Moderator	* * * Well, today's guest's already made some news a couple of hours before this event so I think we're going to hear a little bit more about that from him when he comes up. That news, of course, has to do with his current duties. He's no stranger to state government and, I think, has probably earned the reputation as the consummate fix-it man on a number of policy issues. Of course, his reputation really began in the Summer of 2000 when he served a stint as the state insurance commissioner in the wake of the resignation of Commissioner Chuck Quackenbush and all the allegations surrounding that and in 2002 stepped in after another scandal at the state's department of information technology and ultimately became the state's chief information officer working to turn around the state's troubled information technology program. Of course, as you know, that's not the end of the story. In January, U.S. District Judge Thelton Henderson appointed our guest to be the receiver overseeing

improvements to the healthcare offered in California prisons which, of course, is the subject of legal action and a tug of war over monies and priorities with a lot of state officials, most notably, the Governor. In fact, you may remember that the former Prison Healthcare Receiver, Bob Sillen was our guest here last July. I should also mention that today's guest continues to serve as a professor of law and director of the Capital Center for Government Law and Policy at the McGeorge School of Law and with that it's my honor to welcome to the Sacramento Press Club, Clark Kelso.

* * *

Kelso What I want to talk about very briefly is simply my experience in, you know, as the Mr. Fix-It. What do you do when you've got a troubled agency or a troubled department. How do you turn things around?

* * *

In the receivership one of the big challenges they had when I showed up, they had not clearly identified what their job was and that made it difficult for them to plan and I think we have at this point clearly identified what our job is, what our challenge is. Our job is to as soon as practicable, provide constitutionally adequate medical care to patient-inmates of the CDCR in a delivery system the state can successfully manage and sustain. That's our job and it is to turn it back over to the state.

* * *

I want to try and identify the challenge, the next step is to identify for the organization a shared mission, very similar to identifying the challenge but you have to get your people agreeing on a mission. In our case, in the receivership it is fairly straightforward. We want to reduce avoidable illness and death by providing patient inmates timely access to safe, effective and efficient medical care. That's it, that's all it's about really, and actually if I define the mission that way as we have, then we start to know what to measure, avoidable illness and avoidable death, and we actually spend the significant resources on looking at every single death that occurs within CDCR and doing a comprehensive review from a medical perspective to determine whether it was an avoidable death. We get reports on those on a monthly basis. Once you've got the challenge identified on the shared mission, a leader needs to enable action particularly in a large organization you don't do things by yourself. A lot of other people have to be empowered to act and you have to let them act.

* * *

The administration and the legislature have been extremely cooperative in providing the receivership with the resources it needs and basically they have funded all aspects of my strategic turnaround plan with one exception. Now the one exception does happen to be a large one, but I frankly am very pleased at where the receivership finds itself. We are getting the support of the Governor's office and the legislature to get us the people, the medical support and information systems that we need, support for procurement activities; it's really quite remarkable the degree of support that we are getting and we will resolve the issue about the facilities I'm sure in the next couple of weeks.

* * *

Sigrid Bob: I teach at Sac[ramento] State and I have covered prisons and health care issues for many years for several publications starting at the [Sacramento] Bee in the 70's. You mentioned investigations or reports on avoidable deaths, could you elaborate on that, give us some examples or if you see a pattern?

Kelso

* * *

[W]e see recently, for example, a death of someone who essentially had a heart attack, where the conditions should have been diagnosed and treated rather easily. And instead what happened was, well, there had been multiple interactions and they sent the person back to their cell without any treatment. So you see quite a range of things, often times, what we see are lapses because of bad coordination between nurses, doctors, lab results, external experts. We don't yet have very good information systems that make it easy to share information. So a lot of what we see are failures in communication, failures in handoff from one practitioner to another, but the reports I get are quite detailed.

***

Jim Lindburg, Friends Committee on Legislation: Thank you. It's been suggested pretty strongly by a lot of people in this arena that the reason that the prison system can't deliver constitutionally adequate health care is because of the huge growth in the prison population and that it is not just a matter of beds and facilities but also being able to deliver services. Like I understand in a lot of rural counties, it is very hard to get doctors and clinical personnel, and I'm just wondering if you, as the receiver, do you have an official position on what we should do about the prison population?

Kelso: Let me comment at least a little bit about that. We're not having that much difficulty in recruiting clinical personnel anywhere in the state. It turns out when you raise compensation to private sector levels, people will come. So we are not having difficulty recruiting nurses and doctors. With doctors, we're close to 90% statewide. Now we're having a little difficulty with doctors in the desert portion of the state. They don't like living in the desert, so we are having to figure out some creative solutions for staffing there. Nurses interestingly enough, we are able to recruit nurses up and down the state, even in the desert. For nurses, the place where we have a challenge recruiting is on the coastal areas. Large urban costal. We've got a little bit of a challenge there. I suspect because the standard of living, the expenses of living in the coastal are a little higher. So, I'm just not seeing difficulty in providing medical services no matter what the population is. It is a question of how much are you willing to spend for it. Now, the overcrowding, without a doubt the overcrowding creates additional not just expenses but complications in providing medical services because frankly everything in the prisons is made more difficult by overcrowding. They can't provide any sort of program, for example, in many prisons; they just don't have any room to provide any sort of programs. So everybody is sitting around. Well, that by itself creates a health care problem. If you've ever walked up and down the gymnasiums where their bunks are three high, I have absolutely no doubt that the conditions of overcrowding by itself contributes to greater morbidity. It's like birds on a wire who are crammed too close together. It creates additional stress. I'm confident that is happening. Is it happening to any huge and great extent that we can't respond to? I'm less sure about that. I think we have discovered that you actually can provide care, and it is certainly our plan, our turnaround plan, we believe we can provide constitutional levels of care no matter what the population is.

TRIAL DECLARATION OF STATE SENATOR GEORGE RUNNER

[2] I, George Runner, testify as follows:

1. I have been a Senator for the State of California representing the 17th Senate District since 2004. The 17th District incorporates portions of the Los Angeles, San Bernardino, Ventura and Kern counties. I began my career in politics running for city council in the City of Lancaster in 1992 and subsequently served as Mayor. In 1996, I was elected to the State Legislature in the Assembly. I served three terms as a State Assemblyman until 2002. This declaration is based on my personal knowledge, and I am prepared to further testify as to its contents.

2. I am testifying in my capacity as an individual intervenor and my testimony represents my own views and beliefs.

3. As a Senator, I co-authored, along with San Bernardino County Supervisor Gary Ovitt, the Safe Neighborhoods Act, which is Proposition 6 on the November 2008 ballot. I drafted Proposition 6 after undergoing thorough discussions with law enforcement groups, victims' advocates and policy experts from all over the State about a measure that would benefit and sustain programs to deter and suppress gang activity and violence in California communities. Proposition 6 is a comprehensive anti-gang and crime reduction measure that will bring more cops and increased safety to our streets and greater efficiency and accountability to public safety programs and agencies that spend taxpayer money.

* * *

[3] 8. Overcrowding in prisons interferes with programming and rehabilitation. However, overcrowding does not prevent the provision of constitutionally adequate health and mental care. California

can and does provide adequate care given current resources. I believe that court-appointed *Plata* Receiver Clark Kelso has provided a constitutionally adequate level of inmate health care this year

9. California's extraordinarily high recidivism rate is largely the cause of current crowding conditions. California is the only state in the nation that sends more offenders to prisons from parole than from court. The high recidivism rate is, in large part, a product of California's move from indeterminate to determinate sentencing in the late 1970's. Under indeterminate sentencing, an inmate was released from prison only upon establishing to the satisfaction of a parole board that he had rehabilitated and was no longer a threat to the public. The burden was on the inmate to successfully complete vocational training or education programs and/ or to establish that he had a job, a place to live, and a plan to success upon release. Under the current determinate sentencing system, an inmate is released when his days served and his accumulation of early release credits equal his sentence. Inmates serving determinate sentences are released, ready or not, without regard to whether they have a plan, a job, or a home, or have succeeded in any prison programs. For many, responsibility and incentives have been eliminated from the system. I believe that more facilities to educate and rehabilitate inmates in carefully monitored programs will lower recidivism as will focused parolee monitoring programs. Moreover, I believe that many non-violent parole violators can serve periods of [4] revocation on GPS-monitored house arrest. In 2006, Governor Schwarzenegger and the State Legislature facilitated a new emphasis on inmate rehabilitation and reintegration hack into the community, as evidenced by the passage of Assembly Bill 900. These efforts to

help offenders help themselves will result in lower recidivism rates and, consequently, greater public safety as a result of fewer crimes committed but will take time to produce results.

10. Health care costs per inmate (over $12,000 per inmate per year) in California are among the highest in the United States. In fact, prisoners have greater access to medical and mental health care than the average Californian. As I understand it, the California Department of Corrections and Rehabilitation's health care expenditures have increased significantly in the past 8 years from just under $700 million in 2000, to approximately $2.4 billion in 2007. This information is illustrated in Exhibit C, attached hereto, which is a true and correct copy of a graph entitled "CDCR Healthcare Budget, 2000-2008," My staff compiled the data for this graph in July of 2008 from publicly available state statistics.

11. California's prison population has grown at approximately half the pace of California's overall population over the past decade. I understand that California's inmate population has increased by only 8% between 1998 and 2008, whereas California's general population has increased by 16 °A in that same timeframe. Also, during this time, California's total inmate population has grown an average of less than 1% per year, slower than the composite inmate population growth rate for the other 49 states and considerably slower than California's overall population growth. Accordingly, California has a lower prison incarceration rate in 2008 than it did in 1998. Furthermore, I understand that since January 1, 2008. Texas, with 13 million fewer people, had more prison inmates than California. Therefore any public perception that California has had disproportionate

growth in rates of incarceration over the past 10 years is mistaken.

12. Attached hereto as Exhibit D is a true and correct copy of a document entitled California Prisons 1998-2008: Prison Inmate Population has Become More Violent." My staff compiled the data for and drafted this report in July, 2008. This report is based in part on the Pew Center on the States report, "One in 100: Behind Bars in America 2008," published in February of 2008. Exhibit D illustrates the data discussed in paragraph 11 above.

[5] 13. As I understand it, the average annual mortality rate for US residents ages 15-64 was 308 per 100,000 residents from 2001-2003. The average annual mortality rate for state prisoners in all states is 250 per 100,000 prisoners from 2001-2006, whereas California's rate was 213 per 100,000 prisoners during the same time period. These figures indicate that California has one of the lowest prisoner mortality rates within, the United States. At the same time, California's inmates are among the oldest in the country. This information evidences the provision of constitutional health care.

14. This data is confirmed in Exhibit E, attached hereto, which is a true and correct copy of a document entitled "National and State Prisoner Mortality Rates (California Inmate Mortality – 38th Lowest Among States)." My staff compiled this data and drafted this memorandum in July of 2008 using data from the Bureau of Justice Statistics, Data Brief: Medical Causes of Death in State Prisons, 2001-2004 (Appendix Table ii), January 2007, and Bureau of Justice Statistics, Death in Custody Statistical Tables: State Prison Deaths, 2001-2006, June 2008.

15. A prisoner release order is not necessary for the provision of constitutionally adequate health and mental care in California prisons. Moreover, other viable alternatives exist to solve the issue of overcrowding in California prisoners.

* * *

[6] 20. Finally, the *Plata* Receiver must have more time to implement his Turnaround Plan of Action which Judge Henderson approved on June 16, 2008. In fact, the current *Plata* Receiver was appointed only earlier this year, on January 23, 2008. As I understand it, the death rate of California prisoners first increased but then dropped almost 30% since the beginning of 2006, when inmate healthcare was seized from state control by the Receiver. This drop is due to the Receivership's success in reducing the number of preventable deaths in state prisons due to inadequate access to care. As an alternative to a prisoner release order, this Court should allow the Receiver to continue the work he is doing in improving the delivery of health care in CDCR institutions.

* * *

22. There is no question that early release endangers public safety. For example, early release of prisoners in Los Angeles County jails has led to tragic and dangerous consequences. Since 2002, when Los Angeles County jails closed their doors to prisoners due to budget shortages, nearly 16,000 inmates were rearrested and charged with new crimes while they were supposed to be in jail. Sixteen of those inmates were charged with murder; a quarter were charged with violent or life-endangering crimes, including robberies, sex offenses,

weapons violations, drunk driving incidents, assaults and kidnappings.

* * *

[7] I declare under penalty of perjury under the laws of the State of California and the United States that the foregoing is true and correct and that this declaration was executed by me this 30th day of October, 2008,

By: /s/ George Runner

REPORT OF JAMES AUSTIN, PHD

Coleman v. Schwarzenegger et al.,
No. Civ. S-90-0520 LKK

Plata v. Schwarzenegger et al.,
No. CO1-1351 T.E.H.

AUGUST, 2008

[1] 1. In this report, I demonstrate that California can reduce its prison population without adversely impacting public safety.

2. Reducing the prison population will require one or two events to occur – a lowering in the number of people being admitted to prison and/or a reduction in the amount of time to serve (also known as length of stay or LOS). As I explain below, given California's unique prison population, it is possible to divert some people who otherwise would have been incarcerated, and to shorten some sentences, without adversely impacting public safety.

Basis for My Opinion

3. In addition to the matters set forth in my November, 2007 report, I have been asked to render my opinion on whether a "prisoner release order" as defined by the Prison Litigation Reform Act would have an adverse impact on public safety or the operation of a criminal justice system.

4. The opinions set forth in this declaration are based on my extensive experience studying and researching correction systems, including my recent work on the CDCR Expert Panel on Adult Offender and Recidivism Reduction Programming (hereinafter, "Expert Panel") on my review of data and documents provided to me by plaintiffs' counsel and counsel for CDCR and the intervenors and on my visits to Cali-

fornia State prisons, including, most recently, my expert tour at CSP-Lancaster on November 2. 2007.

5. In preparation for this report. I have reviewed the same documents that I reviewed in preparing for my November, 2007 report. I also reviewed additional documents, listed in Appendix A to this Report. This report is also based on documents [2] and data that I received while working on the Expert Panel, including current population trend data.

6. I have neither authored any publications nor testified as an expert witness in court since my report of November, 2007. My curriculum vitae and the rate that 1 am charging plaintiffs for my work on this case has remained the same.

Background to Overcrowding in California's Prisons

7. There is no question that California's prison system is severely overcrowded. As shown in Table I, the current CDCR institutional population is now at 156,003 male and female prisoners. The CDCR design capacity is only 79,828 indicating a crowding ratio of 197%. The situation would be even more severe if one were to include the 4,400 California prisoners temporarily being housed in out of state private prison systems (Mississippi, Arizona, Oklahoma and Tennessee). Crowding in California's prisons has been a constant condition for many years. Nearly two decades ago in 1990. California's prison population was only 86,942 but the design capacity was 47,221 or a crowding ratio of 184%.

8. In 2006 the US Department of justice reported that California's prisons were more overcrowded than any other states.[1]

9. A major factor contributing to California's crowding problem is that California has one of the highest recidivism rates in the country when one uses the measure of being returned to prison within three years. According to the Virginia [3] Sentencing Commission, only Kansas, Utah and Alaska have higher return to prison recidivism rates than California.[2]

10. This was not always the case. In the 1970s California's recidivism rates were much lower. Figure 1 shows how the California return to prison recidivism rate accelerated very rapidly over a relatively short period of time and reached a peak in the late 1980s. It has since slowly declined but remains twice the level it was in the 1970s.

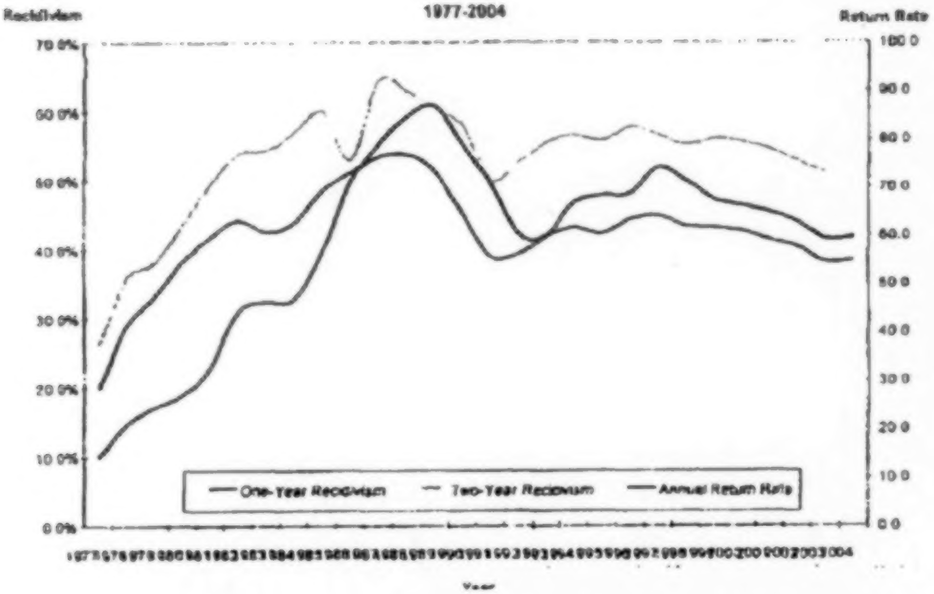
[2] Based on information compiled by Rick Kern, Ph.D.. Director, Virginia Criminal Sentencing Commission from various state department of corrections and sent to me on August 14, 2008.

[4] Figure 1: California's Historical One & Two Year Return to Prison Recidivism Rate with Annual Return to Prison Rate[3]



[5] 11. California's return to prison recidivism rate is so high that the US Department of Justice noted that when deleting California from its analysis of national trends, the overall national return to prison recidivism rate drops from 52% to 40%.[4]

12. As will be shown later, over 91,000 admissions to prison in California are parole violators, of which approximately 69,000 are for technical parole violations. Technical parole violators are individuals

---

[3] This chart is a reproduction of Figure E-1 from Joint Pls. "1r. Ex. 2, Expert Panel on Adult Offender and Recidivism Reduction Programming. 2007, "A Roadmap for Effective Offender Programming in California," ("Expert Panel Report") Appendix E at 88.

[4] Patrick Langan and David J. Levin. June 2002. Recidivism of Prisoners Released in 1994. Washington, DC: Bureau ofiustice Statistics, US Department ofJustic.T, p. 8. Table 9.

returned to prison for a violation of their parole supervision conditions, and not for conviction of a crime. While some of these individuals were arrested for criminal activity, they have not been convicted of a new crime. Because the rate of technical parole violations in California is so high, more than I out of every 3 parole violations in the nation occurs in California. And when California is deleted from the national data, the percentage of prison admissions that are parole violators for the nation drops from one third to one quarter.[5]

13. The explanation for this trend is that California imprisons more parole violators (not that parolees in California commit more crimes). A recent study of California*s recidivism rates concluded that the three year re-arrest rate is similar to many other states. it is the high use of imprisonment for parole violations that produces the high return to prison rate.[6] Moreover, the Sabol and Couture study, a report by Dr. Joan Petersilia and another report by Blumstein and Beck[7] all conclude that California's [6] unique system of imprisoning technical parole violators actually worsens public safety because it

[7] Alfred Blumstein and Allen J. Beck, "Reentry as Transient State Between Liberty and Recommitment, in Jeremy Travis and Christy Visher, Eds., *Prisoner Reentry and Crime in America*. Cambridge, Massachusetts: Cambridge University Press, 2005.

disrupts any effort to stabilize both parolees and the communities where they reside.

> "As two leading crime analysts, Alfred Blumstein and Allen Beck, illustrated in a recent study, California's catch and release model of crime control is creating a destructive situation by constantly cycling offenders in and out of prison and their home communities in a way that blurs the distinction between the two and combines the worse elements of each."[8]

14. Another major factor contributing to the increase in California's prison population is the increase in lengths of prison stays for certain types of crimes. The impact of sentencing laws on prison population has been well-documented by the CDCR in its population projection reports and more recently by the Little Hoover Institute.[9]

15. As a result of the high return-to-prison rates and increased sentences, the population of CDCR prisons has steadily increased over the years. However, the most recent report issued this year (CDCR 2008 Spring Adult Population Projection) shows a slight reduction of 3.591 prisoners (or 2%) over the next five years.[10] This slight reduction is the result of lower new court admissions, lower numbers

[10] California Department of Corrections and Rehabilitation. Spring 2008 Adult Population Projection. (Undated). Sacramento, CA: CDCR.

of parole revocations, and shorter lengths of stay. These factors are the same ones cited by the Expert Panel as possible solutions to the crowding situation. But even the CDCR population projection acknowledges the forecasted population reduction is tenuous, is likely to last only a couple of years, and should not be used for long-term planning purposes (see pages 8 and 9 of the Spring 2008 Adult Population Projection). (Indeed, [7] the methods used by the CDCR to estimate short-term population reductions are being reviewed by two outside experts to determine the validity of the estimating process.) In short, it is uncertain whether the population will actually decline and if it does the amount of the decline and the duration of the decline will be minimal. In any event, even with the projected reduction in population, CDCR's prisons will remain vastly overcrowded.

16. While some degree of overcrowding can be tolerated within a correctional system, there is a point beyond which it becomes very difficult to operate a secure, safe, and humane system for both staff and prisoners. The overcrowding in CDCR now pervades and adversely impacts all aspects of the Operations of the Department, including CDCR's ability to process new prisoners expeditiously. provide adequate medical, mental health and dental care, and provide evidence based programs.[11] The overcrowding also results in inadequate bed space, causing CDCR to take steps such as converting program space to housing.[12] Overcrowding also results in increased violence, resulting in the frequent use of lengthy

lockdowns.[13] These responses. which are required to maintain some semblance of order, serve to also exacerbate the difficulty in providing programs and basic medical and mental health services to the prisoner population.[14]

17. There is no reason to believe that the crowding problem will be solved quickly because California has not enacted the systemic reforms necessary to reduce overcrowding.

The Relationship between Prison and Public Safety

18. California can reduce its prison population without adversely impacting public safety.

19. A smaller prison population would not, by itself, cause an increase in crime. It is well known that many states with *higher* rates of imprisonment have *higher* crime rates and, conversely, many states with *lower* incarceration rates have *lower* crime rates. But in general, there is no relationship between crime rates and imprisonment rates.[15] And as will be shown below, moderately lowering the prison population and [9] incarceration rate while using evidence-based models for rehabilitation does not result in higher crime.

20. Similarly, large prison populations do not equal less crime. Recent studies based on individual states and counties have estimated the crime-reduction impact of prison growth to be small or non-existent.[16] Research on crime and incarceration does not consistently indicate that the massive use of incarceration has reduced crime rates.

---

[15] I conducted an analysis of two US Department of Justice data files containing crime rates and incarceration rates during 2004 by state, and found a correlation coefficient of -.013 which represents no consistent relationship. Looking at violent crime rates only, there is a positive correlation between violent crime rates and incarceration rates, which means that the states with the highest incarceration rates have the violent crime rates.

[16] Bruce Western, *Punishment and Inequality in America*. NY: Russell Sage. 2006), James P. Lynch and William J. Sabol, *Did Getting Tough on Crime Pay?* Crime Policy Report No. 1. Washington, DC: Urban Institute, 1997; Available at www.urban.org/publications/307337.html. Don Stemen *Reconsidering Incarceration: New Directions for Reducing Crime*. New York: Vera Institute of Justice. 2007).

21. Indeed, some research shows that higher rates of imprisonment may actually serve to increase crime rates. This happens in a variety of ways. For example, increasing imprisonment results in the "churning" of large segments of the largely young male population in and out of prison, which serves to disrupt the community and family structure that would otherwise produce low crime rates.[17] Thus, if a state wishes to reduce its crime rate, it will need to look at other factors other than imprisonment. That is, the best way to lower crime rates is *not* to increase imprisonment rates.

22. Moreover, in overcrowded prison systems such as California's, overcrowding has resulted in a reduction in access to basic education, vocational training and drug rehabilitative rehabilitation programs.[18] It is well-known that if prisoners are properly assessed and assigned to well structured programs, persons who complete those programs have lower recidivism rates.[19] Accordingly, overcrowding in California has impeded the [10] State's ability to reduce recidivism. This is why the Expert Panel's first recommendation was to "Reduce overcrowding in its prison facilities

---

[17] Dina Rose and Todd Clear, "The Problem with 'Addition by Subtraction': The Prison-Crime Relationship in Low Income Communities," in Marc Mauer and Meda Chesney-Lind, eds., *Invisible Punishment: The Collateral Consequences. of Mass Imprisonment*, NY: The New Press, (2003), pp 181-194; Todd R. Clear, *Imprisoning Communities: How Mass Incarceration Makes Disadvantaged Places Worse*. New York: Oxford University Press. 2007).

[18] *See* Expert Panel Report at 9-11.

[19] *See* Expert Panel Report at 1-2 for a full discussion and referencing of such programs.

and parole office."[20] If the state were able to decrease its prison population, reclaim program space, and reallocate existing resources necessary for effective programming both in the community and in prison, recidivism rates and crime would decline in California.

23. The bulk of the evidence points to three conclusions: 1) The effect of imprisonment on crime rates, if there is one, is small; 2) If there is an effect, it diminishes as prison populations expand (and California's prison population is already greatly expanded); and 3) The overwhelming and undisputed negative side effects of incarceration and crowding far outweigh the potential, unproven benefits of incarceration.

24. According to Professor James Q. Wilson, we have reached a tipping point of "diminishing returns" on our investment in prisons.[21] Wilson reports that judges have always been tough on violent offenders and have incarcerated them for relatively long sentences. However, as states expanded incarceration, they dipped "deeper into the bucket of persons eligible for prison, dredging up offenders with shorter and shorter criminal records."[22] Increasing the proportion of convicted criminals sent to prison, like lengthening time served beyond some point, has produced diminishing marginal returns in crime reductions.

[22] Wilson, op cit., page 501.

[11] 25. Other former incarceration advocates such as Professor Dilulio and former US Attorney General Edward Meese are calling for a repeal of mandatory minimum sentencing and challenging the wisdom of a massive imprisonment policy.[23]

26. The lesson for California is that lowering the rate of imprisonment will have a minimal or even a positive effect on crime rates, and will improve its ability to engage many soon-to-be released prisoners in rehabilitative programming. Specific examples of this phenomenon are presented in the next section.

Prison Population Reduction Measures in Other Jurisdictions

New York

27. New York state offers the most recent and compelling example of how crime and imprisonment rates can be lowered simultaneously. Like most other states, New York began to experience a drop in its crime rate beginning in 1994. The reasons for this drop are the subject of several studies all of which are summarized in Blumstein and Wallman.[24] One common conclusion is that the drop in crime was not precipitated by a surge in imprisonment.

28. The decline in the state's overall prison population was fueled in part by reducing the length of stay for those sentenced to prison. This was achieved by creating programs that allow prisoners to earn

---

[24] Blumstein A and Wallman J eds). 2000, The Crime Drop In America. Cambridge University Press, Cambridge, UK.

more "good time" credits and thus become eligible for parole sooner than originally scheduled. A report released by the New York State Department of Corrections, estimates that over 24,000 prisoner were released an estimated six months earlier from 1997 through 2006. Those released earlier had [12] significantly lower recidivism rates and the crime rate in New York also declined substantially.[25]

29. New York City, where much of the State's total drop in crime occurred, was also implementing its now well-known police practices that focused on "quality of life" arrests. As a result, the city experienced a decline in the number of felony arrests while misdemeanor arrests and jail bookings increased. But .because misdemeanants have much shorter lengths of stay in the jail and cannot be sentenced to prison, both the City's jail population and the state prison population declined dramatically.[26] Specifically, the New York City jail population declined from 21,000 to 13,000; the prison population from 71,000 to 63,000 and the probation population from 98,000 to almost 50,000.

30. These reductions in the prison population and rate of imprisonment occurred at the same time as the crime rate was declining. Figures 2 and 3 compare the crime and imprisonment rates for New York with California and Michigan. One could pick any state to compare with New York and it would

[26] For a comprehensive assessment of the New York experience see Michael Jacobson, *Downsizing Prisons: flow to Reduce Crime and End Mass Incarceration* (New York: New York University Press, 2005

show the same trend: namely that as New York's rate of imprisonment was declining so too was its crime rates. Other states show the same reduction in crime rates with or without any change in imprisonment rates.

Nevada

31. Nevada has recently enacted reforms that reduced its prison population without impacting. crime rates.[27]

[13] 32. Prior to 2007, Nevada was facing a rapidly expanding prison population fueled in part by an unexpected increase in prison admissions largely form Clark County (Las Vegas). A prison forecast indicated in 2008 that unless steps were taken, the state's prison population would increase from 13,000 prisoners to over 18,000 over the next ten years. Coupled with a worsening economic picture, the state was faced with a growing budget request that would compromise efforts to increase spending on several education and drug prevention initiatives.[28]

33. To address this problem, the state enacted AB 510 in 2007, which increased the amount of "good time" credits a prisoner could earn for good conduct and completion of education and treatment programs.

---

[27] I am currently employed by the State of Nevada, the Council of State Governments and the PEW Charitable Trust Foundation to provide consultancy services to the state. I am very familiar with data regarding the state's prison population. For a recent summary of the 2007 Nevada reforms, see the July 7, 2008 powerpoint presentation that I made before the Nevada Advisory Commission on the Administration of Justice, The Council of State Governments, Carson City. Nevada.

[28] *See* CSG Center on Criminal Justice power point dated October 17, 2006

(The law was made retroactive to prisoners who were sentenced in 2000.) The law also provided for probationers and parolees to receive good time credits for satisfactory behavior and compliance with the conditions of probation and parole. The result was that well-behaved prisoners were eligible for parole sooner, and well-behaved parolees were discharged from parole.

34. With the assistance if the U.S. Department of Justice's Bureau of Justice Assistance (BM), the Parole Board also revised its risk based guidelines to better identify low risk candidates for parole for the purpose of expediting their release. The guidelines were designed to increase paroles for prisoners who have completed programs designed to reduce recidivism rates.

Figure 2: New York versus California and Michigan Incarceration Rates: 1996-2006

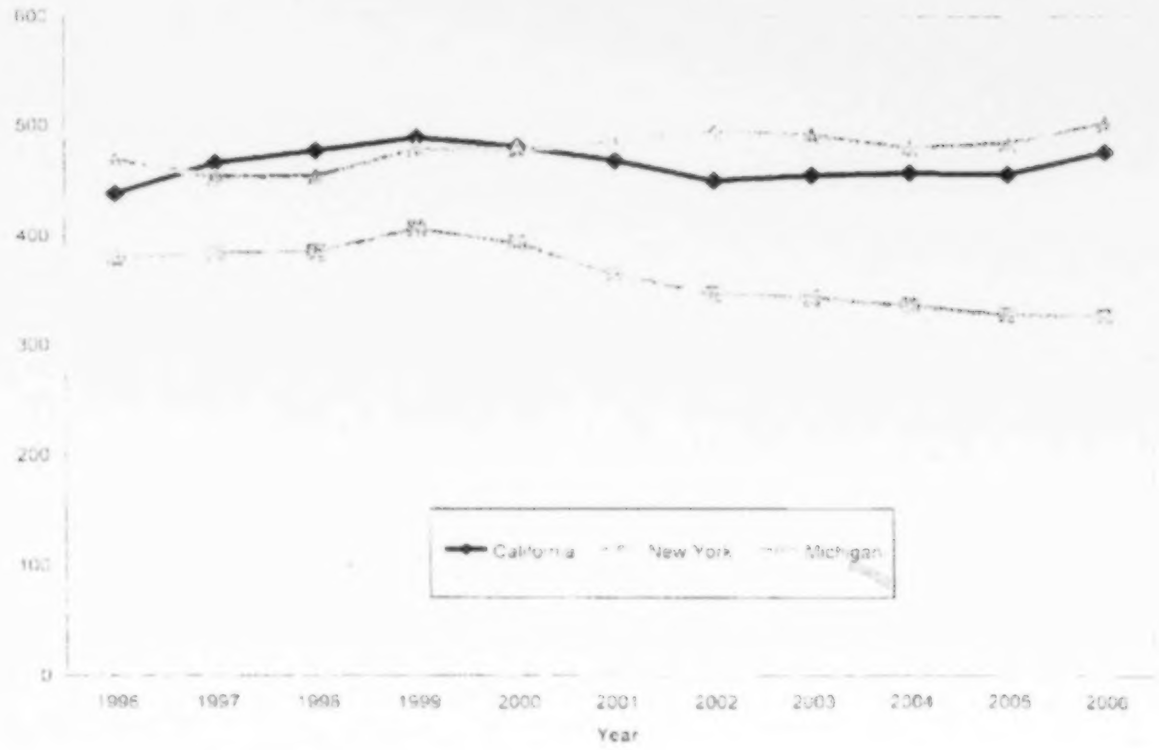

Figure 3: New York versus California and Michigan Reported Crime Indexes: 1996-2006

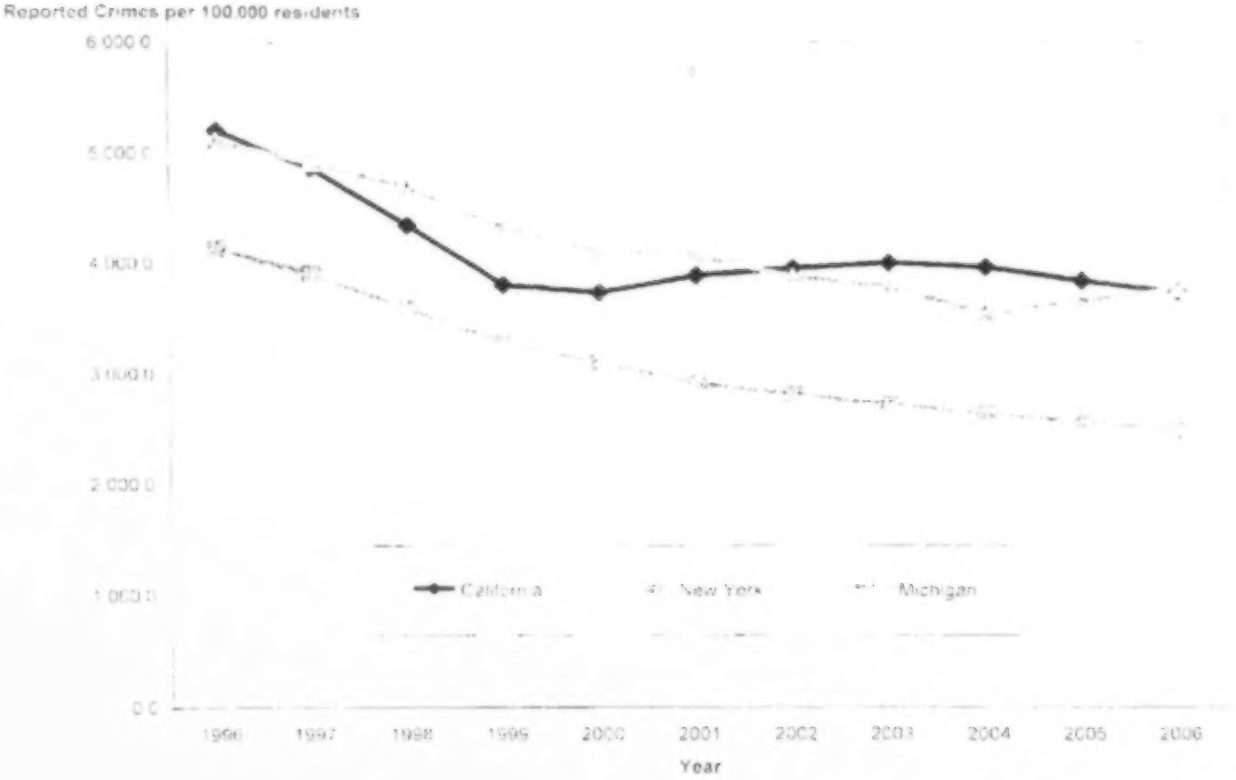

[16] 35. Finally, the Probation and Parole Division, which supervises all offenders in the community, agreed to develop and implement in coordination with the Parole Board a revocation matrix that would reduce the number of returns to prison for technical violations and the length of stay for technical violations.

36. Since the legislation and new policies took effect in 2007, the prison population reversed its upward arc and has begun a moderate decline (See Figure 4). At the same of time the probation population has declined from 14,400 to 13,500 and the probation violation rate had dropped from 47% to 35%. The state also established an Advisory Commission on the Administration of Justice to monitor reported crime, arrests and court dispositions to see what effect the reforms might have on those key indicators. To date there has been no increases in crime, arrests or court filings.[29]

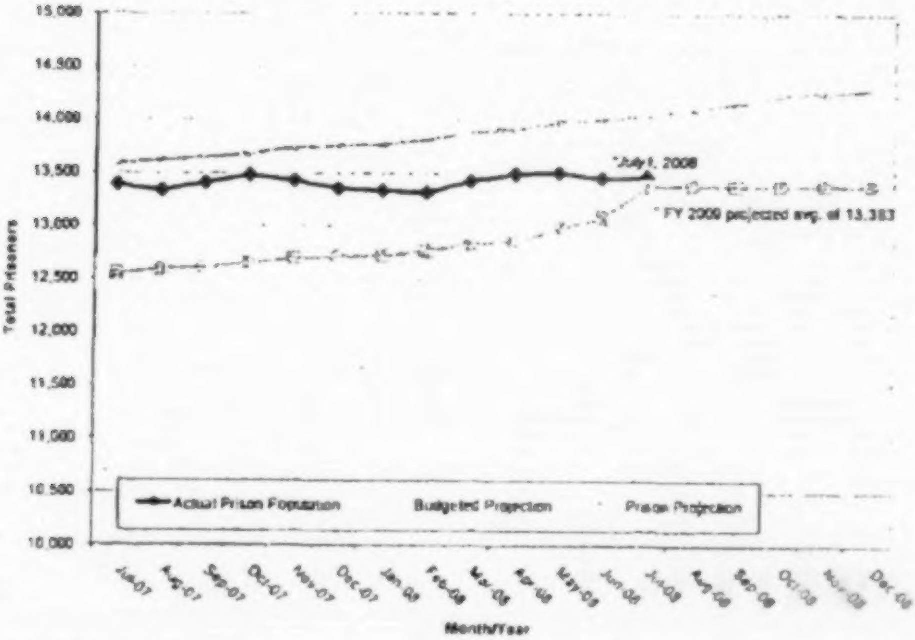
[17] Figure 4: Projected and Actual Prison Population For Nevada[30]



[18] *Mississippi*

37. Like many states, Mississippi adopted truth-in-sentencing laws in the mid-1990s requiring inmates to serve at least 85% of their sentence before receiving parole consideration. While many states applied this restriction only to violent offenders, Mississippi brought all offenders under the net. As a result, Mississippi's prison population more than doubled over the last 14 years, from 10,500 to 21800. In 1994, the Department of Corrections budget was $109.6 million. This year, it stands at $327 million, and state prisons are at 99% of capacity.

38. This year, with the endorsement of Republican Governor Halley Barbour, Mississippi enacted SB

---

[30] The data used to compile this figure was provided to me by the Nevada Department of Corrections.

BEST AVAILABLE COPY

2136, a statute that would allow thousands of nonviolent offenders to become eligible for parole after serving 25% of their sentence. Officials say 4,500 inmates, or 24% of the total population, are covered by the new law. I have been retained by the state of Mississippi to conduct population projections to estimate the effect of the new law. Because the measure is retroactive, about 3.000 inmates or about 12% of the total population already have met their time-served requirement and are eligible for immediate parole consideration. The parole board is ramping up to conduct hearings and beginning to process cases. The state is beefing up its parole ranks to prepare for the increased demand for supervision. I estimate that the Mississippi prison population will experience a 20% reduction all based on shorter periods of imprisonment.

California Counties

39. Several California counties have low numbers of persons sentenced to the CDCR without apparent impacts on crime rates.

[19] 40. Table 2 shows the felony prison disposition rates and prison admissions for new convictions in some of the major counties in California. The table demonstrates that there is considerable variation among the counties in both their felony prison disposition rates and prison commitment rates. The statewide felony prison disposition rate in 2005 (the last year reported buy the California Attorney General), is 19%. This number reflects the percentage of felony convictions that resulted in a prison sentence. The most frequent dispositions are probation and probation with a jail sentence (often representing credit for time served in jail awaiting the court's disposition). Riverside, Los Angles and San Bernardino Counties

have felony disposition rates that are significantly higher than the state average. Alameda, Contra Costa, and San Francisco Counties have the lowest felony disposition rates. If Los Angeles, Riverside and San Bernardino alone were to match the 19% statewide felony disposition rate, the number of prison admissions for new convictions would drop by 12% statewide.

41. Similarly, the prison commitment rates per 100.000 population as reported by the CDCR in its annual report vary from a low of 51 and 55 per 100,000 population in Contra Costa and San Francisco, to highs of 314 and 300 for San Bernardino and Kern counties. The variations in prison commitment rates are not explained by variations in crime rates. The prison commitment- crime rate ratio as is shown in the last column of Table 2, and it demonstrates that counties with the higher prison commitment rates do not have the higher crime rates. For example. Los Angeles, Riverside, and San Bernardino have much higher prison commitment rates but their crime rates are similar to Contra Costa, San Diego. and San Francisco, which have much lower prison commitment rates.

[20] 42. This analysis shows that within California, many counties are maintaining low prison commitment rates – meaning that they are keeping offenders in the community – without jeopardizing public safety. What is lacking are statewide initiatives that would help other counties to follow suit.

Table 2: 2005 Felony Court Dispositions and Commitments by County

County	Crime Rate Per 100,000	Prison Disposition Rate	Prison Commitments per Year	Prison Commitments Per 100,000 Population	Prison Commitment to Crime Rate Ratio
Alameda	3,259	9%	1,755	114	.035
Contra Costa	2,676	12%	529	53	.020
Fresno	3,088	16%	2,211	251	.081
Kern	3,135	19%	2,243	300	.096

Options for California That Will Safely Reduce the Prison Population

43. The size of a prison population is driven by two dynamics – admissions and length of stay (LOS). California can reduce prison admissions and reduce length of stay in a safe and practical manner in four ways: 1) provide evidence-based programming and supervision to technical parole violators instead of returning them to prison; 2) divert low-level offenders to probation and parole instead of prison: 3) provide more avenues for prisoners to earn "good time" credits toward release for good behavior: and 4) provide more avenues for early discharge from parole. Each of these options has been [21] successfully adopted either in California counties or in other states, and has proven to be effective. Further, each of these recommendations were also recommenda-

tions made by the Expert Panel.[31] The recommendations made by the Expert Panel (with one exception) were formally endorsed by the CDCR.[32]

44. It is important to note that individuals who would he diverted or released early under these programs are all people *who would otherwise be returned to the community* within several months of the date that these programs would release them. This report does not contemplate releasing any high-risk offenders or anyone who would otherwise remain incarcerated for life. Thus, the normal risks of recidivism among the population who are released from prison in the ordinary course of events also exists here. As explained below, the actual expected *impact on crime rates* from these population reduction measures is negligible, and implementation of appropriate evidence-based programming can further reduce or eliminate any increase in crime.

Moderately and Selectively Reduce Prison Admissions

45. There are two major types of prison admissions for the CDCR – new court commitments and parole violators. Any moderate reduction in one or both of these two admission streams will have an associated impact on the prison population.

46. As explained above, California has implemented policies that make its prison admission attributes different than any other state in the US. As shown in Table 3, the number of prison admis-

---

[31] Expert Panel Report.

[32] *See* letter signed by Secretary James Tilton dated September 25.2007 to the Honorable Denise Ducheny and the Honorable John Laird endorsing all but one of the recommendations of the Expert Panel Report.

sions is extremely lame (because of the large number of technical parole violators being admitted each year), hut the size of the parole technical violator population at any given point is only approximately 20.000 (because the average length [22] of sentence for these admissions is just four months). The difference between California and other major states is shown in Table 4 which further highlights the unique attributes of these California admission numbers.

1. Reducing The Number of Technical Parole Violators

47. California can safely reduce its prison population by reducing the number of technical parole violators who are imprisoned.

48. While California currently incarcerates a high percentage of parole violators, this has not always been the case.

49. Prior to 1976, CDCR had a high parole success rate. 75% of released parolees successfully completed their periods of supervision.[33] In the 1980's however, CDCR and the Board of Prison Terms implemented a number of policies that reduced the parole success rate and increased the number of technical parole violators being admitted to prison.[34] One of the most prominent changes was the decision by the BPT to accommodate local county officials by admitting parole violators who otherwise would have remained in the local jail pending their revocation hearing.

[34] James Austin, 1987, "Success and Failure on Parole in California. A Preliminary Evaluation", San Francisco, CA: National Council on Crime and Delinquency

This was done to help reduce the jail population and jail crowding.[35]

50. Other factors cited by the BPT and CDCR officials that have served to increase parole revocations were 1) a reduction of community treatment resources, 2) increased used of drug testing, 3) decreased ratio or parole agent to parole caseload and [23] 4) the willingness of the prosecutors to accept a parole revocation in lieu of further prosecution.[36]

51. There are several methods for reducing the number of technical parole violators. In Washington state, state statutes prohibit parole violators from being re-admitted to prison for a technical violation. Instead, technical parole violators can serve up to 60 days of confinement in the local jail. Other states, including Louisiana and [24] Texas, have restricted how long a person can be re-incarcerated for a technical parole violation.

52. A second method is to use a "violation matrix," a system that evaluates the severity of the violation and the risk-level of the parolee to determine appropriate sanctions for a parole violation. Using a "violation matrix" lowers parole revocations for low risk parolees who are involved in non-criminal conduct. A number of states now use such a matrix including South Carolina, New Jersey, Oregon, Georgia, Iowa, Kansas, South Dakota, and Texas.[37]

53. A third method is to reduce the period of supervision for parolees who comply with their conditions of parole. Such a policy would serve as an incen-

---

[37] Personal communication and email from Peggy Burke, Center for Effective Public Policy. August 4-5, 2008.

tive for parolees to behave, and thus reduce violations. As noted above, Nevada has instituted such a law which has reduced the number of both probation and parole violators.

54. Finally, the CDCR could re-institute its own program (successfully implemented in the early 1990s) whereby parole regions would be allocated targets for reducing parole violations which, if achieved would increase community resources for the agents to use. The model consisted of the following live components:

> "1) Broaden the concept of parole to include some accountability for failures,
> 2) Translate operation concepts into budget concepts.
> 3) Redirect part of the avoided prison expenses to parolee support services,
> 4) Train the revocation decision makers and audit decision processes, and
> 5) Keep decision makers regularly informed of the consequences of their actions.[38]

This effort resulted in about 10.000 fewer parole revocations and 3,000 few prison beds being used in 1993.

[25] *Estimated Impact of Reducing Technical Parole Violators*

58. The CDCR Expert Panel estimated that this reform would serve to divert approximately 31,000 of the nearly 70,000 technical parole violations that are

---

[38] *See* Holt. "Reducing Parole Revocations By Improved Decision Making: The California Experience," Unpublished Report by CDCR official.

being returned to prison.[39] Given that technical parole violators serve an average of 2-4 months in CDCR prisons, it is estimated that the impact on the projected CDCR institution population would be at least 6,500 or as much as 9,500 at any given time.[40]

56. As important as the bed reduction, the diversion of at least 31,000 technical violators from CDCR prisons would have a pronounced impact on the volume of persons being processed at CDCR's crowded reception centers, and would enable CDCR to improve the level care that it provides at those facilities.

57. If effective evidence-based programming were provided to the technical parole violators, the diversion program would likely have no impact on crime rates. Indeed, for many technical parole violators who are low-risk offenders, the evidence suggests that their recidivism rates would be *higher* if they were incarcerated rather than released to a community setting with appropriate programming.[41]

2. Divert Low Risk Prisoners with Short Sentences

58. CDCR could also moderately reduce prison admissions without jeopardizing public safety by diverting low-risk newly sentenced prisoners who will spend a very short period of incarceration due to their short sentences and credit for jail time (less than 12 months).

---

[39] *See* Expert Panel Report at Appendix E. p. 89.

[40] *See* Expert Panel Report. It should be noted that the estimates of the impact of this and other reforms were originally removed from the draft report by the CDCR. They were later reinstated based on the objection of the Expert Panel members.

[41] *See* Expert Panel Report at 23.

[26] 59. As shown in Table 5, there are over 27,000 persons sentenced to the CDCR who were sentenced for a "non-violent" offenses and who do not have a second or third strike against them. A large portion of the population has received a sentence for 16 months.

60. A diversion program would eliminate a short period of imprisonment within the CDCR (during which the prisoner is unlikely to become involved in any meaningful programming), but would not eliminate the period of incarceration in county jails (typically 4-7 months).[42]

Estimated Impact of Diverting Low Risk Prisoners with Short Sentences

61. In analysis completed for me by the CDCR, it was determined that the prison population would be lowered by approximately 16,500 within two years of implementing a diversion program for low-risk offenders.[43] I would lower this estimate by approximately 4,000 to account to other factors that may arise as part of the implementation process (exclusions due to prisoner refusals to participate or designation as a hid risk for release to the community). This would suggest the prison population could be reduced by 12,500 through this reform alone. Moreover, if the state provided appropriate community-based treatment for individuals diverted from prison, the diversion program would likely have a neutral or

[43] CDCR Critical Statistical Report Request #1, December 2007, Legislative Estimates Unit, Estimates and Statistical Analysis Section. Offender Information Services Branch.

positive impact on public safety. That is because low-risk offenders such as those targeted for such a diversion program have [27] higher recidivism rates when incarcerated and lower recidivism rates when provided appropriate, evidence-based programming in the community.[44]

3. Moderately and Selectively Reduce Length of Stay (LOS)

62. California could also safely reduce its prison population by moderately reducing the length of stay of selected prisoners.

63. One of the most repeated research findings published by the US Department of Justice's Bureau of Justice Statistics (BIS) and various states is that

---

[44] Expert Panel Report at 23.

increasing or reducing the period of imprisonment has no associated impact on recidivism rates. The WS reports that the average LOS in the nation's prisons has grown from 20 months in 1994 to 30 months in 2002. This alone accounts for 50% increase in the ADP in the [28] nation's prisons. The BJS recidivism studies and others show no relationship between time served and-recidivism rates.[45]

64. The California CDCR completed an analysis for this author to see if recidivism rates were associated with lengths of imprisonment. Table 6 shows the relationship between how long persons are incarcerated and recidivism rates in California. Although the recidivism rates appear to decline slightly, those declines are not statistically significant except for people who serve more than 24 months, and that reduction in recidivism is due entirely to the maturation of the prisoner (older prisoners have lower recidivism rates). When this study is replicated controlling for age and other related factors, there is no statistically significant difference in. recidivism rates by length of stay. A similar finding was found in the US Department of Justice recidivism studies for 1994 releases of which California participated in and dominates the results by virtue of its large numbers (see Table 7). Moreover, the good time credit programs outlined in this report would only result in a reduction of an average of 4 months of LOS, and nearly all the individuals who would be eligible for such reduction would be serving a sentence of less than 24 months.

---

[45] *See* BJS website for analysis of LOS and Recidivism rates at http://www.ojp.usdoj.gov/bjs/correct.htm.

65. It should be noted that even very small changes in LOS can produce very large reductions in a prison population. In California, if all of the 70,000 or so new court commitments spent 30 days less than they do today, the CDCR prisoner population would decline by approximately 5.800 inmates. A three month reduction would drop the population by over 17,000

66. The methods that many states use to reduce the LOS are either through good-time credits or parole board decision making. States with indeterminate sentencing use their parole boards to modify LOS. In a determinate sentencing state like California the [30] only means for modifying release dates is to allow for the award of special program credits that serve as an incentive to participate in risk reduction programs.[46] Illinois and Indiana are two states that offer such good time credits for most of their inmates.[47]

67. Creating an incentive system where prisoners are rewarded for complying with the facility rules and/or participating in programs that serve to reduce recidivism rates is cost effective and helps protect both institution and public safety.

68. In California there are few incentives for California prisoners to participate in programs or to fully

---

[46] In the 1960s, when California had an indeterminate sentencing scheme, Governor Ronald Reagan was able to reduce the prison population by increasing the number of paroles being granted by the Parole Board and increasing emphasis on rehabilitation and treatment. During this period the prison population dropped from 28.000 in 1968 to under 20,000 in 1972 and remained at that level for several years. This practice is still being used by several states (New York. Texas, Nevada, Kentucky, Michigan, and Pennsylvania are states that have increased parole grant rates or have maintained high grant rates for a considerable period of time).

[47] *See* Illinois and Indiana Department of Corrections web sites at http://www.idoc.state.il.us/ and http://www.in.gov/idoc/

comply with prison rules. Prisoners receive a fixed term which can be reduced by varying amounts by receiving earned credits as set forth in Penal Code §2933.[48] The original intent of the work and education credits was to establish an incentive for participating in designated programs and work assignments. But as over-crowding intensified, the opportunities for such participation both decreased and was unevenly applied.[49]

69. To address this problem the CDCR has become more generous in what qualifies for work incentive credits by creating in 2004 the "Bridging, Educational Program" (BEP).[50] The BEP is a 2-4 month in-cell program offered to prisoners at the Reception Centers that awards prisoner good time credits for completing in-cell written [31] assignments. The quality of such services and their impact on recidivism rates is questionable and has not been evaluated.[51] Basically, it is a method for expediting releases by allowing newly admitted prisoners to earn Work Incentive Program (WIP) credits while awaiting a transfer to another facility or release to parole. The percentage of prisoners participating in the Bridging program has accelerated over the past few years.

70. Another method being used by the CDCR to expedite releases is its Conservation Corps Program. Prisoners who work in this program can earn two days off of their sentence for each day in the program

---

[48] Expert Panel Report, page 12 for detailed description of allowed good time credits.

[49] *See* Expert Panel Report, page 12.

[50] *See* Expert Panel Report, page 12.

[51] *See* Expert Panel Report, pages 151and 177.

as authorized by Penal Code §2933.3. Currently, there are over 4,000 male and female prisoners in the Conservation Corps camps, which is less than three percent of the total institutional population.[52] Expanding these programs would decrease the LOS for prisoners who are not sentenced as a "violent" offender, 2nd striker, or a 3rd striker. (It should be noted that there are prisoners in these three excluded classes who are assigned to the CCCs hut are unable to earn the additional good time credits due to existing California law. The 2nd and 3rd plus prisoners classified as serious or violent offenders must serve 80% of their sentences, so the day-for-day earned credits are of less value and are less of an incentive for them to participate in meaningful programs and adhere to the prison rules.)

71. Under current California law and practices, prisoners do not receive full WIP or pretrial credits while in the local jails awaiting transfer to the CDCR. This has resulted in a very complex, cumbersome and expensive bureaucratic system of trying to keep [32] track of the various forms of earned good time credits which is unique for determinate sentencing states.

72. Each year, tens of thousands of CDCR prisoners receive Work Incentive, Education, Vocational and Conservation Camp Credits. Expanding this program would reduce the prison population, and, if done effectively, reduce recidivism as well.

Estimated impact of Lowering LOS

73. The Expert Panel estimated that an enhanced good time credit program would reduce the CDCR population by at least 17,000. That estimate assumed that at least 50,000 new court commitments and parole violators would receive an average of four months of program credits which would reduce the CDCR institution population by at least 17,000 prisoners. However, that estimate included prisoners outside of the 50% earning class (50% earning class are non-serious offenders who, through earning WIP credits, can reduce their sentence by up to 50%) and did not take into account the effects of diverting short-term sentenced prisoners. If one assumes that only the 50% earning class were to be impacted (57,000 admissions per year), and only half were to be able to receive an average of four months case management plan credits prior to release, the impact on the CDCR institutional population would be 9,500. This estimate would be higher if the diversion of short term new court commitments did not occur.

74. Further population reduction would occur if more prisoners were able to participate in the CCC programs and earn the two-for-one day credit.

75. California's current Work Incentive Program is deeply flawed. CDCR has attempted to maximize the effect of the WIP by creating the Bridging program, noted earlier. Today virtually all newly admitted prisoners are enrolled in the Bridging program [33] to ensure they receive the day for day WIP credits. When visiting the Lancaster facility in 2007, I was told that the Bridging program often consists of prisoners being given "assignments" to read materials or other self help documents. Credit for this work is assumed and is not evaluated to determine

what if any progress is being made by the prisoner. It was this lack of structure that led the Expert Panel to recommend that the WIP credits be made statutory which is similar to some other states. Such a change would also eliminate a cumbersome bookkeeping process that has resulted in wrongful incarcerations beyond the proper release date.

76. Finally removing the restrictions prohibiting "serious offenders" and 2nd and 3rd strikers from receiving sentence-reducing credits would significantly reduce the average daily prison population. For example, moving up the release dates of such prisoners by an average of four months would lower the prison population by over 3,000. If such prisoners could be placed in the 50% earning class category, the prison population would decline by as much as 37.000 people.[53] There are a considerable number of prisoners who are not in the 50% earning class but who are low risk and whose further incarceration has no impact On crime rates or recidivism rates.[54]

4. Early Discharge from Parole

77. Finally the state can safely reduce its prison population by offering good time credits to reduce the period of parole supervision. Similar to the research on LOS and imprisonment' there is no evidence that extending parole supervision for all prisoners serves any public safety value or reduces recidivism. In fact a California study showed no relationship between time on parole (or even the placement of a prisoner

---

[53] *See* Expert Panel Report, Appendix E. page 93.

[54] Based on CDCR and UCI recidivism data files I have received since 2007.

on parole) [34] with recidivism rates.[55] The Urban Institute also recently reported that prisoners released with no parole supervision have recidivism rates that are similar to those who are placed on parole.[56]

78. These research findings suggest that the amount of time a CDCR parolee must spend on parole supervision can be significantly lowered without jeopardizing public safety. This is important in that the population-reduction options listed above will serve to place more prisoners on parole supervision for a longer period of time under current CDCR and Board of Prison Terms policies.

79. In order to reduce the number of parolees, California can implement a policy that accomplishes one or both of the following:

a. Allows prisoners to earn day for day good time off their parole supervision period for compliance with the conditions of parole (under this situation most prisoners who comply with the conditions of parole would serve no more than six months of supervision), and

b. Mandates the discharge of all persons from parole supervision after having demonstrated that the prisoner has remained arrest and violation free for a 12 month period.

80. Under current law prisoners must complete a period of parole (usually 1-3 years) after discharge from prison. While state law allows some parolees to be discharged from parole early for good behavior, this option is rarely used and most [35] parolees are not discharged by the BPT even though they have remained arrest and violation free.[57] Implementing an effective early parole discharge program would both reduce the population of parolees and, concomitantly, reduce the parole revocation rate. *Estimating the Impact of Early Discharge from Parole*

81. At the time of writing this report, I had only just received data that will enable me to analyze the impact of decreasing the period of parole supervision for persons who remain arrest- and violation-free, and I have not had time to fully analyze this data.

* * * *

[44] 95. The effects of a good time credit program on the three counties are summarized in Table 11. In this table it is assumed that persons in the 50% earning class will receive an average of four months of credits, which will serve to reduce their period of imprisonment by the same amount. During this four month window (a time during which the inmate would have been incarcerated absent the good time release program), approximately 5% of the released prisoners will be re-arrested or returned to prison for a technical violation.[60] *The good time credit releasees*

would account for a temporary increase in arrests of less than 1 percent °fall arrests occurring in the counties. Several months after the good time credit program is implemented, even this small and temporary increase in arrests and prison returns will disappear.

Benefits to Implementing Population Reduction Measure

96. The population reduction options listed in this report will have a number of benefits in addition to lowering the size of the current CDCR population

[45] 97. The population reducing techniques will have the most immediate impact on crowding at CDCR's critical reception centers, which first house any new admissions. In order for any prison system to function properly it is essential that the major reception centers are not severally crowded. In the CDCR, the crowding of the male reception centers is largely a function of the large number of parole violators (especially technical violators.) who are being processed each year. By lowering the revocation rate and diverting technical violators from the CDCR, the number of admissions will decline as well as the size of the reception center populations. This will increase

the ability of CDCR to effectively screen new inmates for health and mental health concerns and also for programming needs.

98. The reduced population will also reduce the number of lockdowns caused by overcrowding, which will also increase the ability of CDCR to provide medical and mental health care and to provide evidence-based programming that will reduce recidivism.

99. Moreover, the population reduction measures outlined in this report will require no additional funding, because it is far less expensive to provide supervision and programming to parolees than to prison inmates.

100. Finally, the reforms, if implemented correctly, should have no impact on crime rates in California.

EXPERT REPORT OF BARRY KRISBERG, PhD

[1] Expert Report of Barry Krisberg, PhD

I. Qualifications

I have been the president of the National Council on Crime and Delinquency (NCCD) since 1983. Having just celebrated its 100th anniversary, the NCCD is the nation's oldest and most respected criminal justice research organization. I have been known internationally for my research and expertise on juvenile and criminal justice issues and I am frequently called upon by elected officials, the judiciary, and the media. The NCCD is often asked by governors and legislatures in many states to assist in designing justice programs. Most recently, I worked in Illinois, Texas, and Florida to help rebuild very troubled juvenile corrections systems. I have worked in a variety of roles in California to design and evaluate reforms in the state corrections system. My complete curriculum vitae are presented. in Attachment A.

I received my master's degree in criminology and a doctorate in sociology, both from the University of Pennsylvania. I have held several educational posts. I was a faculty member in the School of Criminology at the University of California at Berkeley and as an adjunct professor with both the Hubert Humphrey Institute of Public Affairs at the University of Minnesota and the Department of Psychiatry at the University of Hawaii. I am currently a lecturer in the Legal Studies Department and at the Boalt Hall School of Law at the University of California, Berkeley. Most recently, I gave an advanced seminar for Boalt Hall students on "Legal and Policy Issues in Prisoner Reentry."

In 1979 I was asked by Health and Welfare Secretary Mario Obledo to serve on a Task Force to investigate the over-representation of people of color in California prisons. In the 1990s I was appointed by the Legislature to serve on the California Blue Ribbon Commission on Inmate Population Management. Previously, I was asked by the Legislature to conduct a study on alternatives to prison. More recently I was asked by the California Senate Budget Committee to [2] organize a California Task Force on Prison Crowding. I also was appointed by CDCR to serve on an Expert Panel on Adult Offender Recidivism Reduction Programs.

My memberships have included the Juvenile Justice Committee of the International Association of Chiefs of Police, the National Association of Juvenile Correctional Administrators, and the Association of Criminal Justice Researchers. I was past president and fellow of the Western Society of Criminology and was the Chair of the California Attorney General Bill Lodger's Research Advisory Committee.

In 1993 I was the recipient of the August Vollmer Award, the American Society of Criminology's most prestigious award. The Jessie Ball duPont Fund named me the 1999 Grantee of the Year for outstanding commitment and expertise in the area of juvenile justice and delinquency prevention.

In 2002, I was appointed to by the California Attorney General to chair an Expert Panel to investigate the conditions in the California Youth Authority. In 2004 I was named in a consent decree to help develop remedial plans and to monitor many of the mandated reforms in the Youth Authority. I am often asked by California counties and the Chief Probation

Officers of California to provide training on a range of corrections issues.

I have numerous books and articles to my credit and serve on the editorial board of the prestigious journal *Crime and Delinquency*.

I am frequently called upon by private foundations to assist with the design, implementation, and evaluation of programs—both their own and those of the public sector. The Annie E. Casey Foundation engaged me to assess the effectiveness of their Juvenile Detention Alternatives Initiative, the single largest private program for juvenile justice system reform in the country. The Walter S. Johnson Foundation supported me to lead a Blue Ribbon Commission on California's policy of out-of-state placement of delinquent youth. Baptist Community Ministries [3] has sought my expertise on assessing the needs of troubled youth in the greater New Orleans area, and the Robert Wood Johnson Foundation asked that I prepare a white paper on delinquency and substance abuse. The California Endowment selected me to evaluate a five-county effort to improve mental health services in juvenile detention facilities. The California Endowment has also funded me to lead a 13-city network to reduce gang violence in California. The Irvine Foundation asked me to assess the value of inmate rehabilitation programs at Lancaster State Prison. Several California foundations and the JEHT Foundation funded me to conduct a comprehensive study of California women prisoners. In the late 1990s, the San Francisco Foundation funded me to examine the implementation of a new inmate classification system at San Quentin. I have been regularly consulted by the California Office of the Inspector

General, especially on issues relating to the Division of Juvenile Justice (DJJ).

I have supervised NCCD research studies funded by the National Institute of Justice on Early Release in the Illinois Department of Corrections and on the Use of Electronic Monitoring in Oklahoma. I have also been asked by the National Institute of Corrections to provide training to a number of jurisdictions on jail classification systems and to provide assistance to the District of Columbia Department of Corrections. I am regularly consulted by the Special Litigation Unit of the US Department of Justice on investigations under the Civil Rights of Institutionalized Persons Act, and I testified before the National Commission on the Elimination of Prison Rape at their request.

In the past five years, I have served as a joint expert witness in *Farrell v. Cate*, a case that involves a Consent Decree on conditions in the DJJ. In that capacity, I was deposed on April May 19, 2008 and testified in Alameda County Superior Court on April 24 and May 23, 2008. I was also deposed in July 2006 in cases entitled Fonda Whitfield and The Estate of Deon Whitfield v. State of California et al., Case No. Cv-04-2729 GEB (JFM); Allen Feaster and [4] Gloria Feaster and the Estate of Durrell Feaster v. State of California et al., Case No. CV-04-2730 GEB (NM). The cases stemmed from the January 19, 2004, suicide deaths of two young wards in the same cell, Deon Whitfield and Durrell Feaster at Preston.

II. Expert Opinions

I was retained by the plaintiffs in July of 2008 to be an expert in these proceedings and have reviewed many documents, depositions, interrogatories, and other expert reports and statistical data relevant to the Coleman and Plata proceedings. I have been asked to render an opinion on whether the accelerated release of CDCR inmates would create a danger to public safety. My fee is $300 per hour for work related to these cases.

A. Done properly, a population cap in the California state prison system would not have an adverse effect on public safety.

My extensive review of the available data reveals that millions of prisoners in other states as well as inmates in numerous California county jail systems have been released early in response to population pressures with no adverse effect on serious crime. Indeed, the most solid empirical evidence on the experience of other states that have accelerated prisoner release to reduce population is that such releases are uniformly safe and, if done properly, actually reduce crime.

1. All rigorous studies of other state prison systems' early release programs demonstrate that such programs do not endanger public safety

My opinion is based on a thorough review of empirical research over the past 22 years in states that have accelerated the release of prison inmates. In March of 2007, my colleague Carolina Guzman and I conducted an extensive review of the published literature on early release and public safety. This review utilized the library resources of the National Institute of Corrections, the National Criminal Justice Reference Service, the James Cotton-NCCD Criminal [5] Justice Collection at Rutgers University, and the Bancroft Library at the University of California Berkeley. This review identified 14 peer-reviewed articles, dissertations, state agency reports, and national studies. These materials covered the period from 1981 to 2004 and covered Canada and the states of California, Washington, Wisconsin, Illinois, Texas, Colorado, Montana, Michigan, and Florida. In addition, one study covered early releases from a large jail in the

Northeast U.S. Attachment B includes a brief overview of these 14 studies and the full citation of authors and sources.

Overall, this literature showed that the recidivism rates of prisoners released early were comparable to those who served their full terms. In some instances the recidivism rate among the early release group was lower than those inmates who served their full terms. We found that early release programs actually lowered recidivism rates of released inmates when they were targeted at selected low-risk offenders, especially those convicted of substance abuse or property crimes. Further, early release produced lower rates of recidivism if there were provisions made for community-based supportive services such as housing, employment, or drug treatment. In addition to the recidivism data, virtually all of the studies illustrated that overall crime rates were either stable or declining during the periods when prisoners were being released early. The following discussion reviews some of the specific studies in greater detail.

Washington began accelerating the parole of inmates to reduce prison crowding in 1979. The Legislature mandated that the most serious felons and sexual psychopaths could not be part of the early release program. The research covered 1,674 inmates that were released an average of 6 months early. The comparison group consisted of inmates released in the 12 months before this program. The recidivism rates of the two groups were virtually identical over the next five years. The Washington state crime rate was roughly constant during the period of the early release.

In 1970, the California Department of Corrections selected a cohort of 1,310 inmates who [6] were eligible for parole. Half of the group members were randomly selected and paroled an average of 66 months earlier than their scheduled dates. The CDC researchers found no statistically significant differences between the two groups in terms of returning to prison based on either a new conviction or a parole violation. There was no evidence that this experiment had any effect on the state crime rate.

Colorado immediately released 126 prisoners after the courts ruled that they should have gotten good time credits based on their jail behavior during presentence confinement. There were no statistically significant differences in the re-arrest rates for the accelerated released inmates compared to those who were not released. Again, there was no discernable impact on the Colorado crime rate.

The Montana legislature placed a cap on its prison population in 1993, in part, by decreasing the amount of time served by its prison inmates. The researchers examined inmates who received accelerated good time credits, those sentenced to community-based parole programs, and those who received a regular parole date. The recidivism rates of these offenders were roughly the same as historical Montana recidivism rates. During the period of the prison cap, the crime rate in Montana showed a modest decline.

A Texas study examined a sample of 2,072 prisoners released from the Texas Department of Corrections in 1983. Approximately 29% of these cases were Early Mandatory Releases—inmates selected for release up to 180 days prior to their regular release dates. The researchers found that the return rate to prison was similar for the early release cases compared to others that were released on their regular sentence dates. It was also noted that in 1983, when mandatory release was fully operating, Texas saw the largest drop in 20 years in its state crime rate.

Two studies from Wisconsin followed 1,886 inmates who received mandatory releases after being rejected for parole and another cohort of 892 inmates who were subject to Special Action [7] Release to reduce crowding. In both studies, there was no evidence that releasing selected inmates had any negative effects on recidivism or general public safety. During the course of these programs, the crime rate in Wisconsin declined by over 5% from 1984 to 1988.

With a grant from the National Institute of Justice, the NCCD conducted research on the early release program of the Illinois Department of Corrections (IDOC) that operated from 1980 to 1983. Early releases of up to 90 days were ordered by Governor James Thompson to prevent violence in Illinois's crowded prisons. By 1983, these releases had reduced the average daily population of IDOC by roughly 2,500 inmates. The NCCD study showed that the prisoners who were released early actually had a lower recidivism rate than those released after serving their full terms. Inmates were selected for early releases that were closest to their regular release dates. Wardens were asked to flag cases in which the inmates had presented significant problems while incarcerated. It might be that the early release population possessed a slightly lower risk of re-offending than the group that served their full terms, but the selection of inmates for release process was really driven by how soon inmates would be released anyway.

Illinois's crime rate declined during the years of early release. In 1990 the Illinois Legislature modified the program and actually increased the number of days to 180 by which inmates' sentences could be reduced. The NCCD examined the cases of 4,640 inmates. The early releases had the same recidivism rates as the other released inmates. The later cohort of early-release inmates actually possess lower post-prison failure rates compared to the original group of inmates with accelerated discharges (their releases were advanced to 180 days vs. 90 days). For both cohorts, the majority of subsequent crimes were for nonviolent misdemeanors. Crime rates continued to decline even as early releases were increased in Illinois.

A Michigan Task Force on Jail and Prison Crowding found that the state's crime rate continued to trend downward from 1991 to 2004. The crime drop in Michigan closely paralleled [8] the national decline in crime during this same period. This was a period in which the Governor had capped the prison population and the county jails were advancing the release of many inmates.

Under court pressures, Florida employed house arrest and intensive supervision for offenders who were otherwise bound for state prisons. Inmates usually served short prison stays of roughly 90 days and then were released to intensive community supervision. With funding from the National Institute of Justice, the NCCD studied 630 offenders in this program, known as Community Control. During an 18-month follow-up period, the offenders in the Community Control Program had a lower rate of recidivism than similar offenders who served prison terms of approximately 9 months. A larger study of Community Control was conducted by the Florida Office of Inspector General. This analysis found that the majority of released prisoners that returned to prison or jail did so because they violated conditions of supervision and not because of new crimes. As with the other jurisdictions Mentioned above, Florida's crime rate declined during the period when Community Control was operating.

Research on early parole of jail inmates in Philadelphia showed that adding in community-based drug treatment services increased the proportion of successes among the early released inmates from 66% to 78%. Those who actually completed the drug treatment programs had twice the success rate of those with less than 6 months in treatment. This study showed that while early paroled jails inmates had relatively low recidivism rates, the addition of drug treatment could substantially improve their post-release success rates.

Finally, I found in my March 2007 literature review several studies of offenders who received accelerated parole from Canadian prisons in the mid 1990s. Studies of both men and women prisoners who received early parole showed that they had relatively low post-release failure rates. These offenders did better than comparable inmates who served their full terms, and [9] the subsequent offenses were primarily violations of parole conditions, minor crimes, and overwhelmingly nonviolent offenses.

Others involved in California corrections concur with my opinion. For example, Matthew Cate, the current director of CDCR, testified that corrections experts have indicated that "if done properly," one can reduce the prison population "without negatively impacting crime rates in society."[1] Loren Buddress, Chief Probation Officer for San Mateo County, believes that, given funding to provide appropriate services, "a controlled release of inmates from state prison would not negatively impact public safety."[2] According to Sonoma County Sheriff William Cogbill, putting programs in place would reduce recidivism, and if provided with sufficient funding for programs in conjunction with a prisoner release order, Sonoma County "could mitigate those impacts to public safety to the degree that it wasn't an issue."[3]

2. Early release of jail inmates in California has not had an adverse effect on crime rates

There has been extensive use of early release and diversion in California counties in response to court orders to reduce jail overcrowding. Although these practices have not been subject to the rigorous and in-depth research that I have described above, the aggregate data supports the position that early release done properly does not weaken public safety.

I examined data from the Board of Corrections on the extent of releases of jail inmates in California counties due to court orders to manage crowding, and analyzed this data in relations to changes in the crime rates of these counties. For crime rates, I used the FBI's Uniform Crime Reports and looked at the most serious crimes that most criminologists use to examine crime trends and to compare jurisdictions. These offenses include homicide, aggravated assault, forcible rape, robbery, burglary, grand larceny, auto theft, and arson. The FBI uses these offenses [10] as an index of crime because they are among the most serious offenses, and these crimes have a high probability of being reported by citizens to the police. I will refer to these offenses throughout my report as "serious crimes." Although data on reports for misdemeanors and less serious offenses are less consistently available for all California counties, I examined 10-year trend data from the California Department of Justice on arrests for misdemeanors. From 1997-2006 the California Department of Justice reported that statewide misdemeanor arrests declined from 1,033,196 to 939, 046—a reduction of 9%. The rate per 100,000 of misdemeanor arrests dropped from 4,011 to 3,260—a reduction of 18%.[4]

---

[1] Cate Deposition, page 53.

[2] Buddress Deposition, pages 50-51.

[3] Cogbill Deposition, pages 36-38 and 39-40.

I examined data on individual California counties in releases and the number of crimes, the five-year trends, and the more recent two-year trends. From 1996 to 2006, using 21 counties for which there was complete data, over 1.7 million jail inmates were released due to overcrowding.[5] These were jail inmates that the counties reported to the Board

---

[4] (http://stats.doj.ca.gov/cjsc_statsprof06/004A.htm)

[5] Amador, Butte, Calaveras, Eldorado, Fresno, Humboldt, Kern, Los Angeles, Merced, Orange, Placer, San Benito, San Diego, San Joaquin, Santa Barbara, Shasta, Solano, Stanislaus, Tehama, Tuolumne, and Yolo.

of Corrections (now known as the Corrections Standards Authority) that they had released either via diversion or shorter sentences pursuant to a court order to limit the capacity of their jails. In this same period, the number of serious crimes reported dropped by 18%. During the five years from 2001 to 2006, there were 764, 277 inmates released from 22 counties.[6] The number of reported crimes was largely unchanged in these locales. During the most recent three-year period for which complete data are available (2004-2006), there were 416,767 inmates released in 24 counties due to court orders, but the number
of reported crimes declined by 7% in these same counties.[7] [11] I also analyzed the trends in individual counties but this showed no consistent relation between the volume of jail release due to court ordered population caps and changes in reported crimes across the counties. For example, from 2002-2004, 13 counties (Amador, Calaveras, Fresno, Humboldt, Inyo, Los Angeles, Orange, Placer, San Mateo, Santa Barbara, Shasta, Ventura, and Yolo) had an increase in capacity-based releases and a decrease in crime. Another 8 counties (Butte, El Dorado, San Diego, Merced, San Benito, Stanislaus, Tehama and Tuolumne) had a decrease in releases and a decrease in crime. Only 3 counties (Kern, San Joaquin, and Solano) experienced a rise in both releases and crime.

I looked at patterns in the largest counties (Los Angeles, Orange, and San Diego) as well as a number of mid-sized or smaller counties. Here again, no consistent pattern linked changes in crime with increases or decreases in jail releases due to court orders. Put simply, the accelerated release of jail inmates neither lowers the crime rate nor increases it. This finding is entirely consistent with the studies that I reviewed earlier in this report.

---

[6] Same list as above adding in data from San Mateo.

[7] This group includes also data from Inyo and Ventura.

At the local level, testimony from corrections professionals supports the inference, drawn from the statistics discussed above, that early releases from local jails have not adversely impacted public safety. San Diego County has implemented a variety of diversion and early release programs to control the population in its county jails. William Ingrassia, Commander of the Detention Bureau for San Diego County, was unaware of any specific detriment to public safety caused by these programs.[8] Sonoma County likewise functions under a population cap, Sheriff Cogbill was unaware of any particular crimes that were committed by inmates who were released early.[9]

B. Studies show that if early releases are accompanied by resources for evidence-based programs for this population, there will be a positive effect on public safety

[12] There is a significant population of people who are safer to society if provided appropriate programs in their communities rather than being warehoused in overcrowded, violent prisons. We can generally identify these inmates who pose a very low risk of recidivism, given proven risk classification tools. Further, there are well-tested assessment tools that

---

[8] Ingrassia Deposition, pages 55-60.

[9] Cogbill Deposition, pages 23-24.

can identify and prioritize the treatment needs for individual prisoners. There is a growing body of research identifying program interventions such as Cognitive Behavioral Therapy and Therapeutic Communities that produce measurable progress for inmates with various treatment needs. We can identify the programs, given numerous studies with concrete data showing positive effects on recidivism rates. It is also common sense. A low risk offender will have a better chance of succeeding in the community and becoming a productive member of society if they are enrolled in substance abuse programs or job training programs in the community. Compare this plan to the same convict sitting idle on a tripled bunk in an overcrowded, violent gym with minimal yard time and no work or educational opportunities, consorting with more sophisticated criminals or prison gangs. The CDCR's Expert Panel on Adult Offender Recidivism Reduction Programs (2007) gave numerous examples from states such as Pennsylvania, Ohio and Arizona that are making significant programs in matching appropriate services to offenders as a method of reducing future criminality.

C. The critics of early release make faulty assumptions about the relationship between correctional practices and public safety.

Arguments against accelerated release generally ignore several key facts. First, it is important that virtually every inmate selected for early release under the programs suggested by Dr. Austin in his expert reports and used in California counties under population caps will be released soon anyway. Most accelerated release programs will shorten the prison stays of inmates by six [13] months or less.

As the President of John Jay College, Jeremy Travis has reminded us in his book, *But They All Come Back*, all but death row inmates and prisoners with life sentences eventually return to the community. Although it is true that some released inmates will re-offend, being released several months sooner is not likely to have an impact on that fact. A National Research Council report, released in 2007, reviewed studies on the correlates of prisoners who recidivate and suggested that post-release opportunities including employment, housing, and positive family supports can reduce these failure rates So data on the current recidivism rates of California inmates are not especially relevant to evaluating early release. Further, respected psychologist such as Professor Craig Haney of the University of California, Santa Cruz have argued that prisons actually *debilitate* inmates, increasing their mental health problems and diminishing their abilities to function in the free world.[10] This means that longer prison stays may actually increase recidivism rates. Data from CDCR reviewed by Dr. James Austin suggests that the longer the time served the higher the post-release failure rates.

Second, there is growing evidence that careful selection of inmates for early release can improve the programs' outcomes if there are focused efforts to match inmate's needs to services in the community. Well designed and implemented programs can actually lower prison populations and advance public safety. The Pew Trusts has recently issued reports illustrating examples of this win-win situation. There are several highly effective risk and needs assessment systems that are available. For example, the NCCD approach known as Correctional Management Classification (CMC) has shown its ability to assist in the community supervision of released offenders in states such as Florida, Wisconsin, and South Carolina. Offenders who were supervised by parole or probation staff trained in CMC had much lower rates of failure than [14] other parolees. There are several valid assessment tools available to CDCR to effectively screen out the high-risk inmates and permit better community supervision.

---

[10] Craig Haney, *Reforming Punishment: The Psychological Limits of Pains of Imprisonment,* Washington, D.C.: American Psychological Association, 2006.

There is solid evidence that effective services in the period right after discharge can substantially cut down on recidivism. The CDCR's own Expert Panel on Adult Offender Recidivism Reduction Programs offers a blueprint designed by nationally known corrections leaders and researchers that is based on the best available research. Further, a recent report of the National Research Council on Parole, Desistence from Crime, and Community Integration (2007) offers the best evidence-based models for cutting down on post-release crime. The Urban Institute, the Council of State Governments, and the National Institute of Corrections all have tremendous resource materials on properly managing the prison reentry process.

All of these authoritative sources have shown that the provision of transitional housing, access to health care and mental health services, drug treatment, and vocational services can ease the reentry process and reduce subsequent criminality. It is recommended that planning for reentry services occur early in the incarceration period and that offenders leave prison with specific reentry plans.

The critics of early release exploit the image of inmates being randomly dumped into communities without reentry planning or effective services. If early release is accompanied by funding for proven reentry services, it would be a safe and effective population reduction strategy, the cost of which is far less than building and operating more prison and jail beds. Further, community-based reentry programs can be up and running far more quickly. Critics have argued that such services do not presently exist in sufficient quantity at the local level, but there is no logical reason why this community capacity could not be expanded with appropriate state funding and commitment.

Several counties such as Alameda, San Diego, Santa Barbara, San Mateo, and San Francisco [15] have built sophisticated reentry strategies that merge county and state resources and involve both public and private agencies. These, counties offer a range of ideas on how the CDCR could safely manage the early release of inmates, Many of these efforts are currently being researched, but the preliminary reports from the localities have been promising. Most important, these local efforts illustrate that communities have stepped up to better respond to the needs of released inmates.

Alameda County has been operating Project Choice for several years. Current Attorney General Jerry Brown was instrumental in getting this innovative collaboration started when he was Oakland's Mayor. This program is a partnership between the CDCR, several agencies in Alameda County Government in the City of Oakland, as well as a number of community-based organizations such as the Mentoring Center. The goal is to identify offenders in CDCR who will soon be released back to Alameda County and to build individual community support plans for these offenders. The services include job placement, health care, temporary housing, substance abuse services, and peer-counseling. The Oakland Police Department, Alameda Probation Department, and the CDCR Parole Division worked collaboratively to plan and implement the program. Initially begun to reduce the failure rates of offenders released from state facilities, Project Choice also works with inmates released from the county jail.

Santa Barbara County worked with the NCCD to plan and design a community collaboration to assist released inmates from state prisons and the county jail. Funded initially by local philanthropists and the Gerbode Foundation, this program includes a consortium of non-profit organizations and public agencies such as the Santa Barbara Recovery Center. The program staff contact selected low risk inmates in advance of their release (usually 90 days) and begin joint planning with the offender about the needed services when the person returns to Santa Barbara County. Top law enforcement leadership including the Sheriff, the District Attorney, and the Police Chiefs from all major cities has been involved in the program. The Santa Barbara team [16] works closely with the CDCR Parole Division and was recently funded by CDCR to build and operate a local reentry center that will serve both state and local inmates.

San Mateo County asked the NCCD to assist a multi-agency task force to help the County strengthen its reentry services. This task force was chaired by the Chair of the County Board of Supervisors and included all pertinent county agencies and community-based groups. The initial planning was partially supported by a grant to NCCD from the San Francisco Foundation. Now the services are part of the regular county budget. San Mateo County chose to dedicate a full-time probation officer to assist in reentry planning. The County is attempting to link its rehabilitation programs in the jail to Project Bridge that connects released offenders to similar services in the community. The County is also doing a careful assessment of existing substance abuse service and looking to plug any gaps in these services.

San Diego County has received substantial state and foundation funding to strengthen its local prison reentry services. The San Diego effort is primarily focused on getting released inmates into jobs. There are also a range of supportive services including counseling, health care and housing.

San Francisco has formed an ongoing multi-agency Reentry Council under the leadership of Mayor Gavin Newsome and the Board of Supervisors. The Reentry Council, which has dedicated staffing, also includes the DA, the Sheriff, the Superior Court and the Probation Department. Many community agencies and organizations of formerly incarcerated persons meet monthly to plan new services and to ensure that existing programs for released jail inmates are well-coordinated. The SF Reentry Council has been working hard to reduce barriers to employment for low risk offenders and the Council has paid particular attention to diverting low level offenders from jail sentences.

Besides the reentry programs that I have briefly described above, there are many county jail [17] systems in California that have responded to court-imposed inmate releases have employed a broad range of programs as safe alternatives to total confinement. Attachment C illustrates the extent of court-imposed releases and lists the sorts of programmatic alternatives that have been employed. The interrogatories gathered from most of the intervenor counties offer detailed policy and procedures being used in these counties for home electronic monitoring, work programs, county parole, or work furlough programs, weekend work programs, house arrest, day reporting programs, and drug treatment placements, to name a few existing alternatives. There is also information from the counties about inmate classification systems that are being used to identify the lower-risk inmates for these alternative programs. A recent report by the Chief Probation Officers of California (2007) entitled, *Adult Services Plan: Serving 18-25 year olds—Best Practices* contains an range of excellent programs that California probation leadership assert would allow them to divert many offenders from state prison, if funded appropriately.

Third, some skeptics of early release also suggest that modest reductions in sentences will have a significant impact on the deterrent value of the penal system. The research on deterrence by Franklin Zimring and Gordon Hawkins[11] suggests that it is the timely application of penalties, rather than their severity that exerts a real deterrent effect. There is no reliable scientific evidence showing that minor reductions in time served compromise the deterrent value of the penal system.

---

[11] Franklin Zimring and Gordon Hawkins, Deterrence: *The Legal threat in Crime Control*, Chicago: University of Chicago Press, 1973.

Reviewing CDCR data reported in *California Prisoners and Parolees* reveals that between 1978 and 2007, the median time served for prisoners who were committed for property crimes and many drug offenses actually went down. The corresponding median time served for violent offenders and serious sex offenders went up during that same time period. But, the state witnessed a drop in crime for both violent and nonviolent offenses. The largest crime decline was [18] for burglary. (California Department of Justice 2007, *Crime in California*, Sacramento, California, 2008.)

The extent of time reductions for good behavior for nonviolent offenders has been changed repeatedly. The Legislature has changed the criteria for prison commitments versus sentences to county jails. However, there is no empirical research showing a clear relationship between these sentencing changes and crime rates, especially for the property offenders and minor offenders who would be subject to early release orders. The notion that modest early release will embolden potential offenders is more an "urban legend" than an established fact. Sentences and time served have varied over time, and they vary across jurisdictions. Current penalties are based on political decisions of state officials, not on the science of penology.

D. Defendants' expert Dr. Marquart makes significant errors in his report

I have reviewed Dr. James Marquart's expert report of August 14, 2008, and Dr. James Austin's expert report of August 27, 2008. I fully agree with Dr. Austin's criticisms of Dr. Marquarl's report, contained in pages five through eight of Dr. Austin's report.

Concluding Observations

There are a wide variety of methods though which the CDCR could provide some relief for its severe crowding crisis. These approach encompass programs and policies that either divert offenders from admission or re-admissions to CDCR or those measures that would modestly reduce the time served for non-violent and non-dangerous offenders. Both strategies have been safely and successfully employed in a number of other states and in California over the past 25 years. Moreover, many California counties faced with severe crowding and court-mandated capacity-limits have successfully diverted or accelerated the releases over 1.7 million jail inmates over the past 10 years. Crime rates went down during that same time frame.

Prison and jail population and recidivism reduction programs can be successful in relieving [19] population pressures and keeping the public safe if they include (1) effective screening through validated risk and needs assessment tools; and (2) the provision of services in the community including transitional housing, mental health and health care, and substance abuse counseling. Under these circumstances the recidivism rates of diverted or released offenders is often lower than for those who complete their regular terms. But, it must be added that the best research does not show public safety problems that have been created by early release programs, even if the community treatment or supervision resources are not increased.

The current recidivism rates of released CDCR prisoners are quite high. Further, there is ample evidence that the level of crowding has contributed to a high level of violence within CDCR's institutions. Both inmates and staff have been victims of this prison violence. Moreover, the present inadequate system of prison mental health care and the idleness of many inmates make it more likely that these recidivism rates will remain high. Thus, the status quo that is made worse by severe crowding is threatening to community safety. A better managed and designed penal system could help California reduce risks to the public.

REPORT OF JOSEPH LEHMAN

Coleman v Schwarzenegger et al.,
No. Civ. S-90-0520 LKK
Plata v. Schwarzenegger et al.,
No. C01-1351 T.E.H.

AUGUST 2008

[1] REPORT OF JOSEPH LEHMAN

A. Background

1. I have over 35 years of experience in corrections, parole and probation, including managing adult prison systems and adult probation programs. I have fifteen years of experience running three state correctional systems in Washington State (1997 to 2005), Maine (1995 to 1997) and Pennsylvania (1990 to 1995).

2. In addition to correctional positions, I have been a Commissioner on the Pennsylvania Commission on Crime and Delinquency, a member of sentencing commission in two states (Pennsylvania ex-officio) and Washington. I have been President of the Association of State Correctional Administrators and co-chair of the Washington State Law and Justice Advisory Council. I have received the Michael Francke Award for Excellence from the Association of State Correctional Administrators and the E.R. Cass Award from the American Correctional Association, among others. I have a B.A. from Saint Martin's College and an M.A. with an emphasis in Criminal Justice from Pacific Lutheran University. A complete description of my background is contained in my resume, which is attached hereto as Exhibit A.

3. In the last four years, I have not testified as an expert witness.

4. In December 2006, I was appointed by the State of California as a member of the CDCR Expert Panel on Adult Offender and Recidivism Reduction Programming. That panel produced a report to the California Legislature in June [2] 2007, entitled *A Roadmap for Effective Offender Programming in California*. Joint Pls Tr. Ex. 2 (Expert Panel Report). To produce that report the panel including myself, toured California prisons, were provided numerous documents and heard presentations from many officials within the CDCR.

5. I have been asked by the attorneys for Plaintiffs in both of these cases to express an opinion about whether the California prison system is overcrowded and the effect that overcrowding generally has on the provision of medical and mental health care. I also have been asked to express an opinion about whether a meaningful reduction of the prison population can be accomplished without any significant risk to public safety.

B. Overcrowding in California's Prisons

6. There is no question that California's prisons are overcrowded. As of July 23, 2008. the institution population was 155.096 or 195.3% of design capacity. (CDCR, Data Analysis Unit, Weekly Report of Population, July 23, 2008.) I agree with Governor Schwarzenegger and others that this is an emergency situation; it calls for drastic and immediate action.

7. I am familiar with the effects of prison overcrowding. During my tenure as Secretary in Washington and Pennsylvania, the prisons in those jurisdictions were overcrowded.

8. The kind of severe overcrowding that is present in California's prisons affects the entire operation of a prison and a prison system. First, it is very dangerous for prisoners and staff. "'The overcrowding of CDCR facilities has led [3] to increased numbers [of] infectious disease outbreaks and riots and disturbances system-wide." ' (Expert Panel Report at 9.) Second, overcrowding places intolerable burdens on the staff and the facilities, with significant negative impacts on the CDCR's ability to provide prisoners with all the necessary services, including health care. Third, prison overcrowding in many respects makes the prison classification system meaningless. The classification of inmates becomes no more than a drill to find an empty bed. This results in a greater risk of violence and the inappropriate housing of prisoners who need health care services. In terms of health care, the overcrowding creates a likely situation where only those prisoners who have the most obvious health care issues are classified appropriately. In many respects, in an overcrowded system the classification process focuses only on the behavior of the prisoner, particularly whether he is gang related and presents a potential for violent behavior. Certainly, in this environment the needs of the individual are secondary.

9. The conclusion the Expert Panel reached with respect to rehabilitation is equally applicable to health care: "[The] incidences of violence and other negative consequences of overcrowding degrade the CDCR's ability to consistently operate rehabilitation programs in the prison environment. While lockdowns and controlled movements allow the CDCR to increase the safety of its correctional officers and prisoners, when wardens enact these security measures, they cancel all programming in the affected prison areas. " (Expert Panel Report at 9.)

[4] 10. Overcrowding affects virtually every aspect of a prison's operation. Severe overcrowding, like that affecting California's prisons, results in a lack of treatment and office space, decreased access to health care services, and the cancellation of such services during lockdowns. In lockdown situations staff often have to escort prisoners to their appointments or activity, which makes the strain on the staff even more acute. Because of the strain on the staff, they must then choose between conflicting needs of the prisoner. I found during my tours that significant portions of program space were being used to house prisoners. Overcrowding thus reduces the opportunity for prisoners to program, which causes the obvious idleness 1 observed in a large segment of the population. That in turn leads to frustration, tension and increased violence among the prison population.

C. The California Prison Population Can Be Reduced Safely

11. The first recommendation of the Expert Panel is to reduce overcrowding. (Expert Panel Report at viii.) The panel included as members James Gomez, former Director of the California Department of Corrections, Reginald Wilkinson, former head of the Ohio prison system. Steven lckes, Deputy Director of the Arizona Department of Corrections, Jeffrey Beard, Secretary of the Pennsylvania Department of Corrections, Mark Carey, President of the American Probation and Parole Association, Joan Petersilia, Ph.D., an expert retained by Defendants, and Marisela Montes, then Chief Deputy Secretary for Adult Programs for the CDCR. (Expert Panel Report at ii.) As Chair or the Model Program Sub-Committee, I proposed that recommendation, and continue to [5] believe that a reduction in the population is a

necessary condition for providing rehabilitation in the California prison system. The Expert Panel concurred in that recommendation. The same recommendation holds true for providing other services, especially medical and mental health care,

12. The Expert Panel, mainly through the work of Dr. Petersilia, reviewed fifteen reports that had been written since 1990 on the subject of the crisis in California's prison system. Dr. Petersilia found that all of the reports made the same ten recommendations, which we endorsed:

a. Stop sending non-violent, non-serious offenders to prison. This particularly pertains to technical parole violators, who could better be served in community based, intermediate facilities.

b. Once in prison, use a standardized risk and needs assessment tool to match resources with needs and determinate appropriate placements for evidence-based rehabilitation programs.

c. Develop and implement more and better work, education, and substance abuse treatment programs for prisoners and parolees.

d. Reform California's determinate sentencing system to reward prisoners for participating in rehabilitation programs and [6] allow the system to retain prisoners who represent a continued public safety risk.

e. Move low risk prisoners to community based facilities toward the later part of their sentences to foster successful reintegration and save, more expensive prison-based resources. Sub-populations, such as women, the elderly and the sick, are ideal candidates.

f. Create a sentencing policy commission or some other administrative body that is authorized to design new sentencing statutes into a workable system that balances uniformity of sentencing with flexibility of individualization.

g. Reform California's parole system so that non-serious parole violators are handled in community-based intermediate facilities and more violent parole violators are prosecuted for new crimes.

h. Create viable partnerships between state and local corrections agencies that would expand sentencing options, enhance rehabilitation services, and strengthen local reentry systems. Suggestions have been made that include Community Corrections Acts (to get greater funding for local criminal justice initiatives) and a Community Corrections Division of the CDCR charged with developing alternatives.

[7] i. Evaluate all programs and require that existing and newly funded programs are based on solid research evidence.

j. Promote public awareness so that taxpayers know what they are getting for their public safety investment and become smarter and more engaged about California's prison system.

(Expert Panel Report, Appendix A.)

13. The Expert Panel Report also recommended that the prison population be reduced through the more aggressive use of in-prison credits, the early discharge of some parolees and the selective use of

parole for only certain offenders. (Expert Panel Report at 11-13, 41-43.) The panel found, and I concur, that if implemented properly these measures would reduce the prison population without any significant adverse affect on crime in the community. As the panel found, "it has been widely established by a number of studies, including those conducted by the US Department of Justice and the CDCR. there is no relationship between time served and recidivism (US Department of Justice. 2006). Therefore, releasing prisoners early as a result of earning program credits will not increase their recidivism rates." (Expert Panel Report at 92.)

14. Indeed, in Washington State parole was abolished in 1984 and the law was changed so that offenders could not be sent to prison for probation violations. From 1984 to 1986, the court made certain changes to the sentencing laws retroactive and increased the amount of credits that prisoners were entitled to, creating a situation that caused prisoners to be released "early" in a relatively short [8] period of time. This early release did not have any significant impact on the crime rate or the rate of recidivism.

15. While I was Secretary we were directed by the Legislature to institute a system for parolees that allocated parole resources based on risk that an offender would commit a new crime, as measured by a risk instrument. In this system, low risk parolees and probationers were not supervised at all. This allowed the Department of Corrections to concentrate its resources on those parolees most likely to commit serious crimes in the future. In my experience, only a handful of the low risk offenders who were not supervised were subsequently convicted of violent

crimes, and those were for assaults without a major injury.

16. Washington State also had a number of laws that prevented parole violators and certain felons from clogging up the prisons. Technical parole violators were not sent back to prison at all, but were placed county facilities. In addition, another law diverted certain categories of low risk felons to the county by prohibiting the courts from sentencing them to prison. In my opinion, both of these measures controlled the prison population while not having any significant adverse effect on public safety.

17. Washington State has a legislatively created Institute for Public Policy, which conducts research on criminal justice issues, among many other things. In a report entitled *Evidence-based Public Policy Options to Reduce Future Prison Construction, Criminal Justice Costs, and Crime Rates* (October 2006), the Institute noted many programs that can be instituted in the community and in [9] prison that effectively reduce recidivism (some by as much as 18-20%), thereby lowering the prison population and the cost of the punishment. I believe that many of these programs could be instituted safely by California.

18. In Pennsylvania the state made changes to sentencing guidelines to allow for restorative and intermediate sanctions, such as fines, restitution, probation, residential treatment programs and house arrest. Part of the intent of these changes was to reduce the number of offenders who were sent to state prison. In my opinion and experience, these changes did not result in any increased harm to the public; in fact, in general they benefited both the community and the offender.

D. Conclusions

19. In my opinion. California must act quickly and decisively to reduce its prison population so that prisoners receive the health care services to which they are constitutionally entitled. I have no doubt that the overcrowding crisis in California's prisons can be resolved without having a significant adverse impact on public safety.

20. I have reviewed a memo authored by Deborah Hysen, the head of the CDCR's Facilities Strike Team, appointed by the Governor to implement the extensive AB 900 building plans. Joint Pls Trial Ex. 74 (Validation of In-Fill Bed Plan, AB 900 Strike Team Issue Memo No. 1, August 13, 2007). In that memo. Ms. Hysen states (on pages five through six) that AB 900 infill bed construction should not exceed 145% design capacity, and that in its Master Planning process, [10] the CDCR should ensure that prisoners not be housed at higher than 130% design capacity in the future, a number based on national standards. I agree with Ms. Hysen. In my opinion and in my experience, housing California prisoners at 130% design capacity will give prison officials and staff the ability to provide the necessary programs and services for California's prisoners.

21. I have reviewed the report submitted by James Austin, Ph.D, which discusses the effects of various prison population reducing measures on public safety. I agree with his conclusions that if such measures are properly implemented, the prison population can be reduced, and the community as well as the prison system will be safer. This does not mean that some offenders released from prison "early" will not commit crimes. That happens now with offenders streaming back into the community no better and

often worse off than when they went to prison. There is no need to choose between dangerously overcrowded prisons, on the one hand, and less crowded prisons but more crime, on the other; the question instead is whether California can maintain or reduce crime levels and at the same time run a less crowded prison system. Experience and research in other states throughout the country says that it can.

JOSEPH D. LEHMAN

SUPPLEMENTAL REPORT OF DOYLE WAYNE SCOTT

Coleman v. Schwarzenegger et al.,

No. Civ. S-90-0520 LKK

Plata v. Schwarzenegger et al.,

No. C01-1351 T.E.H.

AUGUST 2008

[1] Supplemental Report of Doyle Wayne Scott

1. I submit the present report to supplement my report dated November 9, 2007. Since writing that report, I have not authored any publications. I have not testified as an expert witness in court, but I have testified in one deposition: my deposition taken in this case, on December 14, 2007.

2. Neither my curriculum vitae nor the rate my company, MGT of America, is charging plaintiffs for my work on this case, has changed.

3. Since completing my expert report for this case in November 2007, I have toured four more California prisons: Folsom State Prison (Folsom) and the California State Prison-Sacramento on June 3, 2008, and the California State Prison-Solano (Solano) and Deuel Vocational Institution (DVI) on June 4, 2008. On these tours, 1 was allowed open access to staff, prisoners, medical and custody records and information. I was not blocked from speaking to any staff or asking any question, and all of my questions were answered. I have also reviewed additional documents, listed in Appendix A to this Supplemental Report.

Overcrowded conditions continue to endanger health and safety of California's prisoners

4. The additional tours and documents serve to confirm the conclusion in my original report: California's prisons remain drastically overcrowded, which makes the state unable to keep prisoners and staff safe and to provide for the health care needs of prisoners. I agree with former CDCR Secretary Jim Tilton, that the overcrowding—and [2] the use of dayrooms, gymnasiums, hallways, and other inappropriate places for housing prisoners—"has reduced the availability of program and recreation space that is essential for positive inmate programming. There is widespread agreement among correctional experts that chronic idleness produces negative psychological and behavioral effects in prison." Joint Pls' Trial Ex. 72 at 15 (CDCR Presentation to the Senate Select Committee on Prison Population Management and Capacity, August 1 5, 2006). 1 further agree with Mr. Tilton that

> [i]dleness-related frustration increases the probability of interpersonal conflict and assaults in prison. Overcrowding simultaneously reduces the opportunities for staff to effectively monitor inmate behavior and drastically limits the options to reduce animosities between inmates by separating them or sending them to different facilities. Thus, there is less for inmates to do, fewer outlets to release the resulting tension, a decreased staff capacity to identify inmate problems, and fewer options to solve them if and when they do.

Ibid. Moreover, my assessment of the present situation in California's prisons comports with Mr. Tilton's in 2006: "the risk of catastrophic failure in a system strained from severe overcrowding is a constant threat . . . . [I]t is my professional opinion this level of overcrowding is unsafe and we are operating on borrowed time." *Ibid.*

5. Prisoners continue to be housed in unacceptable conditions that endanger their health and safety. Prisoners in Folsom (in Building Two) were double-celled in six-by-eight foot cells, with two bunks, a toilet and sink, and a desk crowded into the cells with the two prisoners. There was hardly any unencumbered space in those cells, and they were extremely narrow. Prisoners in these units spent very little time outside these [3] cells. There were no dayrooms in the units. Although there was a large yard, they spent little time on it and what time they spent was in groups of several hundred with very few staff (I saw only one staff on the yard on my tour.) It is inhumane to warehouse prisoners two to a cell under such conditions.

6. Inadequate out-of-cell or out-of-gym time was a common complaint on these recent tours, as on my first round of tours. Staff at Solano told me that administrative segregation prisoners do not receive even the required 10 hours per week of outdoor recreation, because there is simply not enough space available to provide them access to safe exercise.

7. Cells in Folsom's Building Five were seven by nine feet, double-celled, and had solid metal doors. These doors make direct supervision extremely difficult—staff cannot tell what is going on in the cells. Under these circumstances, staff are even less likely to be able to respond appropriately to medical and mental health emergencies, given their inability to See what is happening in the cells, which delays response (because they will need appropriate security

and staff to be able to open the doors) and increases mistrust.

8. These cells doors were also individually keyed on the first tiers, making quick exit in an emergency extremely difficult and escorts far more time-consuming and staff-intensive. The staffing on these units was inadequate, given the solid doors.

9. Nontraditional or "ugly" beds are still very much a common practice in [4] California's prisons. A converted gymnasium at Solano (H Building) contained 225 triple bunks—a wall of sound and bodies and noise. As was often the case in areas with significant numbers of people housed where people were never intended to be housed, many of the over-used toilets and showers were broken. Z Dorm at DVI was a similar mass of people.

10. DVI, a reception center for the San Francisco Bay Area, is extraordinarily overcrowded. The design capacity is 1700 and the count, the day I was there, was just short of 4000. All but approximately 640 prisoners were there for reception processing. The prison is so overcrowded that prisoners being released are carefully timed with new arrivals so that beds are immediately swapped. Every available space was in use for offender housing: most dayrooms at DVI are used for offender housing. I saw dayrooms with 40 inmates in double and triple bunks, using showers in the bottom tier of the associated cellblock, There were beds along all the outer Walls and in the central area, leaving just enough space to walk, but not enough to do anything else. There was no recreation space at all.

11. The Receiver has written extensively about how the physical structure of CDCR facilities poses a serious barrier to delivery of adequate care:

> The facilities available for providing health care services within CDCR are woefully inadequate. Through years of neglect, the facilities have long since passed the time when modest investments could remedy the problem. We are dealing not with deferred maintenance, but with some facilities that are literally falling apart. In addition, investments in health care facilities have significantly lagged behind growing initiate populations, so much so that available clinical space is less than half of what is necessary for daily [5] operations.

Joint Pls Trial Ex. 56, Exhibit 1, at 25 (Federal Receiver's Turn-Around Plan of Action, June 6, 2008, attached as Exhibit 1 to Receiver's Eighth Quarterly Report.) The Receiver has also documented serious problems resulting from the custody understaffing that I discussed in my initial report, noting that "[s]ystem-wide, CDCR lacks the custody staff and organizational structure and processes to ensure that patient-inmates are reliably escorted and/or transported to medical appointments. As a result, patient-inmates are often denied timely access to health care services, substantially increasing the risk that patient-inmates' health will further deteriorate and increasing the overall costs of providing health care services." *Id.* at 5. Several examples he provides are worth quoting at length, because they demonstrate the serious harms to prisoners and staff that result from the understaffing that follows from the current overcrowding crisis:

> Information obtained continues to underscore the serious repercussions of the deficient numbers of custody staff to supervise clinic operations and medication administration to patient-inmates, For example, at one level III/IV institution, a facility clinic was left unsupervised while the correctional officer escorted a patient-inmate back to the housing unit. While the officer was away several prisoners attacked and viciously stabbed a rival gang member 13 times while secured within the holding tank in the facility clinic. At another institution, investigators pursuing suspected criminal conduct in a facility clinic caught patient-inmates stealing syringes and other medical supplies via surveillance cameras. This facility clinic did not have correctional officer posts allocated for the supervision of patient-inmate movement inside the clinic areas.

Joint Pls Trial Ex. 67 at 12-13 (Receiver's Seventh Quarterly Report).

> At present, the CDCR does not have any housing units designed to adequately provide for the needs of developmentally disabled prisoners. [6] Patient C was a 36 year old prisoner with the functional IQ of a nine-year old, and documented seizure disorders. An adaptive evaluation dated July 14, 2005 required "close supervision" in order to remind Patient C to take his medications. However, instead of being placed in a medical sheltered living unit (no such facilities exist in CDCR), Patient C was confined to an overcrowded dormitory in one of California's most deteriorated prisons. In late 2007, Patient C began to encounter problems with medication management and his behavior. On November 9,

> 2007, as the result of an alleged battery, Patient C was transferred (without his medical records) to a nearby high security prison administrative segregation unit. Thereafter, between November 9, 2007 and January 4, 2008, Patient C "missed" four medical appointments (the exact causes for the "missed" appointments is currently under investigation). On January 17, 2008, Patient C returned to dormitory housing; however, there is no indication that the necessary close supervision to remind him to take his medications was provided. Indeed, given the age and structure of the dormitory, and the limited staffing at this facility, it does not appear reasonable to expect minimally adequate care for developmentally disabled prisoners to be delivered at the prison where he had been housed. On January 27, 2008 another prisoner in the dormitory reported to correctional officers that Patient C was having a seizure, Prisoner C died the same day.

Joint Pls Trial Ex. 56 at 48-49 (Receiver's Eighth Quarterly Report).

12. By placing prisoners in such settings, and requiring staff to work under these conditions, California is placing itself at serious risk, as the Governor noted in his State of Emergency Proclamation, from increased violence from enforced idleness, deteriorating mental and physical health from inadequate access to exercise and the outdoors. Further, these overcrowded conditions breed fear, anonymity, and mistrust on the part of custody staff which lead to an increased risk of inappropriate responses by such staff to medical and mental health needs, especially in emergencies.

13. I agree with the Receiver that "[c]ustody resources needed to facilitate [7] access to care and provide the security necessary to deliver health care safely in a prison setting are inadequate, lacking both the personnel and structure to ensure timely access to health care services." Joint Pls Trial Ex. 67 at 5 (Receiver's Seventh Quarterly Report).

California has no meaningful plan to fix its overcrowding problems

14. The CDCR's "Integrated Strategy to Address Overcrowding in CDCR's Adult Institutions" (Integrated Strategy) is an inadequate plan to address this crisis for several reasons. Joint Pls Trial Ex. 73. First, even if CDCR were to build the "infill" and "secure reentry facilities" they note in the plan, these spaces will not be available for prisoners to move in for years. CDCR predicts building 4,800 infill beds and 3,000 reentry beds in Phase I, and "up to" 3,800 additional infill beds and 8,000 additional reentry beds to follow. *Id.* at 3. CDCR predicts that the first 1000 infill beds will not be ready for occupancy until FY 2010/11, with the next 3,800 riot available until FY 2011/12, *See* Integrated Strategy at Chart 1A, Priority Projects, May Revision Pop. Only 500 reentry beds will be available in FY 2009/10, with 500 more the next year, and an additional thousand added for each of the next several years. *Id.* Some of the beds intended to provide relief for this emergency will not be available until 2013, *Id.* CDCR's building projects will provide prisoners with minimal relief from the emergency conditions for many years to come, an unacceptable state of affairs.

15. Second, I have serious doubts as to whether CDCR is capable of accomplishing what they set out to do in this strategic plan. The plan itself admits

that [8] "CDCR has yet to build any of the infill beds authorized by AB 900" at its passage in May 2007 because they have not been able to find Sites and because of "unforeseen limitations of infrastructure„ community concerns with prison„ expansion, staffing difficulties, and scope of construction." *Id.* at 2. These should not have been "unforeseen" problems—these are exactly the problems faced in siting and building prison facilities. CDCR's current facilities have been severely understaffed and have a severely decaying infrastructure, as I point out in my original report; local communities are always concerned with prison expansion. These problems are nothing new. This plan admits CDCR's planning shortcomings for the last several years but provides no assurances that CDCR now has the capacity to accomplish what it promises.

16. Further, the plan states that "the projects have been on hold" because of recent population projections, a budget crisis, and "settlement deliberations" in this case. *Id.* at 2-3. If the state were serious about building new facilities, and were committed to this as a meaningful solution to the crisis, it would not make such excuses.

17. Third, the infill bed numbers—4,800 beds in Phase I, 3,800 more in Phase II—are based on overcrowded housing—denoted on these charts as "HOC" or "housing *overcrowding* capacity," instead of "DBC," or "design build capacity." Prisoners in the new facilities, then, might not initially be living in gymnasiums or hallways, as they are now, but they will still be overcrowded. California will be in the same position with the new beds as with the old, replicating the same conditions that led to inadequate staffing [9] and treatment space, inadequate out-of-cell time, and

overworked and overstressed staff and violent, frustrated prisoners.

18. The state's AB 900 Strike team concluded that housing should be at no more than 130% of design bed capacity in the long term, based on national standards. Joint Pls Trial Ex. 74 at 6 (Validation of In-Fill Bed Plan, AB 900 Strike team Issue Memo No. 1, August 13, 2007). That is a realistic and appropriate place for CDCR to be, to ensure that its prisons are safe and provide legally required services. I caution, however, that while this number might be appropriate for new construction, it should used carefully in CDCR's old, decaying facilities, with their failing infrastructure. Crowding prisoners at 130% is an appropriate goal for CDCR, speaking broadly, but some facilities might only be able to support and provide appropriate health care for smaller numbers.

19. Fourth, the integrated Strategy is extremely vague on reform provisions. The document states that CDCR's strategy "relies upon a reform component" to "effectively reduce overcrowding consistent with CDCR's mission to reduce recidivism," but does not say what that reform component is. Joint Pls Trial Ex. 73 at 5 (CDCR's Integrated Strategy). In fact, CDCR has not even decided what this "reform component" will look like: "our integrated approach incorporates summary parole *or an alternative reform measure* that would safely reduce average daily population by approximately 8,000 inmates when fully implemented." *Ibid.* (emphasis added). This aspiration is a far [10] cry from an actual strategic plan.

20. Fifth, the plan says nothing about funding sources for any of the building or reform components. Although AB 900 does provide some funding, it is not clear to me that it would cover all of the building

proposed in this plan and in particular, the undefined reform components. California's current budget crisis shows that unfunded promises are very risky propositions.

21. The bottom line was stated properly by Mr. Tilton, in a statement currently on the CDCR's website; I would simply add medical care to his list of mental health care, education, and other basic needs that cannot be supplied under current conditions: "[t]he Department of Corrections owns the responsibility to assist inmates who are willing, to change their ways with basic tools, of education. Life skills, drug treatment and mental health, so they can get better when they leave Corrections—not worse. But until I get overcrowding reduced—then I don't have the opportunity to provide the program that I believe is my charge." (Viewed on the CDCR website on August 6, 2008, at http://www.cdcr.ca.gov/News/ Background_Info.html)

Doyle Wayne Scott

Report of Doyle Wayne Scott

November 9, 2007

[1] Report of Doyle Wayne Scott

1. I am an expert consultant on corrections management, staffing, and security. I served for more than 30 years with the Texas Department of Criminal Justice (TDCJ), the agency that runs the state's prisons, and the Texas Board of Pardons and Paroles, culminating in an appointment as the Executive Director of TDCJ from 1996-2001. I have performed independent reviews and expert analyses on staffing patterns, institutional response to violent disturbances, general operations, and security controls for the National Institute for Corrections, the Oklahoma Department of Corrections through a contract issued by the Oklahoma state legislature, the Florida Department of Corrections, the New Mexico Department of Corrections, the Cook County judicial Advisory Council, the Indiana Department of Corrections, the Kentucky Department of Corrections, and the Puerto Rico prison system, the latter on behalf of the federal district judge overseeing reforms due to constitutional violations. I have served as the Vice-Chair of the American Correctional Association's Standards Committee and the Chair of the Legislative and Legal Issues Committee of the Association of State Correctional Administrators.

2. I have not authored any publications in the last ten years. I have not testified as an expert witness in the last four years in court or by deposition. My company, MGT of America, is charging Plaintiffs $250.00 an hour for my work on this case. My Curriculum Vitae is attached as Appendix A.

[2] I. California's severely overcrowded prison population far outstrips the ability of the system to safely or appropriately house its prisoners

3. The overcrowding crisis in California is, in my experience, unprecedented in scope and in the dangers and deprivations of day-to-day life in the prisons. My extensive experience in running the Texas prison system and evaluating management, staffing, and security needs in multiple state and local jail systems, as well as my review of numerous reports regarding California's prisons from diverse and credible sources, and my tours of four California prisons, lead me to the conclusion that without substantially reducing its prisoner population, California will never he able to generate the custodial support services necessary to provide prisoners with basic medical and mental health care.

A. The Texas experience demonstrates the impossibility for systemic reform in these areas under current overcrowded conditions

4. Next to California, Texas is the largest penal system in the United States and one of the largest in the world. When I started as a correctional officer in 1972, the system was severely overcrowded, reaching "over 200 percent of . . . original design capacity" by 1980, the year the overcrowding, health care, and many other aspects of the system were declared unconstitutional. *Ruiz v. Estelle*, 503 F. Supp. 1265, 1285 (S.D. Texas 1980). As Judge Justice found 27 years ago, the Texas Department of Corrections

> has been, by the admissions of its own officials, severely overcrowded since at least March of 1977. The problem has reached crisis proportions. When Director Estelle testified in August

> 1979, he reported that approximately 1,000 of the system's 26,000 inmates were sleeping on the floors of TDC institutions. These supernumerary inmates are housed in cells and dormitories already holding almost double the number of persons for which they were designed.

[3] *Id.* at 1277. The judge described the situation as "intolerable" and, in particular, noted that "[t]he population density of inmates confined in dormitories is shocking," *id.* at 1278, with "sanitary and recreational facilities" that were "wholly inadequate . . ." *Id.* at 1279.

5. Judge Justice issued population controls as part of the relief in Ruiz. *See, e.g., id.* at 1387. As a corrections manager and later the system's executive. director, I firmly believe that population control was absolutely necessary in our decades-long efforts to correct the systemic violations. We were able to remedy the serious harms by reducing our offender population to reasonable capacity limits agreed to by the parties that allowed the Texas Department of Corrections to properly classify and manage its inmates and their attendant needs. These limits or "caps" were calculated at five percent less than the original design capacity of each institution. Those "caps" were later memorialized in legislation passed by the State of Texas that made those limitations permanent.

6. California today is far more overcrowded than Texas ever was. It is the worst overcrowding I have ever seen, in my decades of work in the severely overcrowded Texas system and in subsequent expert consultant reviews of staffing, security, and management functions in prison systems in Oklahoma, Indiana, Florida, New Mexico, Kentucky, Cook

County, and Puerto Rico. Based on my experience, I was prepared to see crowded conditions, fraying infrastructure, and management failures in California's prisons. As the head 'of a similarly huge and complex penal system, and as an employee of that system as it struggled with severe overcrowding, I know that it is impossible to run such an [4] operation properly under such circumstances. However, I was shocked by what I saw in the four California prisons I toured. These tours confirmed the profoundly disturbing accounts that I have read from the Court, the Governor, California Department of Corrections and Rehabilitation (CDCR) officials, the *Plata* Receiver, the Legislature, and the Office of the Inspector General.[1] Not only are California's prisons operating under a state of emergency, it is clear to me that unless the population is reduced, the state will remain in crisis verging on, catastrophe and will remain utterly unable to provide adequate medical and mental health care to the prisoners in its custody.

---

[1] I personally toured four of California's 33 state prisons in October 2007: Avenal State Prison (Avenal), California Institution for Men (CIM), Valley State Prison for Women (VSPW), and California State Prison at San Quentin (San Quentin). These prisons represent a range of the most important variations in the system: men's and women's facilities; Reception Centers, general population units, specialized mental health units, condemned housing, and administrative segregation housing; dormitory, gymnasium, dayroom, hallway, and celled housing; high, medium, and low security; and old and more recently built structures. In addition, I have reviewed reports as noted in Appendix B from a wide range of credible and impressive sources, describing and analyzing individual prisons as well as systemic issues. My review of these written materials gives me confidence that my observations at the four prisons I toured are truly representative of the systemic failures described in this report.

B. California's prison population has expanded tremendously in the last 30 years without the infrastructure, staff, or management capabilities to support it

7. The last few decades have seen extraordinary growth in California's prison population. The population has grown more than 500 percent in less than 30 years, and—the number of prisons has nearly tripled. *Plata* Pls. Trial Ex. 1 at 4 (*Plata* Findings of Fact and Conclusions of Law Re Appointment of Receiver). Today, California houses [5] 171,285 prisoners; its prisons are at 203.7 percent of design capacity. Joint Pls' Trial Ex. 25 at. 1. (Weekly Report of Population, October 31, 2007).

8. The state has proven itself unable to address the increasing health care needs of the expanding population. As the population has grown, the state's prison infrastructure, staff, and management have stretched beyond the breaking point, resulting in the current state of acute crisis.

1. "Ugly beds"

9. It is impossible to grasp the scope of California's crisis without understanding the plight of the thousands of prisoners confined to "ugly beds." Before I describe the specific strains on infrastructure, staffing, and management, I would like to paint a picture of some of the stark realities of life in today's California prisons.

10. As the prison population has grown, it has outstripped the available space for safely housing prisoners. As a result, California has started in recent years to house more and more prisoners in so-called "ugly beds." According to the Governor, as of October 2006, "the CDCR is required to house more

than 15,000 inmates in conditions that pose substantial safety risks, namely, prison areas never designed or intended for inmate housing, including, but not limited to, common areas such as prison gymnasiums, dayrooms, and program rooms. . . ." Joint Pls' Trial Ex. 1 at 1 (Governor's Emergency Proclamation). Six months later, that number had risen to more than 16,000, which [6] "means that about 10 percent of the prison population is currently housed in 'had' beds." Joint Pls' Trial Ex. 13 at 2 (Senate Budget and Fiscal Review Committee Subcommittee No. 4, Agenda of April 12, 2007). "Ugly beds" are not merely uncomfortable, they are actually dangerous: they make it harder for staff to prevent violence and breed anger and frustration among prisoners by sharply curtailing the space available for anything but the warehousing of bodies. *See*, *e.g.*, *id*. at 2.

11. These "ugly beds" are tally appalling. I saw cages at the California Institution for Men (CIM) where, as staff freely admitted, prisoners have sometimes had to spend the night because there were no beds for them. In more than 35 years of prison work experience, I have never seen anything like it. These cages are in wide hallways with busy foot-traffic. They are only a few feet wide, and there is no room for a mattress, so prisoners have to sleep sitting on a bench. There are no toilets, and staff shortages would lead prisoners to wait lengthy periods to be escorted to bathrooms. It is difficult to properly hydrate prisoners in such a setting. These cages are an inhumane and unacceptable result of severe overcrowding.

12. At the same prison, I saw 54 prisoners in Sycamore Hall double-bunked and stuffed into a dayroom intended for recreational purposes. They

had only one toilet. Also at CIM, I saw a shockingly overcrowded gymnasium at the East Facility. Such facilities are supposed to be temporary housing, but staff told me that some prisoners are there up to a year. It was a sea of people: 202 prisoners, with only seven showers and 11 working [7] toilets. These numbers violate contemporary correctional standards for safe and hygienic facilities, as discussed in Section I.B.2, below.

13. At the California State Prison at San Quentin (San Quentin), I saw a gymnasium converted to inmate housing with 328 double bunk beds. There were only nine working toilets to service this entire population: Similarly, Dorm 410 at Avenal State Prison (A venal) was designed for 172 prisoners but has a current population of 344, some housed in triple bunks.

14. My observations are entirely consistent with the findings of the *Coleman* Special Master, who found shocking living conditions for many mentally ill prisoners. For example, Deuel Vocational Institution (DVI) "was old and overcrowded. . . . A large room around the perimeter housed 38 [mentally ill] inmates in a triple-bunk arrangement. They reported that, the room had a single toilet, urinal, and shower. Inmates were observed dumping water into, a drain from a 30-gallon garbage can which they used as a shower supplement. Many windows were broken. Inmates reported that they used blankets to cover windows but that custody officer removed the blankets without replacing them, leaving the area cold and the beds unblanketed. An area of the [administrative segregation] building housing caseload inmates was referred to as 'deep seg' or 'the dungeon' its four cells were designed for the apparent

purpose of isolation. They had almost no outside light and were illuminated by a single light controlled by an outside switch and turned off at night. Cells were malodorous, in disrepair, and out of [8] officers' ready view. Inmates in these cells likely had no more contact with custody staff than inmates housed in [punitive segregation] or stand-along administrative segregation cells and were in much worse condition. Time out of the dorm was limited to approximately 20 minutes twice per day for meals." Joint Pls' Trial Ex. 36 at 101 (18th Special Master's Report).

15. The space inadequacies extend to treatment as well as living spaces. The *Coleman* Special Master has noted that "[e]xcessive population, thus, results in a reduction of programming space now occupied by inmate hunks[;] greater competition for use of the diminishing available space; fewer Correctional officers to permit access to the diminishing space; and, ultimately, the increasing frustration and demoralization of clinicians trying to provide treatment." Joint Pls' Trial Ex. 35 at 7 (*Coleman* Special Master's Report Regarding Overcrowding, May 31, 2007). He has documented mental health treatment taking place in closets (Joint Pls' Trial Ex. 36 at 73 (California Medical Facility)), in the middle of dayrooms (*id.* at 42 (High Desert State Prison), 55 (Mule Creek State Prison)), and on outdoor benches (*id.* at 304 (Valley State)). At the California Correctional Institution, suicidal prisoners have been held in holding cells; sonic "remained in the most frequently used holding cells for as long as three days." *Id.* at 225.

16. As the *Coleman* Special Master has noted, the "ugly beds" harm prisoners. In California's severely overcrowded system, "[a]ll inmates must spend increasingly larger [9] chunks of their days in their

cells, or much more dangerously, in one of the triple-bunked 'non-traditional' spaces. None of this is conducive to the health and well-being of any inmate, much less a seriously mentally disordered inmate/patient; it inevitably escalates the incidence of mental illness and exacerbates the condition of those already mentally fragile and vulnerable." Joint Pls' Trial Ex. 35 at 7-8.

2. Infrastructure

17. Overcrowding affects all prisoners, not just those who are triple-bunked in gymnasiums or forced to live in hallways and dayrooms. "[T]he overcrowding of the prison facilities has overburdened the basic infrastructure of the institutions resulting in sewage spills and shortages of safe drinking water." Joint Pls' Trial Ex 13 at 2 (Senate Budget and Fiscal Review Committee Subcommittee No. 4, Agenda of April 12, 2007). "[C]ritical deficiencies in . . . existing infrastructure" are found at most prisons; 20 prisons have critical drinking water system deficiencies; 18 have critical deficiencies in waste water treatment, 20 in electrical systems, and 14 in other areas: *Id.* at 9.

18. My tours demonstrated the truth of these findings. In my opinion, CIM is an incredibly old, poorly maintained, unsanitary facility with inadequate staffing and overburdened, crumbling infrastructure that must be vacated and provided significant maintenance and renovations or else simply abandoned. In its current state, it is not fit for housing human beings. Similarly, San Quentin needs a substantial infrastructure overhaul before it should house people: I saw bars rusted almost completely through, filthy [10] conditions that staff say cannot be made clean, and what was described to me as

permanent unidentified liquid dripping from upper tiers onto busy passageways. It might well cost less to build an entirely new facility than to rehabilitate San Quentin to an acceptable level, the infrastructure damage and deterioration are so severe.

19. On my tours, I saw housing units with serious deficits of toilets, sinks, and urinals by contemporary correctional standards. The American Correctional Association states that toilets should be "provided at a minimum ratio of 1 for every 12 inmates in male facilities and 1 for every 8 inmates in female facilities." Joint Pls' Trial Ex. 51 at 38 (American Correctional Association, Standards for Adult Correctional Institutions, 4th Ed.). Further, one sink should be provided for every 12 prisoners, and one shower for every eight prisoners. *Id.* at 38-39.

20. California far exceeds these minimum ratios. For example, at CIM, Sycamore Hall had 54 prisoners for one toilet and East Gym had 202 prisoners for seven showers and 11 working toilets. Avenal 410 had 344 prisoners with 14 toilets. As a correctional administrator, I find that such deprivations are not only inhumane, they breed violence, as I discuss in greater detail below, and serve as a dangerous vector for the spread of disease.

21. My understanding is that the established standards for toilets and showers in correctional settings are based on infectious disease prevention requirements. Such precautions are necessary because disease spreads with dangerous speed in extremely [11] dense populations with limited sanitation facilities. According to the CDCR institutions chief, "[t]he overcrowding of CDCR facilities has led to increased numbers of infectious disease outbreaks . . . system-wide." Joint Pls' Trial Ex. 11 at ¶ 3

(Declaration of Scott Kernan in Support of Defendants' Report in Response to the Court's February 15, 2007 Order, May 16, 2007). The *Plata* Receiver has documented similar serious overcrowding-caused outbreaks, supporting his opinion that "[t]he serious levels of crowding in CDCR prisons and the unconstitutional levels of medical services" make it necessary to be alert to "the ever present danger of a serious infectious disease outbreak in California's prisons; a problem that not only jeopardizes inmates and staff, but also has an impact on public health in the community." Joint Pls' Trial Ex. 30 at 70-71 (Receiver's Fourth Bi-Monthly Report, March 19, 2007). As a correctional administrator, lam extremely concerned that lockdowns and limited programming also reduce access to exercise and fresh air; and increase idleness and frustration, with consequent negative effects on physical and mental health.

22. One result of having too many people and too few sanitary facilities are that toilets, lavatories, and showers will be used much more than originally contemplated and wear out faster. Prisoners complained of lack of hot water for weeks at a time at Avenal (on 5 Facility and Building 410, where prisoners complained that there had been no hot water for months) and for days at a time in CIM's West Facility. At San Quentin, staff noted that they could submit work order after work order to repair basic living unit [12] functions, hut the repairs were simply not done. As a result, staff expressed hopelessness and cynicism. At all three of these facilities, maintenance was inadequate and work orders were not addressed in a timely manner.

23. I saw everywhere evidence of crumbling infrastructure. Ventilation appeared to be inadequate at

CIM where I saw filters and screens that had clearly not been cleaned in quite some time. In Elm Hall, a housing unit that houses many paraplegics and other prisoners who use wheelchairs, all windows had been broken and were covered with plastic sheeting. Prisoners also complained that the roofs leak. At Avenal, I saw large amounts of mold in almost every shower that I inspected, demonstrating inadequate sanitation practices over a significant length of time.

24. One of the most dangerous effects of overcrowding on infrastructure lies in safety deficits. I saw a frightening range of fire hazards in the housing areas, where the very high population density exacerbates the risk of deadly fires. I saw few efforts to minimize this risk, but instead saw hazards such as flammable blankets and cardboard on cell doors and other flammable material in the cells and living areas. At San Quentin, the risk of fire disaster is unacceptable—there is no automatic cell unlock system, so in a fire emergency, each one of hundreds of cells, spread over five tiers in many living units, would have to be unlocked individually. It is simply impossible. On my tour of West Block, I smelled at two separate cell locations something burning. Clearly, prisoners are able to light flammable material in their cells, and are doing so if there were a fire in San [13] Quentin's cell blocks, many would die in their cells.

3. Staffing

25. Staffing as well as infrastructure is strained to the breaking point. At the same time as it experienced extraordinary inmate growth, the CDCR has substantially reduced the number of prison, staff, eliminating more than 5,000 workforce positions in the last 15 years alone. Joint Pls' Trial Ex. 4 at 125

(Reforming Corrections: Report of the Corrections Independent Review Panel, June 30, 2004). And the system has not even been able to fill the positions that remain: "CDCR projects current officer vacancies, statewide, at approximately 4,130. . . . [I]t will take about 5 years to fill, all of the vacancies under the current academy structure."[2] Joint Pls' Trial Ex. 43 at ¶ 14 (Declaration of Scott Keenan in Opposition to Writ of Mandate, *California Correctional Peace Officers' Organization v. Schwarzenegger*, No. 06CS01568 (Sacramento Superior Ct)., January 19, 2007).

26. CDCR staffing rates are already extremely low by national standards. According to Dr. Joan Petersilia, who has headed numerous CDCR reform research efforts, "[w]hile the nation's prisons average one correctional officer to every 4.5 inmates, the average California officer is responsible for 6.5 inmates. Although officer salaries are higher than average, their ranks are spread dangerously thin and there is a severe vacancy rate." Joint [14] Pls' Trial Ex. 5 at 2 (Dr. Joan. Petersilia, *Understanding California Corrections* (May 200(6)). The Receiver has expressed similar concerns about staffing: overcrowding "is accompanied by severe, staffing shortfalls" in clinical, custodial, and managerial staff. Joint Pls' Trial Ex, 26 at 11-13 (Receiver's Report Re Overcrowding). I agree with Dr. Petersilia and Mr. Sillen that the paucity of correctional officers in California, due to the low staffing rate and high number of vacancies, is

---

[2] I saw no mention in Mr. Kernan's Declaration of how CDCR will account for the new vacancies that will come about if more prison beds are built as described in the declaration.

dangerous.[3] It is particularly dangerous for prisoners in need of medical care, as I discuss in Section II.A, below, not just because staff are not available to escort prisoners or clinicians to appointments, but because short-staffing can lead to forced overtime and burnout, such that staff make poor decisions, particularly in health care emergencies.

4. Management capabilities

27. Defendants themselves admit that the "rapid growth of the correctional system was not accompanied by organizational restructuring to meet increasing system demands and that it requires fundamental reform in a variety of areas, including management structure, information technology and health care services in order to function effectively and in compliance with basic constitutional standards." *Plata* Pls' Trial Ex. 1 at 4 (*Plata* Findings of Fact and Conclusions of Law Re Appointment of Receiver); *see also* Joint [15] Pls' Trial Ex. 4 at 1 (Deukmajian Report) ("the system's organizational structure has not kept pace with the massive growth in inmate population or with the vast geographical spread of the institutions,") As the Court has found, "[d]ecades of neglecting medical care while vastly expanding the size of the prison system has led to a state of institutional paralysis. The prison system is unable to function effectively and suffers a lack of

---

[3] Several prisons I visited—notably CIM and Avenal—reported that they had no Vacancies, but the staffing patterns I observed were clearly inadequate to maintain security within an acceptable risk level and to address the needs of the prisoner population, especially in the housing units with "ugly beds." In fact, every institution I toured had inadequate custodial staff on the ground to address the needs of the prisoner population, including ensuring that health care services are provided.

will with respect to prisoner medical care." *Plata* Pls' Trial Ex. 1 at 2 (*Plata* Findings of Fact and Conclusions of Law Re Appointment of Receiver). Indeed, "[i]n the area of health care services, the consequences of system expansion without reform have been shocking." *Id*, at 5.

28. Overcrowding has yielded crisis decision-making as well as training and supervision deficits, which leads to poor decisions by line staff in the housing units, as discussed in. Sections I.B.3 and II.A. Further, the CDCR has inadequate information-gathering systems to properly run this enormous and complicated system, meaning that CDCR cannot adequately plan for, create, and manage specialized medical and mental health units and cannot perform the basic functions (such as background checks) necessary to hire the staff to carry out health care treatment and support services. *See* Joint Pls' Trial Ex. 26 at 12 (Receiver's Report Re Overcrowding). As the Receiver has noted, the computer network "that connects the 33 prisons, regional offices, and headquarters is well over 15 years old. It can currently support only email and very [16] limited data." Joint Pls' Trial Ex. 32 at 53 (Receiver's Sixth Quarterly Report). Moreover, there are multiple outages and system failures on a daily basis "that prevent its use as a system to house, access, and share clinical data," and the computers are not linked locally or between multiple prisons, "preventing the sharing of prisoner/patient health care data such as basic laboratory, pharmacy or other information that is essential .for patient safety." Sixth Report at 53.

29. The management failures are found at the very highest levels of state government. As I related above, I was prepared to witness troubling conditions

at the prisons I toured in California, but was unprepared for the sheer magnitude of the crisis. I was even more appalled when I learned that California corrections and other state officials have known for many years that the problem was approaching emergency proportions. I have relied on the Governor's own State of Emergency Proclamation as an extraordinary admission of serious risk of harm for prisoners, staff, and the public, but I continue to be astounded that he issued it more than one year ago, and conditions have not improved.

30. It is indicative of the poor management that is apparent in this crisis that the Governor refused to see at least one of his corrections chiefs, Jeanne Woodford, when she attempted to meet with him regarding sentencing reform. Joint Pls' Trial Ex. 42 at 14:1-16 (Transcript of Proceedings, December 20, 2006, *Madrid v. Woodford*, No. C 90-3094 TEH). She was trying to see him because "our population pressures were just going to continue to become critical, and I felt that the only path to success had to include [17] sentencing reform . . . ." *Id.* at 11:10-15. In Texas, where we took prison population control very seriously, I had the governor's telephone number and met with him routinely every month. The personal contact with the highest level of management in state government was crucial to my ability to run a humane system.

5. Violence

31. One of the most pernicious effects of overcrowding is increasing levels of violence, and it is necessary to devote some discussion to the nature of these effects in order to better understand how overcrowding-driven violence and fear of violence interferes with medical and mental health care deli-

very. According to the CDCR, "overcrowding in CDCR prisons has . . . led to increased riots and disturbances." Joint Pls' Trial Ex. 11 at ¶ 3 (Declaration of Scott Kernan in. Support of Defendants' Report in Response to the Court's February 15, 2007 Order, May 16, 2007).

32. Overcrowding breeds violence in a number of ways. First, people are simply bumping up against each other far more often, especially those housed in triple bunks and dayrooms and hallways. They are also competing for extremely limited toilet, shower, and sink facilities and generate far more noise and smell in close quarters. Decades of experience have demonstrated to me that close physical proximity, lack of adequate supervision, noise, and competition for scarce resources are a recipe for violence in high-pressure prison settings. The lack of adequate toilets and sinks can also lead to long lines and anger at not getting basic needs met, which in turn can lead to violence.

[18] 33. Second, California prisoners have seen drastic cut-backs in the programming available to them due to the fact that programming space is used for warehousing bodies and because of the lockdowns due to staff limitations or violent outbursts. Joint Pls' Trial Ex. 6 at .22 (California State Auditor Report); Sections II.B and II.C, below. I observed on my tours that prisoners have inadequate out-of-cell time (or time spent outside of overcrowded dorms, gyms, dayrooms, and hallways) to compensate for the density of the population, especially at CIM, where prisoners living under extremely overcrowded, triple-bunked conditions had only a few hours per week of recreation in an exercise yard and few opportunities to obtain scarce prison jobs. The idleness and

hopelessness that accompany extremely limited programming in overcrowded living units breed frustration, anger, and violence. I agree with the Governors blue-ribbon panel that "combined with the reductions in security and non-security staff, the crowded conditions and lack of programming have elevated security risks and increased the probability of violent confrontations." Joint Pls.' Trial Ex. 4 at 125 (Deukmajian Report). I also agree with the *Coleman* Special Master that under overcrowded conditions, "[d]isturbances occur more frequently, with resulting increases in the number and duration of lockdowns." Joint Pls' Trial Ex. 35 at 7 (*Coleman* Special Master's Report Regarding Overcrowding, May 31, 2007).

34. Third, short-staffing and the use of "ugly beds" mean that staff has far less control over prisoners. It is far more difficult to supervise a gym densely populated with [19] triple-bunked minimum to maximum security prisoners, as at CIM East Facility, or a housing unit with people sleeping in bunk-beds in a hallway or dayroom, as at CIM and Valley State, than it is to supervise a unit where all prisoners are locked in cells. It is also far more difficult to get to know the prisoners in your unit when there are twice as many of them. These situations are very much a reality in CDCR. In CIM's West Facility, at Cleveland Hall, I saw 198 prisoners with only two officers to keep order, one in an office, with the other roving. Half of the dorm was in. another building connected by the shower/bathroom area, and one room in the back was completely out of sight. It is impossible to provide any type of security or proper services under these circumstances. The housing unit was a serious disturbance waiting to happen. If the prisoners wanted to take over the dorm they could do so in. a

second and no one would know. In the East Facility gymnasium at CIM that I toured, there were only two officers on duty at night and three during daytime watches, plus a gunner, to supervise 202 prisoners.

35. Visibility in these units was poor and sometimes sightlines were non-existent. The physical structure simply could not allow an acceptable level of security. Illicit activities would go on unnoticed and correctional officers are very much at risk. Further, these closed gyms and dormitories provide no opportunity for backup if radio communication is not available in an emergency, and the CDCR lacks adequate supervisory personnel and cameras that would augment the staffing. My review of the written materials and conversations with staff on the tours gives me confidence that these [20] conditions are replicated around the system—indeed, in many places, they are the norm.

36. With short-staffed and overworked officers, and angry, idle prisoners spilling out into common areas, experience tells me that not only is increased violence more likely,[4] but crisis decision-making based on the inadequate controls over the inmate population is guaranteed. The fear of violence and the potential for violence can have more immediate effects than violence itself, as officers make poor decisions, nearly invariably disbelieving prisoners and denying permission for movement, based on their concerns about controlling a population they perceive

---

[4] Increased violence may not be reflected in statistics or in self-reports by prisoners, since, as I mentioned above, many illicit activities will take place out of the sight and knowledge of staff. It is impossible to measure fully the degree of violence, including sexual assaults, taking place among the prison population because there is inadequate staff supervision.

to be barely contained. Such decisions can have the effect of denying essential medical and mental health care, particularly in emergencies, as is discussed in more detail in Section II.A.2, below.

37. Not only does overcrowding cause violence, but violence also leads to even more overcrowding. California punishes prisoners who are found to have committed acts of violence in prisons with the removal of work-time credits, which results in longer terms, or by referring them to the district attorney for prosecution. *See* Cal. Code of Regs., tit. 15, §§ 1315, 1316, and 1323. Either way, the result is likely to be extended lengths of stay, which increases the population and ensures further deterioration of the system.

6. The overcrowding is getting worse

[21] 38. "The overcrowded conditions are projected to worsen over the next several years as the population continues to grow. Over the past 20 years, the state inmate population has grown at an average annual rate of 5 percent. If this trend continues, the LAO indicates that the state prison system will be deficient 152,900 beds by the year 2022." Joint Pls' Trial. Ex. 13 at 2 (Senate Budget and Fiscal Review Committee Subcommittee No. 4, Agenda of April 1, 2007). CDCR itself projects steady population increases, to 175,418 by June 30, 2008: 179,105 by June 30, 2009; 183,171 by June 30, 2010; 186,137 by June 30, 2011; 189,226 by June 30, 2012, and 191,886 by June 30, 2013. Joint Pls' Trial Ex. 19 at 2, 6 (CDCR Fall 2007 Adult Population Projections).

39. No relief is in sight. The CDCR itself projects that even if its population reduction strategies are implemented successfully, California's prisons will still hold 162,674 male prisoners in 2009 (compared

with 159,605 male prisoners today). *Plata* Pls' Trial Ex. 2 at 12 (*Plata* Defendants' Report in Response to the Court's February 15 Order, May 16, 2007); Joint Pls' Trial Ex. 25 at 1 (Weekly Report of Population, October 31, 2007). The state has no plans to lift the State of Emergency before 2009. Plata Pls' Trial Ex. 2 at 12. Under the recently passed prison-building law, Assembly Bill 900, not a single "in-fill" bed will be activated before 2009, assuming that defendants can meet their schedule, *Id.* at 9. There are already indications that they cannot, however.[5] AB [22] 900 also fails to include any plans for staffing. Joint Pls' Trial Ex. 13 at 8. Given how short-staffed the CDCR currently is, they will simply have no ability to open new beds because there will not he adequate staff to run the new housing units.

40. In summary, the overcrowding is pervasive and severe and, barring court intervention. conditions will continue to deteriorate.

C. By any definition, California's prison population exceeds its capacity to safely house prisoners and provide for their needs

41. Any discussion of overcrowding must be grounded in a common understanding of what constitutes prison population capacity. Many terms are used to define how many prisoners can be physically confined in an institution. In Texas, we measure

---

[5] According to legislative experts, "the department's timeline for constructing the infill beds depends on its core business services functioning in a timely manner . . . [and] the majority of these functions within the department are not operating in a timely manner;" and "the remote location of many of the construction sites means that the department will likely have difficulty finding contractors willing to hid for the contract." Joint Pls' Trial. Ex. 13 at 7.

capacity by accounting for a wide range of factors that determine how many people can be held safely and humanely, grounded in all relevant accepted national standards and consistent with acceptable risk levels regarding violence and the spread of disease. *See* Appendix C, Texas Gov't Code §§ 499.101-110, 501.111-113. Specifically, an institution's capacity is meant to ensure that the system has enough space for safety, programming, and humane living conditions, as well as built-in extra space to allow routine maintenance shut-downs and the flexibility to transfer prisoners to specialized housing areas such as medical and [23] mental health units. Capacity includes the ability to provide "medical, dental, and psychiatric care adequate to ensure" minimal delays in service delivery as well as access to specialist care, "a sufficient number of psychiatric inpatient beds," and "sufficient staff" to "meet health care needs . . ." Texas Gov't Code. 499.102(a)(7), (8)(A)-(E). This definition is memorialized by statute, and each institution has a legally mandated capacity. *Id.* at § 499.101(a). This system ensures that the facilities and service areas—such as plumbing, kitchen space, electricity, laundry, education, etc.—are sized to the actual population, and not some anticipated or hoped-for number of prisoners. Our statutory system requires that the population may not exceed this statutory definition of capacity without the express permission of the Attorney General, and then only after rigorous "written findings that the population may be increased without limiting the ability of the division to transfer inmates between units and necessary for classification, medical, and security purposes" and approval of the governor. *Id.* at § 499.109.

42. Such a system is a distant dream in California, where by any measure, population vastly outstrips capacity. California's prisons are currently at 203.7 percent of "design" capacity, the determination by the prison architect as to how many prisoners an institution can hold, including how many toilets, lavatories, and showers are needed. Joint Pls' Trial Ex. 25 at 1 (Weekly Report of Population, October 31, 2007). In my experience, prison systems generally maintain their populations within design capacity. California's vast overflow, then, places it very far outside the range of accepted practice.

[24] 43. The design of some prisons makes them even more susceptible to overcrowding. For example, dorms are easier to overcrowd than cells. Avenal State Prison, which is nearly all dorm housing, was designed to hold 2920 prisoners. Joint Pls' Trial Ex. 25 at 2 (Weekly Population Report, October 31, 2007). At the time of my tour, staff informed me that it held approximately 7500, or 257 percent of design capacity.[6]

44. Another way of looking at prison capacity addresses the number of prisoners that can he held consistent with basic safety and security principles. California's population surpasses by 15,000 the "safe and reasonable" capacity, defined as "the maximum number of inmates who can safely and reasonably be housed in the prison system. . . . [The CDCR] has determined that the maximum safe and reasonable capacity of the state's male prisons is 137,764 – 179 percent of design capacity." Joint Pls' Trial Ex. 4 at

---

[6] The impact on health care delivery of such overwhelming numbers is clear and damaging: prisoners in Building 550, a dorm that holds a large proportion of paraplegic and other disabled prisoners, reported that it takes six to eight weeks to see a doctor.

124 (Deukmajian Report). CDCR currently holds 153,759 male prisoners in California prisons. Joint Pis' Trial Ex. 25 at 2 (Weekly Report of Population; October 31, 2007).

45. "Operable" capacity comes closer to the Texas statutory definition, and "takes into account space needed for effective programming in addition to safety and security." Joint Pls' Trial Ex. 4 at 124 (Deukmajian Report). According to a "group of experienced California prison wardens," CDCR's "operable" capacity "to support full inmate programming in a safe and secure environment is 111,309 inmates, or 145 percent of [25] design capacity." *Id.* at 124). CDCR currently houses 171,285 prisoners in California, exceeding "operable" capacity by nearly 60,000. Joint Pls' Trial Ex. 25 at 1 (Weekly Report of Population, October 31, 2007).

46. Those definitions, however, still fail to look at the capability of a system or individual facility to adequately and. legally care for the medical and mental health needs of its population, considered an essential part of capacity in the Texas statutory scheme. A certain amount of clinical space with appropriate fixtures (such as for hand-washing, privacy, etc). as well as specific treatment beds for medical and mental health care needs that require isolation from the general population must be included in the design structure. California has chosen to design and build prisons with inadequate clinical space and medical/mental health beds for the projected population. According to the Receiver, the state's "newest and most modern prisons" were "designed with clinic space which is only one-half that necessary for the real-life capacity of the prisons." Joint Pls' Trial Ex.

26 at 19 (Receiver's Report on Overcrowding, May 15, 2007) (emphasis omitted).

47. For example, in building Kern Valley State Prison, the newest institution, "absolutely no consideration was given to the real life impact on the prison's health care program that would result by the CDCR's plans to immediately double cell the entire prison." *Id.* at 21. The prison "was planned, designed, and subsequently constructed knowing full well that the medical, mental health, and dental space and staffing would be entirely insufficient for the prison's actual population." *Id.* at 22. Similarly, prisoners in [26] acute mental health crisis situations are frequently housed in punitive administrative segregation conditions and other inappropriate, locations because of the shortage of mental health crisis beds (MHCBs), as the *Coleman* Special Master has documented. *See, e.g.*, Joint Pls' Trial Ex. 36 at 53 (18th Special Master's Report) ("[f]aced with a chronic shortage of MHCBs, [Mule Creek State Prison]. . . . used five cells in administrative segregation to monitor inmates waiting for MHCBs"); 184 (at Wasco State Prison, "Holding cells in the CTC, in B Facility chapel, or in administrative segregation were often used for inmates awaiting MHCB admission"); 250 (at R.J. Donovan, "the monitor's expert continued to find decompensating inmates in administrative segregation"); and 220 ("[t]wo inmates seen by the monitor's expert [at California State Prison at, Los Angeles County] were acutely mentally ill in administrative segregation for weeks rather .than being sent to higher levels of care"). This limiting factor further reduces the CDCR's capacity to house prisoners legally.

48. The different types of capacities discussed above address physical capabilities for housing

prisoners. Another definition of capacity involves available staff and services. For example, a fully equipped 1,000-bed prison cannot house 1,000 prisoners if only three staff members are available to run the institution. The prisoners cannot be fed or safely allowed out of their cells without adequate staff to supervise them, and cannot be provided appropriate medical and mental health care without clinical staff to care for them and custodial staff to escort them to and from appointments both inside the prison [27] and to specialists outside, as well as providing security during their appointments.

49. Over the last several decades, California has made deliberate choices regarding how to house its massively expanding population, building, huge prison complexes mostly in isolated rural areas. It is harder to recruit staff to come to such locations, particularly clinical staff. Joint Pls' Trial Ex. 26 at 14 (Receiver's Report on Overcrowding, May 15, 2007). Custodial staff shortages have also plagued the CDCR for many years, as described above in Section I.B.3. As of October 31, 2007, 10 prisons exceeded what the CDCR determines to be their "staffed capacity": California Men's Colony, Corcoran, California State Prison Los Angeles County, San Quentin, Correctional Training Facility, Deuel Vocational Institution, Folsom State Prison, Kern Valley State Prison, Sierra Conservation Center, and Wasco. Joint Pls' Trial Ex. 25 at 2 (Weekly Report of Population, October 31, 2007).

50. Thus, any measure of California's prison capacity that includes a reasonable expectation of providing constitutional levels of medical and mental health must account for the severely limiting building design and staffing needs. As the Receiver has reported, "overcrowding is ingrained in the CDCR

style of constructing and managing prisons. Crowding related policies that do not provide adequate clinical and program space are now an accepted practice of CDCR prison planning, as is California's practice of offering inadequate salaries and failing to provide adequate hiring programs which have created crisis levels of shortages of clinical personnel and correctional officers." [28] Joint Pls' Trial Ex. 26 at 8 (Receiver's Report on Overcrowding, May 15, 2007).

51. The Governor's blue-ribbon panel declared more than three years ago that "California's prisons are presently filled to the breaking point, with populations exceeding both design capacity and 'safe and reasonable capacity,' and far exceeding operable capacity." Joint Pls' Trial Ex. 4 at 124 (Deukmajian Report). At that time, the population was 162,000. *Id.* at 1. Today, CDCR houses nearly 10,000 more Joint Pls' Trial Ex. 25 at 1. (Weekly Report on Population, October 31, 2007). The situation looks even more dire when all of the factors that we in Texas consider essential components of capacity are considered, and California's severe deficits in building design and staffing capabilities are factored into the equation. I wholeheartedly agree with the statement the Governor made more than a year ago: California' prison population "exceeds the capabilities of the services, personnel, equipment, and facilities of any geographical area in this state," causing "extreme peril." Joint Pls' Trial Ex. 1 at 8 (Governor's Emergency Proclamation). The "extreme peril" in the potential for violence is easy to see. Less obvious is the "extreme peril" of teeming populations of prisoners, at risk for deadly disease outbreaks and overwhelming through sheer numbers any attempt to provide even the basics of humane medical and mental health care, as discussed in Section II.

II. Overcrowding makes the custodial management necessary for medical and mental health care nearly impossible

52. Custodial staff and managers play an essential role in medical and mental health care. Although non-clinicians are not directly responsible for providing health care, in a [29] well-functioning system they establish and run the supporting structure that makes health care delivery possible. They provide escorts and security that allow medical appointments to occur. They staff and run specialized health care units. They transport offenders to specialty medical appointments off site. They are usually the first to respond in any medical and mental health emergency. They see the prisoners on a daily basis and often serve as the gatekeepers that allow them to access care providers. They classify and place prisoners in appropriate housing units for their medical and mental health needs. In California, the short-staffing, inadequate management and supervision, and crisis conditions caused by overcrowding have made it nearly impossible for custodial staff to carry out these, essential medical support roles.

A. Staffing

53 Custodial staff plays several essential roles in the delivery of medical and mental health care in California prisons. They serve as escorts for medical appointments; they respond in health care emergencies; and as the staff with most interactions with the prisoner population, they become de facto watchdogs and gatekeepers for health care delivery.

1. Escorts

54. Staff is needed to move prisoners around within the prisons for medical appointments and outside the

prisons for tests, specialist consultations, and emergency treatment. They are also needed for security during examinations. In California's [30] overcrowded system, staff is often not available, for transportation within and outside the prisons. CDCR's head of adult institutions admits as much: "These riots deflect prison. resources so that while correctional officers now must respond to the increased security concerns and maintain watch over an increasingly dangerous prison population, they are not able to assist the Receiver's efforts in addressing the inmates' medical concerns by escorting inmates to medical appointments, for instance." Joint Pls' Trial Ex. 11 at ¶ 3 (Declaration of Scott Kernan. in Support of Defendants' Report in Response to the Court's February 15, 2007 Order, May 16, 2007). As the Court has already found, "[c]orrectional officers often are not available to take prisoners to medical appointments or to enable the physicians to do examinations. . . ." Plata Pls' Trial Ex. 1 at 22 (*Plata* Findings of Fact and Conclusions of Law Re Appointment of Receiver) (citation omitted)

55. The *Coleman* Special Master has made extensive findings that the paucity of escorts has interfered with mental health treatment. *See*, *e.g.*, Joint Pls' Trial. Ex. 36 at 72 (18th Special Master's Report) (in the California Medical Facility's administrative segregation, "[r]oughly three dozen [mentally ill] inmates did not have confidential meetings due to lack of space, escorts, and schedules"); 84 (at the California State Prison at Solano, "[m]odified programming and failure to honor priority ducats for mental health contacts stymied access to treatment on the level III yards, where modified programming was in force throughout 2006 save for a few weeks. No escorts were available for mental health appoint-

ments"); 103 (at Deuel Vocational Institution, "[a]n audit in October 2006 [31] found that 68 percent of case manager contacts were cell-front due to lack of space and escorts"); 115 (at Corcoran, "[p]rovision of mental health treatment to [mentally ill] inmates in administrative segregation was fraught with difficulty . . . Treatment space, escorts, and confidentiality were problematic"); 168 (at the Correctional Training Facility, [o]bstacles to confidential out-of-cell [case manager] contacts included escorts and space"); 227 (at California Correctional institution, "[t]ime, escort availability, and space constraints stymied meaningful clinical contacts with [mentally ill] inmates in high-security units"); and 254 (at R.J. Donovan Correctional Facility's administrative segregation unit, "[h]alf of all completed [clinical] contacts occurred at cell-front due to a combination of high caseloads, inadequate escort support, and an insufficient number of holding cells").

56. In another example, the California Rehabilitation Center recently converted from ,a mixed population of men and women to all-male, necessitating a move of approximately 600 women to different institutions. *Id.* at 5. As a result, one of the receiving institutions was "overwhelmed with the influx of inmates and custody has closed down some of the off site transportation which is now causing a delay in care." *Id.* at 6 & Exh. 3. According to staff at the receiving prison, "they were at 200% of capacity and . . . there were inmates on the floors. She [the Health Care Manager] does not know how she is going to deliver care to these inmates." *Id.*

57. At San Quentin four very diverse groups of offenders are housed in the Badger [32] cell housing area of the South Block. These four groups consist of

reception offenders, gang members, protective custody offenders, and offenders doing life terms. Because these groups cannot mix with each other the custodial staff must handle services to each group at a distinctly separate time. Staff admits that they struggle daily and sometime fail to meet the service demands of these four sub-populations that all reside in the same cell housing area.

2. Emergency response

58 Custodial staff also performs certain necessary functions within medical housing units, such as responding to "man down" or emergency calls. With chronic short-staffing, these functions sometimes are not performed, with consequent dangers to the prisoner population. For example, the Court has already found that "[i]n medical units that lack call buttons for prisoners to contact doctors, custody staff routinely fail to make rounds and check on patients." *Plata* Pls' Trial Ex. 1 at 22 (Findings of Fact and Conclusions of Law Re Appointment of Receiver).

59. Overcrowding has also interfered with the ability of staff in regular housing units to respond appropriately to urgent and emergent medical and mental health situations. I know from experience that overworked staff without adequate back-up are less able to respond to emergencies and more likely to downplay prisoners' concerns. In a housing unit such as San Quentin's H Unit Dorm 2 (one officer for 200 prisoners) or CIM's West Facility Cleveland Hall (two officers for 198 prisoners) or East Facility gym (two officers [33] for 202 prisoners), staff in an emergency can only sound the alarm, make frantic telephone or radio calls, and hope for backup. An officer alone with several hundred inmates is unlikely, for example to perform emergency first aid or CPR—it is simply

unsafe to do so with no backup, when prisoners could easily simulate an emergency as a diversion. This inability to perform basic lifesaving functions could have potentially devastating consequences on the life and health of a prisoner undergoing a medical or mental health emergency. This situation presents an unacceptable risk of harm to prisoners.

3. Watchdogs and gatekeepers

60. Custodial staff in the housing units generally has more contacts with prisoners than any other staff. They release prisoners for appointments and meals and are generally responsible for overseeing the delivery, of their basic needs. A housing unit officer does not provide mental health care, but if a prisoner is decompensating, that officer is in the best position to see what is happening, recognize the problem, bring in the clinicians to address the patient's mental health needs, and ensure that he does not harm himself or others. Similarly, a housing unit officer does not provide medical care, but if a prisoner does not emerge for multiple meals in a row, that officer is responsible for recognizing the potential danger and investigating to ensure that the prisoner is not sick, or incapable of meeting his own needs. Under overcrowded conditions, with short-staffed units, and line officers who are overwhelmed and even fearful, they are far less likely to recognize a [34] prisoner in need of services and perform this essential function. In addition, managers are overwhelmed, and line staffs often do not get the attention and direction needed to run a safe, humane operation.

61. Short-staffing places managers and line staff alike in unacceptable positions. As the Receiver has noted, "[m]any CDCR prisons are unable to sustain

the basic delivery of medical, mental health, and dental services because of limited staffing (clinical and custody) and an overwhelming number of prisoner/patients who require care. Every day, many California prison wardens and health, care managers make the difficult decision as to which of the class actions, *Coleman*, *Perez*, *Armstrong*, or *Plata* they will fail to comply with because of staff shortages and patient loads." Joint Pls' Trial Ex. 26 at 30 (Receiver's Report on Overcrowding). I agree, and I observed this phenomenon on my prison visits. For example, at San Quentin and CIM, two Reception Centers where prisoners must he escorted to meals, yard, laundry, and other basic functions, staff by their own report get "maxed out" and unable to fulfill the needs of prisoners and the legal requirements of their jobs. Medical and mental health care are included in this burn-out, and demoralized staff often make poor decisions.

62. In an atmosphere of crisis where all operations other than essential safety and security moves are shut down, medical and mental health care are lower and lower priorities. Prison staff is less likely to know the prisoners in their units and have the time, the ability, and the willingness to identify and respond appropriately to basic medical and [35] mental health needs.

B. Lockdowns

63 Overcrowding engenders a state of perpetual crisis that shuts down non-emergency prison functions. I agree with the Governor's expert panel: "Staffing reductions, overcrowding, and attendant violence have eroded the ability of the prisons to operate effectively for any purpose other than security." Joint Pls' Trial Ex. 4 at 125 (Deukmajian Report). Riots and, distur-

bances at Avenal, the California Correctional Center, Calipatria, and Wasco alone account for thousands of days on lockdown or modified programs. Joint Pls' Trial Ex. 11 at ¶ 3 (Declaration of Scott Kernan. in Support of Defendants' Report in Response to the Court's February 15, 2007 Order, May 16, 2007). The Governor noted more than a year ago that overcrowding has "substantially limited or restricted. inmate movement . . ." Joint Pls' Trial Ex. 1 at 6 (Emergency Proclamation).

64. Lockdowns impact health care delivery because they "call for a radically different form of medical delivery than the services provided under normal general population conditions"; when, non-essential movement is shut down, "clinical staff must go from cell to cell to see the prisoner/patient, or small groups o[f] individual prisoners must he escorted by correctional officers to and from clinic areas," so that lockdowns "inhibit the delivery of medical care and increase the staffing necessary for such care." Joint Pl's Trial Ex. 26 at 29-30 (Receiver's Report Re Overcrowding). Lockdowns are also [36] isolating, keeping prisoners in their cells or bed areas and making it harder to get staff attention during health care emergencies and harder for custodial staff to notice prisoners' medical and/or mental deterioration.

65. As a result of lockdowns, many prisoners spend extreme amounts of time in their cells or crowded dorms or gyms, with drastically limited time in beneficial programs or basic living needs, The Coleman Special Master has documented extensively the ways in which lockdowns and partial lockdowns ("modified programming") injure prisoners with mental illness by denying them needed mental health care. Joint. Pls' Trial Ex. 36 (18th Special Master's Report) at 40

("[group therapy was available on all four yards at [High Desert State Prison], though institutional lockdowns and program restrictions caused frequent cancellations and limited inmate participation"); 84-85 (at the California State Prison at Solana, "[m]odified programming and failure to honor priority ducats for mental health contacts stymied access to treatment on level III yards, where modified programming was in force throughout 2006 save for a few weeks. No escorts were available for mental health appointments"; in addition, "rising caseloads, poor access to treatment associated with prolonged modified programming in, one yard, and ducat problems forced clinicians to resort too often to quarterly visits that were little more than a cursory check-in, many of which occurred at cell-front or in locations that compromised visual or auditory privacy. Under these conditions, a subset of sick inmates got sicker, and clinicians sometimes missed, or failed to respond appropriately to, signs of mental [37] illness"); 208 (California State Prison-Los Angeles County's "administration reported that lockdowns in November 2006 and January 2007 disrupted [mental health] treatment,"); and 288 (California Institution for Women's treatment unit for seriously mentally ill patients "continued to limp along.. Although over ten hours of groups per inmate per week were scheduled; inmates received only two to three hours of treatment per week. Staff audits found that 46 percent of groups were cancelled. . . . Lockdowns and other forms of restricted inmate movement were the largest single cause of cancellations").

66. I agree with the Receiver that [o]vercrowding has resulted in increasing numbers of prisoner disturbances and [l]ockdowns' by prison authorities in response. Because of the heightened security

measures associated with lockdowns, medical care to the inmates is delayed and made substantially more time-consuming and cumbersome." Joint Pls' Trial Ex. 27 at 3 (Receiver's Supplemental Report Re Overcrowding, June 11, 2007).

C. Classification

67 Overcrowding has pernicious effects on classification, the central organizing principal that keeps modern prisons as safe as possible for prisoners and staff by separating More dangerous inmates from more vulnerable prisoners and concentrating those in need of intensive medical and mental health treatment in places where services are more readily available and custodial as well as treatment staff are better trained to meet their needs. In a proper classification system, prisoners are assigned an objective classification score based on a range of weighted factors intended to predict their [38] institutional risk and specialized needs. Overcrowding has wreaked havoc with CDCR's classification systems intended to maintain safe conditions and ensure appropriate specialized health care placement.

68. Overcrowding leads to classification failures that impact medical and mental health care delivery in two ways. First, the overburdened system no longer houses prisoners according to their classification levels in an alarming percentage of cases, making it harder to provide for their medical and mental health care needs, and second, the overcrowded system does not have the flexibility needed to respond to inevitable crises.

69. In any well-functioning classification system, "overrides," or instances in which staff make a reasoned determination that a prisoner is more

appropriately housed in a different location than his classification score would indicate, should be no more than 10% In California's overcrowded prisons, an estimated 25% of prisoners are housed outside of their security levels, many in higher security housing. Joint Pls' Trial Ex. 5 at 14 (Dr. Joan Petersilia, *Understanding California Corrections*). The most common reason to override classification scores in California is called a "population override," which "occurs when no bed is available at the type of facility that would normally be used for an inmate with a given score. Under those circumstances, the classification staff representative has total discretion over prisoner placement. This override has become increasingly common as California prisons have filled up beyond their designed capacity [39] [], and this shuffling of inmates to areas that were not designed to hold them has adverse consequences for both the facilities and the individuals they house." *Id.* (footnote omitted). In fact, this is not an override at all—this is the rejection of any classification scheme, at all for these estimated 25% of prisoners. In any event, it is two and an half times greater than the accepted norm for variations from the classification scheme, and presents an unacceptable risk of violence and harm. As Dr. Petersilia notes,

> There are significant implications of these frequent reassignments to more heavily fortified facilities, where inmate violence is higher, [citation omitted] the housing cost per-prisoner is higher, and a lower level of programming is available to inmates. In other words, the pressures of overcrowding frequently lead to housing assignments that are more expensive and dangerous than necessary and less likely to encourage rehabilitation . . . .

> [¶] . . . Prisoners in a maximum-security prison or unit spend a good part of the day in their cell, have strictly regulated movement, and are surrounded by a secure perimeter with extensive gun coverage. At the other extreme, in a minimum-security, conservation camp, prisoners spend a large part of the day out of their dorm and have few restrictions on movement within an unfenced security or work area. [citation omitted] These variations in inmates' level of movement translate into tremendous differences in their ability to participate in rehabilitation programs."

Id.

70. I saw these problems in practice at Avenal, where Building 510 houses 300 prisoners; the population overflow goes to segregation units intended for punitive purposes, where they are treated like segregation prisoners. Similarly, prisoners suffering acute mental health crises are often housed in punitive administrative segregation conditions because of the shortage of mental health crisis beds, as noted in Section I.C, [40] above.

71. The widespread rejection of CDCR's classification system has a significant impact on medical and mental health care: it is harder to get to health care appointments within the prison as well as out-of-prison specialty appointments, and more limited staff contact means that staff are less responsive to emergencies due to distrust, lack of understanding and compassion, and simple logistics: it is harder to get staff attention in a high-pressure, high-security unit. In addition, prisoners are subject to increased degrees of danger and potential for violence because they are placed with more dangerous and violent

prisoners than their classification scores would warrant.

72. Mixing prisoners of different security levels and different needs is also extremely dangerous. At CIM, I saw prisoners of all security levels, minimum to maximum, in a Reception Center dorm setting, and at Valley State Prison for Women, I saw a dayroom which had double bunks for Reception Center prisoners. That kind of configuration is unacceptable for prisoners who have not been classified, about whom staff know little or nothing. At CIM, staff in West Facility admitted that maximum security (Level IV) prisoners are in the yards along with minimum security (Level I and II) prisoners. At San Quentin, on West Block and in the Badger Unit of South Block, I saw gang members on one tier, protective custody on another, general population on another, and prisoners serving life terms on yet another. Having all of these very different, often directly opposing needs in one housing unit makes it extremely difficult to meet all of their needs, [41] since gang and protective custody prisoners cannot come into contact with one another, for example, necessitating, separate yard and feeding periods. Health care appointments are thus even more difficult to facilitate than would he the case in a short-staffed and overcrowded housing unit that nonetheless housed prisoners with uniform classification levels.

73. The second overcrowding-driven classification failure comes about because classification systems need built-in flexibility to respond to unforeseen needs. That is why, for example, in Texas we have defined "capacity" to include enough space to ensure "proper inmate classification and housing within the unit that is consistent with the classification system" as

well as "housing flexibility to allow necessary repairs and routine and preventive maintenance to be performed without compromising the classification system . . ." Texas Gov't Code § 499.102(a)(1)-(2) (Appendix C).

74. This level of flexibility is impossible with the current violence and state of crisis in California's prisons. For example, in late 2006, Los Angeles County cancelled a long-standing contract with CDCR for 1300 beds, requiring that the beds be vacated by January 31, 2007. According to CDCR's Director of CDCR Division of Correctional Health Care Services, this action would result in "thousands of inmate moves over a 13-week period scheduled to begin in September 2006." Joint Pls' Trial Ex. 54 at 1 (Dr. Peter Farber-Szekrenyi, letter to *Plata* Receiver Robert Sillen and *Coleman* Special Master J. Michael Keating, Jr., September 1, 2006).

[42] 75. CDCR simply did not have the capacity to deal with this event in an appropriate way and instead was forced to resort to cutting legally required corners. The head of medical services admitted that during the resulting transfers, CDCR would be unable to comply with legal requirements such as transferring prisoners with a 30-day supply of prescribed medications, performing intake assessments and tuberculosis tests on new arrivals, and completing medical summary forms for transferring prisoners. *Id.* at 2-3. Other "necessary medical services" would suffer "increased delay": outside specialty service appointments would he cancelled for prisoners scheduled to transfer. *Id.* at 3. Further, in order to conduct "required [mental health] evaluations, the existing mental health staff w[ould] have to be

redirected from their primary responsibility of direct patient care." *Id.* at 2.

D. Management systems

76. Overcrowding has overburdened CDCR's inadequate management systems that underlie health care delivery. The excessive population leads to management failures in two ways. First, overcrowding engenders a state of perpetual crisis that causes management failures. Administrators spend their time doing damage control, rather than making sure the prison is operating properly and prisoners are getting the services that they need. I was the warden of a prison with 3,000 prisoners and that was almost unmanageable. A population of 7,000 or more, as is found in some California prisons, is not manageable at all. The sheer size and complexities of managing a prison, that size [43] would be overwhelming, for one manager especially with the limited resources in the areas of staffing and inadequate space for services to the offenders that I observed at all of the prisons I toured in California. One warden simply cannot know what he/she needs to know on a daily basis to make good informed management decisions.

77. Second, overcrowding overwhelms management infrastructure. As I have read in numerous reports of the Receiver, the CDCR lacks the management information systems needed to adequately organize and track prisoner transfers for specialized medical and mental health care and public health related needs (for example, people with compromised immune systems not going to Valley Fever risk areas) in the severely overcrowded conditions. Joint Pls' Trial Ex. 32 at 53 (Receiver's Sixth Quarterly Report). *See* discussion at I.B.4, above. CDCR also fails to hire

adequate numbers of custodial as well as medical staff. *See* Joint Pls' Trial Ex. 26 at 11-12 (Receiver's Report Re Overcrowding).

78. CDCR also cannot track and transfer essential health care records, because the record system lacks the capacity to deliver records regarding this many prisoners. I was told at CIM that 98% of parole violators do not have their files when they arrive, which leads to security problems because staff are unable to properly classify prisoners. As I saw on my tours, staff is failing utterly in the essential task of maintaining health care records. Adequate record-keeping is a basic component of correctional systems management, but at Avenal, a prison I was told was built for 2900 prisoners with a [44] current population of 7500. I was told that there was four feet of loose filing waiting to be placed in prisoners health records. At QM, I saw 48 inches of unfiled documents plus two additional cardboard boxes of unfiled medical records that had just arrived. Staff told me they had 54 inches several days earlier and has been much higher at other times. I am not surprised; given the extraordinary number of prisoners in these facilities, it is simply impossible to manually file so many records on a timely basis. In my experience, such extraordinary pressure on staff also leads to serious filing errors, which means that even records that have been filed might not be available to clinicians, and might be impossible ever to locate.

79. In sum, it is impossible under current conditions to provide adequate medical and mental health care to California prisoners.

III. Overcrowding is the primary cause of the constitutional violations

80. Based on the above, my opinion is that overcrowding is the primary cause of the medical and mental health constitutional violations caused by deficiencies in the support role played by non-health care staff. In rendering this opinion, I agree with the Governor's blue-ribbon panel of experts that "[t]he key to reforming the system lies in reducing the numbers." Joint Pls' Trial Ex. 4 at 3 (Deukmajian Report). I also agree with the *Plata* Receiver, when he reports that "[m]ost California prisons operate at 200% of capacity, with no effective relief in sight. Unless and until the living conditions of some prisons and the overpopulation experienced system-wide is effectively addressed, the [45] Receiver will be impeded in applying systemic an even some ad hoc remedies to the medical care system." Joint Pls' Trial 53 at 3 Receiver's First Bi-Monthly Report, July 5, 2006). I further agree with the California State Auditor that "[m]eeting the constitutional rights of inmates to receive minimum standards of treatment" is a problem that "emerge[s]" from overcrowding. Joint Pls Trial Ex. 6 at 22-23 (California State Auditor's Report). I also agree with the Office of the Inspector General that efforts to solve the medical care failures "are severely hampered by inmate population pressures that have prisons straining at nearly twice design opacity, spreading staff resources thin and leaving little facility space available for programming and other purposes. Developing sustainable solutions will require the [CDCR], state policymakers, and the public to collectively address the available options' to reduce overcrowding, Joint Pls' Trial Ex. 46 at ES-1 (Office of the Inspector General, Accountability Audit, Review of the Audits

of the California Department of Corrections and Rehabilitation Adult Operations and Adult Programs, 2000-2004, April 2006).

[Filed 10/30/08]

[1] THIRD SUPPLEMENTAL EXPERT REPORT OF RONALD SHANSKY, M.D.
SEPTEMBER 28, 2008

1. I make this third Supplemental Report after reviewing the Receiver's Ninth Quarterly Report, filed September 15, 2008.

2. My opinions as stated in my previous reports remain unchanged. Certain of those opinions are further supported by matters included in the Receiver's Ninth Report.

3. Overcrowding delays the time-frame in which the CDCR medical care delivery system will be able adequately respond to the serious medical needs of its prisoners. The Ninth Report discusses problems identified and remedial efforts found necessary following the death of a California prisoner transferred to an out-of-state facility, and the impact of that incident on in-state remedial efforts. Ninth Report at pages 48-49. Addressing that matter "had a serious negative impact on the office of the Receiver, drawing clinical personnel away f[ro]m other important projects and delaying 'in-state' remedial efforts. In essence, thousands of dollars of valuable clinical hours have been devoted to helping a private prison . . . rework its medical delivery system . . . in order to keep the out of state transfer process from collapsing. In fact, the in state remedial process has suffered as a result." *Id.* at page 49. This is an example of how population pressures and addressing overcrowding interfere with and detract from efforts to improve medical care.

4. The Receiver reports that the prisoner death rate in California has been trending downward for

the last ten quarters. Ninth Report at pages 68-70. This is an [2] encouraging development. Discussing this development, the Receiver emphasizes that, "a constitutionally adequate and sustainable prison medical system will not be established until the Turnaround Plan of Action is fully implemented." *Id.* at pages 69-70, I. agree, and the inadequate system will continue to exist for longer than it otherwise would unless there is a significant reduction in the population.

SECOND SUPPLEMENTAL EXPERT REPORT OF RONALD M. SHANSKY, M.D.

SEPTEMBER 10, 2008

[i] TABLE OF CONTENTS

I. EXPERT QUALIFICATIONS 1

II. BASES FOR EXPERT OPINIONS 1

III. EACH OF THE PRISONS I INSPECTED IN AUGUST, 2008 IS DRAMATICALLY OVERCROWDED 4

IV. THE PRISON HEALTH CARE FACILITIES STILL ARE INADEQUATE FOR THE NUMBER OF PRISONERS WHO REQUIRE MEDICAL CARE 6

- A. Reception Center Clinical Areas Continue to be Inadequate for the High Volume of Medical Contacts 7
- B. The Severe Shortage of Clinical and Office Space Described in My First Report Has Not Changed in the Last Six Months 9
  1. NKSP's Clinical Space is Inadequate 10
  2. SATF's Clinical Space is Inadequate 12
  3. PVSP's Clinical Space is Inadequate 13
  4. CSP-Solano's Clinical Space is Inadequate 13
  5. Receiver's Assessment of Other Prisons Medical Space 14

- a. California Rehabilitation Center (CRC) 14
- b. California Training Facility—Soledad (CTF) 14
- c. Mule Creek State Prison (MCSP) 15

V. THE NUMBER OF CLINICIANS CONTINUES TO BE INSUFFICIENT FOR THE NUMBER OF PRISONERS WHO REQUIRE MEDICAL CARE 16

A. CDCR Still Cannot Fill Some Vacancies 17
- 1. NKSP 17
- [ii] 2 SATF 18
- 3 PVSP 18
- 4 HDSP 9

B. Some Prisons Are Still Allocated Too Few Providers 19

C. Use of Registry Still Cannot Resolve Staffing Shortfalls 19

D. Clinical Staff Shortages Continue to Result in Delayed and Inadequate Care 20
- 1. NKSP 20
- 2. SATF 20
- 3. PVSP 21
- 4. Solano 21
- 5. HDSP 22

E. Inspected Prisons Still too Short staffed to Implement Required Programs 22

1. NKSP 23
2. SATF 23
3. PVSP 25
4. SOL 25
5. 5. HDSP 25

VI. PLAINTIFFS ARE STILL NOT RECEIVING TIMELY SPECIALTY CARE 26
A. PVSP 26
B. SOL 26
C. HDSP 27
D. NKSP 27

[iii] VII. MEDICATION MANAGEMENT PROBLEMS 28

VIII. OVERCROWDING FUELS DYSFUNCTION IN MEDICAL RECORDS 29
A. Quality of Medical Records Continues to be Poor at Inspected Prisons 29
B. CDCR Continues to Rely on Inadequate Tracking Systems 31

IX. THERE ARE STILL NOT ENOUGH CUSTODY OFFICERS TO ENSURE ADEQUATE ACCESS TO MEDICAL APPOINTMENTS AND CLINICAL CONTACTS AT SOME PRISONS........ 31
A. PVSP 32
B. HDSP 33

X. THERE ARE MORE PRISONERS REQUIRING SPECIALIZED PLACEMENT FOR MEDICAL REASONS THAN CDCR CAN ACCOMMODATE 34

XI IT WILL TAKE YEARS FOR THE RECEIVER'S TURNAROUND PLAN TO REMEDY THE UNCONSTITUTIONAL MEDICAL CONDITIONS 35
XII. OVERCROWDING INCREASES THE RATE AND SERIOUSNESS OF INFECTIOUS DISEASE TRANSMISSION 35
XIII. CONCLUSIONS 36

[1] SECOND SUPPLEMENTAL EXPERT REPORT OF RONALD M. SHANSKY, M.D.

I. EXPERT QUALIFICATIONS

1. I am a Physician Consultant specializing in correctional medicine and continuous quality improvement, and a voluntary attending physician for the Cook County Hospital, Department of Medicine, in Chicago, Illinois. My C.V. is attached.

2. I have provided two prior reports in this matter, on November 9, 2007 and on December 6, 2007. My November report sets forth my complete academic and professional career.

3. I have listed all of my publications on my attached C.V. I have not published additional publications since my November 2007 report.

4. I am billing the plaintiffs $250 an hour, my usual billing rate. For testimony, my rate is $350 an hour. I have not testified in any cases since November 9, 2007.

II. BASES FOR EXPERT OPINIONS

5. I have been retained by plaintiffs' counsel in the *Plata* and *Coleman* cases as an expert in prison medical care and health care administration, and the impact of overcrowding on prisoners' medical care, including how prison overcrowding detrimentally affects prisoners' access to health care and interferes with the ability of prison officials to meet the existing and increased medical needs of the prisoners in an overcrowded system. I have also been asked to render my opinion with respect to whether overcrowding in the California Department of [2] Corrections and Rehabilitation (CDCR) is the primary cause of the current unconstitutional conditions experienced by

members of the Coleman and Plata classes. My opinions are based upon the evidence that I have reviewed to date documenting current conditions within the CDCR, on my earlier inspections of California Institution for Men (CIM), Avenal State Prison (ASP), Valley State Prison for Women (VSPW), San Quentin State Prison (SQ) and High Desert State Prison (HDSP), on my more recent inspections of North Kern State Prison (NSKP), the Substance Abuse and Treatment Facility at Corcoran (SATF), Pleasant Valley State Prison (PVSP), California State Prison at Solana (SOL), and a second inspection of HDSP, and on my professional experiences working in similarly overcrowded correctional settings. A list of the documents I have reviewed is attached.

6. During my inspections, I spoke to medical staff throughout the facilities, including the Health Care Managers, Chief Medical Officers, physicians, nurses and schedulers. The staff members at each prison were consistently cooperative, provided me with the files, logbooks, documents, records and data I requested, and ensured my full access to the facilities I wished to inspect.

7. In my first report, I concluded that the CDCR's medical delivery system was operating in a state of crisis that harmed prisoners with serious medical concerns and placed them at substantial risk of harm because the number of prisoners in the system far outstripped the capacity of the system to provide care. Having completed the five recent prison inspections and reviewed recent documents, including the Receiver's Seventh and Eighth Reports and his Turnaround Plan of Action, my opinion is unchanged: the CDCR's medical care [3] delivery system cannot provide a constitutional level of care because the

prison system incarcerates far more prisoners than can be adequately treated with the resources, staffing and facilities available in the CDCR. In short, it is my opinion that overcrowding is the primary cause of the constitutional violations in the CDCR for *Plata* class members.

8. I also concluded in my first report that it will not be possible to achieve a constitutional level of health care in the CDCR in the foreseeable future, unless the prison population is significantly reduced. My opinion has not changed. The limitations on the CDCR, including staffing, administrative resources and especially treatment space, are so severe that the only avenue for building a constitutional health care delivery system is to reduce the demand on the system by lowering the number of patients it serves.

9. While I believe that reducing the population is necessary to achieve a constitutional level of medical care, population reduction alone will not, in a vacuum, produce a constitutionally adequate medical delivery system. For example, if the population were reduced at a prison facility, but that prison lacked sufficient numbers of physicians, the care would still be unconstitutional. Reducing overcrowding is not a panacea, but crowding is the primary cause of the ongoing inadequate medical care in the CDCR system. Overcrowding is the one factor that negatively impacts almost every other matter that must be addressed to create a minimally adequate medical care delivery system for California's prisons.

10. Reducing the population in the system to a manageable level is the only way to create an environment in which other reform efforts, including strengthening medical management, hiring additional medical and custody [4] staffing, and improv-

ing medical records and tracking systems, can take root in the foreseeable future. Continuing efforts to build a constitutional system under the current overcrowded conditions will guarantee that the unconstitutional conditions, and preventable suffering, will exist for a substantially longer period of time than would be the case if the population were reduced.

11. The Receiver has tools to fix the health care system, but has no tool within his purview, to deal with external pressures such as overcrowding. The Receiver's mandate is to remove the Court's direct control of the CDCR health care delivery system as quickly as possible. It is my opinion that, if the current overcrowding is not remedied, the Court's involvement in overseeing the health care system will certainly extend many years.

III. EACH OF THE PRISONS I INSPECTED IN AUGUST, 2008 IS DRAMATICALLY OVERCROWDED.

12. According to the CDCR's August 20, 2008 population statistics, there were 159,823 prisoners housed in CDCR prisons and camps, which is 191 % over the prison system's design capacity. Jt. Pls' Trial Ex. 98. The five prisons that I inspected are all, like the system itself, significantly overcrowded, and at some prisons, the higher security classification prisoners are the most significantly overcrowded. All five of the prisons currently house prisoners in "non-traditional" beds, including bunks in gyms and day rooms that were not designed for housing.

13. North Kern State Prison was built for 2,694 prisoners. Id. As of August 20, 2008, the prison was at 204% capacity, housing 5,496 prisoners. *Id.* Most

NKSP prisoners, over 4,600, are housed in the Reception Center. *Id.* The remainder of the population is made up of 297 Level I prisoners and 581 Level III prisoners. *Id.* NKSP also serves as a health care "hub" for an additional 2,000 [5] prisoners housed in community corrections facilities who receive health care at the prison.

14. The Substance Abuse Treatment Facility and Prison at Corcoran was designed to hold 3,424 prisoners, but the total population as of August 20 was 7,121, *i.e.*, 208% of design capacity. *Id.*

15. Pleasant Valley State Prison, built for 2,308 prisoners, now houses 5,199, making it among the state's most overcrowded prisons at 225% of design capacity. *Id.* That prison houses primarily Level III and IV prisoners (over 4,900), and has a small minimum security facility (MSF) housing fewer than 300 Level I and II prisoners. *Id.* While the MSF is less crowded than most other facilities, at 131% of design capacity, the Level III/IV facilities are currently at 234% of design capacity. *Id.* The prison staff also provides care to prisoners at a community care facility with approximately 400-500 patients.

16. California State Prison, Solano, with 5,607 Level II and Level III prisoners in space designed for 2,610, is at 214% capacity. *Id*, The Level III prisoners are slightly more crowded than the Level II prisoners, with rates of 225% and 206% respectively. *Id.*

17. High Desert State Prison has 4,472 prisoners in a prison built for 2,324. *Id.* With fewer than 1,000 Level I, II and III prisoners, the majority of the prisoners are either Level IV (approximately 2,850) or in the Reception Center (approximately 640). *Id.* Both of these populations are very overcrowded: the

Level IV prisoners are housed at 253% of design capacity, and the Reception Center prisoners are housed at 319% of design capacity. *Id.*

[6] IV. THE PRISON HEALTH CARE FACILITIES STILL ARE INADEQUATE FOR THE NUMBER OF PRISONERS WHO REQUIRE MEDICAL CARE.

18. The Receiver recognized the critical shortage of health care facilities in his Turnaround Plan of Action,

> The facilities available for providing health care services within CDCR are woefully inadequate. . . . We are dealing not with deferred maintenance, but with some facilities that are literally falling apart. In addition, investments in health care facilities have significantly lagged behind growing inmate populations, so much so that available clinical space is less than half of what is necessary for daily operations.

Jt. Pls' Trial Ex. 56 (Receiver's Eighth Quarterly Report, Exh. I—Receiver's Turnaround Plan of Action) at 25. Based on my site inspections and review of documents, I believe the Receiver accurately describes the critical shortage of adequate clinical space for the existing prison population. These conditions, which are also described in my first report, create insurmountable barriers to providing timely medical care with appropriate confidentiality safeguards. Additionally, I believe that the lack of clinical and medical office space creates an unprofessional working atmosphere that likely impedes CDCR's recruitment and retention efforts.

19. The Receiver's Turnaround Plan includes plans to build and upgrade clinical spaces around the state.

I understand, however, that the Receiver has yet to obtain funding for this construction plan, and has recently had to move to hold the Governor in contempt for failing to provide financial support for the plan. Except at two prisons, *actual construction of clinical space has yet to begin*. R. Pls' Trial Ex. 56 (Receiver's Eighth Quarterly Report) at 39-44.

20. Even if the Receiver were able to obtain immediate funding for his construction project, his target date for completion of the clinical upgrade program [7] is not until 2012, more than three years from now. It. Pls' Trial Ex. 56 (Receiver's Eighth Quarterly Report, Exh. 1—Receiver's Turnaround Plan of Action) at 25-26.

A. Reception Center Clinical Areas Continue to be Inadequate for the High Volume of Medical Contacts.

21. In my initial report, I documented the significant space limitations at the Reception Center located at the California Institution for Men in Chino. The space limitations that I observed at the North Kern State Prison for reception center processing were as bad as the conditions I found at CIM. NKSP, a prison with a population of approximately 5,500 prisoners, including approximately 4,800 RC prisoners, receives approximately 500 new RC prisoners each week.

22. Under the *Plata* Inmate Medical Policies and Procedures, prisoners arriving at a Reception Center undergo a health screening on their day of arrival. Policies and Procedures, 4-2-1. "Licensed health care staff shall conduct interviews with inmate-patients in a manner that ensures the privacy of their health care information subject to the safety and security

concerns of the institution." *Id.* Reception Center prisoners must be provided a "complete history and physical examination performed by a Nurse Practitioner, Physician Assistant, or a Physician and Surgeon" within 14 days of arrival. P&P's, 4-2-2. The medical facilities that I observed at NKSP were inadequate for this purpose.

23. Arriving RC prisoners are delivered to the Receiving and Release area at NKSP. In this large open area, prisoners are interviewed, have their vital signs taken and receive a TB test, among other things, before proceeding to a housing unit. The initial health screening, which consists of an interview by an RN and administration of the TB test, takes place for most prisoners in a small [8] office just off the R&R area. Two nurses conduct interviews simultaneously, with prisoners sitting back to back, separated only by a shoulder-high divider. I was told that a third nurse sometimes conducts these medical interviews at a desk in the open receiving area, where prisoners and staff, circulate. Neither of these situations affords the necessary confidentiality for these critical initial health care encounters.

24. I questioned Dr. Emam, the facilities Chief Physician and Surgeon, about these conditions. He indicated that space is so limited, that there is no other space available in which these interviews may be performed. I believe that, given the lack of confidentiality for these encounters, prisoners are less likely to provide accurate information about sensitive medical and psychiatric conditions.

25. According to Dr. Emam, prisoners at NKSP are seen by a physician or mid-level provider for their medical history and physical examination within two to three days. I inspected the area where these

encounters take place. The area contains a series of very small rooms, each equipped with two chairs and a medical exam table. The exam table, however, functions as a desk for the medical provider, and the rooms are so small that it would be very difficult if not impossible to perform an actual physical examination in them. Dr. Emam acknowledged that the "exams" that take place are in fact simply medical interviews, primarily for the purpose of determining what type of housing is appropriate for the prisoner.

26. Adequate physical examinations are not performed on NKSP prisoners, despite the P&P requirements, which are based on the basic principle that incoming prisoners must undergo a comprehensive exam upon arrival so that [9] an adequate treatment plan may be developed and implemented. A physical exam, as opposed to a medical interview, is necessary because some conditions can be identified and confirmed only through physical examination of the patient.

27. Dr. Emam told me that the prison lacks the space to provide actual physical examinations for the high number of incoming Reception Center prisoners arriving daily at NKSP, and that, in any case, he lacks the physician staff to provide that service. The failure to provide a true physical examination creates the risk that certain medical conditions will not be timely identified and/or treated.

28. The Receiver has piloted a Reception Center screening process at San Quentin State Prison that, according to the Receiver, "provides integrated medical, dental, and mental health screening on the day of arrival as well as laboratory testing, medication review and administration, and referrals to providers based on national guidelines." Jt. Pls' Trial Ex. 67

(Receiver's Seventh Quarterly Report) at 7. The Receiver states that he intends to implement standardized reception center screening processes at the major reception center prisons by January 2009. *Id.* However, the Receiver frankly acknowledges that "[t]he most formidable challenge to progress at all the sites will be inadequacies in physical space and environment." *Id.*

29. Based on my review of the facilities available at NKSP, I do not believe that the Receiver's pilot Reception Center screening program can be implemented at that prison, without creating additional clinical examination facilities.

B. The Severe Shortage of Clinical and Office Space Described in My First Report Has Not Changed in the Last Six Months.

30. As noted above, the Receiver has concluded that the facilities [10] available for medical care delivery are "woefully inadequate." That is consistent with my findings during my November 2007 inspections, and is further supported by my observations during my most recent inspections.

1. NKSP's Clinical Space is Inadequate

31. At NKSP, the clinical spaces available for medical encounters following Reception Center processing and for the mainline prisoners are inadequate for the number of prisoners requiring medical attention.

32. NKSP is divided into five prison yards, denominated A-E. Yards B, C and D house only Reception Center prisoners awaiting transfer to a permanent institution. Yard A houses both general population prisoners (*i.e.*, prisoners who have been classified and endorsed to stay at NKSP) as well as Reception Center

prisoners, and Yard E, a minimum security facility, houses only mainline prisoners.

33. Each of the yards A-D has medical clinic space consisting of one exam room, a very small office in which the LVN prepares medications for distribution, a very small medical supply room, a dental clinic and a dentists' office.

34. Each yard is supposed to run at least two medical lines each day, one for the RN doing face-to-face triage, and one for the primary care provider (PCP) doing sick call. The yard medical clinics on A-D cannot accommodate simultaneous RN and PCP lines in the one available exam room. Accordingly, NKSP has created three exam spaces on B yard in an area that formerly housed custody offices, in which the RNs are now conducting face-to-face triage for yards B, C and D on Second and Third Watch (*i.e.*, 8 a.m. to 2 p.m., and approximately [11] 3 p.m. to 9 p.m.). The NKSP staff members refer to this area as the Reception Center Medical Clinic (RCMC).

35. While the clinical space allocated to the RNs in the RCMC is objectively adequate for performing screenings, data provided to me by the scheduler shows that prisoners are regularly not seen for their scheduled appointments. The fact that some prisoners going to the RCMC must be escorted from other yards for their appointments may contribute to this problem.

36. For example, I reviewed the nurse triage tracking data for the week of August 18, 2008 for prisoners from D-yard. *Plata* Pls' Trial Ex. 36. During that week, of the 119 appointments schedule, more Chant 50% (61) did not take place. While the tracking form states that five prisoners were not seen because of a

yard change, one paroled and one was at a different medical appointment, the primary reason stated for the missed appointment was "lockdown," "out of time," or "short nurses." I strongly suspect that the location of the clinic on a different yard means that the triage line runs slower, resulting in fewer patients being seen timely.

37. I was told that patients who are not seen for their appointment are given an appointment on the next available triage line, usually two days later. However, I reviewed D-yard's August 18-22 nursing tracking data, and found that of the 14 patients who were scheduled but not seen on August 18, just three patients were rescheduled and seen that week, while ten were either rescheduled but not seen, or not rescheduled within the week. *Id.* (One prisoner transferred or paroled.)

38. The A-yard prisoners do not go to the RCMC for nurse triage. [12] Because the PCP runs a sick call line in the only medical exam room, the RN does face-to-face triage in the hallway, with the prisoner sitting in a chair, within several feet of the prisoners awaiting their appointments. The RN states that, if she decides she needs an exam table for these encounters, she must wait until the PCP is between patients, and then use that office. The triage encounters cannot be maintained confidential under these circumstances; thus, the RN's ability to obtain reliable information from their patients is critically impaired.

39. Prisoners who are housed in the Administrative Segregation Units on A-yard and D-yard are seen for RN triage and for sick call encounters in a meeting room in the housing unit. It is not set up with any medical equipment. Without necessary medical

equipment, including an exam table, the medical staff cannot provide adequate medical care.

2. SATF's Clinical Space is Inadequate

40. The Substance Abuse and Treatment Facility at Corcoran is one of the largest prisons in the system, with approximately 7,000 prisoners housed on seven yards, A-G. Each of the prison yards has its own clinic, with an exam room for the RN performing triage, and a second room for the PCP seeing patients for sick call.

41. At SATF, the medical staff reported that there were 1,200 overdue primary care appointments. I was told that, in an effort to address the backlog, SATF had on the day of my visit three CDCR physicians from the Central Office, whose mission was to visit, at their cell front, prisoners who had submitted sick call slips to determine what medical care they required, if any. I was told that primary care providers will be performing cell front triages two days a week, [13] every two weeks, for the foreseeable future.

42. The SATF staff said that the physicians were seeing patients in the housing units at their cell fronts because SATF lacked exam space for them to use for these medical encounters. Such encounters, which take place with custody officers and fellow prisoners within earshot, are not an adequate substitute for clinical encounters in a private, medically equipped setting.

3. PVSP's Clinical Space is Inadequate

43. Dr. Igbinosa, the Chief Medical Officer at PVSP, reported that he is currently authorized to hire 14 primary care providers to care for the 5,200 prisoners at PVSP. If he were able to fill all primary care

positions, he advised me that he would not have the space for them.

44. Dr. Igbinosa further related that he would like to have more specialty providers from the outside community provide care to prisoners on-site at the prison. Although some specialists do currently see patients at the prison periodically, Dr. Igbinosa said that he cannot expand this program because he lacks the necessary clinical space to accommodate the providers.

4. CSP-Solano's Clinical Space is Inadequate

45. At SOL, the Annex Clinic, which serves the needs of the approximately 1,750 prisoners housed at the prison's Facility 4, is located in what had been an area used for education programs, and the space is still used for education programs as well as prison classification committee activities. The main patient encounter area is a small room in which patients are seen by one of three primary care providers who work in the room. The room is divided into three [14] medical encounter areas by five foot tall wood and cloth partitions or screens. The three patient encounter areas are immediately adjacent to one another, such that a conversation in one can be heard in the others. This space does not provide for adequate patient confidentiality. A PCP also sees patients in the Annex Clinic's main work room. There, a thin hospital bed style curtain separates the patient and PCP from the clinic's other business.

46. All available space in SQL's medical clinics was being used. SOL does not have adequate space for its current complement of PCPs to work in, let alone additional PCPs should the prison hire such additional staff.

5. Receiver's Assessment of Other Prisons' Medical Space

47. I reviewed operational assessments prepared for the Receiver regarding several of the CDCR prison facilities.

a. California Rehabilitation Center (CRC)

48. The January 2008 operational assessment regarding the CRC conducted by the Receiver's office concluded that all medical spaces are in urgent need of repair, and that, "[for the most part, none of the existing areas occupied by health care clinicians are clinically appropriate." Jt. Pls' Trial Ex. 100. (California Prisoner Health Care Receivership Corporation, Operational Assessment for Access to Care at the California Rehabilitation Center) at 15.

b. California Training Facility—Soledad (CTF)

49. A review of CTF conducted by CDCR and Receiver staff in March 2007 determined that the prison's Central Facility clinic is so crowded and has such limited space that "[i]nmates that are ducatted for health care usually wait for hours to see the provider," the North Facility clinic is "very small based on the [15] number of inmate-patients being served," and that the South Facility clinic area, although the newest physical plant of the three facility clinics at the prison, was "built to support an inmate population of 510 inmates and not the current housing of more than 1000 inmates." Jt. Pls' Trial Exh. 99 (Operational Assessment, review conducted in March 2007) at 2-3.

c. Mule Creek State Prison (MCSP)

50. The December 2007 operational assessment report regarding MCSP conducted by the Receiver's

office concluded, "[a]ll of the Facility Clinics are undersized for the quantity of inmate/patients seen on a daily basis and lack[] appropriate holding/waiting space for inmate/patients ducated to be seen by health care providers." Jt. Pls' Trial Ex. 101 (Operational Assessment for Access to Care at Mule Creek State Prison) at 7. The assessment also pointed out that although Mule Creek's "size and overall design . . . is likely one of the most manageable . . . anywhere within the State . . . ", it is "no exception" to the "system wide barrier" of "serious space deficiencies for clinical staff," which have existed at 14ll of the CDCR facilities the Review Team has visited . . ." *Id.* at 28.

51. The Receiver plans to address medical facility deficiencies at existing prisons by assessing those prisons' needs, developing plans and then upgrading or constructing necessary facilities. The Receiver's Plan provides that assessments, plans and will be done on a phased and serial basis. The assessments are scheduled to be completed by January 2010. The target date for completing all upgrades and construction is January 2012. Jt. Pis' Trial Ex. 56 (Receiver's Eighth Quarterly Report, Exh. 1—Receiver's Turnaround Plan of Action) at 25-26.

[16] 52. As of June 2008, Avenal and San Quentin were the only two existing prisons at which medical facility construction upgrades had begun. Jt. Pls' Trial Ex. 56 (Receiver's Eighth Quarterly Report) at 39-44. Avenal was scheduled to have construction completed in July 2009. *Id.* at 40. San Quentin had some projects completed; most projects there were scheduled to be completed in February 2009 with the final project (the central health services building) scheduled to be done in April 2010. *Id.* at 42-44.

53. NKSP, SATF and SOL, where, as discussed above, clinic space is inadequate, are in the final group of 13 prisons scheduled to be assessed and to have upgrades completed (by 2012) . Jt. Pls' Trial Ex. 56 (Receiver's Eighth Quarterly Report, Exh. 1—Receiver's Turnaround Plan of Action) at 26. Thus, in the best case—if the Receiver's timetable has no slippage at all—tens of thousands of prisoners will continue to be incarcerated in prisons with inadequate medical facilities for the next three plus years.

V. THE NUMBER OF CLINICIANS CONTINUES TO BE INSUFFICIENT FOR THE NUMBER OF PRISONERS WHO REQUIRE MEDICAL CARE.

54. In my previous report, I stated that overcrowding creates pressures on the system that make hiring and retaining sufficient numbers of clinicians and other medical workers exceedingly difficult, and that California's overcrowding crisis has created a situation where the prisons, and particularly the more remote prisons, are unable to hire and retain enough health care staff to address the medical needs of the prisoner-patient population. Based on my most recent inspections and my review of the vacancy data from May 2008, my opinion remains unchanged.

[17] A. CDCR Still Cannot Fill Some Vacancies

55. Even after the Receiver substantially raised salaries for medical staff, the vacancy rates at some prisons remain high. The May 2008 vacancy and registry report provided by the *Plata* health care support division shows on-going serious problems in hiring primary care providers (PCPs), and even with having adequate numbers of such providers on site. *Plata* Pls' Trial Ex. 35 (*Plata* Vacancy/Registry Report, May 2008) at 1. The report shows that statewide there

was a 25 percent vacancy rate in primary care provider positions; the vacancy rate adjusted to account for PCP employees on leave in May was 35 percent. *Id.* Further, the report shows that in May the prisons statewide had a shortfall of 56 PCPs even after temporary, overtime, and contract/registry PCPs used to reduce vacancies were taken into account. *Id.* Consistent with this statewide vacancy report, four of the five prisons I inspected in August have had critical, ongoing problems filling their primary care positions with state employees.[1]

1. NKSP

56. According to the *Plata* Vacancy/Registry Report for May 2008, NKSP had a total of 16 primary care provider positions, of which 6.6 were unfilled, for a vacancy rate of 41%. *Id.* at 12.

57. Dr. Emam, the acting Chief Physician and Surgeon at NKSP advised me that the prison had very recently succeeded in hiring some primary care providers, but that it has been extremely difficult to fill the vacant positions. He [18] reported that the prison continued to have two line physician vacancies and that that they had also been unable to fill the Chief Physician and Surgeon position that he has been filling on a temporary basis.

2. SATF

58. The May 2008 Vacancy Report shows that SATF had 13 primary care positions allocated, of

---

[1] CSP-SOL, the fifth prison .I visited, did not have an adequate allocation of PCP positions. See Part V.B, below. Further, as discussed above (see Part IV.B), the prisons, including CSP-SOL, do not have adequate clinic space for PCPs to see prisoner-patients.

which one was filled with a state physician, but that person was on leave. *Id.* at 15.

59. The Report shows that SATF hired 7.7 registry providers at that time to deliver primary care. *Id.*

60. When I inspected the prison, Dr. Enenmoh, the acting Chief Medical Officer, advised me the prison still had just one state employee physician, and that recruiting for the physician positions, and for the unfilled Chief Physician and Surgeon position, had been very difficult. He had eight contract physicians and two contract mid-level providers.

3. PVSP

61. The May 2008 Vacancy Report shows that PVSP had 14.8 allocated primary care positions. At that time, PVSP had just one state employee primary care provider. The prison contracted with 5.1 registry primary care providers. *Id.* at 13.

62. According to Dr. Igbinosa, as of the date of my inspection, the prison had the equivalent of eight full-time primary care practitioners. He explained that it is extremely difficult to recruit medical professionals to work at the prison because it is so remote. Most contract providers currently providing care at the prison live in Los Angeles or San Francisco and commute to the prison [19] on an intermittent basis. One physician commutes from Chicago twice a month, for a week each time. Dr. Igbinosa said that none are willing to relocate to the Central. Valley. He noted that, even when candidates at hiring fairs express interest in working at PVSP, they often retract their application when they realize that they can earn the same CDCR salary and live in or near an urban environment. As a consequence, PVSP has

too few primary care providers to care for the number of patients at the prison.

4. HDSP

63. The May 2008 Vacancy Report shows that HDSP had 8.0 allocated primary care positions, and that two were vacant in May. *Id.* at 10. However, on the date that I inspected High Desert in August 2008, Chief Medical Officer Dr. Swingle advised me that, although HDSP appeared to have four state physicians, all four were either on leave or stripped of their clinical privileges.

B. Some Prisons Are Still Allocated Too Few Providers

64. At SOL, the prison is authorized 9.0 staff primary care provider (PCP) positions. The health care manager stated that the prison was making a request to add two more staff PCP positions, so that there would be a total of eleven. The chief medical officer, however, said that the prison needs a total of 13 PCP staff positions, given the number of medical encounters.

C. Use of Registry Still Cannot Resolve Staffing Shortfalls

65. The heavy use of registry providers is, as I explained in my initial report, a stop-gap measure that mitigates harm to individual patients in the short-term, but is not an adequate long-term solution. Solano's Chief Medical Officer, Dr. Traquina, indicated that there is a rapid turnover in registry personnel, and it is [20] difficult to build a medical care delivery program with staff who do not intend to make a substantial time investment at the prison.

66. Because registry physicians tend to turn over quickly, the prisons end up spending time doing extensive on-the-job training repeatedly, which is time-consuming and detracts from patient care delivery.

D. Clinical Staff Shortages Continue to Result in Delayed and Inadequate Care

67. At each prison I inspected in August, there were delays in triaging patients' sick call slips, and in primary care visits, because the clinicians were unable to keep up with the heavy demand for medical care.

68. At most of the prisons I inspected, the staff reported that, although there are backlogs of patients waiting to see their primary care providers, the staff does triage to ensure that the sicker patients are seen first on the primary care provider lines. The defendants have not, however, demonstrated a method for this triage or that they evaluate or track whether this triage is effective.

1. NKSP

69. At NKSP, I reviewed the tracking data for the D-yard primary care provider sick call line for the week before my inspection, August 18-22. *Plata* Pls' Trial Ex. 37. I found that the clinic had scheduled 94 appointments, but that the primary care provider had not seen 27 (29%) of those patients. The most common reasons cited on the tracking instrument were that the clinician ran out of time, or did not have the patient's Unit Health Record.

2. SATF

70. At SATF, the prison's Health Care Manager, Gayle Martinez, reported that SATF had a backlog of 1,200 overdue primary care appointments. [21] The

prison has a far greater demand for services than the staff at SAIF can deliver.

71. I interviewed the Office Technicians and reviewed sick call slips on four of the seven prison yards (A, C, E and G). I found that, on each of the yards, it usually takes two to six days for prisoners to see a nurse for a triage appointment. (These appointments are supposed to occur within one business day of receipt of the patient's sick call slip.) For example, on E-yard, I reviewed the stack of sick call slips for the patients scheduled to see the RN on August 27. The sick call slips were marked received on August 21-25.

72. On each of the four prison yards I inspected, the Office Technicians reported, and the sick call slips demonstrated, that it takes roughly four weeks for primary care appointments, once the patient has been referred to the primary care line on a routine basis.

3. PVSP

73. I was told by PVSP staff that the wait for routine primary care provider appointments is two to four weeks.

4. Solano

74. At SOL, there are major delays for routine appointments with a primary care provider at each of the prison's three clinics (Primary, Sattelite, and Annex). In the Primary clinic, it takes 16 weeks for such an appointment. In the Satellite clinic, it takes six to eight weeks. In the Annex clinic, the backlog is eight to ten weeks, even with primary care provider appointments taking place on Saturdays. The Primary clinic also has a backlog of face-to-face appoint-

ments with registered nurses; such appointments take about ten days to occur, even [22] though the clinic had run triple lines of such appointments on weekends.

5. HDSP

75. At each of the four main medical clinics at HDSP there are significant delays for routine appointments with a primary care provider (PCP). In "A" facility clinic, routine appointments are scheduled six weeks after a nurse determined that patient should be seen by such a provider. In "B" facility clinic, such appointments are scheduled approximately 16 weeks after such determinations. In "C" facility clinic, such appointments are scheduled approximately eight weeks after such determinations. In "D" facility clinic, such appointments are scheduled approximately 4 weeks after such determinations.

76. The "C" and "D" facility clinics also had backlogs for routine registered nurse face-to-face triage appointments; those appointments are scheduled two and four to five days, respectively, after the prisoner's written request for medical attention was received.

77. The HDSP CMO was not surprised, during the file reviews, to find that documents are placed in UHRs without having the practitioners review them, and the follow-up with PCPs are not timely scheduled. These documents include CT scan, ultrasound, and consultation reports. She was also not surprised that the files demonstrated substantial treatment delays. She advised me that HDSP lacked the staff and resources to treat the number of prisoners at the facility.

E. Inspected Prisons Still too Shortstaffed to Implement Required Programs.

78. Because there are too few clinical staff members to provide adequate treatment to the number of prisoners incarcerated, some prisons have failed to fully implement certain essential medical programs.

[23] 1. NKSP

79. For example, as explained above, NKSP has a large reception center, and thus is tasked with processing arriving prisoners and classifying them for transfer to permanent prisons. Given the acute staffing shortage, coupled with the lack of clinical exam space, NKSP has been unable to provide incoming prisoners with the required comprehensive physical examination. Instead, these prisoners are simply undergoing a second medical interview, several days after their initial interview with an RN.

80. Additionally, based on my review of a sample of unit health records (UHR), I believe required follow-up appointments with primary care providers are not being done for a substantial number of patients. I reviewed 13 UHRs for prisoners sent offsite approximately one month before my inspection (either for scheduled or unscheduled appointments) for whom documentation of the offsite visit and follow-up with the PCP should have been in the file for minimally adequate care. I found that nine of the 13 UHRs lacked documentation of a timely follow-up with a physician, and eight lacked required documentation of the service or hospital visit.

2. SATF

81. At SATF, I visited four prison yard clinics. In none of these clinics was the staff maintaining an

"Urgent/Emergent Log Book." Each yard is supposed to have an Urgent/Emergent Log book, in which the staff records each encounter in which a prisoner reports an urgent or emergent condition. P&P, 4-12-1. These logs play an important role in continuity of care, because the primary [24] care provider assigned to each yard clinic is required to review the log each work day to determine whether any patients require further follow-up. P&P 4-12-3. Without this link, I believe some patients who do require urgent follow-up attention will fail to receive it.

82. I reviewed 11 UHRs for prisoners who had transferred to SATF two weeks earlier and had significant medical conditions. Based on these records and the available documentation, I concluded that for ten of the eleven patients, medically necessary follow-up had not occurred. The problems I identified included missed medications and lapsed chronic care follow-up visits with a primary care provider.

83. Additionally, the UHRs lacked documentation of required primary care follow-up appointments. I reviewed nine UHRs for prisoners sent offsite approximately one month before my inspection (either for scheduled or unscheduled appointments) for whom documentation of the offsite visit and follow-up with the PCP should have been in the file for minimally adequate care. I was unable to find documentation of a PCP follow-up in four records. For three of those four medical records, there was also no documentation from either the hospital or specialist regarding the encounter. Some patients who receive medical attention off-site but are not adequately followed up by their primary care providers upon return to prison will be at serious risk of harm because necessary treatment will either lapse, or not be ordered.

84. The SATF medical staff advised me that they are unable to schedule timely follow-ups in many cases because they have too few medical providers for the number of prisoners requiring treatment.

[25] 3. PVSP

85. I reviewed the UHRs for 23 prisoners sent offsite approximately one month before my inspection (either for scheduled or unscheduled appointments) for whom documentation of the offsite visit and follow-up with the PCP should have been in the file for minimally adequate care. According to the UHRs, 12 of 23 prisoners did not receive timely follow-up appointments. Eleven of the 23 UHRs were missing required documentation, including ER reports, consult reports, etc.

4. SOL

86. At Solano, I reviewed 14 records of patients sent offsite approximately one month before my inspection (either for scheduled or unscheduled appointments) for whom documentation of the offsite visit and follow-up with the PCP should be in the file for minimally adequate care. I found that just seven of the files contained documentation of timely follow-up, and in four UHRs, required documentation of the offsite medical encounter was missing.

5. HDSP

87. At HDSP, I reviewed 15 records of patients sent offsite approximately one month before my inspection (either for scheduled or unscheduled appointments) for whom documentation of the offsite visit and follow-up with the PCP should have been in the file for minimally adequate care. In eleven cases, there was no documentation of a timely PCP follow-up visit, and in nine cases, there was missing documentation.

My review uncovered other serious problems. For example, one patient was ordered an urgent MRI of the [26] brain on July 8, 2008. There was no documentation that the MRI had occurred as of August 29, 2008.

VI. PLAINTIFFS ARE STILL NOT RECEIVING TIMELY SPECIALTY CARE

88. Although defendants have added contract specialty providers, the prisons I inspected still cannot schedule timely "high priority" visits in a large number of cases. PCPs request offsite specialty appointments on a "high priority" basis when the patient has an urgent medical need, and these appointments are supposed to be scheduled within 14 days of the request for services. P&P 4-8-1. The demand for care, particularly for the high priority cases, continues to overwhelm the resources available to the defendants. Additionally, some facilities have proven unable to obtain timely reports from the specialty providers, resulting in unnecessary treatment delays. (See paras. 80, 83, 85-87 above.)

A. PVSP

89. At PVSP, the offsite aging specialty report included 55 high priority referrals as of August 27, 2008. *Plata* Pls' Trial Ex. 38. Of those, 11 had been pending for over 14 days, yet had no appointment scheduled, and of those scheduled, 19 were scheduled to take place more than 14 days after the referral. Thus, well over half of the PVSP patients are unable to receive timely high priority appointments.

B. SOL

90. The situation at SOL was worse. There, 63 high priority off-site specialty appointments were listed on

the aging report for such appointments. *Plata* Pls' Trial Ex. 39. None were scheduled for a date within 14 days of the primary care provider request. Most of these urgent referrals—approximately 40—[27] did not yet even have an appointment date; four of these cases had been already pending at least 20 weeks, four others at least 15 weeks, three others at least 10 weeks, and another approximately one dozen between four and eight weeks. Of the approximately two dozen high priority off-site specialty referrals that had appointment dates scheduled, about 12 were scheduled to take place more than approximately five weeks after approval, with a few of these being scheduled four to five months (or longer) after approval. Another approximately one dozen were scheduled to take place three or four weeks after the approval date.

C. HDSP

91. At HDSP, 48 high priority off-site specialty referrals were listed on the aging report. *Plata* Pls' Trial Ex. 40. Only one was scheduled for a date within 14 days of the primary care provider request, as required for these urgent referrals by the court-approved policies. Three other referrals were scheduled to take place between 14 and 21 days after the approval date. Seven other high priority referrals had appointments scheduled, with dates ranging from four to eight weeks after the approval date. The vast majority of the urgent off-site specialty referrals—37 of the cases—did not yet even have an appointment date with the requested specialty provider. Approximately 20 cases without an appointment date scheduled had been pending for at least six weeks; half of these had been pending for more than two months.

D. NKSP

92. At NKSP, of the 70 listed high priority offsite specialty referrals, 22 (31%) had been pending for more than 14 days and had no appointment scheduled. *Plata* Pls' Trial Ex. 41. Twelve more were scheduled, but more than 14 days had [28] elapsed between the referral and the appointment. Nearly half the appointments currently listed as "high priority" NKSP will not take place within the required timeframe.

93. When specialists see CDCR prisoners or when prisoners are seen for certain procedures, the service provider must provide the sending prison with a report of the encounter. The CDCR primary care provider then uses that report to determine the prisoner's treatment plan.

94. Based on my reviews of unit health records at NKSP and PVSP. I concluded both prisons have a serious problem obtaining these records.

VII. MEDICATION MANAGEMENT PROBLEMS

95. In my initial report, I found that defendants' medication delivery systems were inadequate for the size of the population they serve, and were plagued by short-staffing at a number of prisons. Based on my most recent inspections and my review of the report by Pablo Stewart, M.D., it is still my opinion that the defendants' medication delivery system is inadequate for the population it serves. Because there are too many prisoners, coupled with too few staff and insufficient resources, the system suffers from medication delays and inadequate treatment documentation. Some prisoners continue to receive their medication late, or not at all, and suffer as a result.

96. The Receiver is rolling out a new medication delivery system under the auspices of Maxor. At SAIF, the Maxor system was initiated in April 2008. The staff reported that they continued to find "bugs" in the system, and that the biggest issue was that refills were not being provided timely. The staff also reported that the system was considerably more labor-intensive than the previous [29] system, requiring additional clerical work, and yet the prisons were not provided additional clerical support positions.

97. In its annual report to the Receiver for 2007, Maxor recognizes that overcrowding significantly impacts its ability to deliver medications:

> Overcrowding: The impact of overcrowding on the system's abilities to provide timely and effective delivery of necessary medications is significant. A clear example of this impact was noted at San Quentin. San Quentin receives 75-80 new prisoners each day and presumably transfers out or releases about the same number. Overcrowding however, forces a series of "compaction" moves resulting in as many as 300-400 separate prisoner moves each day in order to free up appropriate housing for the offenders. This constant "churn" of prisoners within the institution keeps the healthcare staff chasing prisoner movement to ensure medications can be delivered in a timely fashion. . . . This takes time, and in some cases, the medications are simply returned to the medical area to try to determine where the prisoner is housed. During this time, the prisoner patient is not getting his medications and may complain to staff who in turn—reorders the medications, resulting in duplicate work.

Jt. Pls' Trial Ex. 67 (Receiver's Seventh Quarterly Report, Exh. 6) at 29.

VIII. OVERCROWDING FUELS DYSFUNCTION IN MEDICAL RECORDS

98. As I explained in my first report, health care records are a critical component of any adequate medical delivery system. Unless medical records and scheduling information are managed, organized, and maintained effectively, appropriate health care services cannot be provided. Overcrowding continues to make it impossible for CDCR to perform these essential functions.

A. Quality of Medical Records Continues to be Poor at Inspected Prisons.

99. Although the Receiver has long-term plans to develop an electronic medical record, those plans are unlikely to come to fruition for years. In the meantime, California relies on paper medical records (except at Pelican Bay State Prison). At each of the prisons I inspected, I found that the medical records were [30] unwieldy, rarely organized chronologically and, in general, poorly maintained. Retrieving useful information from the files invariably requires considerable time sifting through extraneous reports, misfiled documents and outdated materials. At the same time, certain documents that would be extremely useful, such as an updated "Problem List" for each file, which is required by the court-ordered *Plata* Policies and Procedures, are typically missing.

100. There are dangerous widespread delays in filing medical documents at HDSP. After I had provided HDSP medical staff with a list of the names and CDCR numbers of the prisoners whose unit health records (UHRs) I wanted to review, someone

from the prison went through medical records' loose filing (documentation not yet placed in individual patient UHRs) to find any documents for the patients whose charts I was going to review. These documents were then brought to the room where I reviewed the UHRs. The documentation retrieved from loose filing included documents more than a month old, including, for example, the result of a CT Scan received by the prison in July. More alarming, most of the documents in loose filing, some of which had been received a month before my site visit, had not yet been initialed as reviewed by a primary care provider.

101. In addition, Dr. Swingle, the HDSP Chief Medical Officer, reported that the transcribing of dictated primary care provider notes was "several months" behind at the prison. This means that documentation of a PCP-patient encounter is missing in the UHR. This, combined with the backlog in loose filing described above, creates dangerous risks because medical staff members who provide care to the patient have no idea what assessments were made previously or, in some cases, [31] what diagnostic test results were obtained.

B. CDCR Continues to Rely on Inadequate Tracking Systems

102. CDCR's tracking and information systems cannot keep up with the overwhelming data requirements in the system's overcrowded prisons. In support of his Seventh Quarterly Report, the Receiver submitted a February 6, 2008 report entitled "Patient Identification Assessment." Jt. Pls' Trial Ex. 67 (Receiver's Seventh Quarterly Report, Exh, 11 There, the consultant concluded that "the information technology environment within the medical care side of the CDCR is not a 'system' . . . it is an act of

desperation." *Id.* at 5, emphasis in the original. The report further explains that, because the defendants cannot identify and link previous diagnostic and treatment information across prison sites, they face risks including "the possibility of significant errors during patient treatment . . . [and the] inability to identify individuals with chronic and/or communicable conditions upon reincarceration . . . ." *Id.*

103. The Report explains that these problems are magnified in the CDCR due to several factors, including "overcrowding in the prisons (increasing the risk of communicable disease transmission) . . ." *Id.* "Due to debilitating technology and record management practices, pulling together a cohesive picture of the inmate's health status is a significant challenge, and currently is near impossible. This puts continuity of care at risk." *Id.* at 6.

104. I agree with this report that the information systems currently in place in the CDCR are inadequate, and place prisoners at risk of harm.

IX. THERE ARE STILL NOT ENOUGH CUSTODY OFFICERS TO ENSURE ADEQUATE ACCESS TO MEDICAL APPOINTMENTS AND CLINICAL CONTACTS AT SOME PRISONS.

[32] 105. As the Receiver explained in his Turnaround Plan in June 2008,

> Health care services are meaningful only if patient-inmates have timely access to those services. In a correctional setting, issues of access are inextricably intertwined with control and supervision of inmate movement by custody staff. System-wide, CDCR lacks the custody staff and organizational structure and processes to ensure that patient-inmates are reliably escorted and/or

> transported to medical appointments. As a result, patient-inmates are often denied timely access to health care services, substantially increasing the risk that patient-inmates' health will further deteriorate and increasing the overall costs of providing health care services.

Jt. Pls' Trial Ex. 56, (Receiver's Eighth Quarterly Report, Exh. 1—Turnaround Plan of Action) at 5.

106. The Receiver has added additional custody teams to facilitate timely medical appointments, but his overall plan does not call for the full implementation of these additional custody allocations until July 2011, "contingent upon recruiting and training sufficient numbers of correctional officers to fill the new health care access posts." *Id.* at 6.

107. At some of the prisons I inspected, prisoners are unable to access medical care appointments based on custody shortages. When a prison yard is placed on "modified program" status, *i.e.,* either all prisoners or some racial subgroups must be escorted to the clinics, often in shackles, there are often significant delays in treatment. These delays arise because there are not enough custody officers to move the prisoners in and out of the clinics on a timely basis, so far fewer prisoners are seen in the clinics.

A. PVSP

108. I was told by custody staff that the B-yard at PVSP has been locked down during the last two months. The appointment tracking data for PVSP for the [33] month of August (through August 14) shows the dramatic drop off in completed patient appointments on B-yard. *Plata* Pls' Trial Ex. 42 (PVSP Physician Appointment Statistics, August 2008). During the first two weeks of August, primary care providers

on yards A, C and D saw 258, 193 and 215 prisoners, respectively. On B-yard, the primary providers saw 118 prisoners during the same period. Indeed, on August 7, two providers were scheduled to see 42 patients, but just ten patients were seen. *Id.* The reasons stated on the tracking list were "alarms, LD [presumably lockdown]; no escorts." *Id.*

109. The tracking statistics for the RN triage appointments likewise reflect a drop for completed patient triage appointments for B-yard patients. *Plata* Pls" Trial Ex. 43 (PVSP RN Appointment Statistics, August 2008). While A, C and D completed 215, 121 and 129 triage appointments, B-yard nurses completed just 98, or fewer than ten appointments per clinic day. *Id.* The reasons provided for the cancelled appointments included, "lockdown," "no escorts," and "alarms." *Id.*

110. Additionally, on B-yard, the staff advised me that it took one business day from the date of collection of sick call slips to the date of the face-to-face triage appointment. However, when I questioned the office technician further about the scheduling, he stated that because the yard was on lockdown, he had to schedule prisoners for their triage appointments by race/gang affiliation, with each subgroup having one day a week for appointments. Thus, he was able to schedule timely RN triage appointments in only a handful of cases.

B. HDSP

111. At HDSP, the prison routinely has what the Warden describes as [34] rolling lockdowns, in which half of the prison's four main housing facilities are locked down at any one time because the prison does not have enough correctional officers to operate all

facilities without using overtime. When there is such a lockdown on the two HDSP facilities used to house maximum custody prisoners, access to medical care is affected because such prisoners must be escorted to the medical clinics. When there is a lockdown in "D" facility, the primary care provider will be able to see between 12 and 20 patients a day, instead of the 20 that can be seen if there is no lockdown.

X. THERE ARE MORE PRISONERS REQUIRING SPECIALIZED PLACEMENT FOR MEDICAL REASONS THAN CDCR CAN ACCOMMODATE

112. In my first report, I agreed with the Receiver's opinion that the CDCR is currently unable to accommodate the housing needs of medical patients requiring specialized placement. My opinion has not changed.

113. In his Turnaround Plan of Action, the Receiver discusses his plan to expand facilities to accommodate the 10,000 state prisoners "whose medical and/or mental condition requires separate housing to facilitate appropriate, cost-effective access to necessary health care services." Jt. Pls' Trial Ex. 56 (Receiver's Eighth Quarterly Report, Ex—Turnaround Plan of Action) at 27. The Receiver explains these facilities must be built because "CDCR does not have adequate clinical, administrative and housing facilities to support constitutionally adequate health care." *Id.*

114. As the Receiver explained in his Eighth Quarterly report, the current lack of medically appropriate housing for medically fragile prisoners can have dire consequences. "Simply stated, before constitutionally adequate health care can be [35] delivered in California's prisons, there needs to be *constitutionally*

adequate treatment facilities to provide such care. Unless and until these facilities are constructed, the major health care class action cases will continue indefinitely. Likewise, prisoners will continue to die unnecessarily." Jt. Pls' Exh. 56 at 46. (Emphasis in the original.)

115. I understand that defendants have failed to provide the Receiver with the necessary funding for the construction, and the Receiver recently moved for contempt against the Governor and the State Controller for their failure to provide the funding. To my knowledge, no construction has yet begun on this essential project.

XI. IT WILL TAKE YEARS FOR THE RECEIVER'S TURNAROUND PLAN TO REMEDY THE UNCONSTITUTIONAL MEDICAL CONDITIONS

116. On June 6, 2008, the Receiver submitted to the Court a "Turnaround Plan of Action" designed to correct constitutional deficiencies in the California prison health care system. I have reviewed the Receiver's Turnaround Plan.

117. In his August 5, 2008 newsletter, the Receiver wrote that the Turnaround Plan "consists of over two dozen complex projects, initiatives and programs. Any one of these major projects would be enough to challenge an ordinary department." Jt. Pls' Trial Ex. 102 (August 5, 2008 Newsletter from the Receiver.) I agree that the plan is enormously complex, and I believe that it will take years to remedy the current unconstitutional conditions. The timeframe to reach a constitutionally adequate medical delivery system will be delayed if crowding is not reduced.

XII. OVERCROWDING INCREASES THE RATE AND SERIOUSNESS OF INFECTIOUS DISEASE TRANSMISSION

[36] [missing text] the converted gyms, create potential breeding grounds for disease.

XIII. CONCLUSIONS

119. Based on all that I have set forth above and in my previous reports, I continue to believe that overcrowding is the primary cause of the current stale of medical crisis in the CDCR. I do not believe the Receiver and. he CDCR will be able to address and resolve the critical medical care deficiencies until the need for services within the system is significantly, reduced, and I still believe that some of the hiring gains for clinicians will be lost if these systemic issues are not addressed, because many newly-hired clinicians will be unwilling to risk their professional credentials and reputations by practicing in an environment where their patients are at risk of harm because, among other things, adequate clinical space is scarce, appointments are not scheduled, complete medical records arc unavailable, and medications are not timely delivered.

SUPPLEMENTAL REPORT OF JEANNE WOODFORD

Coleman v. Schwarzenegger et al.,

No. Civ. S-90-0520 LKK

Plata v. Schwarzenegger et al.,

No. C01-1351 T.E.H.

AUGUST 2008

[1] SUPPLEMENTAL REPORT OF JEANNE WOODFORD

A. Introduction

1. On November 9, 2007, I submitted a report on the effects of overcrowding in California's prisons. At that time I concluded that overcrowding is the primary cause of the constitutional violations in these two cases, that a prison construction program will not alleviate the unconstitutional conditions and that the prison population must be substantially reduced for there to be any realistic hope that the unconstitutional conditions will be eliminated.

2. Since that time the population of the prison system has remained essentially unchanged, with the exception of a few thousand prisoners that have been transferred to private out-of-state prisons. In November 2007, there were 163,834 prisoners in institutions and camps, which is 199% of design capacity. As of July 30, 2008, there were 159,326 offenders in institutions and camps which is 191% of design capacity. Compare Weekly Reports of Population for July 30, 2008 and November 7, 2007, Data Analysis Unit, California Department of Corrections and Rehabilitation. Almost the entire difference is attributable to the 4,606 prisoners in out-of-state facilities.

3. After considering this information and inspecting three California prisons in the last month, it is still my opinion that the CDCR remains severely overcrowded, that this overcrowding is the primary cause of the constitutional violations and that the prison population must be substantially reduced to alleviate the unconstitutional conditions. In my opinion, the state can and should safely [2] reduce the prison population to an appropriate level that allows prisoners to receive, and staff to provide, the health care to which they are entitled and the programming that will keep all of us safe. I have read that the strike team appointed by the Governor to implement AB 900 has concluded that CDCR should not exceed 130% of design bed capacity in the long term, and should establish measures to ensure that this crowding level is not exceeded in the future. Joint Pls Trial Ex. 74 at 6 (Validation of In-Fill Bed Plan, AB 900 Strike Team Issue Memo No. 1, August 13, 2007). I agree with this position, with the caveat that different (and particularly older) facilities might require slightly lower population limitations, based on the quality of infrastructure and availability of treatment space, for example.

4. I inspected the Correctional Training Facility at Soledad (CM on July 23, 2008, the California State Prison at Corcoran (Corcoran) on July 24, 2008, and the California State Prison—Los Angeles at Lancaster (Lancaster) on August 7, 2008. I was accompanied on the tour by prison officials, a representative of the Receiver's office and a Deputy Attorney General. I was provided with access to all areas of the prison and any documents or prisoner files that I requested. Both custody and health care staff answered all of my questions.

5. All three of the prisons that I inspected are severely overcrowded by any measure. CTF was 197% overcrowded on July 23, 2008, housing 6,500 prisoners in a facility designed for 3,312. Weekly Report of Population for July 23, 2008; Data Analysis Unit, California Department of Corrections and Rehabilitation. [3] Corcoran was designed for 3,116 prisoners; but was housing 5734 on July 23, 2008, 184% of design capacity. *Id.* Lancaster housed nearly 5,000 prisoners on July 23, 2008, in a prison designed for 2,300, an overcrowding rate of an astounding 216%. The three prisons I visited confirmed my opinion that overcrowding negatively affects the entire operation of a prison. Although this is manifested in different ways, it is obvious that the overcrowding itself is very dangerous and is preventing the state from providing the necessary services to prisoners.

6. Even the remedies the state uses to alleviate crowding cause problems for an already overburdened staff For example, at CTF the medical department was swamped with work because they had been ordered to review 1,500 medical files to determine which prisoners were eligible for transfer to out-of-state prisons.

B. Housing Units

7. All three prisons were housing prisoners in areas not designed for that purpose. At Lancaster, all three of the gymnasiums were filled with triple bunks and each housed between 150 and 200 prisoners. Other housing units had 40 double bunks on the dayroom floor. CIT is using three units as dormitories filled with 200 prisoners in double-bunks. And at Corcoran a gym was converted into a triple bunked dormitory, and inmates in a housing unit in the sensitive needs yard were overflowing on to the dayroom floor.

8. These overcrowded housing units are neither safe nor secure. The custodial staffing in each of these units is not sufficient to provide adequate [4] supervision, especially because the bunks obstruct lines of sight and there are not enough officers to patrol the units. At Lancaster, for example, a gym housing reception center was filled with inmates that according to the Correctional Officer had not been classified by security level. This allowed prisoners with different potential for violence to be mixed in a housing unit where there was scant ability to provide supervision. This practice violates the most basic correctional practices designed to ensure that prisoners are safe from harm by other prisoners and that correctional officers are able to provide assistance if the prisoner has a health issue.

9. Adding to the risk of harm is the fact that these units are very hot, with the outside temperature between 95-102 degrees. Further, the prisoners had virtually nothing to do for months and sometimes years on end. The staff in these units confirmed that with the exception of the "E" Dorm at South at CTF there was little program or activity for these prisoners except exercise, and that was often cancelled because of the lack of officers or security lockdowns. At OT North, for example, the size of the housing units, coupled with the lack of recreational space, has resulted in a yard program that divides the yard between three housing units on one yard and two on the other yard. Limiting the number of inmates on the yard has reduced the potential for violence on the yard but has dramatically reduced the number of hours general population inmates are out of their cell. I was told over 50% of the inmates did not have education or work assignments. For these inmates the amount of out of cell time was slightly more [5]

than an inmate in administrative segregation or a security housing unit. As a former correctional officer and Warden, I have observed that prolonged periods of idleness under cramped conditions breeds anger and frustration. I also observed a growing number of elderly inmates at CTF central utilizing assistive devices such as a cane climbing grated stairs to get to their cell. These inmates were having some difficulty. This appeared dangerous under normal conditions. It is hard to imagine how they would accomplish this task in an emergency evacuation. There appears to be an insufficient number of first floor cells to meet the needs of the growing number of elder inmates. Inmates are often left with the choice of staying at a prison that has mobility challenges but offers some programs, such as CTF Central, or transferring to a prison that can meet their physical needs but has no or limited program availability. I agree with Governor Schwarzenegger that this level of overcrowding constitutes an emergency because it increases the risk of violence, riot and the transmission of infectious disease.

C. Reception Centers

10. It is also apparent that the sheer numbers of prisoners are straining the prison operations beyond the breaking point. This is especially apparent in reception centers. Several managers, including the Warded at Lancaster, remarked on the difficulty that they had keeping up with the flow of 1,000 newly arriving prisoners each month, each of whom must undergo a medical, dental and mental health examination. The reception center was also taxed by the need to keep inmates moving through the reception center until transferring to other prisons to [6] complete their sentence. It was also clear from touring

this facility that staff had difficulty keeping up with sanitation and cleanliness. Much of the prison, including medical examining rooms, was unbelievable dirty, lacking appropriate sanitation practices.

11. Another manifestation of crowding is the length of time it takes to transfer prisoners from the reception center to other prisons. Prisoners should be processed through a reception center in 60.days. At Lancaster, the Warden initially told us that the average length of stay was 113 days. During the tour, I was told by correctional staff that the average reception stay was about 120 days. I was later informed by the associate warden that the average length of stay was about 61 days, a figure which appears suspect.

12. The Warden acknowledged that some reception prisoners stayed at Lancaster for up to two years because there was no other place to put them. I spoke with one such prisoner in the most restrictive and harsh unit at the prison, the new free-standing administrative segregation unit. He had been in ASU for two years because there was no room for him at the security housing unit, and in the year since his disciplinary term had expired seven proposed transfers had failed. Since I only talked with a few randomly-selected prisoners in this unit, I am confident that a full examination of the 175 prisoners in that unit would have revealed similar cases. The situation was similar at CTF with at least one prisoner spending two years in administrative segregation because there was no place else to put him.

[7] 13. The Health Care Manager and Director of Nursing at Lancaster both remarked that prisoners coming into the prison from the county jails were sicker and had more medical and mental health problems than general population prisoners. The

chief medical records officer stated that the prison was two months behind in filing certain medical documents because files had not arrived from the *Plata* central medical records storage facility. This was particularly serious because virtually none of the prisoners from the Los Angeles county jails arrived with any health related information.

14. Although CTF is not a reception center, the mental health staff there stated that at times they felt like it was one. Not only were the absolute number (900) of outpatient (CCCMS) prisoners stretching their resources beyond their capability, but many CCCMS prisoners were present at the prison for only a short time, thus requiring staff to use their resources on the time intensive intake process. Mental health staff reported that they have had up to 200 new arrivals in a week, preventing them from .completing the initial evaluations within the timelines, even with staff working overtime.

D. Segregation Units

15. The Warden of Lancaster remarked that the reception center Enhanced Outpatient Program (EOP) prisoners were "really hurting us." Sixty percent of the EOP prisoners at Lancaster were from the reception center. Many of those were housed in an EOP administrative segregation unit. The unit was supposed to house only 54 prisoners, but had housed up to 90. The unit was noisy, filthy, and [8] there were cages all over the dayroom floor that were used as holding cells or for "group treatment". The Health Care Manager candidly acknowledged what was obvious—there was not enough room in the unit to provide medical and mental health treatment to all these mentally ill prisoners: I talked with several who were clearly very distressed. The prison had

converted some custodial office space to treatment space, but those rooms did not even have an examination table for medical staff

16. Prisoners in this EOP unit were not receiving the required ten hours per week of exercise. I examined CDCR forms 114-A, which covered the period of August 3 through 7, 2008. These forms are kept to record the services provided to prisoners in a segregation unit. In all of the thirty-nine 114-A's that I examined only one indicated that the prisoner had received exercise on one occasion. The others either indicated that the prisoner had refused or there was no indication that the prisoner was given the opportunity to exercise. I was quite surprised by the number of refusals since generally prisoners exercise when given the opportunity. The high number of refusals is a symptom of a problem that was not understood or being addressed by staff.

17. According to the Coleman requirements, a psychiatric technician is supposed to make rounds in the unit every day to identify prisoners at risk of decompensation or suicide. The 114s that I reviewed showed that the psych tech was making rounds only once every other day.

[9] 18. The sheer number of reception center prisoners caused prisoners to be housed in places that were completely inappropriate. In the recently built free standing administrative segregation unit at Lancaster, I talked to two minimum security prisoners who were in that unit only because there was no space anywhere else in the facility. The rules of the unit require all prisoners housed there to be treated the same. As a consequence, they remained in the cells for all but 10 hours a week, during which they could exercise in a small cage outside. Another pris-

oner was housed in this unit only because he had a relative who worked at the prison. When I brought these cases to the attention of staff, they told me arrangements had been made to have the minimum custody inmates moved out of the unit and they would explore the possibility of moving the inmate who had a relative working at the facility to another reception center. These examples are significant because it shows that this degree of overcrowding causes staff to make housing decisions solely on the basis of available beds and not according to the prisoners or the prison's needs.

19. While inspecting the administrative segregation unit at Corcoran, I saw a notice posted outside the cell that said that this prisoner had not received any property because he refused a cell mate. The light was off in the middle of the day and the prisoner was lying on his back on the floor motionless with a towel or cloth of some type partially covering his face. This atypical behavior strongly suggests that the prisoner is mentally or emotionally at risk. However, his condition apparently went unnoticed. A review of the 114-Ds for this prisoner [10] revealed that psych tech rounds were done daily, yet no one had referred this man for a psychiatric evaluation despite the behavior and lack of program participation noted on the CDC 114A until I pointed out his condition to the chief psychologist who accompanied me during the tour.

20. I interviewed an older prisoner housed in the Security Housing Unit (CDCR's most restrictive setting) at Corcoran who uses a wheelchair and was wearing a neck brace. After a few minutes, this man started talking about the electrodes that were emanating from his feet and that correctional officers were trying to kill him. It was obvious to me that this

man was out of touch with reality, and the Chief Psychologist who interviewed him shortly after me confirmed that he was severely psychotic. The Chief Psychologist said he was recently in a crisis bed for eight days, and had been in the SHU for the last thirty days. The Chief Psychologist said that he would be referred for a mental health evaluation, but that since he was refusing medication there was little they would do for him until he becomes a danger to himself or others by attempting suicide or assaulting another person. This was not an isolated incident. The Chief Psychologist noted that there were a lot of others like him in the SHU at Corcoran.

21. At Lancaster, I spoke with several of the prisoners in an EOP unit who appeared to be losing touch with reality. They had difficulty expressing their thought and appeared somewhat disorientated to time and space.

E. Lockdowns

[11] 22. Lockdowns continue to be common and were present at each of the prisons I visited. At CTF, the North facility had been on lockdown for about a month prior to the visit. Officers from other facilities had to leave their assigned posts and help with cell searches at North, leaving only one officer responsible for three tiers and hundreds of prisoners in each of the other units.

23. At Corcoran, one of the yards was locked down because of problems with one of the gangs. These lockdowns directly interfered with treatment because mental health staff were required to conduct interviews at the cell front, where there is no privacy.

24. At Lancaster, although the Warden said the prison had few lockdowns, it appeared much of the

prison was on some form of lockdown when we visited. There were few prisoners on the yards, and many prisoners and staff reported that prisoners had gone weeks or months without access to the exercise yard,

F. Custodial Staffing

25. In prisons custody staff is essential to providing prisoners access to health care services, especially in cases where prisoners need urgent or emergency treatment. Not only do they provide escorts at certain times, but they are responsible for alerting health care staff when prisoners complain of an immediate serious problem and also are supposed to observe prisoners periodically to identify actual or potential problems. It is essential to the well-being of prisoners that correctional officers perform these functions at all times. There is not enough custodial staff to keep prisoners safe from harm in California prisons today. [12] "System-wide, CDCR lacks the custody staff and organizational structure and processes to ensure that patient-inmates are reliably escorted and/or transported to medical appointments. As a result, patient-inmates are often denied timely access to health care services, substantially increasing the risk that patient-inmates' health will further deteriorate and increasing the overall costs of providing health care services." Exhibit 1 to joint Pls Trial Ex. 56 (Federal Receiver's Turnaround Plan of Action, attached as Exhibit 1 to Receiver's Eighth Report) at 5.

26. As noted above, in some facilities at CTF there was only one officer responsible for all prisoners in a housing unit. At Lancaster, correctional staff informed us that the day before we arrived, there were no officers on the floor in some units. That left only two officers in the control booth to observe the entire unit,

making in-cell observation and interaction all but impossible.

G. Space

27. I agree with the Receiver that space represents a serious obstacle to the delivery of health care. Joint Pls Trial Ex. 56 (Receiver's Eighth Report) at 5. The staff at all three prisons I toured complained about inadequate space. At CIT, the medical staff stated that the Receiver has accepted their proposal for the construction of more space, which they believed was "critical" to their ability to provide care, but the completion of that project is at least two years away. The lack of space is having an immediate impact since they have identified a physician who could provide services, but they don't have space for him. In the South facility at CTF the clinic is by any measure too small and crowded with staff who [13] hardly can find a place to sit. The infirmary at CTF had 16 beds, six or seven of which were occupied by prisoners who needed long term care. Staff said that they need double that amount.

28. At Lancaster, prison officials cannibalized general population libraries to make room for clinics. But, that resulted in law libraries being moved to the dayroom floor in some of the units, making that space unavailable for recreation and treatment. The medical records office does not have room for all the files; instead, only the current volume of the medical record was readily available. The records office staff were crowded into an extremely small space, and in a small hallway at the rear of the office, boxes filled with records were stacked against the wall, and other vacant boxes were stacked about 10 feet high.

29. The Receiving and Release area at Lancaster was not designed for that purpose. Consequently,

prisoners were stuffed into large holding cages where they spent up to ten hours with some sitting on the floor, waiting to be processed. The area used for psychiatric screening did not provide any visual or audio privacy. Prisoners and clinicians were sitting right next to each other in cubicles where the walls were about three feet tall. The Health Care Manager recognized the critical need for space, but was told it would be many years before the problems are alleviated.

30. As the Receiver noted recently, "The facilities available for providing health care services within CDCR are woefully inadequate. Through years of neglect, the facilities have long since passed the time when modest investments [14] could remedy the problem. We are dealing not with deferred maintenance, but with some facilities that are literally falling apart. In addition, investments in health care facilities have significantly lagged behind growing inmate populations, so much so that available clinical space is less than half of what is necessary for daily operations." Exhibit 1 to Joint Pls Trial Ex. 56 (Federal Receiver's Turnaround Plan of Action, attached as Exhibit 1 to Receiver's Eighth Report) at 25. "Simply stated, before constitutionally adequate health care can be delivered in California's prisons, there needs to be *constitutionally adequate treatment facilities to provide such care*. Unless and until the facilities are constructed, . . . prisoners will continue to die unnecessarily." Joint Pls Trial Ex. 56 (Receiver's Eighth Report) at 46 (emphasis in Original).

H. Conclusion

31. Overcrowding in the CDCR is extreme, its effects are pervasive and it is preventing the Department

from providing adequate mental and medical health care to prisoners.

32. The prison population can be reduced safely. As the former Chief Probation Officer of San Francisco, Warden of San Quentin and acting Secretary of the CDCR, it has been my experience that California incarcerates many more prisoners than is necessary for the safety of the public. This is not to say that offenders should not be held accountable for their actions. Sanctions other than incarceration are effective in punishing many prisoners and at the same time reducing the risk of recidivism. If California used these sanctions it would have [15] not only a prison system that is capable of providing essential services, but safer communities.

[1] *Plata v. Schwarzenegger*; *Coleman v. Schwarzenegger*

REPORT OF JEANNE WOODFORD

A. Background and Introduction

1. I received my B.A. from Sonoma State University in 1978. I became a correctional officer at San Quentin in 1978. I worked for the California Department of Corrections and Rehabilitation (CDCR) for the next 27 years in various custodial and management positions. While at San Quentin, I rose through the ranks, eventually becoming the Warden from 1999 to 2004. In 2004 Governor Schwarzenegger appointed me as the Director of what was then the Department of Corrections. In 2005 he appointed me to be the Undersecretary for the CDCR and then the acting Secretary of the Department. I retired from the CDCR in July of last year. Since November 1, 2006, I have been the Chief Probation Officer for the City and County of San Francisco. A complete description of my educational and employment background is set forth in my resume, which is attached as Appendix A.

2. All of my positions with the CDCR have included health care related tasks. While a correctional officer, one of my responsibilities was to escort prisoners to their medical or mental health appointments. As a supervisor in housing units, I was responsible for ensuring that correctional officers did the same. As a correctional counselor, I advocated for prisoners to be examined by physicians. As a manager at San Quentin and the CDCR I worked with health care staff, and court appointed personnel on the improvement of the health care delivery system both at San Quentin

and in the Department generally through both *Coleman* and *Plata*.

[2] 3. I have been asked by attorneys for the Plaintiffs in both of these cases to describe my observations of the effects of overcrowding on the delivery of medical and mental health care to prisoners and whether in my opinion overcrowding is the primary cause of the constitutional violations, and, if so, whether other orders would effectively address the severe problems that plague the CDCR. I agreed to describe my observations and express my opinions, but I will not accept any compensation for doing so.

4. In preparation for this report I have reviewed the following documents: Governor Schwarzenegger, *Prison Overcrowding State of Emergency Proclamation* (October 2006); Office of Inspector General, *Special Review into the California Department of Corrections and Rehabilitation's Release of Inmate Scott Thomas* (October 2007); Little Hoover Commission, *Solving California's Corrections Crisis: Time is Running Out* (January 2007); Assembly Bill 900; *Toussaint v. McCarthy*, 597 F. Supp. 1388 (N.D. Cal. 1984); CDCR, *Fall Adult Population Projections* (October 2007); Office of the Inspector General, *Special Review into In-Prison Substance Abuse Programs Managed by the California Department of Corrections and Rehabilitation* (February 2007); Expert Panel, *A Roadmap for Effective Offender Programming in California* (June 2007).

5. In the last four years I have testified as an expert witness in a trial involving death row in Ohio.

6. My observations are set forth below. My opinion is that overcrowding is the primary cause of the constitutional violations, and nothing short of a

reduction in the [3] prison population will effectively address these issues.

B. Causes and Effects of Overcrowding

7. When I began employment as a correctional officer there were fewer than 30,000 prisoners in 12 state prisons. In the early 1980s, the prison population began to grow, and as a result the then existing prisons, including San Quentin, began to increase the use of double ceiling, to house prisoners. I saw first hand the effects of overcrowding on prisoners, staff and the prison's infrastructure.

8. The increase in the prison population created problems in virtually all areas. Overcrowding caused the prison to be more dangerous for both prisoners and staff The environmental conditions deteriorated to the point where they posed health and safety risks to everyone living and working in some housing units. Violence increased among prisoners, putting prisoners and staff at a greater risk of harm. Crowding also put a tremendous strain on the prison's ability to deliver adequate services, particularly medical and mental health care to prisoners.

9. It was not long before lawsuits were filed, challenging these terrible conditions. Two cases, *Wilson v. Deukmejian* and *Toussaint v. McCarthy*, resulted in orders not to double cell prisoners. Another case, *Marin v. Rushen*, was settled with an agreement to provide enhanced medical and mental health services to prisoners. In the *Toussaint* case, the Court found that overcrowding "strains all environmental systems within the institution, and makes it difficult to provide decent conditions of confinement to lockup inmates." *Toussaint v. McCarthy*, 597 F. Supp. at 1405. I agree, although I believe the [4]

Court understated the challenges posed by severe overcrowding, perhaps because the lockup units at that time were only 140% overcrowded.

10. Overcrowding of the magnitude currently existing in the CDCR is unprecedented in my experience. I do not know of another state prison system that approaches this level of crowding. In my opinion, it is all but impossible to safely and humanely incarcerate this many prisoners within the existing facilities.

11. Management. The CDCR lacks an effective management structure, it has insufficient management information systems to provide accurate data to managers, and it lacks sufficient number of personnel who have the necessary skill and training to manage such a large and complex organization.

12. Overcrowding exacerbates the weaknesses in the organizational structure of the CDCR. There are simply too many issues that arise from such a large number of prisoners and staff. One result of this is that management spends virtually all of its time fighting fires instead of engaging in thoughtful decision-making and planning. This results in short-sighted decisions that create even more crises. Under these circumstances, it is virtually impossible for the organization to develop, much less implement, a plan to provide prisoners with adequate care.

13. Transfers/Classification. Overcrowding limits the CDCR's ability to get prisoners to the right prison for treatment. The health care needs of prisoners do not take place in a vacuum. The CDCR employs an objective classification system that assigns prisoners points based on the length of their sentence, their disciplinary history and other [5] objective factors.

Based on the number of points, prisoners are classified into one of four levels. The level of classification determines which prisons prisoners can be transferred to. In addition, many prisoners have other special needs, such as for protective custody, gang association or dual diagnosis. All of these factors limit the places that prisoners can be housed. Since crowding fills any available space, there is insufficient flexibility in moving prisoners so that their health care and other needs can be met. For example, crowding causes delays in moving reception center prisoners to other prisons for treatment. Instead, many parole violators end up serving their entire sentence in reception centers, which are not designed for, nor capable of, providing the appropriate treatment.

14. To manage the movement of prisoners appropriately, five percent of housing should be vacant. Without the flexibility that this vacancy rate provides, it is very difficult to ensure that prisoners are housed appropriately for their medical and mental health needs.

15. Staffing. A prison cannot function without adequate custodial staff. Custodial staff are essential to providing health care to prisoners because they supervise prisoner movement to and from medical .appointments, they escort prisoners to services within an institution and they provide supervision when prisoners are taken out of the prison to medical appointments, hospitals or they are transferred to another institution. In California there is not enough correctional staff to provide prisoners with timely access to care and still perform other essential functions.

[6] 16. Despite relatively high salaries, it is difficult to recruit enough correctional officers. While I was in the central office, we tried to step up recruitment efforts but we could not get enough applicants that passed the security and background checks and then made it through the academy to fill all our authorized positions. At San Quentin, for example, even when new recruits were added the effect was often temporary because after a short time correctional officers transferred to other prisons in more desirable, less expensive locations. In addition, the least experienced staff would often have to work the most difficult positions because union rules permitted personnel to bid on 70% of the open positions. When I visited the Correctional Training Facility at Soledad, for example, I found a lone correctional officer in a housing unit who told me that he could not search cells (a basic safety requirement) while prisoners were in the housing unit. When I asked what his supervising sergeant thought about this, he responded that there was no sergeant because it was the least desirable of the units at CTF.

17. The number of authorized positions is grossly inadequate to provide sufficient staff to meet all of the prisoners' basic needs. For example, there are often only two officers to supervise 200 prisoners in a gym or a dorm. This is extremely dangerous for both the prisoners and the staff because line of sight supervision is impossible under these circumstances and it does not permit the staff the time to recognize that prisoners are in trouble from any number of causes, including medical or mental illnesses.

18. Inadequate staff has created dangerous conditions for both the staff and prisoners. To be effective, correctional officers must interact with prisoners.

This [7] communication reduces tension and violence in the unit, and it often allows the staff to know when a prisoner has a medical or mental health issue. Generally, there is not enough prisoner-staff interaction in the CDCR because of the staffing shortages and the insufficient number of staff positions in many of the housing units.

19. The danger to prisoners is enhanced because the correctional staff frequently is forced to work mandatory overtime. Some staff work back-to-back double shifts and would sleep in their cars in the prison parking lot instead of making the long commute home. Officers who are tired and suffer from low morale are often less productive and do not fulfill all their responsibilities to provide for the basic needs of prisoners. Such officers will be less responsive to prisoners who need escorts to medical or mental health services and will be less likely to recognize signs and symptoms of mental illness or manifestations of suicidal ideation.

20. At Corcoran and SATF two tragic cases illustrated the problem. One prisoner literally starved to death and another bled to death. Many officers were in the unit at the time these events occurred. It is inconceivable to me that officers who were properly supervising the prisoners in their care would not notice such obvious events.

21. The tragic effects of overcrowding reach into the community. The case of Scott Thomas exemplifies the unreasonable demands placed on staff when the prisons are so overcrowded. Scott Thomas was mistakenly released on parole on May 18, 2007 and allegedly entered a San Francisco bakery and stabbed a 15 year-old girl and a man who came to her aid.

[8] 22. San Quentin staff made three fundamental errors when processing this case. First, they confused Scott Thomas with another prisoner, Steve Thomas, who was a different race, 16 years younger and 40 pounds lighter. Second, in 2002 the CDCR designated Thomas as "high control", which requires the Department to take additional precautions, such as close supervision, when releasing such prisoners on parole. No such precautions were taken despite prominent documents to that effect in his prison file. Third, staff violated clear CDCR policy that required the release of a prisoner serving a term in the security housing unit directly to a parole agent.

23. Although it is clear that individuals did not comply with CDCR policy, the inappropriate release of Thomas is really a system failure because the people doing the work have an impossible mission. Having been a correctional counselor with similar responsibilities, I know from first hand experience that there is not enough time for the Correctional Counselor III to review 150 to 200 cases per week and do their job properly. Nor is there sufficient trained records staff to complete adequate review of cases for parole or other legal releases.

24. Lockdowns. Lockdowns exacerbate the overcrowding crisis because they are staff intensive and inhibit the delivery of services to prisoners. When I became the Director I was shocked by the number and durations of lockdowns. A recent state-sponsored study of lockdowns recognized the direct relationship between overcrowding and lockdowns: the "other side of the overcrowding coin is that when wardens implement security lockdowns, they usually shut down all programming in the affected areas. Not [9] only is this disruptive to programming but, the Panel

believes the number and duration of lockdowns in California prisons is excessive." Expert Panel, *A Roadmap for Effective Offender Programming in California*, at viii.

25. Lockdowns make the delivery of medical and mental health particularly difficult because staff must escort prisoners to every service or bring the service to them. The CDCR prisons are not staffed for that. In my experience, mental health services were at times cancelled because of lockdowns or other emergencies, and officers would only escort prisoners with urgent medical conditions.

26. Lockdowns increase the risk that a prisoner will not get treatment in an emergency because prisoners are dependent on the correctional officer to properly convey the medical problem to medical staff and then be able get an escort to the clinic. Conversely, there is an extra burden on medical staff because they may be required to travel to the housing unit.

27. Lockdowns also adversely affect some prisoners' mental health. I have observed many prisoners who have been locked in their cells for long periods of time deteriorate right before my eyes. Their skin becomes ashen, their ability to communicate is reduced and sometimes they are not oriented to time and place.

28. Clinical Space. California's prisons were not built with sufficient space for medical and mental health services. Space for mental health facilities is a particular concern because of all the activities that are required by the *Coleman* program guides. To meet the demands for space the CDCR was constantly trying to shoehorn mental health [10]

facilities into areas that were not designed for such activities. Not only did this make an imperfect fit for the space, but it also resulted in the loss of space for other programs.

29. Old and Deteriorating Prisons. Many of the existing facilities are too old and decrepit to provide humane housing. Among those include parts of the Correctional Training Facility, Deuel Vocational Institution, San Quentin, the California Mens Colony, Folsom, the California Rehabilitation Center and the Correctional Conservation Center.

30. When I visited prisons during my tenure as Director at times the noise levels were so bad that it was enough to drive a sane person crazy. In some units, like Palm Hall for example, staff found it unbearable to remain inside the unit for more than a few minutes.

C. The State's Inadequate Response to Overcrowding: AB 900.

31. Assembly Bill 900 is not the right solution for the overcrowding crisis. AB 900 essentially is a prison expansion measure which increases the number of prison cells without addressing the fundamental structural issues that have caused the crisis and that have created unconstitutional conditions within the prisons. It is not consistent with the recommendations of the report of the Expert Panel on Corrections Reform as well as other similar reports. *See* Expert Panel Report at 77 (summarizing recommendations of previous reports).

32. AB 900 does nothing to limit the growth of the prison population. According to the CDCR's latest projections, the population will increase by another 10,000 prisoners [11] by 2010. This confirms my

belief that California cannot build its way out of this crisis.

33. AB 900 relies heavily on the assumption that there will be a reduction in recidivism through rehabilitative programs in the planned reentry facilities. That assumption is wrong. CDCR paroles 10,000 prisoners per month. Sixty percent of those parolees serve an average of 4.5 months, and 69% of first time parolees serve less than a year. Not only is this precious little time to promote effective rehabilitation, but I agree with the Little Hoover Commission that these "short prison stints" have no effect on public safety. "[T]hey . . . disrupt families and communities where these offenders come from and return to, and diminish the potential for offenders to get and keep jobs, maintain housing and become law-abiding citizens." Little Hoover Commission, *Solving California's Corrections Crisis*, at 27.

34. Effective rehabilitation assumes that the Legislature and Governor will appropriate enough money for effective programs. This fiscal year the legislature enhanced the budget for programs by only approximately $50 million. By any measure, this paltry figure demonstrates a lack of commitment to rehabilitation in a system this large with an annual budget of almost $10 billion. In my experience, in tight fiscal times the first thing to go in corrections is money for rehabilitative programs.

35. I witnessed the destruction of most rehabilitation programs during the early 1990s, from which the department has never recovered. With a California budget deficit expected to reach over $8 billion next year, I do not believe that the state legislature's monetary commitment will be any greater and probably much less.

[12] 36. AB 900 relies heavily on the construction of 32 reentry facilities located in urban areas to provide rehabilitation. Since many, if not most, of the prisoners will spend only a short time in these facilities, I doubt it will be very effective in reducing recidivism. In addition, it is extremely unlikely that the CDCR will be able to site 32 of these facilities in local communities, especially in urban centers.

37. In the unlikely event that these facilities are built. I question whether they will ever be adequately staffed or managed. Since the CDCR cannot effectively manage or staff its existing 33 prisons, doubling the number of prisons will only aggravate the problems.

38. The Inspector General recently audited the substance abuse treatment provided by the CDCR. He concluded that the effort was all billion failure-failure to provide an environment that would allow the programs to work; failure to provide an effective treatment model; failure to ensure that the best contractors are chosen to do the job at the lowest possible price; failure to oversee the contractors to make sure they provide the services they agree to provide; failure to exert the fiscal controls necessary to protect public funds; failure to learn from and correct mistakes-and most tragically, failure to help California inmates change their lives and, in so doing, make our streets safer." Office of the Inspector General, *Special Review into In-Prison Substance Abuse Programs Managed by the California Department of Corrections and Rehabilitation*, at 5. Nothing that I now know suggests that the CDCR is any more capable of reducing recidivism through these or any other programs. In fact my experience with the [13] leadership of the CDCR suggests the opposite. When

I was the Acting Secretary of the CDCR, I adopted a goal of reducing the recidivism rate by 10% by 2010. When I stepped down from this position that goal was rescinded. The Secretary informed me that he had rescinded that goal because he believed it was risky to set such a goal. Throughout my career I have found the leadership unwilling to be accountable for the outcome of prisoner programs.

39. The so-called "in-fill" beds will cause more problems than they will solve. Many of California's prisons are so big that they are effectively unmanageable. Wardens and other administrators spend much of their time responding to crises, rather than fulfilling their responsibilities to provide adequate medical and mental health care. Unless these in-fill beds stand alone with their own administrative and support facilities, adding thousands of additional prisoners to already overburdened facilities will only compound the burdens imposed on prison administrators and line staff.

D. Communications with the Governor and His Staff on Overcrowding

40. When the Governor offered to appoint me as acting Secretary of the CDCR, asked him whether we could meet to discuss the direction that I wanted to pursue for the Department. He agreed to meet the next week, but despite several attempts, I never met with him again until the day I resigned.

41. I wanted to meet with the Governor to make sure that I would have his support for the initiatives I believed were necessary. I particularly wanted to talk to him about sentencing reform because I believed that the population pressures were going to

[15] continue and that the state could not build its way out of this problem.

42. I did subsequently meet with Ms. Kennedy, the Governor's Chief of Staff, and Fred Aguiar, the Governor's Cabinet Secretary, and informed them that I could not accept the position as Secretary until I had an opportunity to discuss my plans with the Governor. I told them about the population pressures and my position on sentencing reform. Ms. Kennedy said that she wanted to give the issue some thought, but never discussed this issue with me again until the day I resigned.

43. I finally met with the Governor in his smoking tent after I told Mr. Aguiar that I planned to resign. I told the Governor that the state did not have a plan to address the population pressures. In a prior meeting with the Governor as the Undersecretary of the CDCR the Governor asked me if I thought we needed more prison beds. I replied no, unless it is to replace existing capacity. I explained that California has more prisoners than Texas, yet Texas has over one hundred prisons and California has only 33. I informed the Governor that California had built very' large prisons that were designed to warehouse inmates. These large prisons are very difficult to manage and do not provide enough space for programs and services.

44. During my meeting with him on the day I stepped down as acting Secretary of the CDCR I explained that we could not build our way out of the overcrowding problem and that we needed sentencing reform. I also explained to him that we parole about 70,000 parole violators per year who serve twelve months or less and that this revolving door created population pressures. I also told him that dangerous

offenders were being [15] released without any treatment or program, and that this crisis was jeopardizing public safety. In addition, I explained that low level offenders could receive programs in the community that would cost less and be more effective than the prison programs. Governor Schwarzenegger said that this all sounded reasonable. but Ms. Kennedy reminded him that it was an election year and the meeting ended shortly thereafter.

45. It was obvious to me at that time that in order to run an organization this large with such complex, high profile problems, the CDCR Secretary must have meaningful access to and the support of the Chief Executive. He is the only one who can make the tough, politically sensitive decisions that are necessary to alleviate the crisis. Since it was obvious that I was not going to have this necessary access and it was evident to me the Governor was not going to address the issues in a way I thought would address the prison overcrowding problem, I resigned my position as acting Secretary.

E. Conclusion

46. The Governor's October 4, 2006 emergency proclamation recognized that California's prisons are severely overcrowded, creating "extreme peril" to the health and safety of prisoners and that "the magnitude of the circumstances exceeds the capabilities of the services, personnel, equipment, and facilities. . . ." I agree. Until the population is reduced substantially there is no realistic hope that the unconstitutional conditions will be eliminated.

Defendants.

TRIAL AFFIDAVIT OF ROBIN DEZEMBER

To: Three-Judge Panel

---

[1] I, Robin Dezember, declare:

1. I am employed by the California Department of Corrections and Rehabilitation in the position of Chief Deputy Secretary of Health Care Services within the Division of Correctional Health Care Services. I offer this written testimony on the delivery of mental health care services within the California Department of Corrections and Rehabilitation in light of the Plaintiffs' request for a prisoner release order to address the alleged overcrowding of the CDCR population.

2. I have personal knowledge of the facts stated in this declaration and, if called to testify upon those facts would do so competently.

I. *Current Position and Background*

3. Before I started my career, obtained a bachelors degree from Arizona State University in 1966, and proceeded to achieve a juris doctorate degree from the University of California, Hastings College of Law in 1969.

4. I have served government agencies in a variety of management positions for over thirty-five years. I am a fellow with the National Commission on Correctional Healthcare. I have been a member of the faculty of the Graduate School of Criminal Justice at Sacramento State University and the Graduate School of Public Administration at Golden Gate University.

5. As Chief Deputy Secretary of Health Care Services since January, 2007, I am responsible for developing the administrative structure to support, at the least, a constitutionally adequate mental health care system and dental care delivery system. I have reorganized and expanded the central and regional administrative

structures necessary for supporting the growth and maintenance of appropriate care of inmates within CDCR.

6. My work as Chief Deputy Secretary draws upon the experience gained in a lengthy career dedicated to serving government agencies. That career has included the following positions, in brief:

a. I was the Executive Officer and Chief Hearing Representative for the [2] California Board of Prison Terms from 1976 to 1982, responsible for the management of all aspects of the Parole Board's operations, including budgets, personnel, policy development and due process hearings.

b. I was the Undersecretary of the California Youth and Adult Correctional Agency from 1982 to 1986, an appointee of Governor Deukmejian. In that position, I was responsible for the overall administration of the Departments of Corrections and Youth Authority, Parole Board, and Board of Corrections. My tenure as Undersecretary dovetailed with the "boom" in prison construction. I created the New Prison Policy Committee and, as chairman, initiated the State's multi-billion dollar prison expansion program using public/private sector partnership for Program Management. I also established the first California Corrections Manager's Council comprised of selected representatives of state sheriffs, chief probation officers, and state juvenile and adult correctional agencies.

c. With the end of my tenure as Undersecretary, I left the public sector and joined the construction management firm of Kitchell, Inc. as Senior Vice President. From 1986 to 1993, I provided executive leadership for the firm's Program Management services, involving more than $5 billion in public capital expenditure projects for the further expansion of the California Department of Corrections.

d. In 1993, Governor Wilson appointed me Deputy Director and Assistant Chief Counsel of Health Care Services for the California Department of Corrections. In that position, I developed the policy, procedures, and organizational structure for creating a new comprehensive, standardized Health Care Delivery System based on managed care concepts. I initiated strategic planning and management for all health care services provided by 4,500 staff in 32 institutions throughout the state. I developed a remedial plan for and initiated implementation of a Mental Health Services Delivery System in response to the then-recent injunctive order in *Coleman v. Wilson*. I initiated final implementation of remedies that enabled termination of a class action brought by women prisoners for medical services, entitled *Shumate v. Wilson*, No. CIV [3] S-95-0619 (ED. Cal.).

e. After some 25 years of executive-level work, I returned to school and obtained a Masters degree in Health Services Management from Golden Gate University, San Francisco, in 1994.

f. In 1997, Governor Wilson appointed me Chief Deputy Director for Finance Policy within the California Department of Finance. I represented the Governor and the Director of Finance on more than 60 boards, commissions, and finance authorities. My position encompassed serving as Chair of the State Public Works Board, which governs the state's capital outlay process, and member of the California Health Facilities Finance Authority, which reviews and approve funding mechanisms for the development and expansion of private health care facilities.

g. In 1999, I joined Jacobs Facilities, Inc. as the Director of Government Programs. In this executive level position, I was responsible for program and management development for government capital programs in the Western Region within the public sector markets of corrections, justice, education and general public institutions.

h. I formed a private consulting firm, RJ Dezember Associates, in 2001, to provide consulting services on various issues of California state and local government. I also consulted with other government agencies, including the State of Pennsylvania, on their corrections systems.

i. In 2007, I rejoined CDCR in my present position.

II. *Overview*

7. I understand this Three-Judge Panel has been convened to address the issue of CDCR's overcrowding and its impact, if any, on the delivery of mental health care services to CDCR inmates.

8. Because of my tenure with CDCR, I am uniquely positioned to speak to the mental health care delivery system and its compliance with the *Coleman* court orders. I was employed as the Deputy Director and Assistant Chief Counsel of Health Care [4] Services within CDCR when the *Coleman* injunction issued in 1995. I have spent a good portion of my career collaborating with the *Coleman* Special Master to establish and meet mandates for mental health care and, more specifically, to meet the mentally ill inmates' need for mental health care services. Indeed, in 1995, J. Michael Keating, Jr. was appointed to serve as the special master in the *Coleman* case. I had already established a successful working relationship with him when he was appointed Special Master in the

Shumate case in 1997. With the termination of the *Shumate* case as an exemplar, I have worked towards the termination of the *Coleman* case.

9. I am familiar with the elements of a constitutionally adequate mental health care system, as stated in the published decision of *Coleman v. Wilson*, as well as the ensuing orders of that Court. I recognize that the trial court found CDCR violated the Eighth Amendment because CDCR showed deliberate indifference to the mental health needs of inmates. I submit that CDCR now demonstrates a consistent and integrated approach to the care of mentally ill inmates. That approach has been manifested in the development and implementation of established and systemic mechanisms to ensure the elements of a constitutionally compliant mental health care system—such as sufficient and appropriate beds, staff, medication management, record keeping, suicide prevention measures—are met today and continue to be met tomorrow.

10. By this declaration, I respectfully submit to the Three-Judge Panel information regarding the mental health services delivery system. Because my tenure with CDCR permits the benefit of a retrospective view, my discussion will often compare and contrast the state of the mental health services delivery system at time of judgment in 1995 to the state of the mental health services delivery system today. I will discuss the breadth of the mental health population and the spectrum of mental health care services provided to that population. I will also address the housing of the mentally ill inmates of CDCR.

[5] III. *CDCR Has an Integrated Multidisciplinary Approach To Inmates' Mental Health Care Needs*

11. The fundamental requirements of an adequate mental health service delivery system in CDCR center on a few primary elements that together form the basis for effective care. These elements are: (a) uniform policies and procedures for the delivery of mental health care; (b) appropriately licensed and credentialed clinical staff and support staff, both in the prisons and in central office headquarters, with sufficient number to perform their responsibilities; (c) appropriate space for the provision of mental health services to the inmate-patient population that can accommodate services of a growing population, especially for the higher treatment levels that require residential care; and (d) an adequate information management system for recordkeeping and medication management; and an adequate suicide prevention protocol. *See Coleman V. Wilson*, 912 F. Supp. 1282 (E.D. Cal. 1995).

12. I would add another, overarching element to ensure a functional mental health care system continues to perform: a system of management within the prison setting that continually assesses routinely acquired service delivery information in terms of compliance with established process and performance indicators and, upon identifying issues of non-compliance, engages the processes necessary for their resolution. The management structure must be able to establish and rely on forecasts of the demand for services into a reasonable future time period and the development of plans to address this demand. These management elements have been initiated in the last two years.

13. Plans that should result from these forecasts would prepare for expanding the services delivery system, generate the resources necessary to meet the forecasted demand, and engage the entire spectrum of prison services, including mental health service delivery in an overall program of compliance with policies and procedures. It is necessary, however, for all of these management actions to function together for if one of them is missing the result will be unsatisfactory. With adequate management, the [6] mental health care services delivery system will better meet the needs of the mentally ill inmate and address identified deficiencies notwithstanding population growth.

IV. *Defendants Have Achieved Court-Approved Mental Health Care Policies and Procedures*

14. At the time the *Coleman* case was tried before Magistrate Moulds, CDCR lacked a uniform set of systemwide policies for identifying those individuals who have mental health care needs and providing that care. Magistrate Mould's Findings and Recommendations noted: "The CDC lacks an adequate mechanism for screening for mental illness, either at the time of reception or during incarceration, and has lacked adequate screening since at least 1987." (Defs.' Trial Ex. 1273 which is a true and correct copy of *Coleman* F&Rs, filed June 6, 1994, 31:10-20.) Neither standardized forms nor procedures for mental health screening existed. (*Id*. at 31:15-25.)

15. By the time the Court entered its decision in 1995, CDCR had already established a statewide mental health screening process with referrals for mental health treatment. In 1997, an initial set of policies and procedures (the "Program Guide") were

adopted by CDCR and provisionally approved by the *Coleman* Court.

16. That set of provisional policies matured into a final set of policies and procedures approved by the *Coleman* Court in March 2006. (*See* Defs.' Trial Ex. 1042 which is a true and correct copy of *Coleman* Court Order, filed 3/06; Defs' Trial Ex. 1147 which is a true and correct copy of the 2006 Program Guide.) This development of the 1997 provisional policies into the court-approved 2006 policies involved lengthy and laborious discussions of various draft policies, procedures and forms by a team of CDCR's top mental health clinicians with Plaintiffs' attorneys and the Special Master's team. The discussions occurred in day-long meetings and spanned over three years.

17. Through this process, Defendants were able to obtain consensus with the Special Master's team and Plaintiffs' counsel, as much as possible, on the very language of the policies, procedures, and forms stated in what became known as the Revised Program Guide.

[7] 18. I personally participated in many of these all-day negotiation sessions. I recall the Special Master stating that the Revised Program Guide provided for mental health care well beyond the mere requirements of a constitutionally adequate mental health care system under the Eighth Amendment. Based upon my work and expertise as an administrator of correctional health care, I agree that the Program Guide provides for the care of mentally ill inmates in a manner that comports with, if not exceeds, the Eighth Amendment and the care seen in correctional institutions in other states.

19. Compared to the provisionally approved Program Guide of 1997, the Revised Program Guide of 2006

provided for "enhanced standards for mental health care applicable in all CDCR institutions." (Defs.' Trial Ex. 1109 which is a true and correct copy of *Coleman* Special Master's 17th Report, Part A, filed May 4, 2007, internal pp. 3-4.)

20. The Program Guide provides for several different levels of care to meet different patient needs, as follows:

a. Correctional Clinical Case Management System (CCCMS): Inmates receiving this level of care are able to function well in the General Population with some mental health treatment. These inmate-patients are provided individual therapy at least once every 90 days, medication management by a psychiatrist at least once every 90 days, and group therapy as indicated by the, inmate-patient's treatment plan.

b. Enhanced Outpatient Program (EOP): Inmates receiving this level of care are segregated from the General Population in yards dedicated to these inmates because they require significant services to function well. These inmate-patients are provided weekly contact with a primary clinician, medication management by a psychiatrist at least once every 30 days, and structured treatment activities 10 hours per week.

c. Psychiatric Services Unit (PSU): The purpose of the PSU is to assure the effective delivery of EOP services to inmates who have been diagnosed as having a serious mental disorder and are serving a security housing unit term.

[8] d. Mental Health Crisis Beds: Inmates receive this level of care because of a short-term need for intensive mental health care services, generally not to exceed 10 days. This level of care provided 24-hour

inpatient care, evaluation, and treatment for inmate-patients who require mental health services to prevent danger to themselves or others, or who have mental conditions which cause grave disability.

e. Inpatient Non-Acute Intermediate Care Facility (ICF): Inmates receive this level of care because of a longer-term need for intensive mental health care services delivered by the Department of Mental Health (DMH).

f. Day Treatment Program: This program with 44 beds is operated by the DMH at the California Medical Facility. It is designed for patients needing transitional outpatient care, essentially a step down from intermediate to Enhanced Outpatient Program level of care.

g. Inpatient Acute Care: The Department of Mental Health delivers this 24-hour inpatient care in licensed facilities. Inmates who require mental health treatment to prevent danger to themselves or others, or who have mental conditions which cause grave disability (such as an inability to use food, clothing, or shelter in appropriate ways) receive individual and group therapy as well as medication management by a psychiatrist.

21. The 2006 Program Guide contains standardized mental health forms for screening and referring patients to appropriate levels of care, including subsets of the mental health population such as exhibitionists. (Defs' Trial Ex. 1146 which is a true and correct copy of Defs' Plan to Provide Care to Exhibitionists, July 2007 and August 2007.) The referrals of patients requiring inpatient intermediate and acute care beds are governed by a memorandum of understanding, revised every two years or so, between CDCR and

DMH for DMH to provide such inpatient mental health care to CDCR patients. The working partnership between CDCR and DMH for inpatient care has been enhanced by the use of Coordinated Clinical Assessment Teams to discuss, on a weekly basis, the merits of any decisions on referrals. (*See* Defs.' Trial Ex. 1274 which is a true [9] and correct copy of *Coleman* Order, July 9, 2004.) When DMH noticed some referred patients did not have a therapeutic level of psychotropic medications in their bloodstreams, CDCR responded by requiring blood reference value testing. (Defs.' Trial Ex. 1275 which is a true and correct copy of CDCR Memo, April 4, 2008.) As more fully discussed below, the CDCR-DMH partnership has also engendered the development of additional inpatient mental health care beds within existing prison sites.

22. The population of mental health care patients served by CDCR has expanded from the certified class of inmates with serious mental disorders certified as *Coleman* class members at the start of this case to include those parolees within the physical custody of CDCR who are awaiting parole revocation hearings and who meet *Coleman* care criteria. (*See* Defs.' Trial Ex. 1276 which is a true and correct copy of *Coleman* Order, filed August 8, 2008.) In accord with the *Coleman* court order merging these two populations, the CDCR-DMH memorandum of understanding as well as submitted draft plan to provide mental health care to these parolees acknowledges both of these populations as patients under the *Coleman* Program Guide standards. (Defs.' Trial Ex. 1193 which is a true and correct copy of *Coleman/Valdivia* Draft Mental Health Plan, Draft MOU, September 2008.)

23. This reliable and standard set of policies and procedures governing mental health service delivery has been disseminated to and implemented by CDCR and DMH clinicians. Training for clinical practitioners has occurred and will continue to occur regularly, especially with the adoption of any significant policy or procedure.

24. The Program Guide is now subject only to an annual revision process. This revision process enables the further development of mental health care policies in timely fashion, and takes into account the views of the *Coleman* Special Master, the Special Master's team of court-appointed monitors, Plaintiffs' attorneys, and, on certain overlapping issues between the medical and mental health care systems, the *Plata* Receiver. Indeed, the annual revision process to enable publication of the 2008 Revised Program Guide has occurred, with distribution of the draft 2008 Revised Program Guide [10] to Plaintiffs' counsel and the *Coleman* Special Master for review earlier this year and distribution of the final 2008 Revised Program Guide to the field in the offing. (Defs.' Trial Ex. 1148 which is a true and correct copy of the 2008 Revised Program Guide.)

25. The *Coleman* Special Master himself declared, as of this past year, that "several CDCR institutions were substantially compliant" with the Program Guide and court-ordered standards. (Defs.' Trial Ex. 1112 which is a true and correct copy of *Coleman* Special Master's 20th Report, filed September 12, 2008 at 6.)

26. In my opinion, CDCR has accomplished the establishment of an adequate mental health delivery system by preparing, distributing, training, and implementing the court-approved Program Guide since 2006.

V. *The CDCR Suicide Prevention Program Has Already Been Found Adequate*

27. Throughout the course of the *Coleman* case, Defendants have addressed the risk of suicide among inmates. Indeed, Defendants' suicide prevention measures were recognized and approved by the trial court in 1994.

28. Even as early as 1990, CDCR had a Suicide Prevention Program in place. (Defs.' Trial Ex. 1273 which is a true and correct copy of *Coleman* F & R, 71:3-5, and *cites therein*.) Indeed, the Suicide Prevention Program was "standardized and enhanced in 1990." (*Id.*) The program consisted of three major components: staff education, prevention, and assessment. (*Id.*, 71:5-7, and *cites therein*.)

a. Education of Correctional Officers: A suicide Prevention Handbook was published for in-service training for correctional officers. (Defs,' Trial Ex. 1273 which is a true and correct copy of *Coleman* F & R, 71:11-13, and *cites therein*.) Further, correctional officers received suicide prevention training as part of the curriculum at the Department of Corrections Training Academy and as part of their on-the-job training. (*Id.* at 71:11-23.)

b. Prevention: the Suicide Prevention Program enabled identification of inmates who are potential suicide risks and the placement of such individuals under 'suicide watch.' (*Id.* at 72:1-9.)

[11] c. Assessment: A psychological autopsy on each inmate who committed suicide was mandated by the Suicide Prevention Program. The autopsies included a "description of how the suicide was accomplished, as well as specific recommendations on how to prevent a similar occurrence and timelines for

implementation of the specific recommendations." (*Id.* at 72:10-17.) The psychological autopsy was sent to both CDCR Health Care Services and the warden of the institution where the suicide occurred in order to enable action upon its recommendations. (*Id.* at 72:17-21.)

29. In 1994, the trial court noted the decline in the CDCR suicide rate, from a high of 77 per 100,000 inmates in 1982 to 14 per 100,000 inmates in 1992. (Defs.' Trial Ex. 1273 which is a true and correct copy of *Coleman* F&R, 70:18-22.) Further, the suicide rate for male inmates in the CDC "appears to be lower than the rate in the general population; in 1992, the suicide rate for male inmates in the CDC was 14 per 100,000 inmates, while the rate for non-imprisoned males was 20 per 100,000." (*Id.* at 70:22-71:2.) The suicide rate for female inmates was "relatively low" with only 2 suicides committed by females of the 181 suicides that occurred within CDCR from 1980 to 1990. (*Id.* at 70, n. 45.)

30. The trial court specifically found "defendants have designed an adequate suicide prevention program and have taken many of the steps necessary to implement that program." (*Id.* at 75:1-6.) The full deployment of the 1990 Suicide Prevention Program was hindered only by the "severe understaffing in mental health care." (*Id.* at 75:4-6.)

31. Since the entry of judgment in 1995, Defendants have expanded the Suicide Prevention Program already declared adequate by the trial court and obtained sufficient staffing to enable its full implementation.

32. The Suicide Prevention Program now consists of a multi-faceted and multi-disciplinary approach to

preventing suicides. In other words, mental health clinicians, correctional officers, and facility management personnel are now involved in responding [12] to and preventing suicides in CDCR's inmate population.

33. Mental health clinicians receive direction on the prevention of suicides from several administrative sources. First, the 2006 Program Guide contains an entire chapter dedicated to delineating the identification of inmates at risk for suicide (whether already a patient within the Mental Health Services Delivery System or not) and the treatment of such inmates. The Program Guide provides a clear set of guidelines for screening inmates for the risk of suicide, with a uniform questionnaire used at reception centers and before placement into an administrative segregation unit. A range of responses to the individual inmate's suicide risk may be undertaken, from placement on suicide watch with one-to-one monitoring of the inmate to referral to a higher level of mental health care.

34. The Program Guide also informs the clinicians of their ability to access a *Coleman* class member's history of suicide attempts. In accord with the *Coleman* court order of June 9, 2005, CDCR has diligently worked to create a database within the Mental Health Tracking System to record *Coleman* class members' history of suicide attempts and gestures. The clinicians are responsible for ensuring a record of an inmate's history of attempted suicide, if any, is maintained and considered as part of the treatment protocol.

35. Within my organization and at my direction, mental health care clinicians receive in-service training on suicide prevention protocols. I have a designated Suicide Prevention and Response Coordinator for CDCR Health Care Services who designs and delivers

the suicide risk assessment training for CDCR's mental health clinicians. (*See also* Decl. Canning in Support Def. MIL No. 10, at ¶ 2.) Further, the Coordinator delivers a monthly suicide prevention videoconference for 300-350 CDCR clinical staff. (*Id.*)

36. At my direction, the psychological autopsies discussed in the *Coleman* trial court continue to this day, but in expanded form under the rubric "Suicide Report." (*See also* Decl. Canning in Support Defs.' Mot. In Limine No. 10, ¶ 4.) This report, prepared by a psychologist at CDCR Headquarters, addresses the suicides of individual inmates [13] that have occurred within the confines of CDCR. (*Id.*) In preparing these reports, the psychologist visits the facility where the suicide occurred, interviews available witnesses (such as cellmates, co-workers, housing officers, work supervisors) and mental health care providers, conducts reviews of the inmate's central files and unit health record (including any and all mental health records), reviews the reports of other investigators (such as the investigating officers' incident report, any coroner's report, medical death review reports), reviews visiting and telephone records, views personnel effects, and sometimes interviews family members. (*Id.*) Each Suicide Report provides a summary of the possible distal and proximal causes of the suicide, the victim's apparent mental health status before their death, any mental health care provided to the victim, the emergency response measures undertaken, and, as appropriate, recommendations concerning any deficient practices by correctional or clinical staff that may have contributed to a suicide (in accord with the January 12, 2004 *Coleman* court order). (*Id.* at ¶¶ 4, 5.) The Suicide Report assists in the development of any quality improvement plan, which must be submitted within 180 days of any suicide in accord with the

Coleman court order of June 13, 2002. (*Id.*) These Suicide Reports are analyzed in the preparation of an annual executive report on suicides presented to CDCR executives. (Defs.' Trial Ex. 1171 which is a true and correct, copy of the 2006 Annual Report on Suicides within CDCR.)

37. Correctional officers today continue to receive particular training on appropriate responses to suicide gestures and attempts by an inmate. As much as clinicians have an understanding of the mental health needs of an inmate, the correctional officers' ongoing work with the inmates enables an opportunity to become familiar with an inmate's daily habits and often life issues, such as "bad news" from court or the loss of a loved one. Correctional officers are now trained in identifying possible mental health issues and the means of referring an inmate for a mental health evaluation.

38. Because correctional officers are often the "first responders" at a suicide, [14] they are now responsible for providing life-saving cardiopulmonary resuscitation (CPR) to those inmates who have attempted suicide and show no obvious signs of demise. (*See* Defs.' Trial Ex. 1279 which is a true and correct copy of *Coleman* Order, June 9, 2005.) In 2006 and 2007, CDCR filed a proof of compliance with this court mandate, including declarations from each of the wardens of the 33 institutions attesting to the completion of CPR training (with the provision of cutdown kits and microshields for CPR) by the correctional officers within their employ. (*See* Defs.' Trial Ex. 1279 which is a true and correct copy of *Coleman* Order, June 9, 2005; Defs.' Trial Ex. 1280 which is a true and correct copy of *Coleman* Stipulated Order, February 13, 2006.) In addition, CDCR requires correctional officers to

complete a standard incident report detailing the reasons CPR was not undertaken in response to a suicide event. This uniform incident report is reviewed by the warden and by headquarters staff to ensure compliance with the mandatory provision of CPR by correctional officers.

39. Further, since the CDCR's voluntary moratorium on using remote videocameras to monitor "at risk" inmates in March 2006, CDCR has engaged in one-to-one in-person monitoring of inmates at risk for suicide. (Defs.' Trial Ex. 1311 which is a true and correct copy of *Coleman* Stipulated Order, filed July 5, 2006.)

40. The suicide prevention program of 1990 has now been expanded beyond clinicians and correctional officers to include facilities management staff. This expansion to facilities management arose in response to the *Coleman* Special Master's report recognizing certain features of administrative segregation units as a possible cause in the suicide rates. He noticed, upon reviewing data routinely supplied by CDCR for 2004 suicides that 69.2% of those suicides occurred within administrative segregation units. (Defs.' Trial Ex. 1268 which is a true and correct copy of *Coleman* Special Master's Report on Suicides Completed Within CDCR in Calendar Year 2004, filed December 18, 2006 at 1.) Court monitors found 73% of suicides occurred within single cells, with 43% occurring in single cells in administrative segregation or secure housing units. Some 85% committed suicide by hanging. (Defs.' Trial Ex. 1281 which is a true and correct [15] copy of Patterson & Hughes, *Review of Completed Suicides in the CDCR, 1999 to 2004*, Psychiatric Services (June 2008) Vol. 59, No. 6, p. 678.) Further, of the suicides

within administrative segregation, 53% of such suicides occurred within three weeks of placement. (*Id.*)

41. Correctional and Health Care staff of CDCR examined each of these findings on suicide events in a collaborative effort with the Special Master's team and Plaintiffs to create an appropriate plan to reduce suicides in administrative segregation units. (Defs.' Trial Ex. 1279 which is a true and correct copy of *Coleman* Order, June 9, 2005; Defs.' Trial Ex. 1282 which is a true and correct copy of *Coleman* Order, June 8, 2006.) The plan borne of this collaborative work, and ultimately approved by the Court, relied upon correctional officers, facility management, and clinicians to reduce suicides by several means: (a) replacing the large-mesh ventilation screens used for hanging with small-mesh ventilation screens; (b) creating intake cells with no attachment points for newly-placed inmates in administrative segregation units to stay for the first 72 hours of their stay; (c) screening inmates for suicide risk before placement in administrative segregation units; (d) permitting inmates television and other electronic appliances within administrative segregation yards; (e) requiring 30-minute (at staggered intervals) welfare checks of inmates within administrative segregation units; (f) creating additional small management yards to enable greater outdoor exercise time; and (g) double-celling of inmates within administrative segregation units, where possible. (Defs.' Trial Ex. 1141 which is a true and correct copy of *Coleman* Def. Plan to Reduce Suicides in Ad Seg, filed October 2, 2006, as amended in *Coleman* Def. Response to Objections to Submitted Plan, December 1, 2006; Defs.' Trial Ex. 1268 which is a true and correct copy of *Coleman* Special Master's Report on Plan to Prevent Suicides in Administrative Segregation Units, filed December

18, 2006, pp. 4-10; Defs.' Trial Ex. 1153 which is a true and correct copy of CDCR March 12, 2007 Memo re. Television in Administrative Segregation Units; Defs' Trial Ex. 1157 which is a true and correct copy of Defs.' Supp. Report re. Television Access, filed August 2007; Defs.' Trial Ex. 1182 which is a true and [16] correct copy of Department of Finance Letters to Legislature, dated May 2008.)

42. I defer to the Chief Deputy Secretary of Facilities Construction and Management, Deborah Hysen, and the Undersecretary of Operations, Scott Keman, on the status of some of the above items. I can state, however, that the 30-minute welfare checks of inmates within administrative segregation units have been implemented.

43. Given the nature of suicides, the efficacy of this multi-disciplinary approach to suicide prevention is best evaluated over the course of years. (*See* Defs.' Trial Ex. 1281 which is a true and correct copy of Patterson & Hughes, *Review of Completed Suicides in the CDCR, 1999 to 2004*, Psychiatric Services (June 2008) Vol. 59, No. 6, p. 678.)

44. The Suicide Report discussed above provides Headquarters with the necessary information to audit and evaluate at least the implementation of this multi-disciplinary approach to suicide prevention. Because each Suicide Report discusses causes of the suicide and makes recommendations to prevent such suicides, the Suicide Report assists in the development of any quality improvement plan, which must be submitted within 180 days of any suicide. (*See* Defs.' Trial Ex. 1283 which is a true and correct copy of *Coleman* Order, June 13, 2002; *see also* Defs.' Trial Ex. 1279 which is a true and correct copy of *Coleman* Order, June 9, 2005.) Further, the Suicide Report or

suicide review process can refer any member of the mental health, medical, or custody staff, initially judged to have been responsible for incompetence, malfeasance, negligence to another investigatory and/or disciplinary channel.

45. While some may assert the suicide rates have increased since the entry of judgment in 1995, that assertion is only partly correct. What can be said is that the suicide rate varies. Just as the *Coleman* trial court viewed a ten-year database that showed a decline in suicide rates over the interval of 1980 to 1990, so the *Coleman* Special Master has found a variation in the suicide rates over time. (*See* Defs.' Trial Ex. 1273 which is a true and correct copy of *Coleman* F &Rs at p. 70; Defs.' Trial Ex. 1284 which is a true and correct copy of *Coleman* Special Master's Report on Suicides [17] Completed Within CDCR in Calendar Year 2005, filed November 16, 2007, p. 10.)

46. There are certain demographic features that appear among those who commit suicide, regardless of their incarceration status. Drs. Ray Patterson and Kerry Hughes, psychiatrists who serve as *Coleman* monitors, stated, "The third leading cause of death in U.S. prisons is suicide, exceeded by natural deaths and deaths from AIDS. At least six well-known demographic characteristics of persons who commit suicide are shared by the U.S. general population and the incarcerated subpopulation, including age, gender, ethnicity, drug ad alcohol abuse, history of psychiatric treatment, and prior suicide attempts. For the community, more than 90% of people who die by suicide have a combination of those risk factors, such as male gender and increasing age. For the incarcerated population, these risk factors are similar with the exception of the highest rates of suicide being in

the 31 to 40 age range because of fewer numbers of inmates age 41 and older." (Defs.' Trial Ex. 1281 which is a true and correct copy of Patterson & Hughes, *Review of Completed Suicides in the CDCR, 1999 to 2004*, Psychiatric Services (June 2008) Volume 59, Number 6, p. 677.) I am aware that the CDCR suicide rate over the past few years has been above the national average for correctional institutions. It is too early to determine the impact of CDCR's most recent suicide prevention measures on the occurrence of suicide. I believe suicide to be a very complicated phenomenon that rests on many individual factors, and not solely on the conditions within a correctional setting.

47. In my opinion, CDCR has acted since 1990 and continues to act to present day with deliberation and care to reduce the suicide rate among the inmate population.

VI. *Improvements in Mental Health Care Staffing*

48. A broad array of mental health clinicians staff the mental health services delivery system in order to identify and treat mentally ill inmates. They include psychiatrists, psychologists, psychiatric social workers, nurses, occupational therapists, and recreational therapists. The growth in the mental health clinical staffing, particularly in the core areas of psychiatrists, psychologists, and social workers, from the start of this [18] case in 1994 to today is significant: in July 1994, CDCR had approximately 248 such clinical positions available statewide; in June 2008, CDCR had 2,396 such clinical positions statewide. (*See* Defs.' Ex. 1269 which is a Chart of 1994 Mental Health Care Positions; Defs.' Trial Ex. 1235 which is a chart of CDCR 2008 Mental Health Care Positions.)

49. This growth reflects not only better service to the mentally ill inmates but also better management of the mental health services system. By way of background, in the 1980s and 1990s, CDCR underwent a series of studies and reports on its path to formulating a methodology to determine the number of mental health positions for a constitutionally adequate system. In fiscal year 1991/92, CDC had a total of 277.4 positions authorized for mental health care, with some 208 positions filled. (*Id.* at p. 26.) Yet, one report found 732 staff positions would be necessary to adequately staff mental health care for an inmate population of 119,000 inmates. (*Id.* at p. 37:7-13, *cites therein.*) The fiscal year 1992/93 budget for CDC contained only 376.6 authorized mental health care positions to serve an inmate population of 113,000. (*Id.*)

50. Sometime before 1997, CDCR adopted the Prevalence Mix formula to obtain additional mental health staff as the mental health population within each level of care grew. The population projections, created twice per year, established the number of patients expected for each level of care and were used to support budget requests. This was the beginning of a uniform methodology for providing staff.

51. CDCR often complied with court orders to recruit and retain staff at particular institutions with the use of retention and recruitment bonuses. By 2006, it became apparent that the use of these bonuses resulted in a skewed staffing resources between institutions and between CDCR and DMH. (*See* Defs.' Trial Ex. 1305 which is a true and correct copy of *Coleman* Special Master's Report on DMH Clinicians' Salary, filed 1/30/07.) Further, with the *Coleman* court's approval of the Program Guide, additional

staff was needed to implement the provisions of the Program Guide.

52. Because the staffing methodology up until 2006 relied upon the population, [19] CDCR lacked a staffing methodology to obtain Program Guide-mandated staffing based upon the workload requirements outlined in those mental health care policies.

53. The *Coleman* Special Master responded with a recommendation that Defendants submit a budget package to pursue this immediate need for staffing resources necessary to implement the Program Guide and, more significantly, the budget package include funding for an appropriate staffing tool to objectively evaluate and measure the need for staffing resources.

54. With the benefit of the court order adopting the Special Master's findings and recommendations, CDCR prepared and presented to the special session of the Legislature, held in August 2006, a budget proposal for the allocation of some 530.65 permanent and 21.2 limited term positions, together with an allocation of sufficient funding to execute and complete a workload study. The Legislature supported that request.

55. With the influx of those 530.65 permanent and 21.2 limited term positions, CDCR concentrated its efforts on the recruitment of competent staff.

56. By December 15, 2006, the skewed nature of mental health clinician pay between CDCR institutions was remedied when the *Coleman* court approved an across-the-board pay increase for CDCR clinicians, with a waiver of certain Government Code sections that would otherwise create a barrier to the expedited pay package. (Defs.' Trial Ex. 1285, *Coleman* Order, December 15, 2007.) A similar pay package for DMH clinicians was approved by the Court in June

2007 to avoid any competition for staffing resources between these two partners in inmate mental health care. (Defs.' Trial Ex. 1286 which is a true and correct copy of *Coleman* Order, June 28, 2007.)

57. Even with the increase in pay, the *Coleman* Special Master found, "Staffing shortages among supervisory and line psychiatrists and clinicians remained the single most significant barrier to the effective delivery of mental health services in CDCR institutions." (Defs.' Trial Ex. 1109 which is a true and correct copy of *Coleman* Special Master's 17th Report, Part A, filed June 13, 2007, p. 161.)

[20] 58. In response, CDCR launched a focused recruitment and hiring program in November 2007. (Defs.' Trial Ex. 1287 which is a true and correct copy of *Coleman* Order, August 2, 2007; Defs.' Trial Ex. 1288 which is a true and correct copy of Def. CDCR Recruitment Plan, November 2007.) Streamlined hiring, targeted recruitment of mental health clinicians, and marketing of CDCR salaries and benefits were a few of the tactics employed to address outstanding mental health care vacancies. In addition, CDCR obtained a resolution from the State Personnel Board to compress hiring ranks and so increase the number of candidates for mental health positions. (Defs.' Trial Ex. 1170 which is a true and correct copy of State Personnel Board Resolution, 6/14/07.) Certain employment examinations have been put on-line to further enhance recruitment. (Defs.' Trial Ex. 1189 which is a true and correct copy of the CDCR Memorandum re. Online Exams.)

59. Overall clinical staff vacancies in prisons have been reduced over time from 23.6% in January 2008 to 19.7% in June 2008 as a result of the focused recruitment and hiring program initiated in November

2007. (Defs.' Trial Ex. 1288 which is a true and correct copy of *Coleman* Def. Recruitment Plan, October 2007; Defs.' Trial Ex. 1235 which is a true and correct copy of Chart of Mental Health Care Positions and Vacancies.) This vacancy rate has improved measurably over this brief period of time. The recruitment and hiring program is continuing its focus on filling all of the positions established in recent budgets.

60. The highest vacancy rate in the Mental Health Program had been for psychiatrists, at 50.3% in January 2008. This vacancy rate was reduced to 32% in June 2008. Psychologist vacancies were reduced from 24.8% vacancies in January 2008 to 22.6% in June 2008.

61. CDCR has developed new positions to meet the demand for mental health care services. The "pool" of available clinicians hired by CDCR for its Mental Health Program includes psychologists and licensed clinical social workers who perform some of the core functions for services delivery.

[21] 62. To further address this shortfall in mental health clinicians, CDCR has initiated and sponsored a new Mental Health Therapist civil service classification, the approval for which currently is pending approval by the State Personnel Board. This classification will permit CDCR and other state agencies access to additional properly licensed and credentialed clinicians that have, to date, been unavailable within the civil service to work alongside licensed clinical social workers. Within this therapist classification, Marriage and Family Therapists (MFT) will be able to be hired along with licensed clinical social workers to improve CDCR staffing to provide services appropriate to their scope of licensure for the Mental Health Program. MFTs are licensed by the California

Board of Behavioral Sciences, the same Board that licenses Licensed Clinical Social Workers, who already are employed in the CDCR Mental Health Program. Over 29,000 of these MFT clinicians currently are licensed in California. CDCR has also obtained court approval to employ osteopaths with appropriate credentials to provide mental health care services. (Defs.' Trial Ex. 1057 which is a true and correct copy of *Coleman* Order, April 8, 2008.)

63. These additions to the "pool" of available and competent clinicians will assist CDCR in its efforts to fill its clinical position vacancies on a permanent basis and thereby reduce the overall vacancy rate. CDCR presently relies upon contract staff to fill certain positions, particularly in unattractive or remote geographic locations. As the *Coleman* Special Master has noted, the use of contractors resulted in a lowering of the functional vacancy rate for the core mental health positions of psychiatrists, psychologists, psychiatric social workers, and psych techs to 17% in September 2007 through February 2008. (Defs.' Trial Ex. 1112 which is a true and correct copy of *Coleman* Special Master's 20th Report, Part, A, p. 356.)

64. The quality of mental health clinicians has not been sacrificed over the quantity of clinicians. For example, CDCR clarified its standards for employment as a CDCR psychiatrist. CDCR initiated and completed a program to evaluate the competency of those psychiatrists that were neither board certified, nor board eligible. [22] (Defs.' Trial Ex. 1289 which is a true and correct copy of the *Coleman* Stipulated Order, September 11, 2006.)

65. While meeting the immediate need for mental health clinicians, CDCR has worked closely with the Special Master's staff in finalizing the mental health

workload study and so meeting the long-term need for an approved staffing methodology. (Defs.' Trial Ex. 1174 which is a true and correct copy of the *Coleman* Special Master's Report, dated July 12, 2008; Defs.' Trial Ex. 1168 which is a true and correct copy of the CDCR Workload Study.) The mental health workload study, approved on September 23, 2008 as part of the State Budget, establishes accurate a formula for determining, at each prison site, the staffing levels needed for the delivery of mental health care services necessary to comport with the Program Guide.

66. The staffing of Headquarters management has not gone overlooked. A *Coleman* court order enabled CDCR's use of salary differentials to develop a headquarters management and staffing structure that recognizes and accounts for the management of mental health services as a major program of the CDCR. (Defs.' Trial Ex. 1291 which is a true and correct copy of the *Coleman* Order, filed March 7, 2005.) By February 2007, the "allocations of headquarters staffing quintupled the number of positions available at the Division of Correctional Health Care Services to enhance, among other policy and monitoring capabilities, the ability to compile, collate and analyze data on CDCR's mental health system." (Defs.' Trial Ex. 1109 which is a true and correct copy of the *Coleman* Special Master's 17th Report, Part A, filed February 9, 2007, p. 103.) That additional headquarters staffing has made possible centralized oversight, direction, and responsibility for a mental health care services delivered at each of the 33 CDCR institutions. Attached is a set of charts illustrating the organization of CDCR Health Care Services Division. (Defs.' Trial Ex. 1220 which is a true and correct copy of the CDCR Health Care Regional Administration Chart;

Defs.' Trial Ex. 1260 which is a true and correct copy of CDCR Executive Management Chart.)

67. With the use of prison-based staffing methodology for essential services [23] and core headquarters responsibility for management and staffing of the Mental Health Program, the mental health services delivery system is now at a point at which its succession as well as success can be sustained.

68. Staffing in both the prisons and Mental Health headquarters has reached a level such that the services required of each now can be provided with reduced reliance on overtime or contracted positions. Establishing this staff capability is a major accomplishment and coupled with the knowledge of the approved program represented in the Guide, moves this Mental Health Program further toward its compliance goals.

69. I expect that this combination recruitment efforts, streamlined hiring, and an expanded pool of appropriate clinicians that are available for hiring into CDCR soon will eliminate the clinical vacancies in our prison Mental Health Program. These staffing actions reflect the kind of management attention to the issues of staffing the mental health services delivery system that shows deliberate interest in the care of the mentally ill inmate and in complying with the Program Guide standards, notwithstanding population growth.

VII. *Mental Health Care Beds*

70. In 1995, the identified population of inmates requiring mental health care was 7.9%. The designated beds for mental health inmates were insufficient, as follows:

> a. Inpatient hospital care was provided predominantly at California Medical Facility and Atascadero State Hospital by the Department of Mental Health (708 beds), with 18 inpatient beds at the California Institution for Men staffed by CDCR personnel.
>
> b. Enhanced Outpatient Program Beds were provided at three institutions (California Medical Facility, California Men's Colony and California Institution for Women) in the amount of 2,421 beds.
>
> c. Crisis beds: provided on an "informal" basis within each institution, depending upon available resources. Some 30 to 40% of the infirmary beds were used for mental health crisis care.
>
> [24] d. Outpatient care: provided on an "informal" basis and primarily limited to medication only, with psychological services dependant upon the availability of staff.

(Defs.' Trial Ex. 1273 which is a true and correct copy of the *Coleman* F&Rs, filed June 6, 1994, pp. 43-44.)

71. CDCR endeavored to create a decentralized system of mental health care to enable access to mental health services at every institution. The mental health population, hovering now at 20% of the overall CDCR population, requires housing and treatment space for some 28,000 patients at the Correctional Clinical Case Management System housed with general population inmates and for the remaining patients—those within Enhanced Outpatient Program, Mental Health Crisis Beds, inpatient intermediate and inpatient acute care—housed separately from the general population. Inpatient intermediate and inpatient acute care has expanded beyond Atascadero

State Hospital and California Medical Facility to now include other Department of Mental Health hospitals, such as Coalinga and Patton State Hospitals, and to include DMH facilities located on CDCR sites (Vacaville Psychiatric Program and Salinas Valley Psychiatric Program).

72. The endeavor to create sufficient space for the mental health services delivery system was, to some extent, stymied by the physical design of the prisons and state hospitals themselves. The *Plata* Receiver "traces Defendants' lack of adequate clinical space to the design decisions made in the 1980s." (Defs.' Trial Ex. 1292 which is a true and correct copy of the *Coleman* Special Master's May 31, 2007 Response to Court's May 17, 2007 Request for Information, p. 5.) These prisons were designed and built to accommodate population growth, with "infrastructure, including just water, wastewater, electrical and mechanical components, needed to meet anticipated overcrowding of as much as 190 percent in cells and 140 percent in dormitories." (*Id.*) In contrast, these same prisons were not designed and made "no provision" for any expansion of medical care space beyond the initial 100% of capacity. (*Id.* at pp. 4, 5.) [25] Even worse, "none of the 19 CDCR institutions planned and built in the boom of the 80s and 90s gave any thought to the space that might be needed for mental health purposes." (*Id.* at p. 5.) A similar failure in design vision occurred with the Department of Mental Health, which discovered in 1998 that it had "no facilities of its own in which to provide the level of inpatient care needed by CDCR for high custody inmates with a history of violence or escape." (*Id.* at p. 8.) As a result, such patients often wait for an appropriate inpatient bed staffed by the DMH within a DMH facility

located at a CDCR site, such as Vacaville Psychiatric Program or Salinas Valley Psychiatric Program.

73. CDCR and DMH have engaged in ongoing efforts to create additional mental health care space and housing in CDCR facilities. For instance, in 2004, the Salinas Valley Psychiatric Program, within Salinas Valley State Prison, activated and filled 64 intermediate care beds. (Defs.' Trial Ex. 1293 which is a true and correct copy of the *Coleman* Special Master's 14th Report, filed February 11, 2005, p. 176) Two years later, DMH added 112 intermediate inpatient care beds, particularly designed for high custody (Level IV) inmates, to Salinas Valley Psychiatric Program. (Defs.' Trial Ex. 1109 which is a true and correct copy of the *Coleman* Special Master's 17th Report, Part A, filed February 9, 2007, p. 114.) At the same time, CDCR created an additional 11 mental health crisis beds as well as a new 64-bed Psychiatric Services Unit at California State Prison, Sacramento. (Defs.' Trial Ex. 1294 which is a true and correct copy of the *Coleman* Special Master's 16th Report, filed December 14, 2006, p. 5.) Kern Valley State Prison opened in 2005 and then opened its mental health crisis bed unit in 2006. (Defs.' Trial Ex. 1109, *Coleman* Special Master's 17th Report, Part C, filed June 11, 2007, pp. 2-3.) By 2007, the California Medical Facility had converted two units, P-2 and P-3, to intermediate care beds for Level III and Level IV inmates, with a total capacity of 66 intermediate care beds. (Defs.' Trial Ex. 1111 which is a true and correct copy of the *Coleman* Special Master's 19th Round Report, filed July 25, 2008, p. 20.)

74. The impact of increased mental health beds is easily seen. In January 2008, California State Prison-Sacramento activated an additional sixty-four

Psychiatric [26] Services Unit beds, increasing statewide capacity of Psychiatric Services Unit beds to 384 and resulting in a decrease in the waitlist for such beds decreased from 79 on January 1, 2008 to 22 on July 18, 2008. (Deft.' Trial Ex. 1185 which is a true and correct copy of the California State Prison, Sacramento, Psychiatric Services Unit Activation Memorandum, January 2008.) In June 2008, the California Medical Facility opened a fifty-bed mental health crisis bed unit. While the October 1, 2007 census for such mental health crisis beds was 215 with a wait list of 33, by July 21, 2008, the mental health crisis bed census was 301 and the wait list was at 16. Kern Valley State Prison recently opened 96 sensitive needs yard-Enhanced Outpatient Program beds, allowing for the transfer of many Enhanced Outpatient Program patients who were placed in an administrative segregation unit for safety reasons to be moved to a sensitive need yard bed. (Defs.' Trial Ex. 1186 which is a true and correct copy of the Kern Valley State Prison Activation Memorandum, August 2008.)

75. In sheer numbers, the mental health delivery system has increased dramatically over the years. As the attached chart shows, CDCR now provides at institutions across the State: 25,072 beds for those inmates requiring correctional clinical case management system level of care; 3,763 Enhanced Outpatient Program beds; 336 mental health crisis beds; 26 mental health outpatient beds; and 384 psychiatric services unit beds. (Defs.' Trial Ex. 1247 which is a true and correct chart of CDCR Facilities.) In addition, there are 801 acute and intermediate care beds provided and/or staffed by the Department of Mental Health. (*Id.*) Notably, some of these units, such as Psychiatric Services Units to house those mentally ill

inmates requiring enhanced outpatient care and posing administrative segregation unit issues, did not exist in 1997.

76. Because the policy and procedure has been to provide segregated housing to mentally ill patients receiving Enhanced Outpatient Patient care or higher levels of (inpatient) care, that means that such mentally ill patients of CDCR are not housed within triple-bunked gymnasiums or dayrooms. They are thus insulated from the impact, if any, of the overall crowding of CDCR housing facilities.

[27] 77. Likewise, those mentally ill inmates requiring inpatient care within a mental health crisis bed, an acute bed or an intermediate care bed are in mental health units separated from the general population of inmates and, due to licensure requirements, immune from the triple-bunking seen in gymnasiums and dayrooms.

78. While mentally ill inmates at the lowest level of outpatient care, Correctional Clinical Case Management Services, are permitted to be housed in general population areas, the data shows that the majority, some 80 percent, of these patients are in traditional housing and not in "non-traditional settings" of dayrooms and gymnasiums. (Defs.' Trial Ex. 1252 which is a true and correct copy of a CDCR Chart of Non-Traditional Beds.)

79. Even at CDCR reception centers, inmates awaiting screening and transport to appropriate mental health beds are given care. By way of background, reception centers screen (incoming) inmates for mental health care needs. Those inmates found to need Enhanced Outpatient Program care are endorsed for transfer and placement in an institution with that

level of care. Should an Enhanced Outpatient Program bed not be immediately available, then those mentally ill patients requiring Enhanced Outpatient Program care are given enhanced outpatient care while in reception centers awaiting transfer. (Defs.' Trial Ex. 1142 which is a true and correct copy of the CDCR Plan to Provide EOP Care in Reception, dated October 2007, with supplement December 2007; Defs.' Trial Ex. 1179 which is a true and correct copy of CDCR Plan to Provide EOP Care in Reception, dated May 1, 2008.) This provision of EOP care in reception centers is an interim means for meeting the needs of mentally ill inmates while a permanent solution, the construction of additional EOP beds, is underway.

80. CDCR Mental Health recognizes that the long-term forecast for an increase in the mental health population must be met. CDCR has plans to create more treatment and housing space for *Coleman* class members, particularly those inmates requiring high-custody inpatient beds. Indeed, the Special Master has found the high custody inpatient beds to be of critical importance, remaining critical regardless of the overall [28] population of CDCR or even a release of CDCR inmates. (Defs.' Ex. 1192 which is a true and correct copy of the *Coleman* Special Master's May 31, 2007 Response to Court's May 17, 2007 Request for Information.)

81. CDCR, in collaboration with DMH, has created a series of plans to address the need for acute and intermediate inpatient beds and the need for mental health crisis beds, as described in *Coleman* court orders. (Defs.' Trial Ex. 1042 which is a true and correct copy of the *Coleman* Order of March 3, 2006, Defs.' Trial Ex. 1296 which is a true and correct copy of the *Coleman* Order of May 2, 2006.) Because

Defendants were ordered to coordinate their compliance efforts, particularly those involving bed planning and construction, with the Receiver, the bed plans have been developed with the Receiver's input. (Defs.' Trial Ex. 1297 which is a true and correct copy of the *Coleman* Order, October 20, 2006.)

82. In August 2007, Defendants submitted a long-term plan for the provision of mental health care beds. That plan was premised upon the construction of 'consolidated care centers', housing both medical and mental health (inpatient and Enhanced Outpatient Program) beds in conjunction with the Receiver. (Defs.' Trial Ex. 1139 which is a true and correct copy of the August 2007 Bed Plan; Defs.' Trial Ex. 1298 which is a true and correct copy of the Special Master's Report on the August 2007 Bed Plan, filed September 2007.)

83. In contrast to previously-submitted bed plans, the hallmark of the August 2007 bed plan was its utilization of a validated mental health bed forecast methodology by an outside vendor, Navigant Consulting. The bed-demand forecast and its resultant bed plan also is an essential aspect of management that was re-initiated in 2006.

84. The August 2007 long-term bed plan presented a comprehensive program for developing and constructing the space and beds needed to provide adequate mental health services for the growing population over the next 5 years. The plan results in over 7,400 residential mental health beds (Enhanced Outpatient Program, mental health crisis bed, acute inpatient and intermediate inpatient care.) Under the August 2007 [29] mental health bed plan, CDCR anticipated building in the consolidated care centers the following: 2,532 general population Enhanced Outpatient Program beds and 709 high-custody

Enhanced Outpatient Program beds for men, plus 168 general population Enhanced Outpatient Program and 15 Enhanced Outpatient Program high-custody beds for women, for a total of 3,424 Enhanced Outpatient Program beds. The plan included an additional 150 Enhanced Outpatient Program beds at California State Prison, Los Angeles County. Further, acute and intermediate care beds will be constructed to meet the forecasted needs of mental health care patients.

85. The August 2007 bed plan was approved by the *Coleman* court, with the caveat that CDCR and DMH submit an additional plan concerning the staffing and accreditation of the inpatient care beds. (Defs.' Trial Ex. 1038 which is a true and correct copy of the *Coleman* Court order of October 2007.)

86. The July 2008 mental health bed plan presented the Department of Mental Health as the agency responsible for staffing the new inpatient mental health beds and thus providing its expertise in creating a therapeutic environment for these mentally ill inmates. (Defs.' Trial Ex. 1175 which is a true and correct copy of the July 2008 Mental Health Bed Plan.) In preparing the July 2008 mental health bed plan, CDCR noticed changes in the population projections for the Enhanced Outpatient Program level of care. (*See* Defs.' Trial Ex. 1162 which is a true and correct copy of the Navigant/Misener Forecast Report, June 2008.) Thus, the July 2008 bed plan proposed a different configuration of Enhanced Outpatient Program beds in the consolidated care centers (also known as consolidated health care facilities): 2,245 general population Enhanced Outpatient Program beds and 598 high custody Enhanced Outpatient Program beds for men, plus 255 general population Enhanced Outpatient Program beds and

27 high-custody Enhanced Outpatient Program beds for women, for a total of 3,125 new beds. CDCR also anticipates adding an additional 67 general population Enhanced Outpatient Program beds at California Medical Facility. That raises the total new Enhanced Outpatient Program beds in the proposed plan to 3,192.

[30] 87. The construction of the beds depicted in the July 2008 bed plan presently are subject to coordination with the construction of medical beds by the Receiver in *Plata*. I understand a modification of the CDCR Long-term Mental Health Bed Plan may require re-submittal for *Coleman* court approval by the end of 2008 depending on the results of this coordination. Whether these beds are to be included within the Receiver's construction program or they are to proceed as CDCR separate projects, the commitment to their completion remains.

88. CDCR has persevered in the development of mental health care space at existing facilities and now in new facilities with the Department of Mental Health, and possibly shared with the Receiver's medical care system.

89. Clearly, the construction of mental health care space is a core element of an adequate mental health services delivery system. Yet this element, like the other elements, is management-driven. When well served by management, these elements together form the basis for compliance notwithstanding population growth.

VIII. *Record Keeping, Pharmacy, and Information Technology*

90. As the head of CDCR Health Care, I am aware that compliance in both the *Plata* and *Coleman*

actions has been impeded by the lack of adequate record keeping, pharmacy, and medication management systems. Indeed, the medical, mental health, and medication records of patients have been consistently maintained in hard copy fashion, requiring dedicated staff to maintain the files and make those files available to clinicians working with patients. CDCR has explored various means of bringing electronic recordkeeping to its institutions. The actual installation of electronic technology is often stymied by the aged conditions of buildings, including the challenge of wiring walls containing asbestos and lacking appropriate electrical infrastructure.

91. Under the Coordinated Courts' recent order, the development of an automated electronic information system is to be undertaken by the *Plata* Receiver. (Defs.' Trial Ex. 1299, Coordinated Courts' Order, filed June 28, 2007.) I understand from the *Plata* Receiver that this new information system should become operational [31] over the next 18-24 months. The system will provide comprehensive data to inform all aspects of mental health care and management. The provision of this data readily and on a regular basis will enable the timely and appropriate delivery of medications and mental health care programming to patients. Such information technology will support day-to-day management, quality management committees, program evaluation, performance assessments, and overall patient care.

92. The Coordinated Courts also vested the Receiver with responsibility for the pharmacy. (Defs.' Trial Ex. 1299, Coordinated Court's Order, filed June 28, 2007.) A majority of *Coleman* class members are reliant on timely and appropriate medication for their mental illnesses. CDCR Mental Health anticipates the

Receiver's efforts to improve pharmacy will serve to improve the medication management of Coleman class members.

93. The CDCR anticipates this cooperative relationship with the Receiver on information technology and pharmacy issues will enable a finding of compliance on those elements of an adequate mental health care system.

IX. *Quality Management Systems*

94. The *Coleman* trial court noticed the complete lack of any peer review or other quality management system within ODOR Mental Health Care. (Defs.' Trial Ex. 1273, Coleman F&Rs, filed June 6, 1994.)

95. CDCR now employs a Quality Management system for Mental Health both in its prisons and in Mental Health Headquarters. This system is a variant of such systems that are prevalent within the health care industry. Its fundamental elements are comprised of a committee structure with membership made up of all stakeholders within the respective prisons, regular documented meetings, routine identification of problems in the delivery of services, attention to the corrective actions identified by court monitors, and a structured process of multi-disciplined quality improvement teams operating under the committee's direction to resolve problems and recommend corrective actions. Corrective actions may involve the custody or administrative functions as well as the direct provision of mental health services.

[32] 96. Similarly, Mental Health Headquarters operates a Quality Management Committee system that includes centrally-directed actions, such as facility construction, policy determination, staff recruitment and others, as well as addressing systemic issues that

inhibit prison staffs ability to reach appropriate levels of compliance with governing policy and procedure. Together with the prison-based committees, this Headquarters committee provides a broad process of problem resolution that operates alongside day-to-day management activities.

97. In 2003 CDCR successfully experimented with the Program Support and Quality Management efforts; CDCR has revived those efforts now. A primary element of Headquarters operations is the Program Support Team aspect of the Compliance Unit. Individual teams of clinical and administrative staff are assigned to particular prisons to assist in the development of the quality improvement processes, as well for the resolution of specific ongoing problems that require correction. These Headquarters-based teams become a tool for connecting prisons struggling to achieve regular compliance with the expertise provided through the "team" and support that is designed to improve overall performance.

98. This aspect of the Headquarters organization is now operational and provides effective focus on performance outcomes. Over time this effort will provide an adjunct to the staffing and facility development aspects of this system that will tend toward establishing the teamwork that is needed to achieve compliance.

99. Another element of management that has not been present in CDCR is Program Evaluation, an organizational element of headquarters that conducts regular, annual reviews of the Mental Health Program in each prison. It serves to monitor general and selected elements of program requirements and produces a score for each prison with respect to compliance in each element. Program Evaluation is

just now under development and is expected to begin its initial evaluations in early 2009.

100. Also in development is the Mental Health Utilization Management (UM) function. This function is intended to provide assurance that mental health patients are [33] placed in the level of care required by their condition and are appropriately transferred through proper levels of care in a timely manner. This UM function focuses on the specific patients in the mental health caseload and provides assurances that they are being treated in accordance with the Program Guides and their level of mental health acuity.

101. It is notable that the former Special Master Keating noted in his May 31, 2007 report that CDCR had come close in 2003 to achieving a degree of success that had not been achieved up to that time. He also stated that the reduction of population in CDCR would not have an appreciable impact on the care provided to the *Coleman* caseload. (Defs.' Trial Ex. 1292, *Coleman* Special Masters Report, filed May 31, 2007.)

X. *Summary*

102. The Mental Health organization in headquarters has been completely revamped to incorporate all of the above-described management functions that can assure continued improvement in the provision of necessary services. This restructured organization establishes the ability of CDCR to continue to make gains on compliance with the requirements of the Mental Health Program.

103. Now organized to provide specific staff attention to court compliance, this new organization also produced 5 plans for additional services required by

the *Coleman* court that are now pending with the Court for approval: (1) plan to utilize fully the Intermediate Care beds at Atascadero State Hospital; (2) plan to improve Enhanced Outpatient Care in administrative segregation; (3) plan to further improve mental health assessments for caseload inmates subject to the disciplinary process; (4) plan to improve Enhanced Outpatient Services in reception centers; and (5) a plan to improve staff recruitment and hiring. (*See* Defs.' Trial Exs. 1177-1181 which are true and correct copies of Defs.' Five Plans, May 1, 2008.) These plans are being implemented as feasible by CDCR even pending court approval, although modifications based on testing may be required.

104. As a government manager with extensive experience, I am confident that [34] the management elements described above, if continued with due diligence and support will achieve full compliance with the Program Guides whether or not population growth continues.

I declare under penalty of perjury that the foregoing is true and correct. Executed in Sacramento, California on October 30, 2008.

Deposition of David Bennett, September 9, 2008 (Designations)

* * * *

[5] BE IT REMEMBERED that on Tuesday, the 9th day of September, 2008, commencing at the hour of 3:02 p.m. at the offices of K&L Gates, 55 Second Street, Suite 1700, San Francisco, California, before me, THOMAS J. LANGE, a Certified Shorthand Reporter in and for the State of California, personally appeared

---

DAVID BENNETT

called as a witness herein, who, having been duly sworn, was thereupon examined and interrogated as hereinafter set forth.,

EXAMINATION BY MR. BORNSTEIN

Q. Will you please state and spell your name for the record?

A. David Bennett, B-e-n-n-e-t-t.

Q. Mr. Bennett, my name is Jeff Bornstein. I represent the plaintiffs in this prison overcrowding case. I'll be asking you a series of questions today. You are under oath and the testimony that you're giving is obviously subject to penalty of perjury.

Do you understand that?

A. I do.

Q. And, of course, the court reporter is here and will be taking down everything that's said. Very important that you answer audibly.

* * * *

[75] MS. FRITZ: Calls for a legal conclusion.

MS. KECK: As determined by—I'll object as same. As determined by a court or his own opinion?

Q. BY MR. BORNSTEIN: Do you understand my question?

A. I have worked in numerous jurisdictions that have operated overcrowded jails as determined either by a court or a local determination.

Q. Well, let's take—let me refine the question.

In this case, the court has already determined that the California prison system is in violation of the Constitution because of its failure to provide adequate medical and mental healthcare to inmates. Are you aware of that?

A. Yes.

Q. Do you believe that that is a function of overcrowding?

MS. KECK: I'm going to object that this calls not only for a legal conclusion, but something that is outside the scope of this witness's testimony and his expected testimony. He's not been engaged to-render an expert opinion in this regard.

Q. BY MR. BORNSTEIN: Go ahead.

A. In part.

Q. What do you mean?

[76] A. As has been documented in the expert reports, with the level of overcrowding in the, prison just logistically, it has proven to be very difficult, if not impossible, to provide that level of care that is

required. But it's not just the fact that there isn't the physical space to do that, that it is—and/or that the number of prisoners prohibits that, but it's also having in place the structure, the structure to systematically provide the risk and needs assessment of the offenders, the structure in place to provide that subsequent identification and referral to treatment, that ability to provide services both within the facility and, just as importantly, out in the community.

Q. Would you agree that when a prison is—has a rated capacity, I don't know, 80,000 beds, and yet it is housing 176,000 inmates or 156,000 inmates—I don't know the number right now—that that increases the —or exacerbates, I should say, the problem of providing adequate medical and mental healthcare?

MS. KECK: Same objection. Outside the scope.

THE WITNESS: Yes.

Q. BY MR. BORNSTEIN: And would you agree that reducing the number of prisoners is at least one of the first steps that needs to be taken while you're doing—while you're kind of working on the infrastructure of

Deposition of JAMES EDWIN TILTON

DATE: SEPTEMBER 3, 2008

TIME: 9:41 A.M.

LOCATION: ROSEN, BIEN & GALVAN
315 Montgomery Street, 10th Floor
San Francisco, California 94104

* * * *

[15] Q. Let's shift to your employment history. I know that you retired as secretary of the CDCR. On what date did you first become an acting secretary?

A. April 18th of '06.

Q. And what was your position immediately before that?

A. Before that, it was called—what's called a program budget manager with the Department of Finance.

Q. And in your role of Department of Finance, did you have responsibility for CDCR budget matters?

A. Yes, I did.

Q. Okay. And how long did you have that position at DOF?

A. That position, approximately three years.

Q. Okay. And you were at DOF before that?

A. Yes.

Q. How long have you been at DOF?

A. Since 1998.

Q. Okay. In various positions at the Department of Finance?

A. Right, two positions. Right.

Q. And at what point in your work at Department of Finance did you first have any responsibility for CDC's, Department of Corrections, budget items?

A. Well, the last three years, I was responsible [16] for their support budget. The prior five years, I was responsible for their capital outlay. Their construction program was under my purview.

Q. And prior to 1998, where did you work?

A. Prior to 1998, I was the deputy director for administration for the Department of Corrections.

Q. And how long did you have that position?

A. That particular position; I think, since 1987.

Q. In general, what were your responsibilities in that time period?

A. I was responsible for all the administrative functions, which is procurement, accounting, budgeting, personnel. At one period, I had all of the IT programs. I had health and safety, labor relations for a while, and training.

Q. And training?

A. And training, right.

Q. Who did you report to as deputy director?

A. I reported to the chief deputy director.

Q. And did the chief deputy director report to the secretary during that period?

A. No, he reported to the director of corrections.

Q. Director of corrections, that's right.

And during that period, there was a State [17] entity called Youth and Adult Correctional Authority; is that correct?

A. The Youth and Adult Correctional Agency?

Q. Correctional Agency, yes.

A. Yes.

Q. And that was the secretary level, at that point?

A. That's correct.

Q. Prior to becoming deputy director for administration, did you have other positions at CDCR?

A. Yes, for the two years prior to that, I was assistant deputy over financial operations.

Q. Did you ever work for CDCR in a purely custodial position, such as warden or deputy warden?

A. No.

Q, Were you ever a correctional officer?

A, No.

Q, When did you first begin working at CDCR?

A. In 1985.

Q. What was your prior work experience before that?

A. I was with the Department of Finance. Classification was principal program budget analyst, and I had the corrections assignment.

Q. Okay. And when did you begin that period of

[79] So we—the fact that we had overcrowding and the lack of opportunities for program made it worse.

Q. So if you're living in a gym, but you have—you're on the main line and working and going to classes all day long, it might be less of a problem than if you are living in a gym and you have no programming?

MS. TILLMAN: Objection. Vague and ambiguous. Incomplete hypothetical.

Go ahead.

THE WITNESS: Yes, that's my point.

MR. BIEN: Q. Is it correct that, at times, CDCR has used these gyms and day rooms for housing but had greater access to programs for the inmates living in those housing?

A. Yes

Q. So that the situation, as you just explained, it's not merely the lack of just the use of gyms, butalso the fact that a situation happened where there were also not opportunities for programming at the same time people were being housed in the gyms?

A. True.

Q. Farther down that same paragraph, it states, "In addition, the overcrowding and lack of treatment space to service the additional populations has been a major 'contributor to court intervention regarding CDCR's [80] healthcare services delivery. The CDCR is currently operating under stipulated court agreements for medical, mental health, and dental services, and is under receivership for medical services."

Can you explain how the overcrowding and lack of treatment space had contributed to difficulties in CDCR complying with the mandates of these cases?

MS. TILLMAN: I'll object. It misstates the evidence in the document.

If you can answer, go ahead.

THE WITNESS: Well, I think what we were raising here is the issue that the lack of space is not only a housing issue, but it's impacting the other factors, like delivery healthcare service, the lack of offices, and clinical space.

MR. MEN: Q. Did you believe, in the summer of 2006, that that was a contributing factor to CDCR's difficulty in complying with, for example, the *Coleman* Court inmates for treatment?

MS. TILLMAN: Misstates the evidence. Assumes facts not in evidence.

You can answer.

THE WITNESS: It was clear to me that the lack of program space was not just education, vocational. It also is the ability to provide the mental health and . . .

TENTATIVE RULING

Having heard the evidence and arguments presented by the parties and intervenors, we will now make a tentative ruling. Although it will take the Court some time to review all the evidence that has been presented and to issue a final opinion, we have decided to make this tentative ruling in order to give the parties notice of the likely nature of that opinion, and to allow them to plan accordingly.[1] (The term parties as used throughout shall, where appropriate, include the intervenors.)

[2] We tentatively conclude the following:

1. First, plaintiffs have presented overwhelming evidence that crowding is the primary cause of the underlying constitutional violations. No party contests that California's prisons are overcrowded, however measured, and whether considered in comparison to prisons in other states or jails within this state. There are simply too many prisoners for the existing capacity. The Governor, the principal defendant, declared a state of emergency in 2006 because of the "severe overcrowding" in California's prisons, which has caused "substantial risk to the health and safety of the men and women who work inside these prisons and the inmates housed in them." Pls.' Exh. P-1. A state appellate court upheld the Governor's proclamation, holding that the evidence supported the existence of conditions of "extreme peril to the safety of persons and property." *CCPOA v. Schwarzenegger*, 163 Cal. App. 4th 802, 818 (Cal. App. Ct. 2008). The Governor's declaration of the state of emergency remains in effect to this day. Moreover, in the underlying cases, the court found that the States have failed to deliver constitutionally adequate mental or physical healthcare. Those determinations have not been questioned in the courts that made those findings, nor has there been an appeal of those orders.

---

[1] Although we refer to the evidence in the record in this tentative ruling, we continue to reserve final rulings on all of the outstanding evidentiary objections.

Under these circumstances, the disagreement between the parties cannot be whether overcrowding in California's prisons exists or whether that condition constitutes extreme peril to health and safety. Rather it is whether overcrowding is the "primary cause" of the State's inability to provide constitutionally adequate medical care and mental health care to its prisoners. We agree with the defendants that "primary cause" means the "chief, principal, or root" cause. We also agree that the delivery of constitutional medical and mental health care in prisons is a complicated and "polycentric" problem. As we have stated before, however, we believe that a polycentric problem can have a primary cause – a cause that underlies and affects nearly every dimension of the problem and that in this case must be substantially mitigated before the constitutional failure can be resolved.

Evidence offered at trial was overwhelmingly to the effect that overcrowding is the primary cause of the unconstitutional conditions that have been found to exist in the [3] California prisons. There is, for example, uncontroverted evidence that, because of overcrowding, there are not enough clinical facilities or resources to accommodate inmates with medical or mental health needs at the level of care they require. There is also uncontroverted evidence that, because of overcrowding, there are not enough clinical or custodial personnel to ensure that inmates with medical or mental health needs are receiving appropriate treatment, are taking the medications that they need to take, are being escorted to their medical appointments in a timely manner, and are having their medical information recorded and filed properly. Additionally, as the Governor has stated, and as the California appellate court has found, overcrowded conditions – the use of triple bunks in gymnasiums and other areas not intended to be used for housing, for example – have "substantially increased the risk of the transmission of infectious illnesses among inmates and prison staff." *CCPOA*, 163 Cal. App. 4th at 819-20.

Almost every expert who testified in the first phase of the trial identified overcrowding as the main cause of the prison system's constitutionally inadequate medical and mental health care and as the problem that must be fixed before constitutionally adequate care can be delivered. Among the experts was Ms. Jeanne Woodford, the former acting Secretary of the California Department of Corrections and Rehabilitation, who testified that it is impossible to get inmates necessary mental health treatment and health care exams when operating in the overcrowded setting of California's prisons. Experts with correctional experience in states ranging from Texas and Pennsylvania to Maine and Washington testified to similar effect. Even defendants' expert, Dr. Ira Packer, agreed that the primary cause of the inadequacy in mental health care is that there are not enough mental health resources for the population. He also concluded in his expert report that crowding is the primary cause of the problems at the reception centers.

The defendants argue that the work of the Receiver and the Special Master has significantly improved the conditions in the prisons, and that with more time the Receiver and California Department of Corrections and Rehabilitation (sometimes referred to as CDCR), as monitored by the Special Master, can remedy the constitutional violations [4] without decreasing the prison population. Although we agree that the Receiver and the Special Master have succeeded in improving some of the conditions in the prisons, no party has argued before the *Plata* or the *Coleman* courts that the unconstitutional conditions have abated. The Special Master stated that although much has been achieved in the past eleven years, "many of these achievements have succumbed to the inexorably rising tide of population." Pls.' Exh. P-35. The Receiver stated in a letter to the Governor and legislators dated July 24, 2006, that "[i]t will not be possible to raise access to, and quality of, medical care to constitutional levels with overpopulation at its current levels." Pls.' Exh. P-55. In addition, of course, the Receiver's ability to help ameliorate the overcrowding is currently seriously threatened by the defendants' actions to cut off his funding and terminate the receivership.

2. Second, the evidence is compelling that there is no relief other than a prisoner release order that will remedy the unconstitutional prison conditions. As defined in the PLRA, other "relief" refers only to relief other than a prisoner release order "that may be granted or approved by the court." 18 U.S.C. § 3626(g)(9). We would be remiss, however, if we did not take note at the outset of this section that California, like most other states, is in the throes of an unprecedented economic crisis and that the budgetary implications are of the most serious order. There are simply no additional funds that are currently being made available by the State to deal with the critical problem created by prison overcrowding.

The two cases underlying this three judge proceedings have been in the federal courts for a very long time: *Coleman* has been in its remedial stage since 1995, and *Plata*, since 2002. The respective district courts have entered a number of orders short of a prisoner release order aimed at remedying the constitutional violations. In *Coleman*, the court has entered at least 77 substantive orders to defendants since 1996, including the order appointing the Special Master. Order, *Coleman v. Schwarzenegger*, 2007 WL 2122636, *2 (E.D. Cal. July 23, 2007). In *Plata*, the defendants' failure to bring the prison system into constitutional compliance, despite reasonable opportunity to do so, compelled the court to appoint a Receiver. *See* Findings of Fact and Conclusions of Law Re Appointment of [5] Receiver, *Plata v. Schwarzenegger*, 2005 WL 2932253, *27 (N.D. Cal. Oct. 3, 2005). In granting the motion to convene this panel, both courts concluded that these orders for "less intrusive relief" had failed to remedy the unconstitutional conditions.

The defendants argue that the Receivership and the Special Master's monitoring efforts constitute other "relief" short of a prisoner release order that could remedy the constitutional violations. But the defendants have opposed the Receiver's work in *Plata* and are seeking the dissolution of the Receivership. They have also been unable to bring their mental health care delivery system into constitutional compliance at any point in the past fourteen years. Moreover, as stated in the defendants' motion before the *Plata* court, "California faces an unprecedented and potentially catastrophic $40 billion deficit." Defs.' Motion 1) To Replace Receiver with a Special Master, and 2) To Terminate the Receiver's Construction Plan at 11, Jan. 28, 2009 (Docket # 2039). Even if it were possible for the construction and renovation projects to proceed despite this deficit, they would take many years to complete. As the *Coleman* and *Plata* plaintiffs have been denied their constitutional rights for fourteen and seven years, respectively, the plaintiffs cannot be compelled to await the outcome of the efforts of the Receiver, the Special Master, and/or the State for an indeterminable additional number of years.

Given that the *Coleman* and *Plata* courts have entered a number of remedial orders, we are at a loss to imagine what "other relief" short of a prisoner release order a court could grant. A "prisoner release order" is defined broadly in the PLRA as "any order . . . that has the purpose *or effect* of reducing or limiting the prison population, or that directs the release from or nonadmission of prisoners to a prison." 18 U.S.C. §3626(g)(4) (emphasis added). Many of the forms of relief that defendants and intervenors suggest, like parole reform, good time credits, and evidence-based programming intended to reduce recidivism, are designed to "reduc[e] the prison population" and thus fall under the PLRA's definition of a "prisoner release order." Others, like the implementation of the construction program contemplated by AB900, may not be within the court's general powers under the PLRA. Other forms of relief suggested by various participants are without adequate evidentiary support or appear [6] infeasible as well as incapable of curing the violations presently existing in the California prison system. We therefore tentatively conclude that there is no relief other than a prisoner release order that can remedy the constitutionally inadequate medical and mental health care in California's prisons.

3. When Congress enacted the PLRA, it contemplated that the federal courts would impose prisoner release orders only in limited circumstances. Congress, however, did not prohibit such orders,

recognizing that they would, in some cases, be the appropriate and indeed the only available remedy for unconscionable and unconstitutional conditions in the nation's prisons. Given the clear and convincing evidence presented here that crowding is the primary cause of the constitutional violations and that no other relief will remedy those violations, we tentatively conclude that the PLRA gives us the authority to issue a "prisoner release order" to reduce the overcrowding in California's prisons.

The more difficult question, in the Court's view, is the maximum level of crowding at which the State could provide constitutionally adequate care. The evidence presented provides a range of asserted operational capacities for California's prisons. We heard testimony from law enforcement intervenors that their jails begin to experience problems when the population is over 100% of design capacity. We received evidence that the Independent Review Panel chaired by former Governor Deukmejian recommended 145% of design capacity as the outside limit for California prisons generally, although that number assumed an end to the use of all nontraditional beds in programming spaces and did not specifically address services for the mentally and physically ill. We received evidence that AB 900 Facility Strike Team leader Deborah Hysen recommended that the population in any new facilities constructed under AB 900 be limited to 130% of design capacity. Plaintiffs' experts generally agreed with that number as appropriate for California prisons in general. We also heard from Dr. Pablo Stewart, a mental health expert, that some specialized clinical programs should operate at or below 100% of design capacity. In contrast, as of August

2008, California's prisons were operating at close to 200% of design capacity.

[7] Although the evidence may be less than perfectly clear, it appears to the Court that in order to alleviate the constitutional violations California's inmate population must be reduced to at most 120% to 145% of design capacity, with some institutions or clinical programs at or below 100%. We caution the parties, however, that these are not firm figures and that the Court reserves the right – until its final ruling – to determine that a higher or lower figure is appropriate in general or in particular types of facilities.

4. The PLRA directs the Court to give "substantial weight" to any "adverse impact on public safety or the operation of a criminal justice system," before issuing a prisoner release order. The parties and the Court have therefore dedicated a significant portion of the trial to this issue. It appears to us tentatively that on the basis of the evidence, a prison cap at 120% to 145% of capacity, with some institutions or clinical programs at or below 100%, could be achieved without an adverse effect on public safety. Dr. James Austin, for example, testified that such a population reduction could be implemented without adversely affecting public safety by adopting a combination of parole reform, diversion of low risk prisoners with short sentences, and good time credits. Other evidence introduced at trial also supported the view that earned credits and parole reform would have little effect on public safety, and that earned credits may even improve safety by encouraging prisoners to participate in rehabilitation programs. Evidence-based rehabilitative programming could also benefit public safety by reducing recidivism. But such

programming cannot be delivered given the present state of overcrowding.

Many of these reform measures are also supported by the State and by state officials with a commitment to ensuring public safety. The report of CDCR's Expert Panel on Adult Offender Recidivism Reduction Programming recommended a combination of earned credits and parole reform that would reduce the prison population by about 40,000 prisoners. The Governor supported a similar set of reform measures in his 2008-2009 and 2009-2010 proposed budgets, and the legislature passed a bill containing similar measures in [8] December of 2008.[2] We cannot believe that such support would exist if the adoption of such measures would adversely affect public safety. We thus infer from the universal official support for these measures that they are not likely to result in adverse public safety consequences.

The counties argue that they do not have enough funding to provide released prisoners with appropriate programming for reentry into the community. This, however, appears to be an existing problem regardless of whether the prisoners are released under the current regime or pursuant to the reform measures. More important, the Expert Panel found that, if CDCR were to adopt the recommended combination of earned credits and parole reform, it could save $803 to $906 million annually. These savings could be diverted from the current prison budget to fund community based programming, which would allow the communities to continue and expand the programs that they have described to the Court. We also note, for the benefit of the defendants, that, according to the Expert Panel's recommendation, even if a portion of the savings from population reduction is diverted to new investments in community and prison programming, California could still save between $561 and $684 million a year. It appears from these figures that the State could easily fully fund all the community rehabilitative and other programs that would implement the recommendations of its own experts without expending any funds other than those regularly provided in the prisons budget.

---

[2] These documents have been presented to the Court as part of Plaintiffs' January 23, 2009 Request for Judicial Notice. The Court does not now rule on Plaintiffs' request. However, we note that we will consider any legislative enactments or proposals by the Governor as relevant evidence in these proceedings.

We emphasize that a "prisoner release order" is a broad term that is not limited to the generic "early release" program that many witnesses for the defendants and defendant-intervenors oppose. A prison cap of 120% or 145% of design capacity (or somewhere in between) could be achieved through reform measures that would not adversely affect public safety, and might well have a positive effect. This is particularly true considering that [9] California's overcrowded prison system is itself, as the Governor as well as experts who have testified before the Court have recognized, a public safety hazard.

5. Under the PLRA, any prisoner release order that we issue will be narrowly drawn, extend no further than necessary to correct the violation of constitutional rights, and be the least intrusive means necessary to correct the violation of those rights. For this reason, it is our present intention to adopt an order requiring the State to develop a plan to reduce the prison population to 120% or 145% of the prison's design capacity (or somewhere in

between) within a period of two or three years. The State has a number of options, including reform of the earned credit and parole systems, that would serve to reduce the population of the prison to whatever percentage is ultimately determined to be appropriate without adversely affecting public safety. It could also use the savings that will result from the implementation of a population cap to provide for any increased burdens on the counties. In fact, a roadmap for this type of comprehensive plan has already been laid out by CDCR's Expert Panel. This would, of course, not in any way preclude the State from constructing more facilities in the future so that its prisons could hold more inmates. We tentatively conclude, given the evidence presented to this Court, that an order imposing a cap on the prison population and requiring the State to adopt a course of action to reduce overcrowding is warranted, and that it is authorized under the PLRA.

The Court may hold a final hearing prior to issuing its final order. It will in any event ask the parties and intervenors to submit written proposals setting forth the specific percentages and dates that they believe should be incorporated into the order regarding the ultimate population cap and compliance date, as well as any interim percentages and dates they believe the Court should include in the order. The State will also be asked to specify at that time, or before, the measures it intends to adopt to ensure compliance in a manner that will best accomplish the objectives of the order, including ensuring public safety. Comments by the plaintiffs and intervenors as to these measures are invited.

Prior to the issuance of a final order the State and the plaintiffs, as well as any intervenors who choose to participate, are encouraged to engage in discussions regarding [10] joint recommendations with respect to all or any of the above matters as well as with respect to a settlement of all or any part of the dispute at issue in this proceeding. In any event, the State is directed to consult with the plaintiffs and the intervenors as to any proposed course of action that would serve to reduce the prison population. The Court will accept reports by the participants regarding any settlement that the plaintiffs are prepared to enter into with the defendants as well as with any intervenors who elect to join such settlement.

The parties and intervenors individually are each requested to advise the Court within 10 days of this tentative ruling whether they would like the assistance of a court-appointed settlement referee to aid in their discussions and, if so, whether they would have any objection to the appointment of the prior settlement referees Justice Elwood Lui and Justice Peter Siggins for that purpose.

IT IS SO ORDERED.

THE NEWSPAPER OF CALIFORNIA
GOVERNMENT AND POLITICS

Prisons: it's time to reform and reduce population

By Mathew Cate | 08/13/09 12:00 AM PST

Federal courts are telling California that we are out of time when it comes to reducing inmate overcrowding. The Legislature and the Governor agree that we are out of money, and have cut $1.2 billion from the Corrections budget. Now is the time for elected officials and law enforcement to come together and pass criminal justice reforms that will safely reduce our inmate population.

Inmate "early release" is a radioactive term, and something that everyone wants to avoid. Yet, a three judge court ruling issued last week seeks to impose a cap that could force the release of upwards of 40,000 inmates over the next two years. While the state will likely appeal the ruling, lawmakers should not sit idly by and leave it up to the courts. The recent riot in Chino demonstrates the perils of severe overcrowding. California needs a package of sensible prison, parole and sentencing reforms that will allow our prisons to reduce population over time without swinging open the gates for serious and violent criminals and jeopardizing the safety of our communities.

The best minds in California and the nation have already provided us with recommendations. Five years ago, the Deukmejian Commission outlined ways that we can target resources on higher risk offenders and reduce costs, without increasing crime rates. An expert panel convened by the Schwarzenegger Administration has given us a roadmap to reducing recidivism. The Administration has adopted the recommendations of both these groups in drafting its current reform proposals.

The one remaining piece of the puzzle is the passage of these population and budget reduction proposals. When the Legislature returns next week, public safety reforms must be a focal point of discussion.

Over the past several months, the Administration has worked with law enforcement stakeholders to refine a plan that we believe can reduce the prison population by up to 27,000 inmates this year, and 37,000 through 2009-10, and avert the early release that has been widely feared with the following five key components:

- Risked based parole supervision to reduce agent to parolee caseloads while maintaining law enforcement's search and seizure rights on non-serious, low-risk parolees;

- House arrest or alternative custody with GPS for elderly or infirmed inmates, or low-level offenders with 12 months or less remaining;

- Commutation to Immigration and Customs Enforcement custody of criminal alien felons who can be immediately deported to their country of origin if they're not prosecuted by the feds;

- Changing sentencing for low level offenders convicted of writing bad checks, petty theft with a prior, receiving stolen property, and vehicle theft so that they don't occupy $48,000 per year state prison beds for low-level property crimes, and raising the grand theft threshold for the first time since 1982 from $400 to $2,500; and,

- Motivating low-level offenders to complete in-prison GED, vocational, or substance abuse programs by offering up to six weeks off of the end of their sentences.

In addition to these population reduction strategies, CDCR is slashing operational costs. We are cutting over 400 positions from headquarters, reducing our programs budget by $250 million, curtailing overtime and sick leave abuse, and increasing efficiencies across the agency.

It is the duty of California's elected officials and appointed representatives of the people to make these tough decisions on budgeting for public safety resources. We cannot let the courts exert further control over our system, or allow this critical situation to worsen. With a $1.2 billion hole in our departments [2] budget that needs to be plugged immediately, and the price of inaction mounting at over $100 million a month or more, lawmakers cannot afford to wait any longer.

If California is to avoid court-ordered early release, and have the resources to keep serious, violent, and sex offenders locked up, our elected officials need to pass a sensible package of smart-on-crime bills in the coming weeks that allow us to reduce our prison population on our own terms.

ORDER REJECTING DEFENDANTS' POPULATION REDUCTION PLAN AND DIRECTING THE SUBMISSION OF A PLAN THAT COMPLIES WITH THE AUGUST 4, 2009 OPINION AND ORDER

On August 4, 2009, this three-judge court issued an opinion and order finding that plaintiffs had met their burden under the Prisoner Litigation Reform Act, 18 U.S.C. § 3626, of establishing that crowding was the primary cause of the constitutionally inadequate medical and mental health care systems at issue in the underlying cases and that a prisoner release order was necessary to remedy those violations. Having determined that such an [2] order was narrowly tailored, extended no further than necessary, and was the least intrusive means possible to correct the constitutional violations at issue, we ordered defendants to present the court within 45 days, with a plan "that will in no more than two years reduce the population of the CDCR's adult institutions to 137.5% of their combined design capacity." Aug. 4, 2009 Opinion & Order at 183.

On September 18, 2009, defendants provided this court with a "Population Reduction Plan." The plan defendants provided does not comply with our August 4, 2009 order. Rather than reducing the population of the CDCR's adult institutions to 137.5% of their combined design capacity within two years, it provides for a reduction of the population of those institutions to 166% of their combined design capacity in that period. Additionally, defendants' plan fails to set forth effective dates for the various actions proposed and fails to provide estimates of the reduction in population they expect to achieve after six, twelve, eighteen, and twenty-four months; instead, it provides estimates of the fiscal year in which actions may take effect and estimated population reductions for each fiscal year through 2014/15. In light of these inadequacies, defendants' September 18, 2009 Population Reduction Plan is REJECTED.

Plaintiffs' response urges this court to initiate contempt proceedings against defendants on the basis of their failure to comply with our August 4, 2009 order. Action on this request is STAYED pending further proceedings detailed below.

The Court VACATES the deadline in its August 4, 2009 Opinion and Order for defendants to file a response to the objections of plaintiffs and intervenors to defendants' proposed population reduction plan. Instead, defendants shall, within 21 days of this order, submit a population reduction plan that complies with this court's August 4, 2009 Opinion and Order and that, most important, provides for a reduction of the prison population to 137.5% of design capacity within two years. Defendants are reminded that they "shall set forth in their proposal the effective dates of the various actions they propose to undertake and their estimate of the reduction in population they expect to achieve after six, twelve, eighteen, and twenty-four months." *Id*

[3] Additionally, defendants shall set forth the following in their response to this order: First, defendants shall (1) explain the calculations through which they obtained the estimates of the population reductions associated with each action that they propose; (2) identify the assumptions underlying those calculations; and (3) explain why those assumptions are reasonable.

Second, in accordance with the request of Intervenor California Correctional Peace Officers' Association, this court takes judicial notice of a September 17, 2009 press release issued by CDCR and publicly available on the CDCR website. The press release describes a reduction of $250 million in rehabilitation programs for adult offenders, and identifies that reduction as eliminating over one-third of the budget for such programs.[1] Defendants' September 18 Population Reduction Plan relies on that programming for some of its reductions. To the extent that the population reduction plan that defendants submit within 21 days of this order relies on rehabilitation programs, whether for earning credit towards release or otherwise, defendants shall explain how the September 17, 2009 budget reduction and any planned additional reductions in funding for such programs affect their estimates of population reductions associated with that plan. Additionally, defendants shall advise the court on a continuing basis of all budget reductions announced or implemented in 2009 that (1) affect the provision of medical or mental health services at CDCR's adult institutions, and (2) otherwise affect the size of the population of CDCR's adult institutions.

Third, defendants shall advise the court of the specific measures that the state will take to ensure public safety through reentry and diversionary programs, including programs provided for incarcerated inmates, post-incarceration programming, and programs for persons diverted from incarceration. The state shall catalogue and provide descriptions of current programs, including the number of persons served by each program, and shall also provide details of any programs planned for the future and the specific implementation dates [4] of such future programs. Moreover, our August 4, 2009 Opinion and

---

[1] *See* Press Release, California Department of Corrections and Rehabilitation, CDCR Reduces Offender Rehabilitation Programs (September 17, 2009) available at http://www.cdcr.ca.gov/News/2009_Press_Releases/Sept_17_Programs.html (last visited October 8, 2009) (Ex. A to CCPOA Req. for Jud. Notice).

Order recognized the necessary role of community-level rehabilitation and reentry programs for ensuring the safe and successful implementation of population reduction measures, and noted that the decision lies with California's elected officials whether to allocate state funds to communities to promote and support such programs and the crime reduction and gains to public safety that accompany them. *See* Aug. 4, 2009 Opinion & Order at 164-66. Defendants shall advise the court on a continuing basis of the measures that the state is taking to support and assist counties and other community-level providers of rehabilitation and reentry programs in providing such programs, and of any steps that it may have taken or will be taking to increase, reduce, or eliminate such support or assistance since January 2009 and in each succeeding six-month period.

Fourth, the court takes judicial notice that Defendant Schwarzenegger is reported to have submitted a plan to the California State Legislature providing for a population reduction of 37,000 over two years. That such a plan was submitted by the Governor was widely reported in the press, including in an article written by Defendant Matthew Cate.[2] Defendants shall advise the court of (1) whether the plan submitted to the legislature by the Governor provided for a prison population reduction of 37,000 prisoners, and, if not, the correct estimate of the prison population reduction for which this plan provided; (2) the estimated reduction for which this plan provided in the population of CDCR's adult institutions expressed as a percentage, of the combined design capacity of those institutions; (3) the specifics of the plan submitted to the legislature, including the population reduction actions proposed therein, the date that each such action would be implemented under that plan, and defendants' estimate of the reduction in population that such a plan would achieve after six, twelve, eighteen, and twenty-four months; (4) whether this plan was adopted by the California State Senate, and, if modified, the estimated population reduction associated with [5] the plan as it was adopted by the Senate; and (5) whether, if adopted by the Senate, the plan was submitted to a vote of the California State Assembly in the form adopted by the Senate, and, if so, whether it failed in the Assembly by a formal recorded vote and what such recorded vote was. Additionally, defendants shall explain the calculations through which they obtained the estimates of the population reductions associated with each action proposed in the plan submitted to the California State Legislature; identify the assumptions underlying those calculations; and explain why those assumptions are reasonable.

---

[2] *See* Matthew Cate, *Prisons*: *it's time to reduce and reform the population*, Capitol Weekly, August 13, 2009, available at http://www.capitolweekly.net/article.php?_c=ybp9m22r8xx2n4&xid=y6x62x72akddqo&done=.ybxkujm111kclt (last visited October 8, 2009) (Ex. B to Evenson Decl. in Supp. of Pls.' Response).

Defendants are reminded that our August 4 order provided that "should any of defendants' proposed population reduction measures require the waiver of any provisions of state law, [defendants] shall so advise the court, and shall explain why the requested waiver is permissible under 18 U.S.C. §3626(a)(1)(B)." Aug. 4, 2009 Opinion & Order at 183. Should state law limit defendants' ability to implement any measures that would, in their view, aid in achieving the constitutionally required prison population reduction explained in our. August 4, 2009 Opinion and Order, defendants shall so notify this court, and in such notification describe the specific provisions of state law at issue and explain how those provisions limit their ability to implement such measures. Even if defendants contend that state law waivers are not permissible in this instance, *see* Defs.' Sept. 18, 2009 Population Reduction Plan at 16 n.11, they must identify those waivers of state law that would be required to implement their proposals to reduce the prison population in compliance with our order.

Plaintiffs shall forthwith commence preparation of an alternative population reduction plan. Should defendants fail to submit a timely population reduction plan that complies with the August 4, 2009 Opinion and Order and with this order, this court shall, in addition to any other action it may take, order plaintiffs to provide the court within 14 days with a population reduction plan that will in no more than two years reduce the population of the CDCR's adult institutions to 137.5% of their design capacity. Should any of the population reduction measures plaintiffs propose in such a plan require the waiver of any provisions of state law, they shall so advise the court, and shall explain why the requested waiver is permissible [6] under 18 U.S.C. §3626(a)(1)(B). Intervenor California Correctional Peace Officers' Association may also submit any proposals or suggestions it may have for compliance with the August 4, 2009 Opinion and Order at such time as any population reduction plan by plaintiffs is due to be submitted, or within seven days thereafter.

This court is unaware of any excuse for the state's failure to comply with our August 4, 2009 Opinion and Order but, as noted earlier, will stay any sanctions, including possible contempt proceedings, pending defendants' response to this order. We will view with the utmost seriousness any further failure to comply with our orders. As has been made clear, this court would prefer that the state develop its own plan to meet the constitutionally required prison reduction goals explained in our August 4, 2009 Opinion and Order. We have afforded the state every opportunity to do so, even at the cost of delaying the reduction of the overcrowding of California's prisons—a reduction that is necessary to the elimination of the unconstitutional medical and mental health conditions that lie at the heart of these proceedings, and that will, in addition, significantly reduce the prison system's criminogenic effects so detrimental to public safety and welfare. Should the state again fail to submit a population reduction plan that complies with our August 4, 2009 Opinion and Order, the court will be left with no alternative but to develop a plan independently and order it implemented forthwith.

IT IS SO ORDERED.

[1] [Seal] Office of the Governor

ARNOLD SCHWARZENEGGER
THE PEOPLE' GOVERNOR

GOVERNOR'S REMARKS

Wednesday, 08/19/2009 1:35 pm

Governor Tours the California Institution for Men in Chino

WARDEN FAKHOURY:

Good morning and welcome to the California Institution for Men State Prison, Chino Reception Center West, I'm Aref Fakhoury, acting warden at the California Institution for Men, also known as CIM.

I'm pleased to have the opportunity to be here this morning with the governor of the great state of California, Governor Arnold Schwarzenegger, along with the Secretary of the California Department of Corrections and Rehabilitation Matthew Cate and Assemblywoman Norma Torres.

Before I introduce you to the Governor, let me take a moment to thank all the CIM staff for their courageous response to stop the major disturbance here at our C-West facility on August 8th, 2009. Through staffs quick and safe response they were able to control the incident, save lives and quickly bring order back to the facility. Staffs professional commitment to duty displayed throughout this incident is a shining example of their dedication to ensure our committees are safe.

I also want to thank our Correction families for their sacrifice through these types of incidents and situations and to thank our fellow staff from responding institutions for the assistance they provided. In addition I want to thank the local law enforcement from the city of Chino, Chino Hills, San Bernardino Sherriff, city of Ontario, as well as the Chino Valley Independent Fire District, for the valuable assistance they provided in response to the incident.

And now it is with great pleasure and honor that I introduce you to Governor Schwarzenegger. (Applause)

GOVERNOR SCHWARZENEGGER:

Well, thank you very much, Warden Fakhoury, for your introduction and it's great to be here today and get a tour. Two weeks ago, as you know, these prison grounds were the scene of a tremendous amount of violence and a violent riot. It involved hundreds of inmates. Beds and mattresses were torn apart and destroyed and walls and bathrooms were destroyed. Inmates would pick up, to try to find anything they could to just hit each other, or stab each other with broken glass and so on and entire housing units were burned. It looks like a scene from one of my movies except this is a real danger here and real destruction.

A few minutes ago I had the chance of and shook hands with some of the brave men and women who entered the danger zone and restored order here. I want to thank Warden Fakhoury and Secretary Cate for taking me and also Assemblywoman Torres, on a tour here and showing us what was going on there.

Let me tell you something, they did an extraordinary job. And this is why I wanted to come here today to thank them for their spectacular job, because they did this all without the loss of a single life. Let me again thank them, to all of the staff at the California institution for Men, for their extraordinary effort and work and for their bravery. You go to work every day under the most difficult and dangerous circumstances and conditions and California appreciates the great work that you are doing and the kind of great sacrifices that you make.

Now, the riot here at Chino was a single incident. However, it is a terrible symptom of a much larger problem, a much larger illness. The reality is that California's entire prison system is in a state of crisis. It is collapsing under its own weight. Spending on prisons has nearly doubled in the last five years. We spend here in our state nearly $49,000 per inmate per year, where the national average is $32,000.

[2] And it's hard to argue that the money is spent wisely and efficiently, We have one of the highest rates of recidivism in the nation. Our prisons are overcrowded and endangering the staff and the inmates. Here in Chino nearly 6,000 inmates are in these facilities and the facilities were built only for 3,000.

And the politicians in Sacramento have swept the problem under the rug for so long California is quite literally losing control of our prisons. A federal judge has taken over the healthcare system already. Two weeks ago the federal court imposed a cap that will force the early release of 40,000 inmates.

And all of this is happening in the midst of an economic crisis that has forced us to make tough cuts also right here, not only in government but in our prisons. The budget that I signed just a month ago includes $1.2 billion in cuts and the legislature right now is debating on how to achieve those kind of savings.

Some say that the answer is to just get rid of or weaken the Three Strikes but that's not going to happen on my watch. Others say let's just open up the gates and let criminals out and roam the streets. Well, let me tell you something, this is also not going to happen on my watch, because public safety is our number one priority.

I think it's very important we must be measured and smart about how we go about and create those reductions. We must find a way to cut costs and relieve overcrowding but without sacrificing public safety. Not all criminals and not all crimes are created alike, that's very clear and this is why I have proposed and put forward a certain proposal of reforms so that we can reduce the cost of running those prisons:

- For instance, reducing parole caseload. ratios from 70/1 to 45/1, allowing us to strengthen supervision of the most serious and violent offenders;
- Or allowing certain low-risk offenders to serve the last 12 months of their sentence under house arrest with GPS monitoring;
- Or adjusting our property crime thresholds and reduce some of the 'wobblers' to misdemeanors. These are reforms that will make our communities safer, our prisons safer and give taxpayers a greater return on their investments.

And I cannot stress enough that the time for action is now. It is very important that the legislators recognize that every single day it costs us an extra $3 million if we don't have those reforms and this is why I urge Democrats and Republicans to work together and to create those reforms as quickly as possible. I know they can do it.

Thank you very much. And now I would like to bring up Secretary Cate to say a few words. Thank you.

SECRETARY CATE:

At about 1:30 in the morning on Sunday, August 9, I got the call that no secretary of Corrections wants to hear; that there's a major riot in one of the prisons. On these fields and in these dorms we had almost 1,300 inmates rioting and we had about 30 officers, 30 cops in these dorms and in those towers and on this yard.

And my primary purpose is to thank those officers for the job they did in retaking this facility. I'm very proud of the work they did under those kind of odds. They retook it one-by-one without the loss of life. They retook it one-by-one without officers being severely injured, no hostages, no deaths and I just appreciate that very much.

I want to especially thank our version of the SWAT team, our Crisis Response Team, for the work they did in going through these dorms and storming them one-by-one and retaking them for the state.

I also want to thank Director Hubbard and Assistant Director Knowles for the work they did in organizing us in these last two weeks. I think that it's really a testament to the professionalism of our staff that we sit here today with so much of this already cleaned up.

I want to thank the inspector general, who is going to review this for us and especially our law enforcement partners who surrounded this facility to ensure that no inmate escaped regardless of what was happening.

So I just have a great deal of gratitude for all of the public servants who were at work that night and in those early morning hours and the work that they did. Whether they work for the state or for the local law enforcement or the fire department, [3] they just did a great job.

The Governor is absolutely right about this crisis. There are 6,000 inmates in a 3,000-inmate facility and that makes everything we do more difficult. The Governor declared a state of emergency in overcrowding three years ago. We need action now and so with the Governor we'll be seeking reforms, the reforms that were first proposed by Governor Deukmejian in 2005 and the expert panel on recidivism reduction. Reforms will allow us to reduce overcrowding, to reduce recidivism rates.

I believe we can have a criminal justice system and a system of corrections that can one again be a leader, a national leader for inmate programs as well as safety and security. I think we can have it all; we just need to get a handle on this overcrowding issue first.

So I think we're at a turning point of this criminal justice issue and I want to say thank you to the Governor for his leadership, to Assemblymember Torres for her support in being here. Thank you to the warden for his work.

And now I'll turn it back over to the Governor for a question and answer period.

QUESTION/ANSWER:

GOVERNOR: Again, I just want to reiterate also how proud I am of Warden Fakhoury and also of Secretary Cate for the great leadership that they have provided. I was very proud of them when this whole thing took place and it actually turned out, under the circumstances, so well without any lives lost. So thank you to both of you for your great leadership.

So if you have any questions about that, please feel free.

QUESTION: We all know how expensive it's going to be to clean up; we've heard upwards of $6 million. The state budget is not in a good position, teachers are getting laid off, people are frustrated that we're having to pay that kind of money because of a riot. How do you think, how do you feel about that?

GOVERNOR: Well, I think, first of all, it will cost us money; this is very clear. And this is why it was very important and why I fought a month ago when we did our budget, that we have a reserve. Remember, the legislature left me with $156 million in the hole. This would have been the first time where we had no reserve and this is why I fought for a reserve. And that's why we have a $500 million reserve, so we can take care of things like that, or if we have fires and so on, because there are always emergencies. We have to have the money available so that we can clean up quickly and rebuild as quickly as possible and that's what we're going to do.

But it doesn't address—I just want to make sure also that you understand that it doesn't address really the larger issue. I think that the reforms will address some of the larger issues. The reality of it is, as you can see, in the last two decades we have had this mess. I mean, lawmakers and people are very quick to pass laws to be tough on crime. But every time you're tough on crime you put more people in the prisons but then where's the funding mechanism? Where are the funds, the extra funds? So what you basically do is and that's why I said earlier that we have doubled the amount of money we spend on prisons in the last five years and that means that you're taking money away from other programs.

So I think that it is very important we reform, that we reduce the prison population. We have already started doing great work by sending some of them outside the state to other prison facilities. And now we have to do some reforms and I think that will get us the savings.

Yes?

QUESTION: As your reforms are debated by the legislature there are several Republicans who feel that this is not a case of overcrowding and they have questioned and doubted that there is overcrowding. What do you say to that, specifically to your Republican colleagues?

[4] GOVERNOR: I think it's very important to recognize that, when you go to a facility like

here in Chino, that you have a facility that's built for 3,000 inmates and you have 6,000 here. That's overcrowding. No matter if you're a Republican or if you're a Democrat, that's overcrowding. And that is the case all over the state of California. We have facilities altogether that are for 100,000 inmates and we have 165,000 inmates. Its too many. That's why federal judges have now said that if we don't go and have reform and start ourselves looking at how to reduce the population that they will force us into reducing by 40,000 inmates. So we have to do something about it.

So look, I have been around. I have been going to prisons in my bodybuilding days, in the '70s, going to work out with inmates in various different prisons, basically all of the prisons all over California. So I see the difference between now and what it was then. Then there was no overcrowding. Now there is serious overcrowding and it's very, very dangerous for the staff and it's very dangerous for the inmates.

And we can do better and I think that we are going to do better now when the legislators go in there and start negotiating and creating those reforms,

Thank you very much, everybody. Thank you for coming out.

[i] Achieving a Constitutional Level of Medical Care In California's Prisons

---

Thirteenth Tri-Annual Report of the Federal Receiver's Turnaround Plan of Action

---

January 15, 2010

[ii] California Prison Health Care Receivership

Vision:

As soon as practicable, provide constitutionally adequate medical care to patient-inmates of the California Department of Corrections and Rehabilitation (CDCR) within a delivery system the State can successfully manage and sustain.

Mission:

Reduce avoidable morbidity and mortality and protect public health by providing patient-inmates timely access to safe, effective and efficient medical care, and integrate the delivery of medical care with mental health, dental and disability programs.

[iii] Table of Contents

1. Executive Summary 5

2. The Receiver's Reporting Requirements 8

3. Status and Progress Toward the Turnaround Plan Initiatives 9

GOAL 1 Ensure Timely Access to Health Care Services 9

Objective 1.1 Screening and Assessment Processes 9

Objective 1.2 Access Staffing and Processes . 9

Objective 1.3 Scheduling and Patient-Inmate Tracking System 12

Objective 1.4 Standardized Utilization Management System 13

GOAL 2 Establish a Prison Medical Program Addressing the Full Continuum of Health Care Services 15

Objective 2.1 Primary Care 15

Objective 2.2 Chronic Care 15

Objective 2.3 Emergency Response 15

Objective 2.4 Specialty Care and Hospitalization 16

GOAL 3 Recruit, Train and Retain a Professional Quality Medical Care Workforce 24

Objective 3.1 Physicians and Nurses 24

Objective 3.2 Clinical Leadership and Management Structure 26

Objective 3.3 Professional Training Program 27

GOAL 4 Implement a Quality Assurance and Continuous Improvement Program 29

Objective 4.1 Clinical Quality Measurement and Evaluation Program 29

Objective 4.2 Quality Improvement Programs 30

Objective 4.3 Medical Peer Review and Discipline Process 32

Objective 4.4 Medical Oversight Unit 34

[iv] *Objective 4.5* Health Care Appeals Process 37

Objective 4.6 Out-of-State, Community Correctional Facilities and Reentry Oversight 40

GOAL 5 Establish Medical Support / Allied Health Infrastructure 44

Objective 5.1 Pharmacy 44

Objective 5.2 Medical Records 49

Objective 5.3 Imaging/Radiology and Laboratory Services 51

Objective 5.4 Clinical Information Systems 54

Objective 5.5 Telemedicine 54

GOAL 6 Provide for Necessary Clinical, Administrative and Housing Facilities 57

Objective 6.1 Upgrade Administrative and Clinical Facilities 57

Objective 6.2 Expand Administrative, Clinical, and House Facilities 57

Objective 6.3 Finish Construction at San Quentin State Prison 60

4. Additional Successes Achieved by the Receiver 61

A. Joint Governing Body for Integrated Care 61

B. Health Care Master Bed Plan 61

5. Particular Problems Faced by the Receiver, Including Any Specific Obstacles Presented By Institutions Or Individuals 63

6. An Accounting of Expenditures for the Reporting Period 64

7. Other Matters Deemed Appropriate for Judicial Review 65

A. Coordination with Other Lawsuits 65

B. Master Contract Waiver Reporting 65

8. Conclusion 66

[5] Section 1
Executive Summary

In closing the final reporting period for the year, there is much that prison healthcare stakeholders and advocates can showcase as accomplishments. While faced with unprecedented budget challenges and managing a diverse stakeholder process system, progress has continued toward attaining the Vision and Mission outlined in the Receiver's Turnaround Plan of Action (RTPA). Highlights of progress include the following:

- The Receiver's Medical Classification Team has finalized the classification system and Reception Centers will begin utilizing the system on January 20, 2010 with newly arrived inmates. The Non-Reception Centers are scheduled to begin utilizing this system during the 1st quarter of 2010.
- Patient-inmate access to health care has markedly improved and, through our ongoing collaborative efforts with the Department of Corrections and Rehabilitation (CDCR), we are projecting that control of the Health Care Access Units can be transferred back to CDCR as early as next fiscal year, with a target for July 2011.
- Utilization Management (UM)—Critical to successful implementation of UM is staff leadership. The lead Nurse Consultant position was filled in September by Grace Dodd. Under Ms. Dodd's leadership interviews for UM nursing consultants have been initiated. By filling these positions, we will further

enhance implementation and accountability for application of the UM system.

- The new Episodic Care Processes were tested at Mule Creek State Prison in October 2009, and the results have directly contributed to the development of draft policy to be released by December 31, 2009. The rollout of the New Episodic Care System is projected for the 1st quarter of 2010.
- Following the rollout of the Primary Care Model, the Receiver's staff conducted compliance evaluations at each institution, and each achieved 100 percent compliance with implementation requirements.
- A Request for Proposal (RFP) to obtain a medical services network from a Preferred Provider Organization (PPO), as allowed under SBX4 13, was released on October 20, 2009. A Bidders Conference was held on November 12, 2009. The selection will be announced during the next reporting period.
- Medical invoice processing activity has continued to be streamlined for efficiency through the use of Third Party Administrators (TPA) and system enhancements. The Two-Year Post Audit indentified billing discrepancies which resulted in recovering $368,835 and triggered approximately $5.6M in voluntary provider refunds.
- Significant gains have been made to meet our medical care staffing goals filling 87 percent of nursing positions and 87 percent of physician positions. (Note: Percentages have been adjusted from the prior reporting period

to account for additional nursing and physician positions to be filled that were authorized in the 2009/2010 budget.)

[6] - Quality Improvement Programs—To ensure a healthcare delivery model that is compliant, efficient and sustainable administratively and at the institutions, the Quality Improvement Program continues to lead efforts that provide for a multi-level system of checks and balances. While this report addresses all of the efforts, we highlight the ongoing audit activity by the Office of the Inspector General (OIG) and California Prison Health Care Services (CPHCS) to evaluate performance and identify opportunities to improve delivery systems; the results of the Rand study which has proposed 79 indicators to measure access to care and clinical performance, which will be incorporated into processes and systems; and the newly formed interdisciplinary Quality Management Committee charged with enterprise coordination and evaluation of the programs.

- Implementation of a pharmacy wholesaler agreement tailored to address the specific and evidentiary medical needs of patient-inmates has generated an estimated cost avoidance of $38.9M through October 2009. This coupled with improvements in pharmacy operations, based on inspection results, and the successful rollout of the GuardianRx pharmacy operating system to 29 institutions, continues to drive policy enhancements and efficiency gains at each institution.

- Upgrades to Avenal State Prison are in the final stages of completion with staff moving to the new buildings December 2009. Construction has also been completed at San Quentin. Planning activities and legal responses for the Consolidated Care Center in Stockton are proceeding in coordination with vested stakeholders.

While we continue to make strides in many important areas that bring us closer to the goal of providing a constitutional level of healthcare within California's correctional system, the momentum of these efforts has clearly been affected by the State's budget and fiscal crisis. The budget and fiscal crisis is likely to continue for the foreseeable future, and the Receivership is doing everything it can to reduce expenditures without cutting into core healthcare areas. However, productivity has been impacted throughout the organization, and coupled with some staff turnover, certain projects and initiatives have been delayed in their implementation. Due to these factors, this report will reflect extensions on some of the objectives and action item dates to fulfill the goals.

Moreover, although the Administration has made some proposals to the Legislature to reduce prison population and overcrowding (in part to address the state's budget crisis), so far, those proposals have not been fully embraced by the Legislature and none of them has yet been implemented. CDCR's prisons remain significantly overcrowded, and the lack of adequate facility space and appropriate beds for medical and mental health purposes continues to impede efforts to improve care.

Format of the Report

To assist the reader, this Report provides three forms of supporting data:

1. *Metrics*: Metrics that measure specific RTPA initiatives are set forth in this report with the narrative discussion of each Goal and the associated Objectives and Actions.

   [7] Metrics were initially included in the Ninth Quarterly Report to the court and were also published as part of the Receiver's Turnaround Plan of Action Monthly Reports beginning in October 2008. Monthly Reports for this reporting period can be viewed at the CPHCS website (http://www.cprinc.org/ receivermo.aspx).

2. *Appendices*: In addition to providing metrics, this report also references a number of documents that are provided to the reader in the included Appendices filed concurrently with this report.

3. Website References: Whenever possible website references are provided to the reader.

RTPA Matrix

In an effort to provide timely and accurate progress reports on the RTPA to the Courts and other vested stakeholders, we are introducing a new format that provides activity status by enterprise and by institution, as appropriate to the activity and coordination.

The Enterprise Project Deployment worksheet and the Institution Project Deployment worksheet provide an illustration of the progress made toward each goal-objective-action outlined in the RTPA and the Tri-Annual Report. The Enterprise Project Deployment worksheet captures projects specifically assigned to the Receiver for broad administrative handling, analysis or testing. The Institution Project Deployment captures the status of all other activity by institution. Similar to the Percent Completed Worksheet, reporting will reflect activity that is completed, on schedule, delayed or not progressing, with corresponding dates. The Tri-Annual Report will continue to provide a narrative status report.

Due to the size of the document, the Matrix is included as Appendix 1.

[8] Section 2

The Receiver's Reporting Requirements

This is the thirteenth report filed by the Receivership, and the seventh submitted by Receiver Clark Kelso.

The Order Appointing Receiver (Appointing Order) filed February 14, 2006 calls for the Receiver to file status reports with the *Plata* court concerning the following issues:

1. All tasks and metrics contained in the Plan and subsequent reports, with degree of completion and date of anticipated completion of each task and metric.
2. Particular problems being faced by the Receiver, including any specific obstacles presented by institutions or individuals.
3. Particular success achieved by the Receiver.
4. An accounting of expenditures for the reporting period.
5. Other matters deemed appropriate for judicial review.

(Reference pages 2-3 of the Appointing Order.)

http://www.cphcs.ca.gov/docs/court/PlataOrderAppointingReceiver0206.pdf

In support of the coordination efforts by the four federal courts responsible for the major healthcare class actions pending against the CDCR, the Receiver now files Tri-Annual Reports in four different federal court class action cases. An overview of the Receiver's enhanced reporting responsibilities related to these cases and to other Plata orders filed after the Appointing Order can be found in the Receiver's Eleventh Tri-Annual Report at pages 15-16. (http://www.cphcs.ca.gov/receiver_tri.aspx)

[9] Section 3

Status of the Receiver's Turnaround Plan Initiatives

Goal 1. Ensure Timely Access to Health Care Services

Objective 1.1. Redesign and Standardize Screening and Assessment Processes at Reception/Receiving and Release

> *Action 1.1.1. By January 2009, develop standardized reception screening processes and begin pilot implementation.*

This Action has been completed.

> *Action 1.1.2. By January 2011, implement new processes at each of the major reception centers.*

The Reception Center redesign is planned to occur after completion of Action 1.1.3 in January 2010. Re-evaluation of the reception center processes, established in Action 1.1.1, and statewide implementation of the new processes at each of the major reception centers is expected by January 2011.

> *Action 1.1.3. By January 2010, begin using the new medical classification system at each reception center prison.*

During this reporting period, the Medical Classification System was finalized, including approval of the policy and the Medical Classification Chrono; system training of key staff; and preparation of Local Operating Procedures by Institutions. On January 20, 2010, all Reception Centers will begin using the Medical Classification System on all newly arrived inmates.

> *Action 1.1.4. By January 2011, complete statewide implementation of the medical classification system throughout CDCR institutions.*

Non-reception center institutions will begin using the Medical Classification System during the first quarter of 2010. The Regional Leadership Teams will then begin assessing institutional compliance with the system.

Objective 1.2. Establish Staffing and Processes for Ensuring Health Care Access at Each Institution

> *Action 1.2.1. By January 2009, the Receiver will have concluded preliminary assessments of custody operations and their influence on healthcare access at each of CDCR's institutions and will recommend additional staffing, along with recommended changes to already established custody posts, to ensure all patient-inmates have improved access to health care at each institution.*

This Action has been completed.

> [10] *Action 1.2.2. By July 2011, the Receiver will have fully implemented Health Care Access Units and developed healthcare access processes at all CDCR institutions.*

Health Care Access Units (HCAU)

All institutions have reported improvement in patient-inmate access to scheduled healthcare appointments since the last Tri-Annual Report.[1] These reported improvements indicate that inside healthcare access programs, once fully implemented, will have the necessary resources to support healthcare operations at the current level of service. Because of these improvements, and barring any regression or inability to support the field, the data suggests that operational control of custody HCAU could be transferred back to CDCR and released from Receivership control by next fiscal year (target July 2011).

Collaborative Efforts

The Corrections Services Field Operations Unit worked extensively with CDCR to reach a consensus regarding a sufficient number of additional HCAU custody staff to adequately provide access to care. These efforts sought to increase efficiencies, in view of the current fiscal issues in California, while satisfying the remaining access to care custody staff resourcing at the 33 CDCR adult institutions. This consensus with CDCR, which included a substantial increase in the number of proposed HCAU staffing from CDCR's original custody staffing reviews, was reached in October 2009.

Corrections Services continues to collaborate with CDCR mission changes and in the implementation of the short, intermediate and long term bed projects. Corrections Services continues to work with CDCR and the adult institutions to ensure that healthcare operations are not interrupted.

---

[1] These reports track the efficacy of custody escort and transportation to scheduled appointments—not whether all needed appointments are scheduled.

The Receiver is continuing to work with CDCR by reviewing operational processes and staffing resources to ensure that together healthcare in prisons is safe, efficient, patient-centered, timely, efficient and equitable.

Operational Assessments

To facilitate this process, an accelerated schedule for conducting Institutional Operational Assessment reviews has been developed.

Previously, institutions were scheduled to have the Operational Assessment reviews completed by June 2010. In order to ensure the assessment instrument adequately measures intended objectives, the process review completion timeline has been extended to December 2010. Although much work remains, overall healthcare access at the institution level is on track to meet this goal.

Monthly Health Care Access Quality Report (AQR) - Data Collection Instrument

During this reporting period, AQR data stabilization continued along with the overall coordination of custody and clinical staff in an effort to track patient-inmate movement to [11] healthcare services. September's AQR indicated 90 percent of all patient-inmates that received ducat(s) for a healthcare appointment(s) were seen by a clinical provider. Specific to custody performance, the number of inmates *Not Seen Due to Custody* represented 1.24 percent of the total number of ducats, slightly lower than 1.3 percent recorded in June 2009.

Updates to the AQR during this reporting period, include the addition of Personnel Post Assignment System (PPAS) Timekeeper's Monthly Overtime and

Expenditure Report information. The new data elements record the hour and dollar figures under billing codes .08 -Medical Costs (Med Guarding), and .16 - Medical Transportation, costs that are billed to the Receiver.

The addition of those PPAS data elements and results from the testing phase for the input of AQR data into COMPSTAT necessitated further modification of the COMPSTAT data collection tool. AQR and COMPSTAT staff continues to work toward the goal of integrating the report into COMPSTAT within the coming months.

Corrections Services Field Operations Unit has established quarterly meetings with the Division of Adult Institutions, Associate Directors. On the agenda for these meetings are AQR trends, changes and updates, as well as discussions and development of other Field Operations functions and their association within elements of the DAI.

Refer to Appendix 2 for the Executive Summary and Health Care Access Quality Reports for September-November 2009.

Buses

From April 2009 through September 2009, ten (10) buses for patient-inmate transportation were distributed statewide. Efficiencies will include a reduction in the number of medical transports and backlog appointments as a result of up to 21 inmates per trip traveling to specialty appointments. Additionally, the buses allow sister institutions (HDSP/CCC) (CTF/SVSP) to utilize the same providers and batch the appointments together to make a more efficient process for both CDCR and the providers.

The Emergency Response Vehicle prototype has been completed and delivered to Avenal State Prison to complete a 4-month pilot of the unit. The Emergency Response Committee will be including the overall effectiveness of the unit into its evaluation process. All modifications will be addressed through that committee and the Corrections Services Unit. At the conclusion of the pilot, the department will assess the effectiveness, cost and purchasing of additional vehicles for all institutions.

Fair Labor Standards Act (FLSA) Validation

Since Fiscal Year 04/05, Medical Guarding and Transportation expenses have increased at a rate of approximately 48 percent each year. In order to determine the cause for increase and validate Medical Guarding and Transportation expenses, Corrections Services began FLSA validation at all CDCR institutions in December 2009. The FLSA validation process includes a review of [12] FLSA's and other billing documentation to validate overtime and temporary help expenses charged to CPHCS for 5 separate points in time at all 33 institutions. Target date for completion is March 31, 2010. The FLSA validation process will assist in confirming expenses charged and custody resources needed as part of fully implementing the Health Care Access Units.

Objective 1.3. Establish Health Care Scheduling and Patient-Inmate Tracking System

> *Action 1.3.1. Work with CDCR to accelerate the development of the Strategic Offender Management System with a scheduling and inmate tracking system as one of its first deliverables.*

A centralized system for the scheduling and tracking of healthcare appointments, coordinated with all other appointments for patient-inmates, is an essential element of providing timely access to care. General offender scheduling and movement control within the 33 existing CDCR prisons and the planned new long-term healthcare facilities will be handled by the Strategic Offender Management System (SOMS). SOMS will include four informational components for each offender that is critical to the success of the prison healthcare system: a unique lifetime identification number; demographic information; continuous real-time location; and a comprehensive master schedule and scheduling prioritization protocol.

After the decision in summer 2009 to incorporate the healthcare scheduling functionality into SOMS, a CPHCS team of Subject Matter Experts from all areas (Medical, Nursing, Mental Health, Dental, Allied Health and Telemedicine) participated in a series of requirements definition and validation workshops. The result of these sessions culminated in the Electronic Offender Management Information System (eOMIS) Prototype and the General System Design Document which will be the foundation for the development of the healthcare scheduling system.

In conjunction with the system design activities, efforts to plan for deployment, change management, training and communication have begun. The deployment of the system will occur in phases, with the three women's institutions going first in July 2010. After a stabilization period, the roll-out will proceed to men's institutions that currently do not use technology for scheduling and then on to the remaining institutions. Roll-out of healthcare scheduling to all institutions is scheduled to be completed by the end of 2011.

Change management and training activities have been initiated beginning with the documentation of the future state business processes for scheduling, utilizing the new system. These baseline documents will provide for the development of training and user acceptance testing materials. They also serve to determine the gap between current practices and future practices in the scheduling process, thus allowing the change management team to assess the effort that will be required for training of the end users.

Communication activities included an article in the *Lifeline* newsletter and an overview PowerPoint presentation for statewide distribution and participation of the project team in various statewide calls. Feedback on the system received to date has been overwhelmingly positive.

[13] During the next few months, planning activities for the new scheduling systems will continue on multiple fronts. By growing the project team and assigning dedicated leads for change management, deployment, infrastructure and training, CPHCS will ensure that the deployment of the new scheduling system will be a success.

Objective 1.4. Establish a Standardized Utilization Management System

> *Action 1.4.1. By May 2010, open long-term care unit.*

As of October 30, 2009, the California Medical Facility Outpatient Housing Unit (OHU) Section 6.00 funds were approved by the Department of Finance authorizing the Department to use Inmate Labor to proceed with this project. Section 6.00 of the budget act allows support money to be utilized for construction projects. The scope of this project is to convert a 200 man dormitory into a 72 bed Outpatient Housing Unit. The construction adds exam rooms, nurse's stations, medication and general storage rooms, and an additional staff restroom. These additional OHU beds will be used to reduce the number of aberrant bed days that CDCR is currently encountering. Aberrant bed days are the days an inmate remains in a community hospital, discharged, awaiting placement back into a correctional institution. The cost of one discharged inmate in a community hospital bed is estimated at $4,052 per 24 hour period. This cost includes guarding and administrative fees. The OHU project is estimated to save $27 million per fiscal year.

Action 1.4.2. By October 2010, establish a centralized Utilization Management System.

To maximize the impact of the Utilization Management (UM) department, clinical activities are field coordinated rather than centralized. By directly coordinating with institutional leadership, we are providing a reporting mechanism that drives accountability at the institutional level for oversight of the specialty referral activity, institutional bed occupancy and community hospital utilization, while maintaining enterprise coordination through the regional offices and headquarters.

Current central components of the UM department include:

- Oversight of specialty referral manage ment—implementation was completed in June 2009 and continuous quality improvement activities are ongoing.

- Oversight of institutional bed availability—regular infirmary bed rounds occur in 2/3 of the regions and the Northern Region bed rounds are planned for early 2010.
- High volume community hospital bed management—hospital rounds with attending staff at high census hospitals to monitor appropriate utilization and discharge scheduling are ongoing.
- Telemedicine referral policies and processes—as the capacity of institutions to expand telemedicine services increases, transition of services from off-site to telemedicine will begin.
- Case Management of high cost, high risk patients with institutional staff, beginning with hospital case management.
- Education and outcomes reporting to Headquarters and Regional Leadership.
- Development of guidelines and assessment of new technology.

[14] UM continues to participate in the activities below:

- Claims Third Party Administrator (TPA) Payment System
- Development of a Claims Based Medical Outcomes Reporting Library
- Network Initiatives to Improve Specialist and Hospital Coverage
- Contract Initiatives to Improve Specialty Coverage in key areas and specialties

The Nurse Executive position has been hired, and, under her leadership, interviews for regional UM nursing leads have begun. Supervisory case management should commence in early 2010. This staff will be responsible for the mentoring, monitoring and training of the institutional nursing staff. Institutional bed management, community hospital discharge and case management training are planned. Their goals will be optimal institutional OHU and Correctional Treatment Center (CTC) vacancies, and the oversight of timely care and discharges of the acute community hospitalized patients. The UM nursing teams will be field based, and work in collaboration with the Physician Advisor teams. Once hospital case management is mastered, and patient data sources are developed, individual patient and patient population case management will be introduced.

As CPHCS refines its plans regarding placement of inmates in institutions that are appropriate for their medical and nursing needs, UM departmental activities will include the identification and transfer of sicker, high cost patients to those institutions close to effective specialist networks and quality hospitals with efficient care and locations It has been shown that a small percentage of high acuity patients generate a large proportion of potentially avoidable medical costs (588 high acuity patients generated over $139M in medically related costs, according to claims information from FY 2008/2009). By placing these patients, as resources permit, in institutions with closer proximity to medical resources, it is anticipated that some of the transportation, guarding and transfer costs for care can be mitigated.

[15] Goal 2. Establish a Prison Medical Program Addressing the Full Continuum of Health Care Services

Objective 2.1. Redesign and Standardize Access and Medical Processes for Primary Care

> *Action 2.1.1. By December 2009, complete the redesign of episodic care processes, forms, and staffing models.*

This action has been completed.

A test of the new Episodic Care Processes and forms began in Facility A at Mule Creek State Prison in October 2009. The test was successfully built on the structures and processes established by the Primary Care Model. Redesign of the CDCR 7362 "Health Care Services Request Form" was completed. The draft policy based on the redesign and the test site experience was completed by December 31, 2009.

> *Action 2.1.2. By July 2010, implement the new episodic care system in all institutions.*

Roll-out of the new Episodic Care System to all institutions is anticipated for the first quarter of 2010. It is anticipated that the system will be implemented at all institutions by July 2010.

Objective 2.2. Improve Chronic Care System to Support Proactive, Planned Care

> *Action 2.2.1. Implement an inter-disciplinary team-based Primary Care Model in all institutions by December 2009. Implement a Chronic Disease program within the framework of the Primary Care Model by December 2010.*

This action has been completed.

The Primary Care Model was implemented at all institutions during the previous reporting period. During this reporting period, each institution was evaluated by an on-site compliance evaluation team using a standardized methodology. All of the 33 institutions achieved 100 percent compliance with the implementation of the Primary Care Model.

Objective 2.3. Improve Emergency Response to Reduce Avoidable Morbidity and Mortality

> *Action 2.3.1. Immediately finalize, adopt and communicate an Emergency Medical Response System policy to all institutions.*

This Action has been completed.

> *Action 2.3.2. By July 2009, develop and implement certification standards for all clinical staff and training programs for all clinical and custody staff*

This Action has been completed.

> [16] *Action 2.3.3. By January 2009, inventory, assess and standardize equipment to support emergency medical response.*

This Action has been completed.

Objective 2.4. Improve the Provision of Specialty Care and Hospitalization to Reduce Avoidable Morbidity and Mortality

> *Action 2.4.1. By June 2009, establish standard utilization management and care management processes and policies applicable to referrals to specialty care and hospitals.*

This Action has been completed.

Specialty Referral Management and InterQual Outcomes

Areas of operational focus that continue include:

- Institutional compliance with UM processes and policies;
- Reduction of medically unnecessary referrals so that access to specialty care is optimal;
- Monitoring of backlogs and compliance with processing timelines, especially in specialty areas where network access challenges exist;
- Audits for over utilization and potential under-utilization;
- Ensuring physician and nursing inter-rater consistency in clinical decisions.

Outcomes

Specialty referral outcomes have met the Receiver's goal of 100 Referral for Specialty Services per One Thousand Inmates (RFS/K*) as illustrated in Table 1.

Table 1

RFS total		North	South	Central	Statewide	RFS/K*	
Baseline FY 08/09		[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	25,000
April	2009	4,525	6,674	10,023	21,222	137.19	
May	2009	3,479	5,647	7,482	16,608	104.38	
June	2009	3,578	4,978	8,124	16,680	109.67	
July	2009	4,905	4,245	6,600	15,750	102.89	
August	2009	3,875	3,708	6,477	14,060	92.46	
September	2009	3,811	4,018	6,869	14,698	98.15	
October	2009	3,995	4,131	6,933	15,059	97.85	
November	2009	3,261	3,549	5,629	12,439	81.19	

Ongoing on-site audits continue to be performed by the UM staff to ensure that denials are not "overdone" and that decreasing utilization is medically safe and appropriate.

Challenges and Threats

Personal, direct and continuous UM physician advisor and nursing support continues to be essential to sustain the improvements achieved. As these processes are relatively new to [17] CPHCS, leadership continues to engage staff in change management activities to ensure both continuity and sustainability for improved handling of Specialty Care and Hospitalization.

SBx4 13 has produced some volatility in specialty network coverage, particularly in key surgical specialty areas. Procedures to monitor access and availability are being developed, in cooperation with Regional Leadership teams, and will be a priority so that timely information regarding the need for alternative access strategies can be communicated and managed.

Infirmary / Community Hospital Bed Access

A statewide and institutional census reporting system and daily monitoring of hospital and institutional census bed occupancy began in October 2009.

Regular clinical rounds on patients in institutional infirmary beds and high volume community hospital beds are required and institutional compliance will be monitored.

While improvements in patient transfers and institutional bed vacancies have resulted, significant challenges continue. Hospital aberrant bed days (patients who have no clinical reason to stay in the hospital, but have no suitable, safe destination to return to) remain. Until enough additional beds are available, so that all hospitalized patients can return to safe institutional beds in a timely fashion, optimal hospital utilization outcomes will not be possible and unnecessary hospital days will continue to accrue and add to medical costs.

* * * *

[18] Community hospital lengths of stay reflect both a high acuity patient population and lack of institutional beds that patients can return to. While the situation is not amenable to significant improvement until additional institutional beds are available, the UM team has begun clinical monitoring of patients at 10 of the top high volume hospitals, statewide, so that the hospital census can be managed to the maximum degree possible under the current circumstances. Daily census review and collaborative discharge planning efforts with hospital case management are ongoing.

In addition to the root causes of high community hospital utilization described above, it has been found that other drivers of utilization that can be improved are common. These include: unaligned incentives to discharge promptly among community hospital attending staffs, lack of hospital case management and discharge planning, and some institutional inattention to community hospital patients.

Daily concurrent rounds at high volume hospitals are now conducted by the UM physician advisor staff. Institutional responsibility for tracking their community hospital patients and maintaining telephonic access with their high volume community hospitals and attending staffs will be mandatory. IT links to hospital medical records departments for institutional tracking of patient progress are being developed.

As UM impact on hospital bed utilization increases, benchmarks for hospital bed utilization will be established and monitoring of institutional performance will begin, similar to the process used to manage referrals.

[19] *Case Coordination*

Reports have been developed to identify the top high cost patients, statewide, who generally represent the highest acuity medical patients, at risk for frequent hospitalizations and multiple specialty referrals. The team has implemented processes to identify these patients and, through Regional leadership, share them with institutional clinical staff. The initial goal is to improve continuity of care and access to coordinated specialty care. While it is not known what impact improved clinical case coordination of these patients care could have on costs, it is intuitive that coordinated. Care coordination would mitigate lapses in continuity of treatment, and facilitate better primary care communication with outside specialists. Many of these patients are located in remote areas and would benefit from transfer in the future, as resources expand, to locations with expanded specialty and hospital coverage.

Telemedicine

Standardized referral review processes, using InterQual, have been implemented for all initial telemedicine requests. Working with the telemedicine team, additional analysis to determine which specialty areas would benefit from additional telemedicine access is planned (see Objective 5.5 for more information). It is hoped that a shift from off—site specialty referrals to on-site telemedicine referrals, as telemedicine space/equipment capacity grows, will result in additional cost avoidance for transportation and guarding, and result in improved access to care.

Referrals for Specialty Services

The following are charts that contrast the total referrals for specialty services (RFS) generated vs. the total RFSs run through the InterQual system for the northern, central and southern regions during the September 2009 through October 2009 timeframe (See Tables 4, 5 and 6 below). This program requires all RFS's to be run through the InterQual system. While the majority of RFS's are captured in this report, the following contribute to reporting exceptions: 1) the ratio between total referrals and InterQual data is closely related to system training needs and delayed reporting, captured in the following month; and 2) the difference in volume of RFS referrals is related to a number of factors including patient acuity mix, specialty network practices and requests, provider familiarity with UM processes, provider staff turnover, strength of the institutions primary care model, and the acuity of physician reviewer oversight. (Note that these differences mirror referral practices in the civilian sector.) As UM becomes more engrained into institutional processes and reviewers gain familiarity with the InterQual system, we anticipate minimal differences among the regions.

* * * *

[21] This action item is ongoing. Progress during this reporting period is as follows:

ProdÁgio Contract Processing System

Implementation of an upgrade to an automated contracts process system is scheduled to take place in January 2010. This upgrade will deliver enhanced processing features including auto-filing of contract documents, and an analyst time-tracking feature. This additional functionality will aid in effective contract processing until CDCR's Business Information System (BIS) system is implemented for direct medical contracts (see "CDCR's BIS Integration" below). A number of medical contract staff participated in Train-the-Trainer and User Acceptance Testing of the upgrade features in December 2009.

CDCR's BIS

CPHCS is continuing its participation in work groups and demonstrations organized by the CDCR BIS Team. In addition, CPHCS will begin the process of defining how Medical Contracts will integrate BIS into its business process.

Streamlining Medical Contracting and Aligning Resources to Achieve Performance Goals

To the greatest extent feasible, medical contracts are now entered into as a statewide master, regional, or joint contracts, rather than on an institution-by-institution basis. This contracting methodology significantly streamlined CPHCS' ability to provide greater patient-inmate access [22] to care. From August 17, 2009, through December 9, 2009, 100 new negotiated contracts and 20 amendments to negotiated contracts were executed for hospitals and specialty physician services. In addition, competitive bid efforts initiated in the previous reporting period resulted in 36 competitively bid contracts and 18 amendments to competitively bid contracts for a variety of services.

The Request for Proposal (RFP) to obtain a medical services network from a PPO, as allowed under the new legislation (SBX4 13 which amended Penal Code section 5023.5), was released October 20, 2009. The Bidder's Conference was held on November 12, 2009.

The selection will be announced during the next reporting period.

During the reporting period, CPHCS Medical Contracts initiated or completed the following contract negotiations with ambulance providers: ten in the Northern Region, two in the Central Region, and seven in the Southern Region. A total of 24 ambulance contract negotiations were initiated and 19 ambulance contract negotiations were completed. There were seven invitations to bid advertised and two bid openings during the reporting period.

Medical Contracts continues to work closely with the Receiver's Emergency Medical Services Liaison, county Emergency Medical Services throughout the state, and ambulance associations and providers to enhance customer relations and emergency medical contract processes.

Hospital Rate Negotiations

Since the passage of SBx4 13, staff has successfully negotiated statutory rates (including the exempted administrative days) with 24 hospitals. Thirty nine (39) contracts have been executed with hospitals that have agreed to the new rate structure. Only one long term hospital partner, Community Regional Medical Center in Fresno, has discontinued service due to the lower rates. However, there are a couple of hospitals, including the three University of California (UC) hospitals, which are continuing to see patients without a contract in place at the non-contracted rate of 100 percent of Medicare. While concerns about the rates have been raised by these hospitals, CPHCS will continue to work with the providers to execute service contracts at the statutory rates stipulated in SBx4 13 to ensure a consistent and equitable rate of reimbursements for services rendered by agreement/contract for all providers. See Appendix 3 for the California Hospital Map, a color coded map indicating coverage throughout the State.

> *Action 2.4.3. By November 2009, ensure specialty care and hospital providers' invoices are processed in a timely manner.*

Medical Invoice Processing Days

During this reporting timeframe, the number of invoices processed per day has increased. This has resulted in a decrease in the number of invoices waiting to be processed. With that, we expect to see a decrease in overall days to process in the first quarter of 2010. Due to the transition of a subset of the invoices to the TPA as discussed in the next section, metrics on both areas will be reported in the next Tri-Annual Report to the Court.

[23] *Contract with the Third Party Administrator (TPA)*

The full transition of claims submitted on industry standard fauns (hospital, physician, and ambulance) to the TPA began on October 5, 2009 for dates of service September 1, 2009 forward. The electronic interface between the TPA, BIS and the State Controllers Office is successful and working smoothly. The average days to process for the TPA claims will go live January 7, 2010.

The eligibility interface between the TPA and the Offender Based Information System is expected to go live in early 2010. This will reduce the TPA processing time by several days. Additionally, a Provider Web Portal, that will allow providers to access their explanation of benefits information directly, will be included with this interface. This will help reduce operations workload further by shifting payment inquiry research to providers through this portal.

Two-Year Post Audit

Viant has performed their audit of the two largest laboratory providers and their initial findings will be presented to staff in January 2010. In addition, they continue to contact providers for recovery based upon their findings of duplicates and hospital bill audits. As of December 8, 2009, their recovery effort has netted $368,825 in refunds. Their payment for this effort is 27 percent of that amount. In addition to Viant's recovery efforts, as of December 8, 2009, staff has received approximately $5,647,671 in voluntary provider refunds. These voluntary refunds are in part due to staff identifying duplicates and overpayments as part of their data cleanup and have been contacting providers directly for refunds. In addition, providers are sending duplicates and overpayments back to balance their Accounts Receivable due to their knowledge of the audit.

TPA/Contract Medical Database (CMD) Interface

The TPA to CMD interface workgroup has adopted system requirements and has met regarding initial design and development of that interface. The interface will push down utilization and expenditure data from the TPA into the CMD. This is necessary to be able to accurately report on the effect of the cost containment initiatives as well as prepare for contract medical budget projections. This interface (Phase 1) is expected to roll out by the end of February 2010. The second phase of this project will be to expand the data elements not currently collected by CMD to include clinical line item detail.

[24] Goal 3. Recruit, Train and Retain a Professional Quality Medical Care Workforce

Objective 3.1. Recruit Physicians and Nurses to Fill Ninety Percent of Established Positions

> *Action 3.1.1. By January 2010, fill 90% of nursing positions.*

As of November 30, 2009, which is the most recent reporting period available, approximately 87 percent of the nursing positions have been filled statewide (this percentage is an average of six State nursing classifications). It should be noted that while there is a decrease in the percentage of filled nursing positions since the 12th Tri-Annual report, this is due to the fact that an additional 58.8 nursing positions were authorized in the 2009/2010 budget and are reflected in the November Human Resources Recruitment and Retention Report, adjusting the percent comparison.

More specifically, the goal of filling 90 percent of the Registered Nurse (RN) positions has been achieved at 18 institutions (54.5 percent of all prisons). Eleven institutions (33.3 percent) have filled 80 to 89 percent of their RN positions. The goal of filling 90 percent of the Licensed Vocational Nurse (LVN) positions has been achieved at 15 institutions (45.4 percent) and 14 institutions (42.4 percent) have filled 80 to 89 percent of their LVN positions. Twenty-two institutions (66.6 percent) have achieved the goal of filling 90 percent of their Psych Tech positions. Four institutions (12.1 percent) have filled 80 to 89 percent of their Psych Tech positions.

The following hiring-related initiatives continued during the reporting period: (1) focused recruitment continues statewide for LVNs and Psych Techs; (2)

presentations at nursing schools statewide; and (3) online job postings. Nursing vacancies are posted on multiple websites including: www.ChangingPrisonHealthCare.org, www.Indeed.com, www.VetJobs.com, and several more. Each job posting often represents multiple vacancies at an institution. Additionally, staff recently negotiated a contract with www.Monster.com for job postings on that site. Staff has been assigned to monitor vacancy reports and job postings to ensure that vacancies are accurately represented in all job postings.

At the following institutions: Richard J. Donovan Correctional Facility, California Correctional Institution, Wasco State Prison, Pleasant Valley State Prison, and California State Prison, San Quentin, nursing has experienced moderate turnover (11 to 19 percent) and moderate vacancies (11 to 30 percent vacant) as displayed in the Nursing Filled Percentage and Turnover Rate map in the November Human Resources Recruitment and Retention Report. A moderate vacancy rate (11 to 30 percent) exists at Chuckawalla Valley State Prison, California Men's Colony, Kern Valley State Prison, North Kern State Prison, Correctional Training Facility, California State Prison Corcoran, Substance Abuse Treatment Facility, Valley State Prison for Women, Sierra Conservation Center, Deuel Vocational Institution, California Medical Facility, and Pelican Bay State Prison. For additional details related to vacancies and retention, refer to the Human Resources Recruitment and Retention Reports for September, October, and November 2009. [25] These reports are included as Appendix 4. Included at the end of each Human Resources Recruitment and Retention Report are maps which summarize the following information by institution: (1) Physicians Filled Percentage and

Turnover Rate, (2) Physicians Filled Percentage, (3) Physician Turnover Rate, (4) Nursing Filled Percentage and Turnover Rate, (5) Nursing Filled Percentage, and (6) Nursing Turnover Rate.

Action 3.1.2. By January 2010, fill 90% of physician positions.

Physician recruitment efforts continued to focus on "hard-to-fill" institutions during the reporting period. Most urban institutions have now hired their full complement of primary care providers. As of November 30, 2009, approximately 87 percent of physician positions are filled (this percentage is an average of all three State physician classifications). More specifically, 94 percent of the Chief Medical Officer (CMO)/medical executive positions are filled; 80 percent of the Chief Physician and Surgeon (P&S) positions are filled; and 87 percent of the P&S positions are filled. Eighteen institutions (54.5 percent) have achieved the goal of filling 90 percent of their P&S positions; 15 of these institutions have filled at least 95 percent of their P&S positions. Six institutions (18.2 percent) have filled 80 - 89 percent of their P&S positions. It should be noted that while there is a decrease in the percentage of filled P&S positions since the 12th Tri-Annual report, this is due to the fact that an additional 12.5 P&S positions were authorized in the 2009/2010 budget and are reflected in the November Human Resources Recruitment and Retention Report. While the Central Valley region, along with High Desert State Prison, Pelican Bay State Prison, and Chuckawalla Valley State Prison continue to be "hard-to-fill," P&S hires have been made at the Substance Abuse Treatment Facility, High Desert State Prison, Chuckawalla Valley State Prison, California Correctional Institution, and California State Prison, Corcoran. Of special note, California State Prison, Corcoran has now filled 96 percent of their P&S positions.

Job postings continue to be placed online at the Department's recruitment website, other online job boards, and recruiters continue to visit residency programs and other recruitment events. Additionally, staff has drafted a RFP for physician and executive search services. These services would be used to assist with staffing the "hard-to-fill" institutions.

A high vacancy rate (50 to 55 percent) and turnover rate (33 to 40 percent) exist at Pelican Bay State Prison, Salinas Valley State Prison, Chuckawalla Valley State Prison, and Avenal State Prison, as displayed in the Physicians Filled Percentage and Turnover Rate map in the November Human Resources Recruitment and Retention Report. A high turnover rate (16 to 33 percent) also exists at High Desert State Prison, Central California Women's Facility, California Men's Colony, Ironwood State Prison, and California State Prison, Los Angeles County. For additional details related to vacancies and retention, refer to the Human Resources Recruitment and Retention Reports for September, October, and November 2009. These reports are included as Appendix 4. Included at the end of each Human Resources Recruitment and Retention Report are maps which summarize the following information by institution: (1) Physicians Filled Percentage and Turnover Rate, (2) Physicians Filled Percentage, (3) Physician Turnover Rate, (4) Nursing Filled Percentage and Turnover Rate, (5) Nursing Filled Percentage, and (6) Nursing Turnover Rate.

[26] *Objective 3.2.* Establish Clinical Leadership and Management Structure

Action 3.2.1. By January 2010, establish and staff new executive leadership positions.

Action 3.2.2. By March 2010, establish and staff regional leadership structure.

The Chief Executive Officer (CEO) examination was launched on December 24, 2008. Since the exam commenced, 339 CEO eligible applicants have been added to the certification list and four hires have been completed. Due to the severity of the State's fiscal crisis, the Department of Personnel Administration (DPA) has approved a reduction in the salary structure for the CEOs to more closely approximate that of the institutional wardens; however, a differential for hard to recruit or high cost areas and the performance incentive features were retained as additional means of compensation. The pool of CEO candidates is very competitive and interest remains high.

Strategically, CEO positions will be filled statewide and these individuals will then play a pivotal role in establishing the remainder of the clinical leadership structure. The interview and hiring process for all CEO positions is underway, and several hires are pending.

The Receiver's Nurse Executive examination was launched in September 2008. Since the examination commenced, 247 Nurse Executive eligible applicants have been added to the certification list and nine Nurse Executives have been hired.

The Receiver's Medical Executive examination was launched in December 2008. Since the examination commenced, 83 Medical Executive eligible applicants have been added to the certification list and nine Medical Executives have been hired.

On September 3, 2008, the State Personnel Board (SPB) approved a fourth Receiver's Career Executive Assignment (RCEA) classification, entitled Clinical Executive that is intended for the chief and assistant chief responsible for all licensed allied health disciplines. The civil service examination for this classification was released on November 4, 2009, and DPA has issued the pay letter. An organizational structure has been approved by CPHCS executive management and recruitment is in progress for five of the listed specialties: rehabilitation, laboratory, radiology, respiratory, and dietary services.

A fifth RCEA, Receiver's Health Care Administrator, that will be responsible for all medical administration subject areas that are not clinical in nature, is scheduled for approval by SPB on December 17, 2009. Prior to filling jobs covered by this classification, a salary study must be conducted and salaries approved by DPA.

In an October 2009 hearing, CPHCS staff reported to the five member SPB on the status of the delegation for the establishment of CEA positions. Staff noted that the delegation did not reduce the time or paperwork needed to establish CEAs. Given that the number of new CEA requests has diminished significantly, CPHCS staff requested that the delegation agreement be discontinued. Additionally, CPHCS currently has an arrangement with DPA whereby CPHCS [27] funds a position that is dedicated solely to CPHCS workload. This arrangement will be assessed on a continual basis to determine the ongoing need.

Objective 3.3. Establish Professional Training Programs for Clinicians

Action 3.3.1. By January 2010, establish statewide organizational orientation for all new health care hires.

Status of New Employee Orientation and Training

Health Care New Employee Orientation (HCNEO) was placed on hold regionally with the exception of Headquarters during February 2009. During this time CPHCS employees in the field (institution and regional) were directed to attend the local institution IST NEO until the statewide re-implementation could be coordinated. A recent audit, however, identified a large number of healthcare new hires who had not attended any orientation. The primary issue of inconsistency with the IST NEO from one institution to the next was instrumental in the development and roll-out of the HCNEO curriculum. The program will begin in January 2010 at the institution-level for all healthcare staff to include Medical, Dental, Mental Health, and support staff located in the field; and the curriculum is consistent statewide. Headquarters staff continues to receive training on a monthly basis in the greater Sacramento area. In addition, portions of the training continue for out-of-state patient-inmate providers via a computer-based training program. Success of this overall program relies heavily upon collaboration with CDCR and CPHCS staff locally and at Headquarters. The next tri-annual report will provide an analysis of how the training is being implemented and received.

Status of the Proctoring / Mentoring Program

Implementation of a proctoring/mentoring program was put on hold at the end of February 2009. The plan for proctoring and mentoring is being revised so that fewer resources are required to implement and maintain.

> *Action 3.3.2. By January 2009, win accreditation for CDCR as a CONTINUING MEDICAL EDUCATION provider recognized by the Institute of Medical Quality and the Accreditation Council for Continuing Medical Education.*

This action has been completed.

During this reporting period, the Continuing Medical Education (CME) courses (listed below) were conducted for a total of 40 sessions at various institutions throughout the department. These sessions were provided to 195 MDs and 247 non-MDs for a total of 3,354 hours of instruction.

- 2009 Program Guide Training (Mental Health)
- Advance Directives

At this time, the following eight CME courses are in various stages of development, review, approval and/or implementation.

- CPHCS Pain Management Guidelines
- Low Back Pain/Acute Joint Pain
- [28] Do Not Resuscitate/POLST
- Diabetes
- Mental Health Assessment and Referral Project Training
- HIV Medicine for the Primary Care Provider
- CPHCS HIV Update 2009-2010
- Introduction to the MHSDS for Medical Staff

As a continuous effort to improve inmate-patient healthcare, the Office of Professional Education and the CME Committee continue to work with other programs to assess the educational needs of CPHCS/CDCR clinicians. To fully embrace the multi-disciplines within CPHCS/CDCR, in addition to physicians and surgeons, the CME Committee includes representatives from mental health, dental and nursing.

[29] Goal 4. Implement Quality Improvement Programs

Objective 4.1. Establish Clinical Quality Measurement and Evaluation Program

> *Action 4.1.1. By July 2011, establish sustainable quality measurement, evaluation and patient safety programs.*

During this reporting period, RAND completed their in-depth analysis of correctional and free world health system quality measures. In October 2009, the principal investigators presented their findings to CPHCS executives. The final 79 performance measures, selected by a panel of national experts, were a mix of process and outcome measures that were virtually all based on evidence from research and/or accepted national standards (e.g., HEDIS measures). The Measurement and Evaluation Unit will focus analysis on outcome performance measures because of their immediate impact upon the health of our patients and the resources needed to care for them. The Unit will work with clinical leadership to embed the outcome measures into clinical guidelines and other decision support tools; professional development and training programs; and patient self-management tools. The intended result will be reduced patient morbidity and mortality and reduced resource burdens statewide.

The Measurement and Evaluation Unit also continued the development of a data collection and reporting infrastructure to support their analysis of outcome indicators. This included support for the Clinical Data Repository (CDR) and the development of accurate medical chart review capacity and methodologies. With this infrastructure in place, the primary care teams and management will be able to be more efficiently inform patient care. Unit staff continued their support of clinical staff in the implementation and evaluation of several system-wide initiatives. One example was the full implementation of the primary care model to all 33 institutions. Complementing these initiatives was a request by executive leadership for the Unit staff to lead a high priority data validation study on a number of "access to healthcare" measures. The findings from this study will be used to improve patient health oversight and prompt the refinement of the department's data collection procedures.

> *Action 4.1.2. By July 2009, work with the Office of Inspector General to establish an audit program focused on compliance with Plata requirements.*

This Action is divided into two phases. Phase I included program development and pilot implementation, and Phase II included statewide roll-out and implementation. Phase I is complete and Phase II is well underway.

As of the close of this reporting period, the OIG has completed five additional inspections at High Desert State Prison, California Correctional Center, North Kern State Prison, Kern Valley State Prison, and Folsom State Prison, respectively. The first year inspection results will establish a baseline that will provide an objective, clinically appropriate method to evaluate and monitor the progress of medical care delivery to patient-inmates within each institution. Once final inspection reports are issued, the inspection results for each institution will be available to be viewed on the OIG website (http://www.oig.ca.gov).

[30] The OIG activated its second team in December 2009. Inspections will proceed at a rate of one inspection per team each month. With two inspections per month, they are on target to complete medical inspections of all the institutions by fiscal year end, thus completing Phase II.

During this reporting period, the Program Compliance Section (PCS) completed six 180-day follow-up reviews at California Medical Facility, RJD Donovan Correctional Facility, Centinela State Prison, Deuel Vocational Institution, California Correctional Women's Facility, and California Men's Colony. The 180-day follow-up reviews focused on those areas where the institution stated corrective action of the OIG findings had been fully implemented. The PCS also completed its first 360-day follow-up review at California State Prison, Sacramento. The 360-day follow-up review focused on those areas not fully implemented and areas found to be non-compliant during the 180-day review. These follow-up reviews will provide the necessary monitoring to ensure progress continues towards a system of adequate medical delivery for patient-inmates.

Objective 4.2. Establish a Quality Improvement Program

Part of the Quality Improvement Program has been the implementation of a Credentialing and Privileging Program. The Program contains both a formal committee and a support unit to process all initial and reappointment medical staff applications, while ensuring all providers have adequate and current credentials.

Credentials Committee

During the reporting period of September 1, 2009, through November 30, 2009, the Credentials Committee reviewed 44 individual provider cases. Of the 44 cases reviewed, 16 were approved, 9 denied, 17 reviews resulted in either a Credential Alert or a Credential Bar, and 2 are pending a final determination.

Credential Applications

Within this reporting period, the Credentialing and Privileging Unit staff processed 508 credential applications. Of these, 373 were approved, 10 denied, 30 were closed due to being incomplete, and 95 files are pending completion.

Two-Year Reappointment Compliance

During the reporting period of September 1, 2009, through November 30, 2009, 220 civil service and 15 registry providers were notified to complete their two-year reappointment. Of these 235, 73 have been completed while 162 remain pending completion. Of the 162 pending reappointments, 57 are not due until January 2010, 9 are currently being processed by the Unit staff, leaving the remaining balance of 96 pending due to provider compliance.

The previous reporting period reflected that 230 reappointments were pending completion; however, further internal auditing shows a total of 280 reappointments that were pending completion. Of the 280, 82 have been completed leaving 198 still pending. Of those 198, 11 are pending completion by the Unit staff and 187 are pending provider compliance.

[31] To date, 360 reappointments are pending completion with 78 percent due to provider non-compliance. The two-year reappointment credentialing requirement is a condition to continue providing clinical services to the Department. Due to the non-compliance of provider completion, the Unit management has addressed the need for regional and institutional management to administratively direct the providers to comply. Beginning January 2010, the Credentialing and Privileging Unit staff will provide monthly compliance reports to the Executive Leaders to assist in achieving statewide compliance.

Tracking of License and Board Certification Expirations

The reporting period for Licensure Expirations is September 1, 2009 through November 30, 2009. The Licensure Expiration process has yet to be completed for the month of December. During this reporting period 79 Notice of Licensure Expirations were processed and renewed. To date all monitored provider's license are current through November 30, 2009. There were no Board Certification Expirations during this reporting period. The tracking of expiring license and certifications is an on-going process with notifications being sent out regularly to ensure that the practitioners have active, current credentials and/or licenses at all times.

Backlog and Delays in Processing

The number of pending files is once again at an all time high. The furlough program continues to impact turn around times for completing provider files and activities. In an effort to decrease the turnaround timeframe for final committee decisions, the Credentials Committee resumed weekly meetings in November 2009.

> *Action 4.2.1. (merged Action 4.2.1 and 4.2.3): By January 2010, train and deploy existing staff—who work directly with institutional leadership—to serve as quality advisors and develop model quality improvement programs at selected institutions; identify clinical champions at the institutional level to implement continuous quality improvement locally; and develop a team to implement a statewide/systems-focused quality monitoring/measurement and improvement system under the guidance of an interdisciplinary Quality Management Committee.*

During this reporting period, the Quality Improvement Section was reorganized and the objective actions have been revised. The new plan for the Quality Management Improvement (QMI) program will include a small headquarters team of clinicians supported by analytical staff dedicated full-time to state-level oversight, monitoring and training functions. They will coordinate and evaluate statewide and systems-focused quality improvement activities under the guidance of an interdisciplinary Quality Management Committee (QMC).

Regional QMI leadership will be coordinated by existing nursing and physician staff who travel to the institutions on a regular basis to monitor and address a variety of issues and who maintain ongoing relationships with institutional healthcare leaders. These staff will work closely with quality improvement teams and clinical champions at each institution. To achieve this action, state-level, regional and institutional staff from throughout CPHCS will be trained by January 2010 with the goal of full deployment and statewide implementation by June 2010.

[32] In addition, during this reporting period a joint interdisciplinary QMC (encompassing medical, mental health and dental issues) has begun to meet on a regular basis. The QMC has met a total of five times to provide direction to the QMI work plan, with an initial focus on measurement of healthcare quality processes and outcomes. The interdisciplinary Clinical Guidelines Committee, which reports to the QMC, continues to meet and has made adjustments to and adopted national guidelines on diabetes care. The identified best practices and approved guidelines will be used as a basis for development of training and medical education programs and tools to support quality improvement at the institutions.

> *Action 4.2.2. By September 2009, establish a Policy Unit responsible for overseeing review, revision, posting and distribution of current policies and procedures.*

This Action has been completed.

During this reporting period, the Policy Unit coordinated the development and statewide distribution of four new policies. Policy Unit staff also finalized 13 related medical forms, which institutions may now order through CDCR. A total of 11 policies were submitted to the Policy Unit during the period. One entire volume of the Inmate Medical Services Policies and Procedures was updated by the end of the reporting period.

Policy Unit staff identified a test institution site for statewide implementation of a policy tracking system and is coordinating implementation with Health

Care Information Technology staff and the Project Management Office.

Action 4.2.3. By January 2010, implement process improvement programs at all institutions involving trained clinical champions and supported by regional and statewide quality advisors.

This Action has been combined with Action 4.2.1.

Objective 4.3. Establish Medical Peer Review and Discipline Process to Ensure Quality of Care

Action 4.3.1. By July 2008, working with the State Personnel Board and other departments that provide direct medical services, establish an effective Peer Review and Discipline Process to improve the quality of care.

This Action has been completed.

The Professional Practice Executive Committee (PPEC) and Peer Review Subcommittee met 13 times during the reporting period and have reviewed a total of 83 civil service referrals. The Peer Review Subcommittee closed 26 referrals following review or the successful results of training and/or monitoring plans, of which 13 new plans were implemented. The Governing Body approved six case closures of providers whose clinical practice was deemed to meet an appropriate standard of care following a peer review investigation.

[33] In this reporting period, the PPEC summarily suspended the privileges of two providers, while three providers separated from State service following a referral. The Governing Body also issued Notices of Final Proposed Action under the new policy to revoke privileges and employment of one physician. Graphical displays of PPEC outcomes for

the period September 2009 through December 2009 are presented in the Tables 7 and 8.

* * * *

[34] While the PPEC's primary charge is providing for patient safety, PPEC is also charged with supporting physician practice improvement. With an improving physician and mid-level workforce, the PPEC can increasingly focus efforts on remediation and practice improvement while still providing for increased patient safety. During this reporting period, the number of referrals and summary actions has decreased while case closures, training, and remedial activities have increased.

In a continued effort to ensure physicians are afforded their due process rights in a timely manner, CPHCS has taken affirmative steps to implement the entire disciplinary process including formal hearings. During this reporting period, there were no formal appeal hearings before a Judicial Review Committee. In the next reporting period, CPHCS will work collaboratively with SPB to transition the appeal hearing process from hearings at the Office of Administrative Hearings to the SPB.

In a healthcare organization, the Governing Body is the highest policy making body for the provision of healthcare. Consistent with community standards and healthcare organization, the Governing Body is responsible for the administration, direction, monitoring, and quality of healthcare services provided to inmate-patients within CPHCS and Division of Correctional Health Care Services (DCHCS) adult institutions. The Governing Body takes final action on recommendations from the PPEC regarding practitioners.

During this reporting period, the Governing Bodies for CPHCS and DCHCS were combined into one Governing Body. This merging brought together the medical Governing Body (responsible for the practice of physicians, nurse practitioners and physician assistants) and the mental health and dental Governing Body (responsible for the practice of psychiatrists, psychologists, licensed clinical social workers and dentists). The newly reconstituted Governing Body has met monthly since October to act on the recommendations of the PPEC.

Objective 4.4. Establish Medical Oversight Unit to Control and Monitor Medical Employee Investigations

> *Action 4.4.1. By January 2009, fully staff and complete the implementation of a Medical Oversight Unit to control and monitor medical employee investigations.*

[35] This action has been completed.

The Medical Oversight Program (MOP) has utilized an alternative operational approach that meets the key program objectives in an efficient and cost effective manner. The MOP has realigned clinical resources regionally, utilizing both CPHCS headquarters and regional clinicians as MOP team members in order to maximize the clinical resources. This approach was implemented to utilize physicians and nurses as subject matter experts in medical investigations while also utilizing their clinical expertise in a variety of initiatives for CPHCS.

During this reporting period, MOP has developed the first draft of policies that will govern the program operations. The policies will be reviewed by key stakeholders from CPHCS and CDCR for input prior to finalizing the draft during the next reporting period.

CPHCS clinicians and the Office of Internal Affairs are working collaboratively to develop a process for the MOP Chief Medical Officer (CMO) and MOP Chief Nurse to pre-screen "Confidential Request for Internal Affairs Investigation/Notification of Direct Adverse Action." The aim of this endeavor is to ensure medical experts are involved in the review processes at the earliest stage necessary to expedite medical investigations.

MOP activations continue to review the most egregious of sentinel events. During this reporting period, the MOP was activated for eight cases. Four of these cases were submitted by institutional healthcare managers and four were called by the MOP CMO. The Medical Intake Panel convened and opened four cases for investigation, rejected nine cases for investigation, and five cases are pending further review. With respect to the disposition of cases reviewed by the Panel, four "Direct Actions" were referred back to the hiring authority, eight subjects were referred to Nursing Practice Review and one subject was referred to the PPEC.

Graphs of MOP outcomes for September—December 2009 are in Tables 9 and 10.

* * * *

[37] *Objective 4.5.* Establish a Health Care Appeals Process, Correspondence Control and Habeas Corpus Petitions Initiative

> *Action 4.5.1. By July 2008, centralize management over all healthcare patient-inmate appeals, correspondence and habeas corpus petitions.*

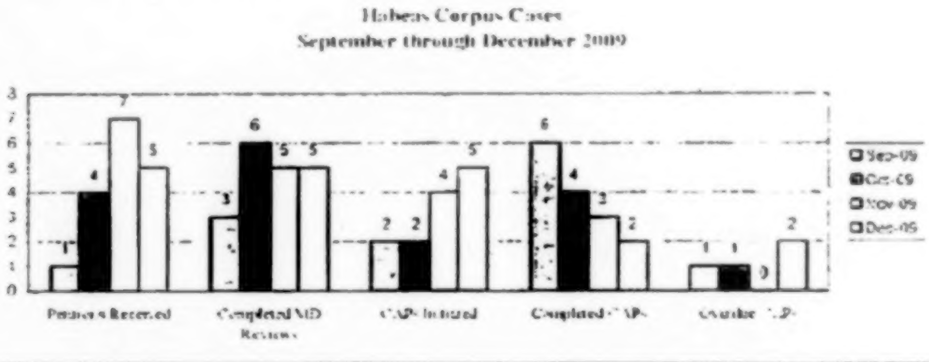
This Action has been completed.

Habeas Corpus Petitions

The volume of Habeas Corpus petitions received remains inconsistent from month to month (e.g. in March 2009, eleven were received and in September 2009, one was received). However, an average of six petitions was received each month since late 2008. During this reporting period, an average of four habeas corpus petitions were received; an average of three Corrective Action Plan (CAP)s were initiated; an average of four CAPs were completed; and an average of one CAP was overdue.

Table 11 displays the habeas corpus petitions for September through December 2009.

Table 11



Habeas Corpus Cases
September through December 2009

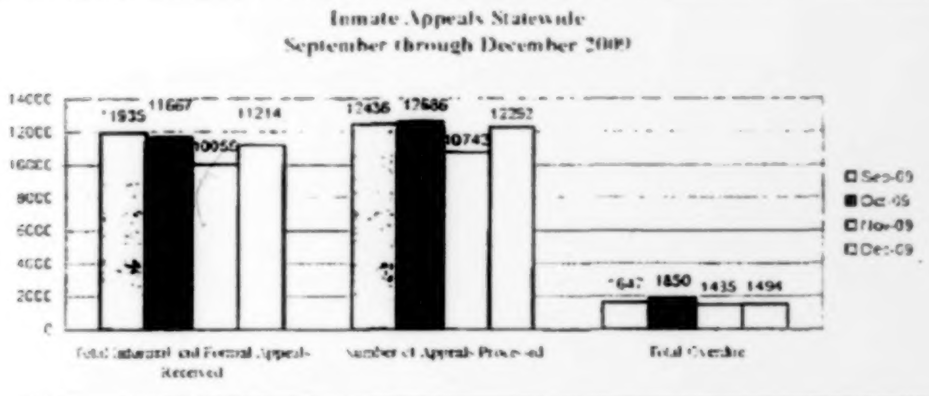
Institutional Health Care Appeals

During this reporting period, the monthly average of healthcare appeals received at institution healthcare appeals offices decreased from 12,369 during the prior reporting period to 11,220. The monthly average of all healthcare appeals processed at institutions decreased from 13,183 during the prior reporting period to 11,955. However, the monthly average of overdue appeals statewide increased from 1,467 during the last reporting period to 1,644.

Table 12 displays data related to Health Care Appeals Statewide for September through December 2009.

[38]

Table 12



Office of Third Level Appeals-Health Care

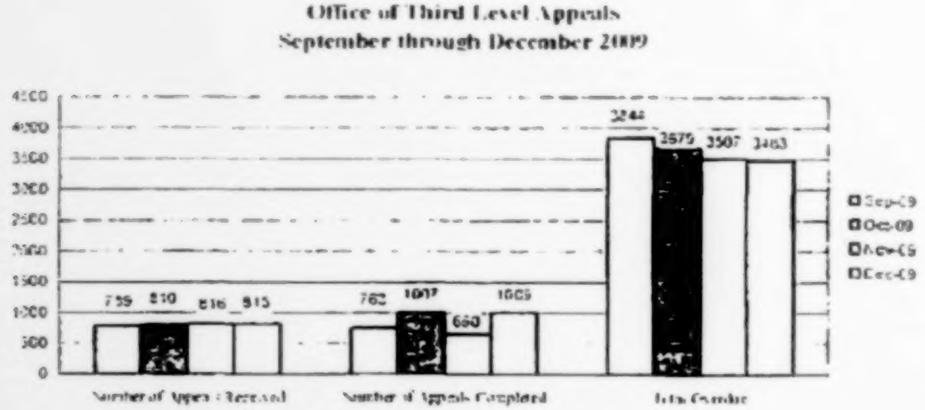
On August 1, 2008, the Office of Third Level Appeals (OTLA) began receiving all third level appeals regarding healthcare issues that were previously processed by CDCR. Due to the higher than anticipated volume and a necessary clinical review, there continues to be a significant and growing number of overdue appeals. In an effort to address this, a re-engineering analysis was recently completed to streamline the OTLA processes. Additionally, some staff have been redirected from other departments within CPHCS and overtime is approved to assist in alleviating the backlog of overdue appeals. A variety of significant OTLA work process improvements have been initiated since July 1, 2009, to continually increase the number of appeals closures with a goal to eliminate the overdue appeals by April 1, 2010. These efforts have significantly increased the number of appeals closure as evidenced below:

8/1/08-6/30/09 (11 months) of 3,765
7/1/09-11/30/09 (5 months) of 3,741

Further, a new plan of action to process all of the overdue appeals will be initiated on January 4, 2009. All of the overdue appeals will be screened and triaged by management and clinical staff to determine if the lower level appeal response is complete and appropriate, and if so, the lower level responses will be adopted. However, if the lower level response is incomplete or inappropriate, staff will complete an abbreviated medical records review and clinical summary prior to completion of the response. Meanwhile, all new appeals will be processed to prevent any additional overdue appeals which will provide data to determine if the current staffing resources are sufficient to keep up with the incoming workload. Both action plans to address the backlogged appeals and new incoming appeals will involve a management and clinical "triage" review to identify administrative and critical/chronic care healthcare appeals.

[39] Table 13 displays data related to OTLA for September through December 2009.

Table 13



Action 4.5.2. By August 2008, a task force of stakeholders will have concluded a system-wide

analysis of the statewide appeals process and will recommend improvements to the Receiver.

This Action has been completed.

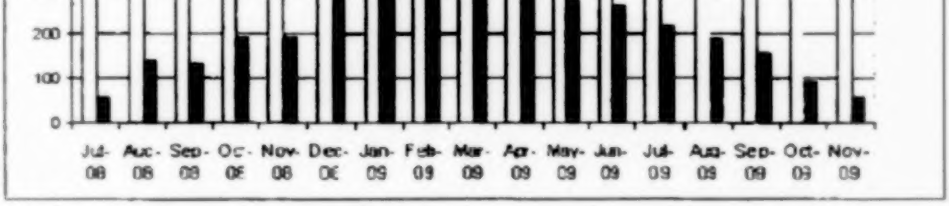
Controlled Correspondence and Litigation Support Unit (CCLSU)

Additional staffing for a new Controlled Correspondence team to address the increased workload has been added. Overdue responses spiked in January 2009 to a high of 430, but with the increased staff and a limited amount of overtime, overdue responses have trended downward for the past seven consecutive months to 61 overdue cases by the end of November 2009. In addition, policies and procedures were reviewed and revised to streamline CCLSU processes. At the current rate of progress it is anticipated CCLSU will eliminate their backlog by the next reporting period. The CCLSU Executive Summary Reports for September-November 2009 are attached as Appendix 5.

See Table 14 regarding the tracking of CCLSU incoming inquiries and overdue responses.

[40]

Table 14



Objective 4.6. Establish Out-of-State, Community Correctional Facilities (COCF) and Re-entry Facility Oversight Program

> *Action 4.6.1. By July 2008, establish administrative unit responsible for oversight of medical care given to patient-inmates housed in out-of-state, community correctional or re-entry facilities.*

This Action has been completed.

During this reporting period, CPHCS' Field Support Division (FSD) staff continues to work collaboratively with the Corrections Corporation of America (CCA) on finalizing policies and implementing monitoring tools related to the systemic issues identified in the July 2008 Remedial Plan, which came as a result of the May 2008 visit to Tallahatchie County Correctional Facility (TCCF) in Mississippi. While the initial implementation of the approved policies and monitoring reports were to be implemented at TCCF, CCA began implementing them at all five facilities currently housing California patient-inmates. Therefore, discussions related to rolling out the Remedial Plan to the remaining facilities are no longer required.

During this reporting period, the following policies were approved for implementation by CCA, CCA 13-58, Medical Records; CCA 13-70, Pharmaceuticals; CCA 9-18, Transportation Procedures; CCA 13-86, Transfer/Release Screening & Follow-up; CCA 13-34, Emergency Medical Response; CCA 13-37, First-Aid/Spill Kits; and CCA 13-74, Privacy of Protected Health Information.

[41] As CPHCS clinical leadership provides input into the pending policies, there has been a need for additional revisions and continued discussions with CCA staff to resolve the outstanding issues so that

we can finalize the remaining policies. The pending policies are CCA 13-06, Chronic Care & Disease Management; CCA 13-47, Infection Control; CCA 13-56, Credentialing, Privileging, & Licensure, and CCA 13-52, Continuous Quality Improvement, which includes policies related to peer review, mortality and morbidities, sentinel events, medical incidents and medical investigation.

Current Activities

The following provides an overview of the current activities FSD staff is involved in related to ensuring CCA compliance with the Remedial Plan developed in July 2008.

1. *CPHCS Clinical Performance Appraisals of CCA Primary Care Providers*

   In August 2008, CPHCS clinical staff began completing Clinical Performance Appraisals (CPAs) of all CCA Primary Care Providers (PCPs) providing care to California patient-inmates. The reviews are to ensure that appropriate care is being provided by the CCA staff providing medical care to our patient-inmate population. CCA has also begun the process of generating CPAs on their providers. FSD staff is working with CCA and CPCHS clinical leadership to finalize the CCA policy related to this requirement. It is anticipated that the policy will be finalized during the next reporting period. FSD staff is in the process of developing a report to track the status and outcome of this process. It is anticipated that the information will be available during the next reporting period.

2. *Weekly Physicians Collaborative Update on COCF Patient-Inmates*

   In November 2008, FSD staff initiated a weekly conference call with all CCA Physicians providing care to the California patient-inmate population, including CCA Regional Medical Directors. The purpose of these calls is to review patient-inmates with significant changes in their medical condition resulting in complex, serious and/or unstable conditions to ensure appropriate care is being provided and to determine whether or not the change in their medical condition is so significant that the patient-inmate is no longer eligible to be housed out-of-state. These calls continue to occur on a weekly basis. FSD staff is in the process of developing a report which will provide an overview of the outcomes of these calls. It is anticipated that the information will be available during the next reporting period.

3. *CPHCS Review of Credentialing Information of CCA PCP Candidates*

   In November 2008, CCA began forwarding CPHCS clinical staff copies of all required credentialing material for potential candidates for hire by CCA. Implementation of this process ensures that CCA is hiring PCPs who have the appropriate credentials based on CPHCS requirements to provide care to the California patient-inmate population. FSD staff is working with CCA and CPCHS clinical leadership to finalize the CCA policy related to this requirement. It is anticipated that the policy will be finalized during the next reporting period.

[42] 4. *Post Audits of Patient-Inmates Transferred Out-of-State*

To ensure that the appropriate patient-inmates are transferred out-of-state, Registered Nursing staff assigned to FSD began the process of conducting post audits of the Unit Health Record (UHR) for all patient-inmates transferred out-of-state. The post audit consists of reviewing the patient-inmate's UHR and the screening documents completed by field nursing staff reflecting COCF eligibility.

In instances where it is found that a patient-inmate has been inappropriately transferred out-of-state, a list containing pertinent information regarding the discrepancy is forwarded to the CMO of FSD for review and determination regarding the action to be taken (either the patient-inmate is to be returned to California or he remains at the out-of-state facility). To date, no patient-inmates have been returned as a result of this review.

5. *Establishment of Monitoring Reports*

In April 2009, staff assigned to FSD developed and implemented seven Monitoring Reports that ensure compliance with Plata policy requirements for specific systemic issues that were identified during the visit to TCCF in May 2008. The initial reports were manual and generated a significant workload increase for both CCA and FSD staff. In October 2009, FSD staff, with the assistance of Information Technology staff, began the process of automating these reports and we anticipate having executive management reports for CPHCS and CCA management by January 2010.

The reports are required to be submitted on a daily, weekly or monthly basis and are as follows:

Daily Reports (Next Day)

1. Transportation Monitoring Requirements
2. Watch List Monitoring Requirements

Weekly Reports (Due Every Tuesday)

1. Intake Screening Monitoring Requirements
2. Specialty Care Referrals Monitoring Requirements
3. Hospital Stay and Emergency Department Visits Monitoring Requirements

Monthly Reports (Due the 5th of each month)

1. Sick Call Monitoring Requirements
2. Chronic Care Monitoring Requirements

Upon receipt of these reports, Nursing Consultants within FSD review the reports for their assigned facility to ensure compliance. When discrepancies are noted, they take the appropriate steps to ensure it is clarified and/or resolved to ensure compliance with policy requirements.

[43] 6. *COCF Reception Center Transfer and Screening Process*

While it was anticipated that CPCHS and CDCR would roll-out the COCF Reception Center screening and transfer process at the remaining Reception Centers, this did not occur during this reporting period. With the scheduled implementation of the new medical classification system at the Reception Centers in January 2010, there is no longer a need to report on this issue.

7. *Clinical Staffing Levels at CCA Facilities*

   FSD and CCA staff developed a matrix to assist CPHCS clinical leadership with identifying the specific number of clinical and nursing staff providing care to the California patient-inmate population at each of the five CCA facilities. This information has been submitted to CPHCS clinical leadership for their review, modification, and/or approval of the staffing levels identified. It is anticipated that this issue will be resolved during the next reporting period.

8. *Compliance Audits Beginning January 2010*

   FSD has established an audit schedule for 2010 and 2011. Two on-site visits will be conducted of each facility by June 30, 2010. Effective July 2010, an on-site visit will be conducted at each facility a minimum of three times per year. Any significant issues that impact this schedule will be documented in future reports.

   The audits will consist of three components:

   A. Review of the roll-up of the Monthly Monitoring Reports for the three month period prior to the on-site audit.

   B. Electronic Medical Record Review, which is required to be completed at least two weeks prior to the on-site audit.

   C. On-Site Facility Audit.

Information obtained from the audit will be presented in a final report, which will be distributed to CPHCS, CDCR and CCA executive management staff. CAPS will be required to address any areas of deficiency.

Community Correctional Facilities

During the last reporting period, an update was provided regarding the seven CCF contracts that would be expiring by June 30, 2011. However, at this time, funding has not been identified to support the contract renewal process. Additionally, due to population concerns, CDCR has made a decision to move forward with closing three of the CCFs that are expiring on June 30, 2010. A 60 day notice has been served, with a closure date of December 25, 2009 (close of business).

Also during this reporting period, FSD staff conducted site audits at four CCFs. The remaining CCFs are tentatively schedule to be reviewed between January-March 2010. As reports are finalized, FSD staff will work with the facilities and CDCR to ensure Corrective Action Plans are developed to bring the impacted facilities into compliance.

[44] Goal 5. Establish Medical Support/Allied Health Infrastructure

Objective 5.1. Establish a Comprehensive, Safe and Efficient Pharmacy Program

During this reporting period, implementation of the pharmacy services Road Map to Excellence continued to move forward and show progress. The Road Map gives priority to achieving improved patient safety and health outcomes, developing an evidence-based pharmacy practice and increasing cost-efficiency. Progress during this reporting period is detailed below.

Action 5.1.1. Continue developing the drug formulary for the most commonly prescribed medications.

The CDCR Pharmacy and Therapeutics (P&T) Committee continued its monthly meetings to review utilization trends, address formulary issues, and review and approve pharmacy policies and procedures. During these meetings, the members of the P&T Committee reviewed monthly reports including the pharmacy dashboard, monthly metrics summary, the pharmacy inspection grid, a review of pharmacy cost center trends and reviewed medication error reports. After initial development work, additional review of pain guidelines was deferred by the committee to the Clinical Guidelines Committee.

During this reporting period, the P&T Committee also reviewed and discussed initiatives to address prescription duration and over-the-counter and non-pharmaceutical utilization. Clinical pharmacy support has been provided to ongoing UM initiatives.

The P&T Committee selected Ventolin HFA as the preferred formulary inhaled albuterol product. Discounted pricing for this product has been established and is now being tracked as part of the targeted contract savings. All updates to the formulary are distributed to provider and pharmacist staff, posted to the CPHCS intranet and are made available through the online Epocrates web service.

The P&T Committee has also been working collaboratively with nursing leadership to align nurse protocols with CDCR formulary. The committee approved several changes in protocol medications to eliminate any conflict with CDCR formulary. The protocols were referred to the Guidelines Committee to complete the process.

Coordination with UM was conducted to establish an appropriate level of intravenous services based on facilities' ability to compound IV admixtures in a safe manner. Solutions developed include the use of additional premix products and outsourcing depending on facility need and capability.

The Clinical Pharmacy Operations Specialists (CPOS) continued to provide in-service to facility staff on Pharmacy Policy and Procedure on a regular basis. During this reporting period, topics covered included Ch.8 - CDCR Drug Formulary, Ch. 9 - Prescription Requirements, Ch. 19 - Medications Brought into a CDCR Facility by Patients, Ch. 20 - Floor Stock Orders, Ch.25 - Inspection of Medication Storage Areas, Ch. 31 - Use of Tricyclic Antidepressants, Ch.35 - [45] Therapeutic Interchange, and Ch.38 - Prescription Turn-Around Time. In addition, CPOS discussed non-formulary approval and utilization with providers and leadership staff based on purchases and utilization data in Managed Care reports and provided in-service to facilities on the Hepatitis C medication algorithm.

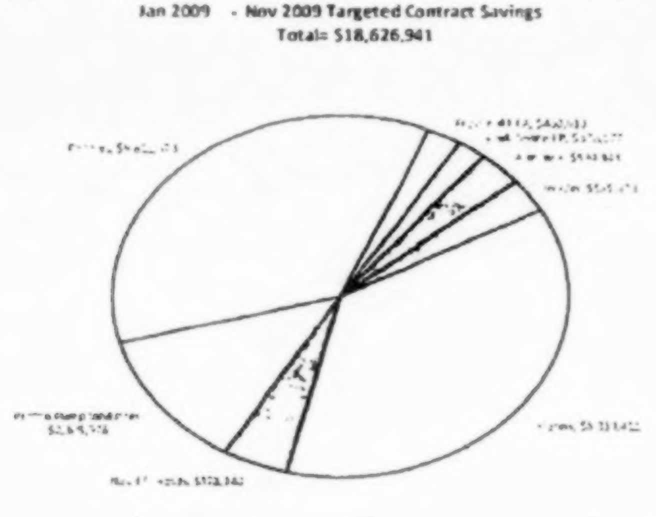
A formal Pharmacotherapy Management Consult (PMC) and process has been rolled out to several facilities, along with a pilot project to extend the duration of certain medical prescriptions to twelve months. By the end of December, CPOS will have presented PMC to Medical leadership at Central California Women's Facility, Chuckawalla Valley State Prison, Mule Creek State Prison, California State Prison, Corcoran, California Substance Abuse Treatment Facility and California State Prison, Sacramento.

Extensive emphasis continued on training and implementation of enhanced performance monitoring metrics in coordination with healthcare leadership. These activities included additional report refinement and training of staff and the Pharmacist-In-Charge

(PICs) on newly defined clinical performance metrics.A Mental Health (per member per month) cost metric was added to the Pharmacy Dashboard. Additionally, prescription related metrics relating to non-formulary prescriptions and prescriptions per inmate are being compiled on a regular basis for inclusion in the Facility Monthly Management Reports.

As displayed in Table 15, through November 2009, Maxor has documented cost avoidance of $18,626,941 thus far in calendar year 2009 from the use of targeted contracting strategies linked to P&T Committee decisions.

Table 15



[46] *Table 15 Results Explanation: These categories represent specific P&T Committee initiatives targeting particular drugs or drug classes. Savings calculated by comparing purchases using the actual targeted contract rate to the pre-targeted contract rate.*

Targeted contracts, order management activities and the implementation of a wholesaler agreement tailored specifically to address the pharmaceutical needs of the CDCR healthcare system continue to contribute to savings as displayed in Tables 16 and 17. In CY 2009, through the month of November 2009, over $44.8 million in expenditures were avoided when compared to prior historical trends.

Table 16

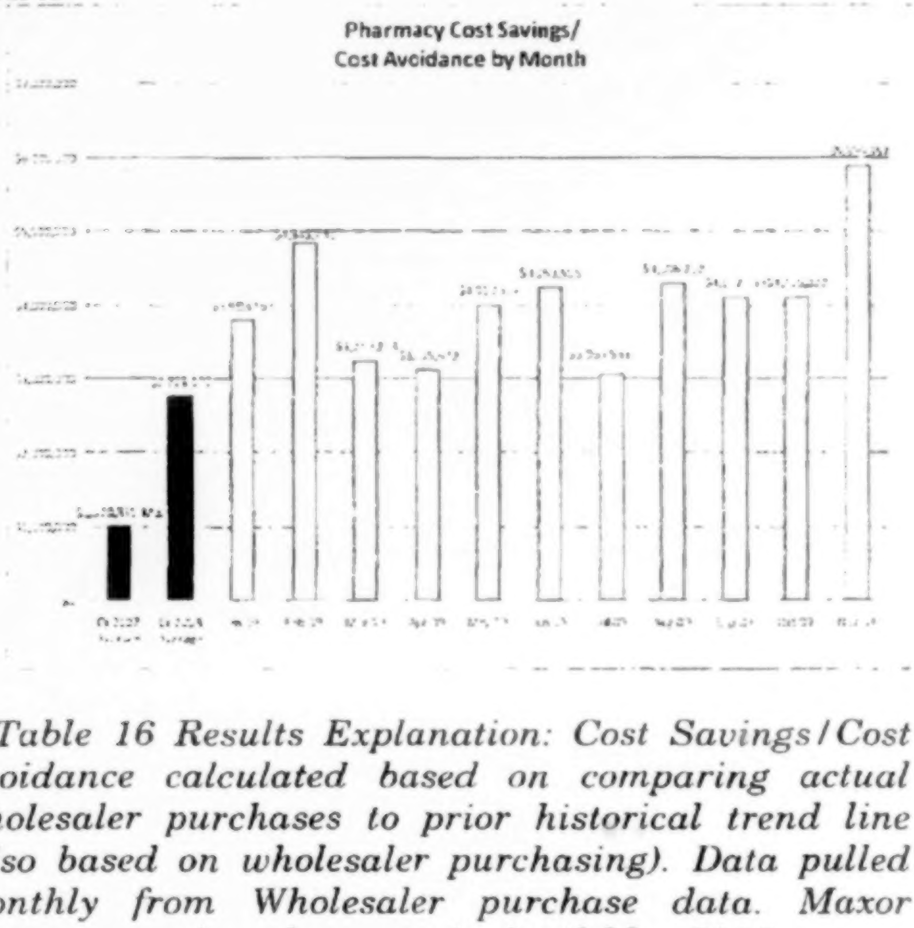


Table 16 Results Explanation: Cost Savings/Cost Avoidance calculated based on comparing actual wholesaler purchases to prior historical trend line (also based on wholesaler purchasing). Data pulled monthly from Wholesaler purchase data. Maxor began managing pharmacy in April-May 2007.

Table 17

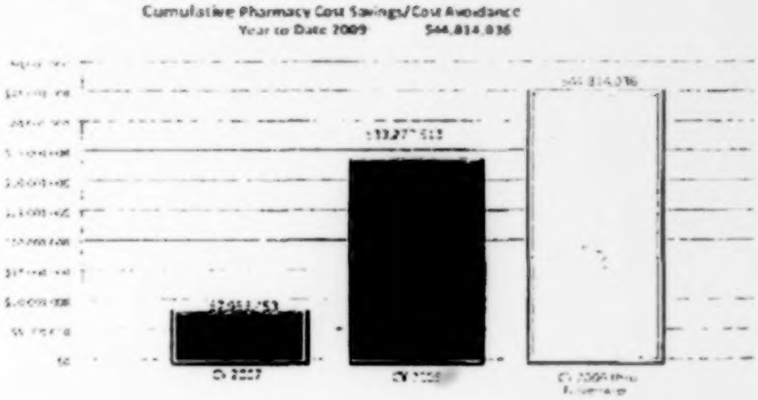

Table 17 Results Explanation: Savings/Cost Avoidance is calculated by comparing actual wholesaler purchases to prior wholesaler purchase trend line. Maxor began managing pharmacy purchasing in April-May 2007.

> *Action 5.1.2. By March 2010, improve pharmacy policies and practices at each institution and complete the roll-out of the GuardianRx® system.*

Pharmacy Policies and Practices

During this reporting period, the P&T Committee approved proposed changes to the pharmacy policies and procedures manual and completed its annual review and update of the policies. Following P&T Committee approval, the policies were sent for final review by the new policy and program evaluation department. In addition to reviewing and updating all existing pharmacy policies, two additional new policies were developed and approved. Chapter 41, Specialty Pharmaceutical Purchasing and Chapter 42, Prescription Quantity Standards were approved. A new draft policy and procedure was prepared to address quantity limits on certain groups of drugs and define packaging quantities for the planned central fill facility. This policy (Chapter 42) was approved by the P&T Committee in December 2009.

Additionally, pharmacy leadership has continued to focus on implementation of policy and procedures at the facility level to ensure compliance. To aid in this effort, a renewed emphasis was placed on the use of the *MC Strategies* online training and assessment tool to provide in-service training. Expectations were established with a targeted goal of a 95 percent completion rate. Facilities deficient in compliance are required to submit a written plan of action to bring training compliance up to the targeted levels. Also during this reporting period, two revised *MC Strategies* lessons were deployed and two new lessons (Ch. 19 - Medications Brought into a CDCR Facility by Patients and Ch. 20 - Floor Stock Orders) were released to PIC and pharmacy staff. The MC Strategies completion rate system-wide is now at 89 percent. Compliance continues to be evaluated quarterly.

[48] Recruitment efforts continue in an effort to fill pharmacy positions across the State. Work continues through the centralized hiring process to identify, interview and select qualified applicants. Also during this time period, pharmacy leadership have worked with finance and human resources staff to address significant differences between the deficient historical pharmacy staffing levels approved in prior appropriations cycles and the actual staffing levels required by current workloads and processes. While implementation of the Central Fill Pharmacy (CFP) will help in bridging this gap, discussion continues in order to ensure that mission critical services will be maintained in the interim and during the imple-

mentation of the CFP. Meetings with CPHCS leadership and finance staff are ongoing to address these issues.

Pharmacy inspections are conducted and documented monthly. The number of pharmacies with an inspection rating score of pass/problem (not failed) has increased from 21 percent in March 2007 to 64 percent in November 2009. This percentage is down from a high of 85 percent reported in July 2009. Pharmacy inspection scores are dropping largely due to late submissions of inspection reports by facilities. CPHCS is taking action to improve the timeliness of these submissions to avoid this drop in scores. Pharmacy inspection status data is displayed in Table 18.

Table 18

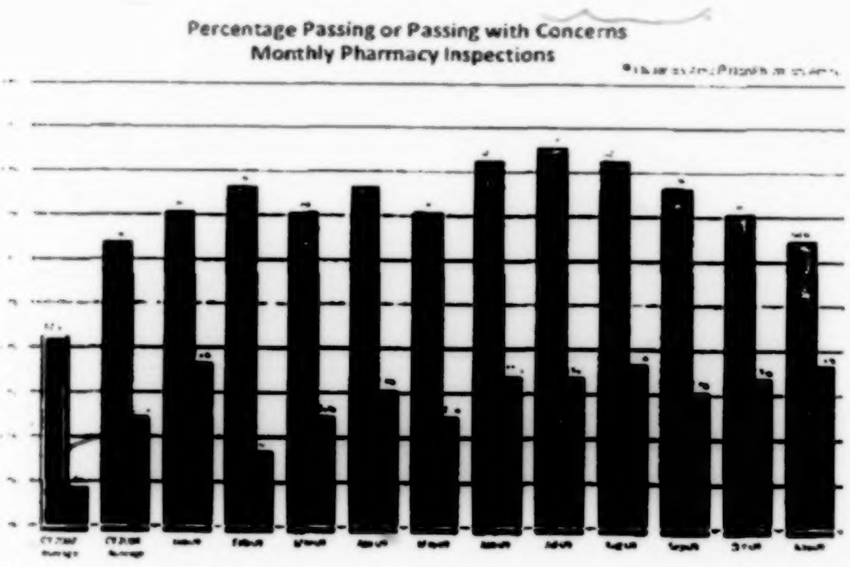

Table 18 Results Explanation Pharmacy areas are denoted in blue, and non-pharmacy locations (medication administration locations) are denoted in red: Independent Maxor Validation of Monthly Inspection Data began in February 2008.

[49] *Roll-out of the GuardianRx® System*

The GuardianRx® pharmacy operating system has now been successfully implemented in 29 of the 33 CDCR institutions. Pre-conversion meetings and training at upcoming facilities continue. The remaining four facilities are Sierra Conservation Center, Richard J. Donovan Correctional Facility, California State Prison, Solano, and California Medical Facility. Each of these facilities has significant infrastructure issues which are being considered as final scheduling takes place by the GuardianRx® Steering Committee.

The Receiver has completed initial efforts to improve pharmacy policies and practices at each institution by the initial target date of June 2009, having completed a comprehensive initial review and revision of all pharmacy policies and procedures. Efforts to enhance training and improve compliance with these policies and procedures continue. However, the timeline for rollout of the GuardianRx® system has been extended, as described above, and will not be fully implemented statewide until at least March 2010.

> *Action 5.1.3. By May 2010, establish a central-fill pharmacy.*

Work continues towards the establishment of a CFP Facility for the CDCR. The pre-centralization ambulatory model is being defined and implemented as processes are standardized and validated as part of the GuardianRx® implementation work plan. Following the final approval of the lease terms with the property owner by Department of General Services in early August, demolition, permitting and renovation work on the facility was started. Coordination with DGS architects and space planners, the CPHCS Project Manager, the construction team and the automation vendor occurs on a daily basis as this vital project enters the active construction phase. The building contractor is proceeding on schedule with the renovations and build-out of the facility. Meetings with Cornerstone Automation Systems (the vendor selected to provide the automation equipment for the facility) continue to ensure equipment specifications are met and installation schedules are coordinated. Cornerstone Automation Systems has recently advised scheduling obstacles with a potential delay of 60 days. CPHCS staff is actively working with the vendor to resolve for on time delivery.

Additionally, work related to the staffing and operation of the facility has also continued. Meetings have been held to plan the process of moving positions for the CFP and reevaluate time lines and system wide pharmacy staffing. Work is being done to define the pharmacy staffing model going forward and the interim staffing model until the CFP is fully operational. Based on current schedules, the CFP Facility is now estimated to be operational by May 2010. Once opened, it is expected to take approximately 14-18 months to transition all prisons completely over to central fill.

The Monthly Summary Reports for the months of September, October, and November are attached as Appendix 6.

Objective 5.2. Establish Standardized Health Records Practice

Implementation of the Health Information Management (HIM)/Health Records remediation road map continues to move forward to achieve improved patient health records management based [50] on evidence-based practices and increased cost-efficiency. Progress continues and is detailed below.

Action 5.2.1. By November 2009, create a roadmap for achieving an effective management system that ensures standardized health records practice in all institutions.

The Receiver has been developing a plan for an enterprise-wide UHR Conversion initiative where all UHR's and loose filing at the institutions will be scanned into a "paper-like" scanned UHR (s-UHR). This same effort will also scan all of the Paroled UHR's at the Health Records Center (HRC). This effort is taking advantage of the Strategic Offender Management System (SOMS) Custody File (C-File) scanning effort for CDCR after they have completed scanning the C-Files at each institution. The first institutions and HRC will have their UHR's scanned in July 2010 and the last institution will be completed approximately 12 months later.

The process of establishing an s-UHR will also establish a "day-forward" scanning operation at each facility that will process all loose filing. These efforts are an important step for CPHCS to advance to an electronic UHR or EMR by moving UHR users away from a paper UHR. This effort will also improve the standardization and use of healthcare forms as well as the many business processes that utilize or provide input to the UHR.

These efforts will improve the availability of the UHR at the point of care and will significantly advance the quality of new UHR content. These efforts combined with additional advancements of the CPHCS CDR and other Allied Health Services domains (e.g., Lab, Radiology, and Pharmacy) will support an effective Electronic Medical Record (EMR). The EMR provides an effective management system for ensuring standardized health records use and practice at all institutions.

At HRC there is currently a loose filing backlog of 50,000 inches. This backlog will be eliminated by a scanning process that will start by early February 2010. These scanned loose files will then be distributed to active UHR's at institutions and will no longer be missing from clinical visibility.

Active recruitment is underway for two Health Information Management (HIM) CEA positions for a Chief of Health Information Management and an Assistant Chief/Privacy Officer. These critical managers will provide CPHCS leadership guidance over stabilization, remediation and ongoing enterprise-wide HIM operations.

The Dental effort toward a more efficient organization of the Dental portion of the unit health record has been proceeding. A purchase order for 51,314 multi-tab inserts and x-ray envelopes for the dental section has been completed. Prison Industry Authority (PIA) will manufacture the items and is in the process of procuring the materials to do such. Based upon the PIA factory schedule, the Receiver estimates that the items will be distributed to the institutions in March 2010.

[51] *Objective 5.3.* Establish Effective Imaging/Radiology and Laboratory Services

> *Action 5.3.1. By August 2008, decide upon strategy to improve medical records, radiology and laboratory services after receiving recommendations from consultants.*

Medical Records

The strategy and plan related to Health Records is addressed under Objective 5.2.

Imaging / Radiology Services

This Action has been completed.

During this reporting period, Ascendian Healthcare Consulting (formerly McKenzie Stephenson, Inc.) completed site visits to all 33 adult institutions, with the goal of improving several areas of imaging departmental functions. Standardized and accurate processes are valuable in preventing delays in diagnosing patient-inmate conditions, reducing costly repeat diagnostic studies, and improving overall safety.

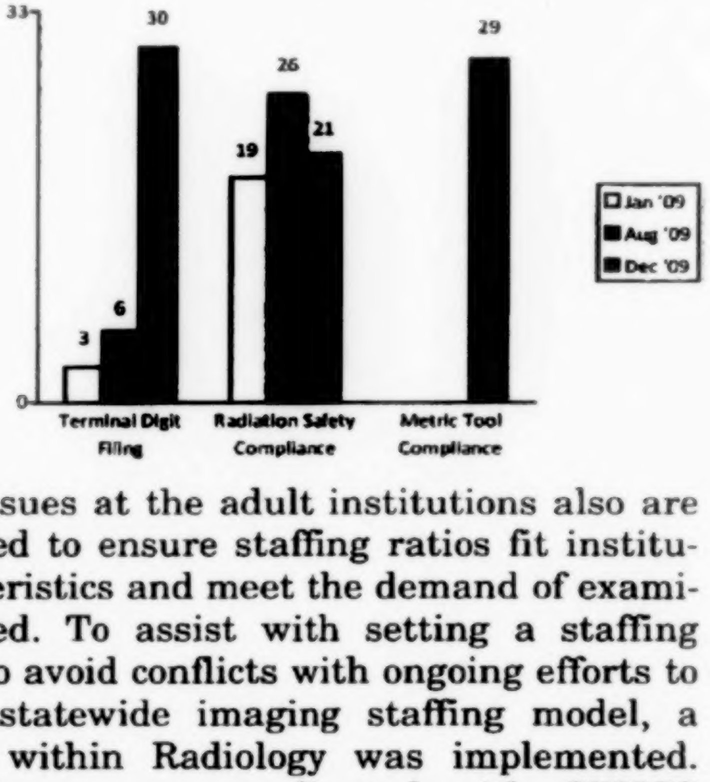
One area of focus included compliance with report and film handling, proper film filing methods, and tracking mechanisms required to safely transport medical data throughout the State. We have made significant improvements in terminal digit filing for film storage, with the number of sites in compliance rising from 6 to 30 as indicated in Table 19.

Another area of focus was to implement metrics tools designed to provide a baseline for operational volumes, workload, equipment maintenance and uptime, referrals, and other important data related to improving patient care and access. This metrics management process began in September 2009 and has been widely adopted. As shown in Table 19, 29 institutions currently report operational, clinical, and safety metrics on an ongoing basis.

A third area of focus has been compliance with radiation safety guidelines. As in Table 19, there appears to be a negative trend in radiation safety compliance since August. This is a result of a new and stricter compliance measurement and monitoring regime, which includes new metrics associated with Physicist reports and Radiation Supervisor positions. We are working with all non-compliant sites to ensure that the proper paperwork is submitted and supervision is provided as required.

[52]

Table 19: Imaging/Radiology Metrics - Compliance by Institution



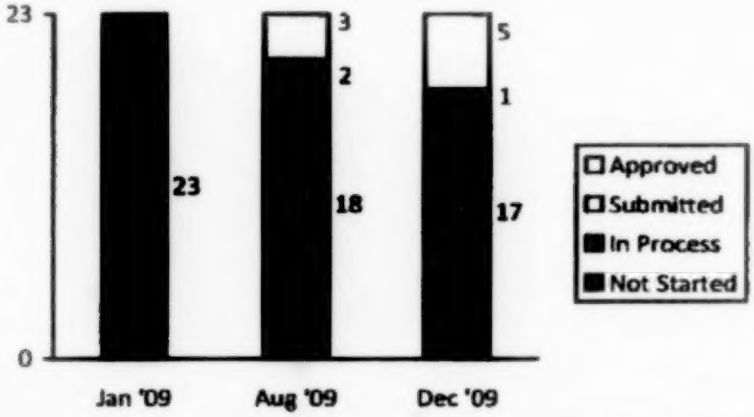
Personnel issues at the adult institutions also are being addressed to ensure staffing ratios fit institutional characteristics and meet the demand of examinations ordered. To assist with setting a staffing baseline and to avoid conflicts with ongoing efforts to redesign the statewide imaging staffing model, a hiring freeze within Radiology was implemented. This hiring freeze was coordinated with CPHCS Human Resources and Regional Personnel Directors. A revised staffing model is under review, with approval and implementation expected for early 2010.

Ascendian Healthcare Consulting expects to complete Mammography Quality Standards Act (MQSA) certification at Valley State Prison for Women prior to the end of 2009. Issues related to equipment reliability and documentation initially delayed the completion of this process, however the paperwork has since been filed. In addition, all three female institutions are prepared to comply with recent state legislation that reinforces existing policies regarding the posting of violations of MQSA guidelines.

Our team continues to work through the 23 different types of contracts held for support of Radiology and Imaging Services. As indicated in Table 20, we have been making progress on the remediation of these contracts. Due to concerns related to contract accuracy and accountability, the scope of the work conducted by this team now includes management and oversight of vendor invoicing and payment.

[53]

Table 20: Progress of Radiology/Imaging Contract Remediation



Work on the Mobile MRI program has ceased due to project budget and scope changes. CPHCS has established a preference for contracted services as a long-term solution to providing on-site MRI services, whereas the previous strategy was to implement state-owned and operated MRI services. We currently are reviewing the infrastructure at all institutions to determine what improvements are required to meet the minimum requirements for mobile MRI and CT service. The first five sites selected (California State Prison, Corcoran, California Substance Abuse Treatment Facility, North Kern State Prison, Kern Valley State Prison and Wasco State Prison) all require upgrades to provide level concrete pads or proper electrical hookups. While we had initially planned to expedite this project, CPHCS learned that the project is subject to Section 6 state funding requirements and approval process. To fulfill this process, the timeline has been adjusted and is expected to be completed by end of fiscal year 09/10.

We continue to coordinate with other CDCR and CPHCS project teams that are implementing technologies overlapping with imaging services (e.g., transcription, scheduling, CDR). Our goal is to ensure that these overlapping processes accommodate the work and data flow required for interoperability with Radiology and Imaging Services. However, recent changes in budget and resource allocation have delayed the Radiology Information System (RIS) implementation, which is designed to capture relevant patient data and allow for interoperability across the enterprise. Revised expectations on RIS implementation schedule, cost, and patient care impact currently are under development.

Laboratory Services

The Receiver has completed a work plan to stabilize/reform the Reference Lab Contracts and to provide a statewide reference lab service. Approximately half of CPHCS lab tests are performed through the CPHCS Reference Lab contracts. This statewide service will significantly improve the quality, timeliness, and effectiveness of reportable lab results that inform clinical decisions at [54] each of our institutions. The next two reporting periods will be focused on implementing this work plan.

The Receiver has begun the recruitment for a Chief of Laboratory Services. By June 2010, Laboratory Services leadership will be recruited to implement a State managed sustainable Laboratory Services program.

Objective 5.4. Establish Clinical Information Systems

> *Action 5.4.1. By September 2009, establish a clinical data repository available to all institutions as the foundation for all other health information technology systems.*

The goal of the CDR project is to store key patient health information, such as current medications, allergies, lab results, healthcare encounters, problems, etc., in a standardized manner and ensure availability of this information to providers at the point-of-care to support clinical decision-making. The current phase of the CDR is focused on providing current medications, allergies, and reference lab results.

As of December 2009, the CDR has transitioned into the Maintenance & Operations Phase, with rollout of the CDR to Valley State Prison for Women; California Correctional Facility for Woman and Los Angeles County institutions. In the months leading up to December, historical data was loaded from custody, pharmacy and laboratory partners and live data feeds from these partners was initiated. Staff at the pilot institutions was trained on the CDR and on-site and remote assistance was provided to support the roll out.

The pilot phase of the project will run through January 2010. During this period the system will be evaluated for stability and performance. Remediation work will be performed in areas that require such services. Rollout to additional institutions will begin in February 2010.

Objective 5.5. Expand and Improve Telemedicine Capabilities

> *Action 5.5.1. By September 2008, secure strong leadership for the telemedicine program to expand the use of telemedicine and upgrade CDCR's telemedicine technology infrastructure.*

This Action has been completed.

Telemedicine staffing and governance continues to improve. During this reporting period, CPHCS hired 2 new staff members to conduct the scheduling of specialty services, and are recruiting for a Health Program Manager. We also held the initial meeting of the Telemedicine Services Core Leadership Team.

Progress in expanding telemedicine system-wide is shown in Table 21. While total RFS volume is declining because of the recently implemented utilization management program, telemedicine encounters are continuing at a steady pace.

* * * *

[55] Phases One and Two of the six-institution initiative to expand telemedicine services are underway (Table 22). This initiative is being conducted at North Kern State Prison, Kern Valley State Prison, Richard J. Donovan Correctional Facility, Centinela State Prison, California State Prison at Corcoran and Substance Abuse Treatment Facility. At the six institutions, we are expanding

telemedicine equipment, addressing access to care obstacles, expanding the provider network, increasing the number of telemedicine specialties, and taking other steps to increase telemedicine usage. We also are collecting statistics to measure our progress in increasing telemedicine encounters while at the same time reducing off-site specialty services encounters. This data will be shared in future reports.

* * * *

[56] The CPHCS team is working closely with our Information Technology experts to identify the most cost-effective approach to developing and expanding the technology infrastructure that supports the delivery of telemedicine services. We recently met with several vendors to review current technologies and equipment as it relates to telemedicine services, including *store and forward* technology.

During this reporting period, CPHCS has implemented various process and staffing improvements. These improvements include reassigning the RN staff from scheduling and administrative functions to clinically focused tasks of the Telemedicine Program. We also are in the process of automating our telemedicine scheduling process.

The "Provider On-Boarding" process was fully implemented in this reporting period to expand patient access to telemedicine specialty providers, with an additional provider organization "on-boarded" to provide statewide services. The addition of the new providers has increased the number of specialty services offered from sixteen to twenty. These additional services are Plastic/Reconstructive, Nephrology, Oncology and Urology. We are also working to transition the UCSF on-site services to telemedicine.

Ongoing review of statewide scheduling backlogs and patient needs will continue to be a factor in provider recruitment efforts, which will help us meet demand for specialty care statewide. The CPHCS team is engaged in discussions with prospective medical groups and providers throughout the state that can provide telemedicine services. To support this expansion, we have updated the contract language to include telemedicine provisions in all medical general services agreements. The Telemedicine Program also is working with our Credentialing and Privileging unit to establish credentialing protocol for telemedicine providers.

During the next reporting period, we expect to successfully complete the six-institution initiative, complete the automation and re-engineering of our scheduling function, further expand our provider network and launch initiatives to increase telemedicine at other institutions. CPHCS anticipates the successful completion of the six-institution initiative and a phased rollout of increased telemedicine services statewide.

[57] Goal 6. Provide for Necessary Clinical, Administrative and Housing Facilities

Objective 6.1. Upgrade administrative and clinical facilities at each of CDCR's 33 prison locations to provide patient-inmates with appropriate access to care.

Progress on this objective continues to be impacted due to lack of funding. Assessments, planning, design and construction progress was limited due to the funding impacts. The timeframes originally established in the action items are no longer feasible and will continue to be negatively impacted until such time as AB 900 funding becomes available.

Action 6.1.1. By January 2010, completed assessment and planning for upgraded administrative and clinical facilities at each of CDCR's 33 institutions.

In concert with the most recent Abt study data and the proposed medical classification system proposed by CPHCS's medical planning group, Vanir is providing input to this team from the data collected during site visits at all 33 institutions. This input includes confirmation of existing conditions, such as confirming bed counts and locations at each yard, and identifying the best potential locations for needed new beds identified by the medical planning group as having an acute care mission.

Action 6.1.2. By January 2012, complete construction of upgraded administrative and clinical facilities at each of CDCR's 33 institutions.

Upgrade Construction at Avenal State Prison:

Construction at Avenal State Prison is in its final stages. Work under construction includes three yard clinics to provide medical and mental health treatment space, an Administrative-Segregation clinic and a healthcare administration building to provide support for healthcare access and administration, on schedule for completion by January 2010. Institution staff began moving into the new buildings sequentially, starting in December 2009.

Work on hold due to funding limitations includes the following: expansion of medical records, conversion and expansion of the pill room, new inmate waiting building, canopies at pill lines and waiting areas. Construction of a new medical warehouse has been cancelled. Once the funding for the Upgrade Program has been identified, there will be a statewide master planning effort that will address the need to complete those construction projects currently on hold.

Objective 6.2. Expand administrative, clinical and housing facilities to serve up to 10,000 patient-inmates with medical and/or mental health needs.

The "Receiver's Report on Options for Long-Term Care Bed Construction," filed with the court on February 6, 2009, details the four-year history of the Receivership's efforts to work with CDCR and the State to secure funding for construction of facilities which are a necessary step toward bringing prison healthcare up to constitutional standards. A complete copy of that report is available on the website http://cprinc.org/docs/court/doc2065_20090206_Options.pdf.

[58] The construction options identified in that report were intended to be one component of a long range plan to bring medical care up to constitutional standards. The other components are dependent upon improvements in prison and health care, and program improvements that have not been fully realized in part because of CDCR's severe.

In brief summary, the initial planning efforts, begun in 2006, culminated in 2008 with an agreement with the Administration to seek new funding in the amount of $6 billion to construct seven new facilities around the state which would have added approximately 10,000 beds for inmates requiring basic care for long-term, chronic medical problems, serious mental health concerns, and medical conditions requiring special housing and ready access to care. The plan was intended to satisfy healthcare bed needs projected out to 2018. Under the Receiver's plan, these facilities would have been built and operated by the Receivership to ensure timely completion of construction and operation of the facilities consistent with constitutional standards. The Administration also agreed to $1 billion in funding to improve facilities at existing prisons to support medical and mental health treatment (this figure was raised during 2008 to $2 billion when the Administration requested that the Receivership take on facilities improvements for the dental program). The Receiver believes that this $8 billion capital investment, if combined with other operational and staffing improvements and a reduction in the prison population, would likely be sufficient to end the four primary class actions involving prison health care in the near future.

Beginning in July of 2008, the Administration withdrew its support for this investment. After a brief period of litigation between state officials and the Receivership (which is still pending before the Ninth Circuit), and with the collapse of the national economy and California's budget, the Receiver began working collaboratively with Secretary Matt Cate and other CDCR staff to attempt to scale back construction plans to a level more consistent with available resources. These discussions ultimately resulted in CDCR submitting a long-term bed plan to the *Coleman* court which provides approximately $2.34 billion in funding for healthcare-related construction to be financed from the sale of bonds previously authorized by AB 900. Instead of 7 facilities and 10,000 new beds to be operated by the Receivership, the new plan envisions only 1 new facility of approximately 1,600 beds for inmates with medical and mental health problems, the use of three juvenile justice facilities which would be converted to hold approximately 3,200 inmates with medical and mental health conditions, and allocation of $700 million for improvements to existing facilities. Although the current plan is likely to fall short of actual needs in some material respects, the Receiver believes it is the most that can be accomplished at this time given the state's serious financial problems and the amount of funding available under AB 900.

As of this date, although there is a plan to build, the state still has not provided access to any funding to implement this plan, it remains uncertain whether funding will ever be made available for these purposes, and it is unclear whether the State will significantly reduce its prison population.

> [59] *Action 6.2.1 Complete pre planning activities on all sites as quickly as possible.*

During this reporting period, planning activities for the CCC have continued along with planning models and assumptions for the converted DJJ facilities. The CCC facility prototype, operational plans, facility plans, staffing model, and integrated healthcare program model are being revised and completed to a draft level that will allow for the facility to be constructed within an accelerated time-frame.

In November 2009, CPHCS construction staff transitioned to CDCR Facility Planning, Construction and Management Division to combine the construction efforts on all AB 900 projects.

> *Action 6.2.2 By February 2009, begin construction at first site:*

This action has been delayed until such time as AB 900 funding becomes available.

Stockton Site Environmental Impact Report (EIR) Status - On October 12, 2009, the Receiver certified the final EIR and also signed the Resolution of Approval, approving the proposed project and the Secretary of the CDCR concurred. The Notice of Determination was filed on October 19, 2009.

A petition for writ of mandate challenging the EIR entitled *Greater Stockton Chamber of Commerce, County of San Joaquin and City of Stockton v. J Clark Kelso, in his capacity as Receiver and the Department of Corrections and Rehabilitation* was filed on November 17, 2009 in San Joaquin Superior Court, Case Number 39-2009-00230310 CU-WM-STK. An amended petition was filed on November 19, 2009. Both the Receiver and the CDCR were served on November 24, 2009. The case was removed to the jurisdiction of the United States Federal Court for the Eastern District of California on November 25, 2009. Notices of Related Case were filed on December 3, 2009 and the court ordered the matter related to the *Coleman v. Schwarzenegger* Case No.2:90-cv-520 LKK on December 4, 2009, with a status conference set for February 16, 2010. The attorneys for both the Receiver and CDCR are reviewing the amended petition and are preparing the record and necessary responses. The attorneys for both the Receiver and CDCR filed answers to the amended petition and are preparing the administrative record for certification by January 25, 2010. Petitioners filed a Motion to Remand the case back to state court, which is set for hearing before Honorable Judge Karlton on January 25, 2010.

> *Action 6.2.3 By July 2013, complete execution of phased construction program.*

A phased construction schedule has been developed that provides for an accelerated schedule to open these beds by April of 2013.

[60] *Objective 6.3.* Complete Construction at San Quentin State Prison

> *Action 6.3.1. By December 2008, complete all construction except for the Central Health Services Facility.*

With the exception of small closeout "punch list" items, construction is complete. All projects are complete and the areas are occupied by staff and inmates as appropriate, including: the medical warehouse; east and west rotunda clinics; personnel offices; triage and treatment area; clinic heat project; and replacement parking spaces. Exercise yards have been relocated and office modular buildings have been added.

> *Action 6.3.2. By April 2010, complete construction of the Central Health Services Facility.*

The Central Health Services Building achieved substantial completion on November 19, 2009, almost three months ahead of the required contract completion date of February 8, 2010. Staff began occupancy of the building and the clinics and started treatment of inmates in December 2009. We are targeting a complete move of all mental health and medical patients by end of January 2010.

[61] Section 4

Additional Successes Achieved by the Receiver

A. Joint Governing Body for Integrated Care

In a health care organization the Governing Body is the highest policy making body for the provision of health care. Consistent with community standards and health care organizations, the CPHCS and DCHCS Governing Body are responsible for the administration, direction, monitoring, and quality of health care services provided to inmate-patients within the adult institutions. These Governing Body Committees take final action on recommendations from the Professional Practice Executive Committee regarding all practitioners within CDCR.

During this reporting period the two separate and distinct Governing Bodies,

1) Medical—responsible for the practice of physicians, nurse practitioner's and physician assistants and 2) Mental Health and Dental - responsible for the practice of psychiatrists, psychologists, licensed clinical social workers, and dentists, were merged in to one Governing Body. This is a critical step in a deliberative process to reintegrate the health care services within CDCR.

To facilitate a seamless transition of enterprise wide health care policies and processes, the newly reconstituted Governing Body will focus on interdisciplinary practices issues and resolutions. The new Governing Body began convening in October and will draft formal Bylaws within the upcoming months.

B. Health Care Master Bed Plan — *2009 Chronic and Long-term Care in California Prisons: Needs Assessment Projections*

Guided by the Vision and Mission of the Receiver's Turnaround Plan of Action, CPHCS is committed to ensuring a sustainable medical care system that increases the effectiveness of medical care while implementing system efficiencies for cost containment and savings. In support of that effort, the Receiver directed an assessment of the long-term care prison medical beds to ensure that the capacity was sufficient to support a constitutionally adequate level of medical care for inmates. Abt Associates revised their *2007 Chronic and Long-term Care in California Prisons: Needs Assessment* projections and improved the study outcome by adjusting the data collection tool. Pursuant to concerns raised about the 2007 study by independent reviewers, the assessment tool was modified and updated under the direct leadership and participation of CHPCS clinical staff. Complete analysis of the *Abt 2009 Chronic and Long-term Care* study is undergoing final review and will be shared in the 1st quarter of 2010.

To ensure resolute handling of this critical project, the Receiver directed a Medical Master Bed Planning Executive Leadership Group be created to oversee the medical bed master planning effort utilizing data from the study. In addition, a Health-Care Bed Master Planning Workgroup (Workgroup) was formed. The groups are comprised of representatives of all stakeholders, [62] including Court representatives for Plata, Coleman, Armstrong, and Perez, as well as leaders representing CPHCS, the CDCR Mental Health and Dental Programs, Facilities, the Division of Adult Institutions, and the Department of Mental Health.

With the benchmarking data from the study, the Receiver's goal is to create an Integrated Health Care Master Bed plan that will provide a continuum of care and serve a variety of care levels (including medical, mental health, and dental), that will meet or exceed the bed and treatment needs for integrated health care services, and that fulfills custody requirements for safety and security of CDCR facilities. The plan will incorporate the results of the following: population specific health care studies; data/findings from medical and mental health classification systems; the Mental Health Long Term Bed Plan filed with the Coleman Court; and the Dental Services Plan.

The Workgroup is nearing completion of its analysis and will provide recommendations for an Integrated Health Care Master Plan. They will present the recommendations in late January to the Leadership Group and Court monitors. It is anticipated that these recommendations will include adjustments to the current Bed Plan which are necessary to meet the projected long term health care needs of California's inmate-patients while ensuring the best use of planned construction resources.

[63] Section 5

Particular Problems Faced by the Receiver, Including Any Specific Obstacles Presented by Institutions or Individuals

While the Receivership continues to make progress in many key areas to achieve the goal of providing a constitutional level of healthcare within California's adult correctional system, the State's fiscal crisis and resulting employee furlough program has had an impact administratively and at the Institutions, as it has on many state government operations. While this impact is difficult to define and measure, this Tri-Annual Report identified programmatic areas in which timelines have been adjusted. Many staff intensive administrative functions, such as inmate appeals processing and invoice processing, have failed to meet their goals. While blame for these failures can not be placed solely on furloughs or the lack of funding for new positions, there is little doubt that budget cuts and furloughs are contributing factors to some of these setbacks.

The budget forecast coupled with California's low financial rating will present challenges for all in 2010 and the years that follow. However, the Receiver continues to utilize all available resources to ensure that the goals and objectives within the Turnaround Plan of Action are achieved and will continue strive in these efforts to fulfill the Vision and Mission.

[64] Section 6

An Accounting of Expenditures for the Reporting Period

A. *Expenses*

The total net operating and capital expenses of the Office of the Receiver for four months ended December 31, 2009 were $3,033,872 and $6,873,314 respectively. A balance sheet and statement of activity and brief discussion and analysis is attached as Appendix 7.

B. *Revenues*

During the four month period ending December 31, 2009, the receiver requested transfers totaling $1,100,000 from the state to the California Prison Health Care Receivership Corporation (CPR) to replenish the operating fund of the office of the Receiver for the reporting period 2009-2010 Fiscal Year.

All funds were received in a timely manner.

[65] Section 7

Other Matters Deemed Appropriate for Judicial Review

- Coordination with Other Lawsuits

During the reporting period, regular meetings between the Receiver and the monitors of the Coleman, *Perez*, and *Armstrong* ("Coordination Group") class actions have continued. Coordination Group meetings were held on September 22, 2009, November 17, 2009, and December 9, 2009. Progress has continued during this reporting period.

- Master Contract Waiver Reporting

On June 4, 2007, the court approved the Receiver's Application for a more streamlined, substitute contracting process in lieu of State laws that normally govern State contracts. The substitute contracting process applies to specified project areas identified in the June 4, 2007 Order and, in addition, to those project areas identified in supplemental orders issued since that date. The approved projects areas, the substitute bidding procedures and the Receiver's corresponding reporting obligations are summarized in the Receiver's Seventh Quarterly Report and are fully articulated in the court's orders, and therefore, the Receiver will not reiterate those details here.

During the last reporting period, the Receiver has used the substitute contracting process for various solicitations relating to services to assist the Office of the Receiver in the development and delivery of constitutional care within CDCR and its prisons. However, those solicitations have not yet resulted in fully executed and approved contracts. Therefore, those contracts will be reported in subsequent Reports to the Court.

[66] Section 8
Conclusion

We are approaching the halfway point in implementing the Turnaround Plan of Action. As this report reveals, there are many accomplishments which have contributed to improving the quality of care and reducing avoidable morbidity and mortality. At the same time, however, it is worth remembering that we have embarked on this extraordinarily challenging organizational improvement initiative in the midst of what is the worst budget and organizational conditions in California government in half a century.

Overcrowding continues essentially unabated, resources to improve and expand facilities have not been made available, employees have been subjected to furloughs and other employment pressures which undoubtedly interfere with their productivity, and the State's cash condition is unstable.

While we have clearly been presented with all of these challenges, as a State and the Receivership, we continue to work collaboratively with CDCR, the Department of Finance, the Department of Personnel Administration and the Governor's Office to achieve as much alignment as possible. The pace of our further progress will depend to a great extent upon our ability to build on the collaborative trust that we have developed over the last year and to gain the support from the State that we need to complete our task.

Achieving a Constitutional Level of Medical Care In California's Prisons

Fourteenth Tri-Annual Report of the Federal Receiver's Turnaround Plan of Action

[Filed: 05/27/10]

May 15, 2010

* * *

[5] Section 1
Executive Summary

In our first Tri-Annual reporting for 2010, we recognize and share the accomplishments achieved by prison healthcare stakeholders and advocates. While we continue to be faced with unprecedented budget challenges and managing a diverse stakeholder process system, progress has continued toward attaining the Vision and Mission outlined in the Receiver's Turnaround Plan of Action (RTPA). Highlights of progress include the following:

- Prison Healthcare Chief Executive Officer (CEO)—Since the CEO examination was launched on December 24, 2008, 476 CEO applicants have been added to the certification list and 12 hires have been completed. The pool of CEO candidates is very competitive and interest remains high with 12 CEO positions to fill for oversight of 33 institutions.
- Utilization Management (UM)—We recently hired a Lead UM Nurse Consultant who has successfully recruited 5 UM Nurse Consultant Program Review (NCPR) nurses who

have been trained to support field based regional UM and care coordination activities. They are all actively working in the 4 Regions, to align the Receiver's UM objectives and institutional outcomes.

- The Request for Proposal (RFP) to obtain a medical services network from a Preferred Provider Organization (PPO), as allowed under the new legislation (SB X4 13, 2009, which amended Penal Code section 5023.5), was released October 20, 2009. Proposals were received and are in evaluation. Due to the number and complexity of proposals received, the evaluation period has been extended into the next reporting period. The plan is to make an award by the first of July 2010.

- Medical invoice processing activity has continued to be streamlined for efficiency through the use of Third Party Administrators (TPA) and system enhancements. As of March 2010, the TPA is within the mandated 30-day processing timeframe. The Two-Year Post Audit identified billing discrepancies which has resulted in $13.8 million in refunds as of early April 2010. These refunds apply to the timeframe between July, 1, 2007 and June 30, 2009 and will not apply to current year savings.

- Pharmacy—On April 15, 2010 the Office of the Inspector General (OIG) released their report entitled "Lost Opportunities for Savings within the California Prison Pharmacies." While acknowledging that there is more to do to rein in the high cost of inmate medicines, the report was a snapshot of a changing situation in our pharmacies. Our Tri-Annual and Monthly reports continue to showcase the progress made in pharmacy and the cost savings/avoidance achieved through the implementation of formulary management, over-the-counter (OTC) policy changes, the return-to-stock program, and the rollout of the Central Fill Pharmacy Facility (scheduled to open in May) and program.

- Telemedicine: Phase 2 of the Telemedicine Services Project was completed, which included the Six Institution Initiative to Expand Telemedicine Encounters. The Initiative resulted in a 14 percent increase in telemedicine services at the target institutions, and provided [6] experience that will facilitate telemedicine expansion at the other California Department of Corrections and Rehabilitation (CDCR) institutions.
- Avenal—Construction at Avenal State Prison is complete. All clinics were fully operational as of February 5, 2010.
- San Quentin—The Central Health Services Building is complete. We began seeing inmates in December 2009. CTC licensure was achieved in January 2010.
- California Health Care Facility (CHCF)—In January 2010, the Department of Finance submitted the 30-day notification letter to the Joint Legislative Budget Committee (JLBC) for review. At the request of the JLBC this project was pulled from the February Public Works Board (PWB) agenda and has not been rescheduled. Legislation (AB 552) is pending

that would clarify the use of AB 900 bond funding for this project.

While we continue to make strides in many important areas that bring us closer to the goal of providing a constitutional level of healthcare within California's correctional system, the momentum of these efforts continues to be affected by the State's budget and fiscal crisis. The budget and fiscal crisis is likely to continue for the foreseeable future, and the Receivership is doing everything it can to reduce expenditures without cutting into core healthcare areas. However, productivity has been impacted throughout the organization, and coupled with some staff turnover, certain projects and initiatives have been delayed in their implementation. Due to these factors, this report will reflect extensions on some of the objectives and action item dates to fulfill the goals.

Moreover, although the Administration has made some proposals to the Legislature to reduce prison population and overcrowding (in part to address the state's budget crisis), so far, those proposals have not been fully embraced by the Legislature and none of them has yet been implemented. CDCR's prisons remain significantly overcrowded, and the lack of adequate facility space and appropriate beds for medical and mental health purposes continues to impede efforts to improve care.

Format of the Report

To assist the reader, this Report provides three forms of supporting data:

1. *Metrics*: Metrics that measure specific RTPA initiatives are set forth in this report with the narrative discussion of each Goal and the associated

Objectives and Actions. Metrics were initially included in the Ninth Quarterly Report to the court and were also published as part of the Receiver's Turnaround Plan of Action Monthly Reports beginning in October 2008. Monthly Reports for this reporting period can be viewed at the California Prison Health Care Services (CPHCS) website (http://www.cprinc.org/receiver_mo.aspx).

2. *Appendices*: In addition to providing metrics, this report also references a number of documents that are provided to the reader in the included Appendices filed concurrently with this report.

* * *

[9] Section 3

Status of the Receiver's Turnaround Plan Initiatives

Goal 1. Ensure Timely Access to Health Care Services

Objective 1.1. Redesign and Standardize Screening and Assessment Processes at Reception/Receiving and Release

Action 1.1.1. By January 2009, develop standardized reception screening processes and begin pilot implementation

This action has been completed.

Action 1.1.2. By January 2010, implement new processes at each of the major reception center prisons

The Reception Center redesign is planned to occur after completion of Action 1.1.3 in January 2010. Re-evaluation of the reception center processes, established in Action 1.1.1, and statewide implementation of the new processes at each of the major reception centers is expected by January 2011.

Action 1.1.3. By January 2010, begin using the new medical classification system at each reception center prison.

This action has been completed.

On January 20, 2010, all Reception Center institutions began using the Medical Classification System on all newly arrived inmates. During this reporting period, Local Operating Procedures for each institution were approved by the Regional Leadership Teams and the Medical Classification Chrono was implemented. At the time of this report nine of eleven Reception Center institutions have self-certified they are compliant with the Medical Classification System Policy and Procedure. The Regional Leadership Teams are currently preparing for the formal site certification visits.

Action 1.1.4. By January 2011, complete statewide implementation of the medical classification system throughout CDCR institutions.

On March 8, 2010, all non-reception center institutions began implementation of the Medical Classification System. As the institutions report self-certification status, the Regional Leadership Teams will schedule formal site certification visits. Implementation certification of the Medical Classification for all institutions is expected before January 2011.

Objective 1.2. Establish Staffing and Processes for Ensuring Health Care Access at Each Institution

Action 1.2.1. By January 2009, the Receiver will have concluded preliminary assessments of custody operations and their influence on healthcare access at each of CDCR's institutions and will recommend additional staffing, along with recommended changes to [10] *already established custody posts, to ensure all* *patient-inmates have improved access to health care at each institution.*

This action has been completed.

Action 1.2.2. By July 2011, the Receiver will have fully implemented Health Care Access Units and developed healthcare access processes at all CDCR institutions.

Health Care Access Units (HCAU)

The HCAUs continue to be effective in facilitating inmate access to care. All Access Quality Reports indicate that improvements in access to care are being maintained. The reported improvements indicate that healthcare access programs have the resources necessary to support healthcare operations at the current level of service. Because of these improvements, and barring any regression or inability to support the field, it is possible that operational control of the custody HCAU could be transferred back to CDCR and released from Receivership control by next fiscal year (target July 2011).

Corrections Services continues to work with CDCR to modify post orders, hours of work and days off to better facilitate access to care. Correction Services staff work with CDCR to mitigate the effect of mission changes and in the implementation of the short, intermediate and long term bed projects, to ensure that healthcare operations are not interrupted.

Operational Assessments

Corrections Services is in the process of reviewing the operations of institutions HCAU to determine the effectiveness of the positions allocated for this purpose as well as reduce any access to care barriers.

Operational assessments for all 33 institutions are scheduled to be completed by July of 2011.

Monthly Health Care Access Quality Report (AQR)—Data Collection Instrument

AQR data remained stable during this reporting period. February's AQR indicated that overall 90 percent of all patient-inmates that received ducat(s) for a healthcare appointment(s) were seen by a clinical provider. Specific to custody performance, the number of inmates *Not Seen Due to Custody* represented 1.9 percent of the total number of ducats.

There were no updates to the AQR during this reporting period; all data elements remained the same. Field Operations staff met with COMPSTAT to review modifications to the data collection tool. The updates to the data collection tool will result in a report that mirrors the AQR, and it is anticipated that institutions will begin inputting 09/10 AQR data into COMPSTAT within the next month.

Corrections Services Field Operations Unit continues meeting quarterly with the Division of Adult Institutions (DAI), Associate Directors. On the agenda for these meetings are AQR trends, changes and updates, as well as discussions and development of other Field Operations functions and their association within elements of the DAI.

* * *

[18] Goal 3. Recruit, Train and Retain a Professional Quality Medical Care Workforce

Objective 3.1 Recruit Physicians and Nurses to Fill Ninety Percent of Established Positions

Action 3.1.1. By January 2010, fill 90% of nursing positions.

This action has been completed.

As of February 28, 2010, which is the most recent reporting period available, over 91 percent of the nursing positions have been filled statewide (this percentage is an average of six State nursing classifications).

More specifically, the goal of filling 90 percent or higher of the Registered Nurse (RN) positions has been achieved at 27 institutions (81.8 percent of all institutions), with 4 institutions (12.1 percent) having filled 100 percent of their positions. Six institutions (18.1 percent) have filled 80 to 89 percent of their RN positions.

The goal of filling 90 percent or higher of the Licensed Vocational Nurse (LVN) positions has been achieved at 20 institutions (60.6 percent), with 6 institutions (18.1 percent) having filled 100 percent of their LVN positions. Eleven institutions (33.3 percent) have filled 80 to 89 percent of their LVN positions.

Twenty-three institutions (69.6 percent) have achieved the goal of filling 90 percent of their Psych Tech positions, with 11 institutions (33.3 percent) having filled 100 percent of their Psych Tech positions. Four institutions (12.1 percent) have filled 80 to 89 percent of their Psych Tech positions.

The following hiring-related initiatives continued during the reporting period: (1) focused recruitment continues statewide for LVNs and Psych Techs; (2) presentations at nursing schools statewide; and (3) online job postings. Nursing vacancies are posted on multiple websites including: www.ChangingPrisonHealthCare.org, www.Indeed.com, www.VetJobs.com, www.caljobs.ca.gov, and several more. Each job posting often represents multiple vacancies at an institution. Additionally, staff recently negotiated a contract with www.Monster.com for job postings on that site and access to their database of jobseeker resumes. Staff has been assigned to monitor vacancy reports and job postings to ensure that vacancies are accurately represented in all job postings.

At the following institutions: California Correctional Institution, High Desert State Prison, and Pleasant Valley State Prison nursing has experienced moderate turnover (11 to 19 percent) and moderate vacancies (11 to 30 percent vacant) as displayed in the Nursing Filled Percentage and Turnover Rate map in the February 2010 Human Resources Recruitment and Retention Report. A moderate vacancy rate (11 to 30 percent) exists at California Medical Facility, California Men's Colony, Chuckawalla Valley State Prison, Ironwood State Prison, and Sierra [19] Conservation Center. For additional details related to vacancies and retention, refer to the Human Resources Recruitment and Retention Reports for December 2009 and January and February 2010. These reports are included as Appendix 5. Included at the end of each Human Resources Recruitment and Retention Report are maps which summarize the following information by institution: (1) Physicians Filled Percentage and Turnover Rate, (2) Physicians Filled Percentage, (3) Physician Turnover Rate, (4) Nursing Filled Percentage and Turnover Rate, (5) Nursing Filled Percentage, and (6) Nursing Turnover Rate.

Action 3.1.2. By January 2010, fill 90% of physician positions.

This action is ongoing. Progress during this reporting period is as follows:

Physician recruitment efforts continued to focus on "hard-to-fill" institutions during the reporting period. Most urban institutions have now hired their full complement of primary care providers.

As of February 28, 2010, nearly 88 percent of physician positions are filled (this percentage is an average of all three State physician classifications). More specifically, 90 percent of the Chief Medical Officer (CMO)/medical executive positions are filled; 89 percent of the CP&S positions are filled; and 87 percent of the P&S positions are filled.

Eighteen institutions (54.5 percent) have achieved the goal of filling 90 percent of their P&S positions; 16 of these institutions have filled at least 95 percent of their P&S positions. Five institutions (15.1 percent) have filled 80-89 percent of their P&S positions.

While the Central Valley region, as well as Chuckawalla Valley State Prison, continue to be "hard-to-fill," the following institutions decreased their vacancy rate during this reporting period: Avenal State Prison, California Correctional Institution, Centinela State Prison, California Men's Colony, California Medical Facility, Corcoran State Prison, Mule Creek State Prison, North Kern State Prison, Pelican Bay State Prison, California State Prison Solano, Salinas Valley State Prison, and Valley State Prison for Women. Of special note, Centinela State Prison; California State Prison, Corcoran; Pelican Bay State Prison; and Valley State Prison for Women have now filled 100 percent of their P&S positions.

Job postings continue to be placed online at the Department's recruitment website, other online job boards, and recruiters continue to visit residency programs and other recruitment events. Additionally, a RFP for physician and executive search services was released in March 2010. These services will be used to recruit a statewide executive leader, as well as assist with staffing at the "hard-to-fill" institutions and the medical executive positions.

A high vacancy rate (30 percent or higher) and turnover rate (20 percent or higher) exists at Correctional Training Facility and Chuckawalla Valley State Prison as displayed in the Physicians Filled Percentage and Turnover Rate map in the February 2010 Human Resources Recruitment and Retention Report. A high turnover rate (20 percent or higher) and moderate vacancy rate (11 to 30 percent vacant) exists at Avenal State Prison; California State Prison, Los Angeles County; High Desert State Prison; Pelican Bay State Prison; and Salinas Valley State [20] Prison. For additional details related to vacancies and retention, refer to the Human Resources Recruitment and Retention Reports for December 2009 and January and February 2010. These reports are included as Appendix 5. Included at the end of each Human Resources Recruitment and Retention Report are maps which summarize the following information by institution: (1) Physicians Filled Percentage and Turnover Rate, (2) Physicians Filled Percentage, (3) Physician Turnover Rate, (4) Nursing Filled Percentage and Turnover Rate, (5) Nursing Filled Percentage, and (6) Nursing Turnover Rate.

Objective 3.2 Establish Clinical Leadership and Management Structure

Action 3.2.1. By January 2010, establish and staff new executive leadership positions.

Action 3.2.2. By March 2010, establish and staff regional leadership structure.

This action is ongoing. Progress during this reporting period is as follows:

Since the CEO examination was launched on December 24, 2008, 476 CEO applicants have been added to the certification list and 12 hires have been completed. The pool of CEO candidates is very competitive and interest remains high.

Strategically, CEO positions will be filled statewide and these individuals will then play a pivotal role in establishing the remainder of the clinical leadership structure. The interview and hiring process for all CEO positions is underway, and several hires are pending.

Since the Receiver's Nurse Executive examination commenced in September 2008, 322 Nurse Executive applicants have been added to the certification list and nine Nurse Executives have been hired.

Since the Receiver's Medical Executive examination was launched in December 2008, 112 Medical Executive applicants have been added to the certification list. Nine Medical Executives have been hired.

A fifth Receiver's Career Executive Assignment, Receiver's Health Care Administrator that will be responsible for all medical administration subject areas that are not clinical in nature, was approved by the State Personnel Board on December 17, 2009. Prior to filling jobs covered by this classification, a salary study must be conducted and salaries approved by the Department of Personnel Administration.

Objective 3.3. Establish Professional Training Programs for Clinicians

Action 3.3.1. By January 2010, establish statewide organizational orientation for all new health care hires.

This action is ongoing. Progress during this reporting period is as follows:

Status of New Employee Orientation and Training

Health Care New Employee Orientation (HCNEO) was delegated to each institution to comply with the January 2010 implementation date. This was done through formal training for trainers

* * *

[54] Section 8
Conclusion

This report reflects continuing success in recruiting and maintaining a highly qualified clinical staff. There is also continuing success in overcoming most obstacles to access to care. In sum, we are doing a better job in managing the "people" aspect of the prison health care system.

For the next several years, we will be concentrating a huge amount of our implementation energies upon the "information" piece of health care. The information piece includes electronic scheduling, the mental health tracking system, conversion of paper health records into digital health records, creation of a live electronic health record, more reliable and timely information flows for radiology and laboratory results, and increased utilization of telemedicine technologies to expand cost-effective access to care.

For CDCR, these information systems represent a quantum-leap into the information age. During the last two years, we have been building the technology infrastructure for these information systems, including acquisition of a modern fiber-based network to each institution, building out local area wireless and wired networks, installing 1,000's of switches and up to 10,000 network drops at institutions, and installing thousands of desktops and laptops in the field. These numbers are large because CDCR is jumping forward from 1970s technologies to 21st century technologies.

We will also be focusing attention upon completing the "facilities" aspect of our turnaround plan. We have had very positive meetings with legislators this Spring to describe the construction plan that is jointly sponsored by the Administration and the Receivership, and we are within days or weeks of final approval by the Legislature. Construction and population reduction remain of critical importance to our efforts since the continuing overcrowding that exists within CDCR's adult institutions stands as a significant obstacle to the delivery of care.

Achieving a
Constitutional Level of Medical Care
In
California's Prisons
Amended Fifteenth Tri-Annual Report of the
Federal Receiver's Turnaround Plan of Action
October 4, 2010

* * * *

[5] Section 1
Executive Summary

In our second Tri-Annual reporting for 2010, we recognize and share the accomplishments achieved by prison healthcare stakeholders and advocates. While we continue to be faced with unprecedented budget challenges, managing a diverse stakeholder process system, and severe overcrowding, progress has continued toward attaining the Vision and Mission outlined in the Receiver's Turnaround Plan of Action (RTPA). Highlights of progress include the following:

- Prison Healthcare Chief Executive Officer (CEO) – Since the CEO examination was launched on December 24, 2008, 504 CEO applicants have been added to the certification list and 21 hires have been completed. The pool of CEO candidates is very competitive and interest remains high with 3 CEO positions left to fill for oversight of 33 institutions.
- Prison Healthcare Nurse Executive – Since commencement of the examination in September 2008, 336 Nurse Executive applicants

have been added to the certification list and 10 Nurse Executives have been hired.

- Prison Healthcare Medical Executive – Since launching of the examination in December 2008, 143 Medical Executive applicants have been added to the certification list and 12 Medical Executives have been hired.
- The Request for Proposal (RFP) to obtain a medical services network from a statewide provider network company was released October 20, 2009 and the contract was approved on June 28, 2010. CPHCS and Health Net Federal Services, LLC (Health Net) have partnered to develop and maintain a statewide network of healthcare providers for all 33 institutions.
- Medical invoice processing activity has continued to be streamlined for efficiency through the use of Third Party Administrators (TPA) and system enhancements. Claims processing continues to be within the 30-day mandated timeframe. The Two-Year Post Audit effort has resulted in $18.4 million in refunds as of August 2010.
- California Health Care Facility (CHCF) – During this reporting period, the 30-Day Letter for the California Health Care Facility (CHCF) and two of the former Division of Juvenile Justice (DJJ) facilities (DeWitt Nelson and Estrella Correctional Facility) were submitted to the Joint Legislative Budget Committee (JLBC) in June 2010. These projects were approved by the Public Works Board (PWB) and received Pooled Money

> Investment Board (PMIB) loan approval. The 30-Day Letter for the remaining DJJ facility (Herman G. Stark) was submitted to the JLBC on August 18, 2010.

While we continue to make strides in many important areas, the momentum of these efforts continues to be affected by the State's budget and fiscal crisis and severe overcrowding in the prisons. The budget and fiscal crisis is likely to continue for the foreseeable future, and the Receivership is doing everything it can to reduce expenditures without cutting into core healthcare areas. However, productivity has been impacted throughout the organization, and coupled with some staff turnover, certain projects and initiatives have been delayed in their [6] implementation. Due to these factors, this report will reflect extensions on some of the objectives and action item dates to fulfill the goals.

Moreover, although the Administration has made some proposals to the Legislature to reduce prison population and overcrowding (in part to address the state's budget crisis), so far, those proposals have not been embraced by the Legislature and none of them have yet been implemented. CDCR's prisons remain significantly overcrowded, and the lack of adequate facility space and appropriate beds for medical and mental health purposes continues to impede efforts to improve care.

On August 26, 2010, the Office of the Inspector General released a "Summary and Analysis of the First 17 Medical Inspections of California Prisons" ("Summary and Analysis"). In addition to summarizing the results of its first set of medical inspections, this report conducted a new "category analysis" of the data. In this analysis, OIG "sort[ed] the data from

100 key questions into five general medical categories recommended by [its] lead physician" (Summary and Analysis, p. 58). The five categories are Medication Management, Access to Providers and Services, Continuity of Care, Primary Care Provider Responsibilities and Nurse Responsibilities. (Summary and Analysis, p. 59).

The results of the category analysis show scores of 74% adherence in Continuity of Care, 74% adherence in Primary Care Provider Responsibilities, and 80% adherence in Nurse Responsibilities. The results show significantly lower adherence in the categories of Medication Management (58%) and Access to Providers and Services (60%). In explaining these lower scores, the OIG concludes that "[p]risons are ineffective at ensuring that inmates receive their medications" (Summary and Analysis, p. 62), and that "[a]ccess to providers and services is poor" (Summary and Analysis, p. 64).

The low scores in medication management and access to care require further analysis and explanation, because the low score in medication management, which is primarily a nurse function, is apparently inconsistent with the higher score for nurse responsibilities. Similarly, the low score for access to providers and services is apparently inconsistent with the results we see in the monthly reports from the health care access teams (where we have been seeing greater than 85% of scheduled appointments being met).

Upon further review of operational difficulties in the field, the primary reason for the apparent inconsistencies becomes clearer. The comparatively high score in Nurse Responsibilities reflects the fact that we have largely completed those portions of the

Turnaround Plan dealing with improving the quantity and quality of nursing staffing and making sure that we are more appropriately training our clinical staff. Notwithstanding this success, we continue to be frustrated in the category of timely administration of medications, which is primarily a responsibility of the nursing staff, because of the significant overcrowding within the prisons combined with the high frequency of overcrowding-related custody controls, such as modified programs and lockdowns, that interfere with medication management processes.

[7] Overcrowding also is a primary factor causing the comparatively low score in the Access to Providers and Services category, which essentially focuses upon the timeliness of care pursuant to CDCR policies. As we report below on Action 1.2.2, our Health Care Access teams continue to be highly effective in facilitating inmate access to scheduled appointments. However, the sheer number of inmates at each facility frustrates our efforts to meet the required timelines for access to physicians and specialty providers. There are only so many hours in the day, so many slots for appointments, and so much treatment space available to handle the population.

As the remainder of our tri-annual report indicates, and as is largely confirmed by the higher scores reported by the OIG for Continuity of Care, Primary Care Providers Responsibilities, and Nurse Responsibilities, we have made demonstrable progress in developing key aspects of a functioning system of medical care. However, the OIG scores highlight the overriding challenge of trying to provide medical care in the context of a highly overcrowded prison system where there are too many prisoners for the healthcare infrastructure, and there is a high incidence of overcrowding-related violence resulting in lockdowns and modified programs that interfere with the efficacy of the medical system.

Format of the Report

To assist the reader, this Report provides three forms of supporting data:

1. *Metrics*: Metrics that measure specific RTPA initiatives are set forth in this report with the narrative discussion of each Goal and the associated Objectives and Actions. Metrics were initially included in the Ninth Quarterly Report to the court and were also published as part of the Receiver's Turnaround Plan of Action Monthly Reports beginning in October 2008. Monthly Reports for this reporting period can be viewed at the California Prison Health Care Services (CPHCS) website (http://www.cprinc.org/receiver mo.aspx).
2. *Appendices*: In addition to providing metrics, this report also references a number of documents that are provided to the reader in the included Appendices filed concurrently with this report.
3. *Website References*: Whenever possible website references are provided to the reader.

RTPA Matrix

In an effort to provide timely and accurate progress reports on the RTPA to the Courts and other vested stakeholders, we are introducing a new format that provides activity status by enterprise, for statewide applications/programs, and by institution, as appropriate for and in coordination with that operation.

The Enterprise Project Deployment worksheet and the Institution Project Deployment worksheet provide an illustration of the progress made towards each action item outlined in the RTPA and reported in the Tri-Annual Report. The Enterprise Project Deployment worksheet captures projects specifically assigned to the Receiver for broad administrative handling.

REPORTER'S TRANSCRIPT

Wednesday, June 27th, 2007 – 10:30 Am

Re: Joint Motion Hearing On Plaintiffs Motions To Convene Three Judge Panel

---

* * * *

[18] The only one you have to decide today is the two-part test that I mentioned earlier.

JUDGE KARLTON: We are required to believe that a three judge court may be able to solve the problem. That is one of the requisites of the statute.

MR. SPECTER: Well, there would be no point in you referring it to a three judge panel if you didn't have some hope that that would be the case, but it is not a legal conclusion you have to make.

JUDGE KARLTON: All right.

MR. SPECTER: In terms of the point about whether it's the primary cause, I think, first of all, I want to make one point. And that is that the evidence is basically uncontradicted in this case.

There is not—there is not a dispute about the facts here. The inferences which one may draw from that evidence may be subject to different interpretations, but all of the evidence shows that overcrowding is a severe problem, all of the evidence shows that overcrowding is inhibiting the remedial efforts of both the courts and the Special Master and the Receiver in this case. And therefore, it is delaying the constitutional remedy.

And to my mind, if you can make that link between that it is actually causing, and I think the evidence is clear that it is, then it becomes, for legal purposes, a [19] primary cause.

And let me tell you in some sense why that is so clear. Because in these cases, which are about—we're using the word "overcrowding," but it is not exactly—it doesn't exactly fit the cases that you're presiding over.

It is true that the prisons are overcrowded in the sense that there are not enough places for people to sleep.

They've run out of beds. They've run out of room to put beds for people to sleep. But this is a case about health care services.

And in health care services cases, as you both know, the critical issues are the staffing, which is critical, and the space to support the clinical activities.

So in terms of the constitutional violations, it's in some sense a supply and demand issue. And that is you have all of these prisoners who have a certain demand for services, and the population is so great, the overcrowding is so great that the prison has not been able to supply enough services to meet that demand.

And so here—so that is a direct primary cause of the overcrowding. It's the same thing.

JUDGE KARLTON: You mean the overcrowding is a direct 3 cause of the failure to provide adequate medical and mental health care?

MR. SPECTER: Yes. Exactly.

[20] JUDGE KARLTON: You said it the other way.

MR. SPECTER: I appreciate the correction.

As both the receivers' report and Mr. Keating's report make clear, this overcrowding has also indirect effects which are inhibiting the remedy.

In Mr. Keating's report he said that there's literally not enough staff for about a third of the mentally ill population. And they've been—I don't know how many of your 70 orders were directed to staffing, but a good percentage of them over the last 15 or so years.

And in Mr. Sillen's report he questions whether there will be enough medical clinicians to staff an ever growing prison population with what they need without either bankrupting the state or taking all the doctors away from the communities, which is a scenario that nobody wants to have happen.

Does that answer your question, judge?

JUDGE HENDERSON: It does, but it only prepares me for another question.

MR. SPECTER: Okay.

JUDGE HENDERSON: You correctly stated that we must find today in this hearing whether defendant has had a reasonable amount of time to comply with previous court I orders.

Does that reasonable amount of time begin once [21] defendants are on notice that the court has found that there's overcrowding or serious overcrowding or that it is a primary cause, or is that irrelevant in our consideration?

MR. SPECTER: Well, I would say as a legal matter that it is irrelevant. It is not within the statute. But even if it were somehow—It is not within the express language of the statute certainly. Even if it was somehow implied, the evidence in the record is overwhelming that they have known that overcrowding is causing these problems for many, many, many years.

JUDGE KARLTON: But it's—Judge Henderson's question really raises a different question, I would think.

It is not a question of whether the defendants know that overcrowding has contributed in some significant way to the failure to provide constitutionally adequate care, it is a question of whether or not they know that the courts have so found.

I mean, that's the question.

Does that make any difference?

MR. SPECTER: I don't really think so. I don't—I don't think so. But even if—I mean, it is not in the language. I don't even take it from the language. But even if it were, Judge Henderson, in your order of Findings of Fact and Conclusions of Law in which you found that there was a need to appoint a Receiver, you alluded to the fact of [22] overcrowding in that order.

And I think one of the first sentences in your findings was that the prison has grown 500 percent over the last so many years. I can't remember exactly. So they're certainly on notice that you've been concerned about those issues.

And in terms of the reasonable—talking about the reasonable time, in your February 15th order you put—you said that the reasonableness of the time had to be judged in the factual context of the case, and specifically in terms of the harm that is at stake, alluding to the fact that in this case it's uncontested that one prisoner dies every six or seven—dies needlessly once every six or seven days.

And in this particular case, we have the overwhelming evidence to support the notion that a reasonable time has already passed. And Mr. Sillen's report makes clear that the remedial efforts are being significantly delayed, if not in some cases altogether prevented, from remedying the constitutional violations that exist.

Even in terms of his plan of action he says, quote: "Every element of the plan of action faces crowding-related obstacles."

And in that sense I believe that when the stakes are so high, the reasonableness of the time has to be shortened. One other point I want to make about the stakes being [23] so high flows from Judge Henderson's remarks when he was, I think, ruling from the bench or talking about the issue of the Receivership.

You said that the court's authority to remedy constitutional violations was at its highest point when the loss of life itself is a result of constitutional violations.

And I think in both of these cases we have that same point. In Coleman it's not as frequent fortunately, but it occurs in suicide after—preventable suicide after preventable suicide.

And I agree, of course, with your thought that the court's authority is at its highest when those principles of 3 life and death and serious injury are at stake.

And it is because that authority is at its highest peak that it appears to me to be a situation where if there i is a situation where the court has to take over one of the core state functions of government, in this case determining who should and should not be imprisoned, that this is it.

And I think the evidence shows that all of these all of these—none of the remedies that are reasonable will I ever be taken without court intervention.

JUDGE HENDERSON: I know this is akin to an exercise in abstraction, but indulge me.

I agree with your quoting of what I said.

MR. SPECTER: It's always a good technique.

[24] JUDGE KARLTON: It's safe to assume the judge will agree with you when you are quoting.

MR. SPECTER: I learned that a long time ago.

JUDGE HENDERSON: How do we go beyond that? So I expect the state is going to say that, yeah, but we really haven't had—We have AB 900, and we're just revving up. And you're arguing people are dying. But how do I weigh that?

Do I sit here and say: One, two, three—six days someone died?

And how many days and how many deaths are you weighing against defendants?

How do I do that?

How does Judge Karlton?

How do we say, okay, that's enough deaths?

That's an abstraction, but do you have an answer to that?

MR. SPECTER: Part of my answer was in the wisdom of the President who appointed you to the federal bench and the experience you have in making these decisions.

Our opinion as counsel for the plaintiffs is that there is no question that there are so many deaths and needless suffering and the harm is so high that it outweighs all of the efforts that the state is going to say about what plans they're going to say that will take years, years, if [25] not longer, to implement.

And it's unconscionable, I believe, for the state to have not done something immediate and instead embarked on a program of prison construction which is three, five, ten years away.

Let me just say while I'm on that point, because they will talk a lot about AB 900, which is our position that we've submitted in the briefs, but I think bears repeating here is that our position is that AB 900 will actually make the situation worse and not better.

It will make it worse because it will increase, not decrease, the number of prisoners. As I said before, this is not a case about where prisoners sleep. It's a case about the demand and supply for services.

So they're increasing the demand for services, but where's the action on the supply side?

You know, it will double the number of prisons so that there will be 32 new prisons in addition to the 30-odd ones they have already. That will make management even difficult.

It will create over 10,000 new beds. And with all of the 7.9 or 5 billion dollars the Governor is spending, all of that legislation, that big piece of legislation in that bill, and all the declarations and evidence submitted by the defendants, where is there something about staffing?

* * * *

[68] court will have to do is be much more careful about who's released and how and under what circumstances.

But that's—

MS. TILLMAN: See even—

JUDGE KARLTON: That is an issue for the three judge court, not this court. I am asking you, not telling you.

MS. TILLMAN: I would suggest, though, it indicates a dispute about causation. If only the targeted release—As Special Master Keating says, if only the targeted release of severe mentally ill inmates may actually reverse current staff and bed deficiencies and program deficiencies, then is it really the overcrowding of the entire institution that's impacting the ability to provide mental health care, or is it simply the fact that the mental health care system has not been able to come up to snuff and address the needs of the population within the *Coleman* class.

I would suggest it's the latter. And that's why you see in defendants' papers the consistent concern about the management issues that have come to play into the difficulties of establishing and implementing mental health care.

JUDGE KARLTON: I'm sorry. I don't mean to dominate.

JUDGE HENDERSON: No. No.

JUDGE KARLTON: One of the questions which I have raised and I am troubled by is whether or not this is an

TRANSCRIPT OF PROCEEDINGS

* * * *

[26] saving, like Mr. Specter did, an opportunity to respond to what other Intervenors state, that seems reasonable to the *Plata* Defendants.

MS. TILLMAN: Good afternoon. Lisa Tillman on behalf of the *Coleman* Defendants. We would join in Mr. Mello's comments regarding the Intervenors' role. Thank you.

JUDGE HENDERSON: Thank you.

MR. HUGHES: Charles Hughes, Riverside County District Attorney's Office, on behalf of the DA Intervenors.

We do not look to expand the role—the scope of these proceedings. I agree with the Court that, as DA Intervenors, we have a more narrow or limited role in the proceedings, in the sense of the types of evidence we would be presenting. We view our role and the types of evidence we would present as more of the impact on public safety, and impact on the criminal justice system.

I disagree with Plaintiffs' Counsel characterization, that that role only applies at the remedial phase, however. I believe that role is part and parcel of this Court's determination for whether there are less intrusive means available. How intrusive any prisoner-release order would actually be necessarily speaks to the issue of whether there are less intrusive means available.

So, we do view the DA Intervenors' roll as limited to impact-style evidence, but I don't see it as applying only at [27] the remedial phase.

JUDGE KARLTON: Counsel, before you move, tell me what kind of evidence you think the DAs would have, relevant to public safety or whatever, that would not be appropriate for the California Defendants to present, in a sense, preempting your presentation, if you Will.

MR. HUGHES: Well, there are many impacts that a prisoner-release order might have within any given county that the District Attorney's Office would be familiar with. Such as, the effect on the ability to timely prosecute cases within a county, if local jail inmates have to be released because our jails are overcrowded, because people who have already been sentenced to state prison can't go there.

So, for instance, an inmate goes to trial in Riverside County, gets convicted of a crime for which he must go to state prison. If the Court has put a cap on the state prison population and we are at that cap, then that inmate must stay in the Riverside County jail.

We are already under a federal cap within our jail. So there's not room in our end for the next person who gets arrested for a crime and who is now pending trial. That inmate would be out of custody. Whether that inmate has any incentive to plead guilty, or timely go to trial, is—is an issue that

D.A.'s offices would be uniquely situated to present. There are others, but that's an example.

[28] JUDGE KARLTON: Thank you.

MR. HUGHES: Any other questions? Thank you.

MS. BARLOW: Good afternoon again, Your Honor. Kimberly Hall Barlow, Jones & Mayer, on behalf of the Sheriff, Police Chiefs, Corrections, and Probation parties Intervenors.

We also believe that there are two issues on which the Intervenors, at least my client Intervenors—and I correct myself, it is actually 67 parties I represent, but I'll still only take a week—the first issue we think is also important for the Defendant Intervenors to offer evidence on, and that is—

JUDGE KARLTON: Would you move that microphone down just a bit?

MS. BARLOW: Certainly.

JUDGE KARLTON: Thank you.

MS. BARLOW: That is the issue of alternatives. For example, representing the probation officers gives us a unique opportunity to present alternatives, in terms of probation reforms, probation alternatives that could solve some of the problem, so that we don't even need to get to the issue of what might the local impacts be of a release order.

So we believe that those are issues that are uniquely able to be presented by our Sheriffs, and those people who deal with some of these—this population, both at the front end and at the back end, if you will.

[29] So, right now, you have the prison folks in the middle. We are dealing with them before they get to the prison system and after they come out of the prison system. And we have an opportunity to offer evidence both on the alternatives to the prison release or cap that's being proposed, and we have an opportunity to provide you unique evidence from different perspectives—city police chiefs, county sheriffs—on the jails, both local and county, as well

as the probation officers and corrections at the local level, in terms of impacts to the community if a release order were entered.

Frankly, Your Honors, we don't know that the State is in a position to offer all of that evidence—and since we just joined the fray, as it were, we believe that that is an important function for our role as Intervenors.

JUDGE REINHARDT: Well, you suggest you have lesser alternatives involving probation officers that you could tell us about. Such as what?

MS. BARLOW: Well, Your Honor, there are several programs that are actually underway to deal with the—the 18-to-25-year-old population; 25 percent of the in-custody population in the state prison is in that age range.

Those are the unique population that we think could be perhaps diverted out of the system so that they don't have that 70 percent recidivism rate that seems to be getting prisoners back to the system over and over again.

[30] If we can provide—

JUDGE REINHARDT: You are talking about procedures that would result in the release of prisoners?

MS. BARLOW: We are talking about both post-release probation facilities, including reentry facilities, where there's discussions happening between probation and the Sheriffs and the State, under AB 900.

But also, before they get to that system—it's worked very well in the juvenile court system, where we have reduced the juvenile population, the juvenile prison population, if you will, in the state—similar programs could be used to target this young group that is representing a rather sizable proportion of prisoners, and yet, we believe, are in a position to be diverted ut of the long-term prison population.

JUDGE REINHARDT: Thank you.

MS. BARLOW: You are welcome, Your Honor. Thank you.

MR. KAUFHOLD: Your Honor, Steve Kaufhold, from Akin, Gump, Strauss, Hauer & Feld, on behalf of the Assembly and Senate Intervenors.

There are three legal issues that we are interested in contributing to, and then one practical issue that I wanted to mention as well.

On the legal side, in terms of the arguments and possibly testimony, I believe we could provide unique and helpful testimony and information regarding AB 900, how it is [31] intended to function, and what the appropriate timing of any possible order would be.

Second, we are interested in providing testimony possibly, and certainly analysis, regarding what alternatives are open to the Court.

Third, our clients also believe that they can and should have some input with respect to the public-safety impact of any cap order or any prisoner-release order.

And finally, as a practical matter, we believe, to the extent the Court is interested in discussing some settlement of the pending litigation or some informal resolution, that there should be a place at the table for our Intervenor clients as well, and that we could be productive contributors to that process.

JUDGE KARLTON: That latter—hang on.

(Off-the-Record discussion)

JUDGE KARLTON: I want to raise an issue with you. It might be just my problem. You are not the Assembly, you are biased. They are not the Senate, they're a subset.

It may well be that under the statute, they have a right of intervention. They also have to meet a constitutional standard, of standing. Is there a problem with your—with that leg of your being the proper Intervenors?

MR. KAUFHOLD: No, I don't think there is any problem with that at all, Your Honor. I think the statute is written in

* * * *

[33] MR. KAUFHOLD: Thank you, Your Honors.

MS. FUENTES: Theresa Fuentes, from Santa Clara County.

As a preliminary matter, in the Court's September 19th order, you asked that the County Intervenors, the five counties–

JUDGE KARLTON: I'm sorry.

MS. FUENTES: Santa Clara, Santa Barbara, San Mateo, Contra Costa, and Solano—select a lead counsel to speak in these proceedings, and those five counties have agreed that Santa Clara County would be the lead counsel for these proceedings.

JUDGE HENDERSON: Thank you.

MS. FUENTES: The counties see their role in these proceedings as, as also being limited and affecting—there is substantial evidence, medical, mental health—if prisoners are released into the community, there will be housing issues to address, mental health issues to address, regular health issues, public health issues, and all of those impact on public safety.

In addition, if there are caps, at the—at the state-prison level, it would impact the local level in terms of ability to provide mental health care and medical care. If these prisoners are not able to receive that care in the state prisons, they also will not be able to receive it at the local level, either.

[34] And so, that does impact not only the—the—not only—it impacts the cause but in addition, the ability to remedy the problem.

Thank you.

JUDGE HENDERSON: Thank you, Counsel.

Any other Intervenors or—okay. Mr. Specter? MR. SPECTER: Donald Specter, for the Plaintiffs.

That was—thank you for allowing me to hear that.

That was very helpful.

I'll go down the list. The DA Intervenors, we understand, and I—we understand the relevance of the DA Intervenors wanting to present arguments and impact on public safety, as to any kind of release order. That seems relevant to us.

The other part of their comment, I think they're a little confused, maybe because the statute's a little un—well, I don't know.

But, the DAs, I think, misstated the legal standard. The alternatives to incarceration may be relevant to the remedy, but they are not relevant to whether to issue a remedy. That is, are there any other orders which could fix the medical and mental health care in the prisons that would be effective. And that's something that the State's familiar with and should defend, if there are any.

So, the DA—I think the DA's role should be limited

TRANSCRIPT OF PROCEEDINGS

San Francisco, California
Friday, June 26, 2008

* * * *

[12] Shorter, your honor. We want to reserve our right not to add evidence that is duplicative of the defendants' evidence on that point, but we do want to have the ability to reserve our right to develop independent evidence and potentially provide you with expert—independent expert evidence on that point. But I would think that would be the type of testimony—and I would be interested in hearing from my colleagues—that could be presented within a day or two by the intervenors, and that's the intervenors collectively not per intervenor.

JUDGE KARLTON: So your view is if we bifurcate, Intervenors' case taking a day or two?

MR. KAUFHOLD: Correct, Your Honor. And we absolutely want to participate in that portion should the court determine that bifurcation is appropriate.

JUDGE KARLTON: In your view—I'm sorry. I don't need to—in your view, would bifurcation lead to a more ready disposition, or would trying the whole case at once and getting the whole view a better posture?

MR. KAUFHOLD: Our clients don't have a position on that, your honor, and we're pleased to do it however you think is most appropriate. There is, of course, the possibility that you would determine that overcrowding is not the primary cause and have some economy, but I think that we're pleased to go forward however you believe is appropriate.

JUDGE KARLTON: Does anybody else have—I'm sorry,

* * * *

[14] JUDGE HENDERSON: yes.

MR. SPECTER: Anyway, that's our position.

MR. BIEN: Michael Bien on behalf of *Coleman* Plaintiffs.

I also say that some of the witnesses are going to be testifying on both issues, so I'm not sure there's going to be a lot of efficiency.

MS. KECK: Anne Keck for the Sonoma County Intervenors.

Your Honors, we believe that bifurcation may very well be appropriate, but urge the court to bifurcate—to be very clear in the bifurcation.

For example, Sonoma County Intervenors do not intend to present any evidence on the question as to whether overcrowding is the primary cause of the constitutional violation. However, the code section combines that with the issue of whether there are alternative remedies available other than a prison relief order. We believe that should be put with the remedy section, because we do believe we have evidence to put in that regard.

So it makes a difference as to how the Court bifurcates the issue, but we don't intend to present any evidence on the constitutional violation issue. Thank you.

JUDGE HENDERSON: Thank you, Counsel.

MS. FUENTES: The County Intervenors agree with [15] that.

MS. BARLOW: Kimberly Hall Barlow, Jones & Mayer, on behalf the sheriffs, police chiefs and chief probation officers.

We would concur with the legislative intervenors that we don't take a position. It's entirely up to the court. And I agree that I think we could, the intervenors, collectively could put on their evidence on the primary cause issue in a day or less. Thank you.

MR. MITCHELL: William Mitchell. We are the same position as previously stated by the other intervenors.

MS. EAST: Rochelle East for the state defendants.

JUDGE KARLTON: I'm sorry. I can't hear you.

MS. EAST: Rochelle East for the state defendants.

Likewise, we do not have a problem bifurcating the trial. We would only note there was a bit of confusion with the bifurcation and the overlap of some of those issues. That was the only thing. Thank you.

JUDGE HENDERSON: Thank you. Anyone else? Thank You.

Now let's turn to the issue of dispositive motion schedule. In particular, we would like to hear from the parties and intervenors on two issues. First, is there a need for such a schedule. And, secondly, should the court adopt plaintiffs' proposal for defendants to provide more detail

* * * *

[32] All right. We're just repeating ourselves now. Thank you.

MS. TILLMAN: Thank you.

JUDGE HENDERSON: Anyone else on the dispositive motion schedule? Okay. Thank you.

Let's turn to discovery issues. First, the court denies defendant's request to modify the magistrate judge's order regarding time to respond to discovery. That order which requires responses to discovery within 21 days of service will remain in full force and effect.

We'd like to hear from counsel on the following discovery-related issues:

One, when should the non-expert and expert discovery cutoffs be?

Secondly, why do plaintiffs need three weeks after disclosing experts to prepare expert reports?

Three, should trial witnesses be disclosed in advance by August 1st?

Four, should the court adopt defendant's proposal to prohibit additional site inspections of CDCR facilities?

Again, why don't we start with plaintiffs? Do you want me to repeat those questions? Do you have all four?

MR. SPECTER: I think so, but I'm going to bifurcate the response, if that's okay. Mike is going to take some of these.

[33] I'm just going to respond to the trial witnesses and site inspections, if you like, and I'll let Mr. Bien do the rest. On the trial witnesses, I think it would make the case go a lot faster if we could depose each other's trial witnesses.

It seems eminently reasonable, and it seems to me the defendants are close to our position in that they say that they don't disagree with that, they just would limit the depositions to only those people that they designate as trial witnesses, which is clearly not appropriate, because it would hide evidence. So we think that's an order that will be in the court's best interest and in the parties' best interest.

As to the site inspections, our position is that we were ready to go to trial after the site inspections were conducted. They were conducted in the fall of last year. And, as you recall, there was a February trial date, and we were ready to go to trial on the issue of the primary cause of overcrowding as of February of this year. We're still ready, just as long as the delay that's occasioned wouldn't prejudice us, our ability to make the appropriate record.

So in the sense that if the defendants are not going to come at some point, or the intervenors are not going to come at some point and say, well, everything's changed, you know, what they saw then is different than what it is now, then we're fine, we don't need any site inspections, and we think the [34] Experts' got enough of a sense of the prisons at that time to give the court—they've all written their reports. I don't think they've been filed, but they have been given to the other side which provide all the evidence. If we do the site inspections, we will have to redo those over again, and it will be a fair amount of work.

So our preference would be not to duplicate it, because it's expensive and it's already been done, but we don't want to get sandbagged later. That's all.

JUDGE HENDERSON: Mr. Bien.

MR. BIEN: I'll address the other two questions.

In terms of the idea of disclosing the names of our experts and their identities and then having a period of time before they file their reports, I think the idea, and we thought that was a good idea, in terms of letting everyone get experts together and know what topics are at issue so we don't have—less of a need for rebuttal kind of experts, sort of you know who the experts are and the reports are coming before their depositions. It's more just a matter of convenience and efficiency rather than any dire necessity.

In terms of the discovery cutoffs, we feel that the dates suggested by both the intervenors and defendants are extremely limiting, especially in light of the stay that was in effect for the last thirty days. We served little or no discovery since February. There's been just some clean-up on [35] matters that were hanging, and we have done no discovery of the intervenors, other than something that was filed well before the first stay. And the odds of us being able to serve discovery on Monday and get answers and finish everything in 45 days is very limited.

We, of course, will expedite everything, but our experience is there is going to need to be more time than that, given the kinds of objections and normal kind of process that happens.

Very little phase two discovery was done, as you recall, and we really, in the interest of the settlement process, held back and didn't do discovery during that period, even while discovery was open. We did some clean up of things that were hanging and finished some of the motions that were pending before magistrate judge moulds.

JUDGE HENDERSON: Thank you. Counsel for CCPOA.

MS. LEONARD: Yes, thank you, Your Honors.

We took no position as to your questions relating to expert discovery, but we would stand with plaintiffs in stating that it would be a convenience to all of the parties in terms of scheduling on this expedited schedule to do—to identify trial witnesses in advance. We do have a limited time. We want to keep the limited time. We all want to get to trial on the 17th. I think it would be a matter of extreme efficiency.

With respect to site visits, of course, every day is [36] a site visit for us, and we would take no position.

JUDGE HENDERSON: Let me make sure I understood you. It would be an inconvenience to disclose witnesses in advance?

MS. LEONARD: No, no, Your Honor. On the contrary, it would be a convenience to disclose them to expedite the discovery schedule and deposition.

MS. EAST: Your Honor, Defendants' position in particular is that the percipient and paper discovery, that that cutoff be sooner, ideally, versus the date we proposed, which I believe is August 15th. The reason for that is, like plaintiffs, we, too, are really gearing up and going into a pretrial mode. Our feeling is that, especially with that twenty-day discovery turnaround, that six weeks of further discovery—and, as you know, a great deal has already taken place—that should be enough to get us to where we need to go.

We believe the time spent after the close of that kind of discovery is better spent preparing the testimony by affidavit, preparing the court's binders, authenticating documents, for example, those sorts of things. So while certainly we believe that schedule the defendants proposed is certainly one that we'd offer. The date in particular, we feel, is appropriate is to have that discovery cutoff in the middle of august rather than later.

As far as the expert testimony—again, there's [37] probably some room, and we're probably closer to plaintiffs, and certainly—we would certainly be willing to give there. That's not our issue, not like the prior one.

Again, the trial witnesses, we are happy to disclose those. But, again, our position is that the depositions be limited to those who—that we depose the trial witnesses and start really focusing this discovery. Our position is conducting discovery in order to get potentially more discovery, that that time has probably come and gone, and, certainly, we've produced a great deal of discovery to that end.

JUDGE KARLTON: May I inquire?

The plaintiffs say that they've got to do visitations, because they fear that the defendants are going to argue that any position that they take is out of—is no longer—things have changed. Are your clients willing to stipulate that the testimony presented by the plaintiffs will not be attacked as being out of date? Do you understand my question?

MS. EAST: I do, Your Honor. The problem is that the receiver is out there, and the *Coleman* master is out there. To the extent the receiver, for example, is doing things every single month—

JUDGE KARLTON: So the answer is no?

MS. EAST: I think the answer is no.

[38] JUDGE KARLTON: So then what we have to do in order to ensure we have current testimony—I ask you, not tell you—I'm sort of asking you, anyway—is let them go, because otherwise they're out of date?

JUDGE HENDERSON: If they leave that trap open and don't come in prepared—

MS. EAST: It is. It's—certainly, plaintiffs are obviously entitled to be prepared. There's no question about that.

On the other hand, what we have done are numerous site inspections. And, for example, plaintiffs' expert was out just this past month in conjunction with the settlement procedures. At some point there must be some cutoff with the site inspections.

JUDGE REINHARDT: What is the date you stop introducing changes?

MS. EAST: I think we can come to a date such as that, Your Honor, no question, because, absolutely, otherwise, it's just always changing.

JUDGE REINHARDT: So the order would not be no further site inspections, it would be after the date on which you agree that's the last time that you would say that the evidence is relevant?

MS. EAST: Agreed.

JUDGE REINHARDT: I think that, rather than just [39] have an order now, you and the plaintiffs should get together on a date.

MS. EAST: I think that's reasonable. Yes, Your Honor.

JUDGE HENDERSON: Anything further?

MS. EAST: Not from me, unless there's any questions.

JUDGE HENDERSON: Thank you.

Anyone else from Defendants or Intervenors?

MR. KAUFHOLD: Your Honor, Steve Kaufhold for the Legislator Intervenors.

I just want to underscore the point that was made about the need to have, obviously, a date certain, as you pointed out, Judge Reinhardt, but we need to base whatever decision the court makes on current or as-close-to-current information as we can, in our opinion.

We think it wouldn't do the Court, the parties, or the public any service to be talking about making a decision of the importance and magnitude that you are based on what the state of play was a year ago or months ago.

So, we think it's important, and if that means leaving open some avenues of discovery to the plaintiffs, then that's what needs to be done.

JUDGE REINHARDT: It's a proposal by the state to cut it off. So if you want to leave it open the whole time—

* * * *

[41] the cutoff date after which no evidence about subsequent changes would be appropriate?

MR. KAUFHOLD: Yes, Your Honor. Our point is that should be a date closer in time to our trial date, number one. And then number two, in the meantime, there should be reasonable limitations on the site visits, the same way there would be on any discovery, with the understanding that it would be expensive and intrusive. Our point is just there shouldn't be a deadline set in the past for stale evidence presented to the court.

JUDGE REINHARDT: I'm going to ask you a question you may not have thought of. What should that date be, from your point of view? If you are prepared to say, "I'm not prepared," that's fair enough.

MR. KAUFHOLD: I'm not prepared, but I'm going to answer you anyway. I would think something more toward the end of the summer would be appropriate, as opposed to freezing the state of the record now.

JUDGE KARLTON: The end of August?

MR. KAUFHOLD: Something more like that. Thank you, your Honors.

JUDGE HENDERSON: Thank you, Counsel.

Any other comments on that topic? Okay. I've come to the end of my questions. Do either of you have any questions you want to put to counsel?

TRANSCRIPT OF PROCEEDINGS

* * * *

[6] behalf of the *Coleman* defendants. Also here on behalf of the *Coleman* defendants are Connie LeLouis

and Danielle O'Bannon, from the Attorney General's office. Thank you.

MR. MITCHELL: Good afternoon. William Mitchell, with the District Attorney Intervenors.

MS. BARLOW: Good afternoon, your Honors. Kimberly Hall Barlow, on behalf of the 67 Law Enforcement Intervenors: sheriffs, police chiefs, chief probation officers.

MS. KECK: Good afternoon, your Honors. Anne Keck, Deputy County Counsel, on behalf of the Sonoma County Intervenors.

MS. FUENTES: Good afternoon, your Honor. Theresa Fuentes, on behalf of Santa Clara County, and also as lead counsel for the County Intervenors.

MR. KAUFHOLD: Good afternoon, your Honor. Steve Kaufhold, from Akin, Gump, Strauss, Hauer, & Feld, for the Legislative Intervenors. I think we're all right.

JUDGE HENDERSON: Okay. Good afternoon.

Welcome. We're going to begin. As you can see, Judge Karlton is in Sacramento, and is appearing by video.

We're going to begin with rulings on the motions *in limine*. And those rulings are as follows. And we will not be following up with written explanations of these rulings.

Plaintiffs' motion *in limine* number one is granted as [7] to the exclusion of witnesses from the courtroom and the provision of transcripts to witnesses who have not yet testified. The motion is denied as to the provision of filed testimony to witnesses.

Plaintiffs' motion *in limine* number seven is granted as to Mr. McIntosh's testimony regarding the survey. As to Mr. McIntosh's testimony of the rate of disease, the motion is denied if such testimony is based on the PPIC report, but is otherwise granted.

Defendants' motion *in limine* number six to exclude evidence of settlement discussions is granted.

This ruling shall also extend to exclude the referee's report from evidence.

Defendants' motion in limine number 13 to limit the trial testimony of Dr. Beard to the scope of his deposition is granted.

The motion to exclude testimony by Mr. Hennessee is denied.

The Law Enforcement Intervenors' motion *in limine* regarding the testimony of Dr. Austin is denied, except that plaintiffs may not introduce evidence of any analysis by Dr. Austin of the documents relied on by Mr. Dyer and by Mr. Powers that Dr. Austin performed after his deposition.

All other motions *in limine* are denied.

As to the parties' motions to exclude hearsay from

* * * *

[28] Say it five different times in five different ways, is the thing that slows—

And I'm not just talking about the intervenors. Plaintiffs do it, too. And they make their point.

And it's our plan to say, "Asked and answered. We've heard it." And we will be pushing that. And I think that will move the trial along, so be ready for that.

Make your point. Assume that all three of us heard it. And, if not, one of us heard it. And if not, our law clerk will hear it and tell us about it. So I think that will move things along faster.

I'm going to go over one more point. And then I will go to plaintiffs' table to see if there are any other housekeeping matters or other matters we need to discuss, and then do the same thing with defendants and intervenors.

The other thing—let me—we will now hear evidence on whether defendants are in Constitutional compliance. There was a request for a ruling on that. Any such arguments are simply not for this Court to consider, and would instead be properly presented to the individual *Plata* and *Coleman* courts.

The role of this Court is to determine first whether overcrowding is a primary cause of the Constitutional violations at issue in both *Plata* and *Coleman*; and secondly, if so, whether a prisoner release order is appropriate. So we [29] will not be hearing any evidence on whether defendants are in Constitutional compliance.

And, with that, let me ask if there are any additional matters we need to discuss or cover today. First, plaintiffs.

MR. BIEN: We've tried to work through most of our procedural things.

One issue that we wanted—I think everyone wanted to raise with the Court is dealing with deposition excerpts, and how—what process should be undertaken.

We had thought we had an agreement on it between us, and apparently we do not; but we have submitted deposition excerpts. And is there a schedule for objections to those? And how would the—does the—how does the Court want them addressed in terms of physically providing the pages to the Court, or a list of the pages? Just the procedure of it.

MS. JOHNSON: Well, good afternoon, your Honor. Anne Johnson, on behalf of the defendants.

JUDGE HENDERSON: Mm-hm.

MS. JOHNSON: We designated three depositions. They have designated 44. So we would ask—

JUDGE KARLTON: I'm sorry. I can't hear you, ma'am.

MS. JOHNSON: The defendants designated three depositions, and plaintiffs have designated 44. So the defendants would ask for some time to work through objections

Proclamation

REI

10/04/2006 Print Version

Prison Overcrowding State of Emergency Proclamation

PROCLAMATION
by the
Governor of the State of California

WHEREAS, the California Department of Corrections and Rehabilitation (CDCR) is required by California law to house inmates committed to state prison; and

WHEREAS, various trends and factors, including population increases, parole policies, sentencing laws, and recidivism rates have created circumstances in which the CDCR is now required to house a record number of inmates in the CDCR prison system, making the CDCR prison system the largest state correctional system in the United States, with a total inmate population currently at an all-time high of more than 170,000 inmates; and

WHEREAS, due to the record number of inmates currently housed in prison in California, all 33 CDCR prisons are now at or above maximum operational capacity, and 29 of the prisons are so overcrowded that the CDCR is required to house more than 15,000 inmates in conditions that pose substantial safety risks, namely, prison areas never designed or intended for inmate housing, including, but not limited to, common areas such as prison gymnasiums, dayrooms, and program rooms, with approximately 1,500 inmates sleeping in triple-bunks; and

WHEREAS, the current severe overcrowding in 29 CDCR prisons has caused substantial risk to the health and safety of the men and women who work inside these prisons and the inmates housed in them, because:

With so many inmates housed in large common areas, there is an increased, substantial risk of violence, and greater difficulty controlling large inmate populations.

[2] With large numbers of inmates housed together in triple-bunks, there is an increased, substantial risk for transmission of infectious illnesses.

The triple-bunks and tight quarters create line-of-sight problems for correctional officers by blocking views, creating an increased, substantial security risk.

WHEREAS, the current severe overcrowding in these 29 prisons has also overwhelmed the electrical systems and/or wastewater/sewer systems, because those systems are now often required to operate at or above the maximum intended capacity, resulting in an increased, substantial risk to the health and safety of CDCR staff, inmates, and the public, because:

Overloading the prison electrical systems has resulted in power failures and blackouts within the prisons, creating increased security threats. It has also damaged fuses and transformers.

Overloading the prison sewage and wastewater systems has resulted in the discharge of waste beyond treatment capacity, resulting in thousands of gallons of sewage spills and environmental contamination.

And when the prisons "overdischarge" waste, bacteria can contaminate the drinking water supply, putting the public's health at an increased, substantial risk.

WHEREAS, overloading the prison sewage and water systems has resulted in increased, substantial risk of damage to state and privately owned property and has resulted in multiple fines, penalties and/or notices of violations to the CDCR related to wastewater/sewer system overloading such as groundwater contamination and environmental pollution; and

WHEREAS, overcrowding causes harm to people and property, leads to inmate unrest and misconduct reduces or eliminates programs, and increases recidivism as shown within this state and in others; and

WHEREAS, in addition to all of the above, in the 29 prisons with severe overcrowding, the following circumstances exist:

Avenal State Prison has an operational housing capacity of 5,768 inmates, but it currently houses 7,422 inmates, with 1,654 inmates housed in areas designed for other purposes. At the same time, in the last year, there were 64 incidents of assault/battery by inmates — 31 of them against CDCR staff — along with 15 riots/melees, and 27 weapon confiscations.

The California Correctional Center has an operational housing capacity of 5,724 inmates, but it currently houses 6,174 inmates, with 450 inmates housed in areas designed for other purposes. At the same time, in the last year, there were 128 incidents of assault/battery by inmates — 16 of them against CDCR staff — along with 34 riots/melees, and 21 weapon confiscations.

[3] The California Correctional Institution has an operational housing capacity of 4,931, but it currently houses 5,702 inmates, with 771 inmates housed in areas designed for other purposes. At the same time, in the last year, there were 125 incidents of assault/battery by inmates — 79 of them against CDCR staff — along with 5 riots/melees, and 57 weapon confiscations.

Centinela State Prison has an operational housing capacity of 4,368, but it currently houses 4,956 inmates, with 588 inmates housed in areas designed for other purposes. At the same time, in the last year, there were 141 incidents of assault/battery by inmates — 30 of them against CDCR staff — along with 10 riots/melees, and 151 weapon confiscations.

The California Institution for Men has an operational housing capacity of 5,372, but it currently houses 6,615 inmates, with 1,243 inmates housed in areas designed for other purposes. At the same time, in the last year, there were 170 incidents of assault/battery by inmates — 57 of them against CDCR staff — along with 21 riots/melees, and 47 weapon confiscations.

The California Institution for Women has an operational housing capacity of 2,228, but it currently houses 2,624 inmates, with 396 inmates housed in areas designed for other purposes. At the same time, in the last year, there were 65 incidents of assault/battery by inmates — 26 of them against CDCR staff and 6 weapon confiscations.

The California Men's Colony has an operational housing capacity of 6,294, but it currently houses 6,574 inmates, with 280 inmates housed in areas designed for other purposes. At the same time, in the last year, there were 151 incidents of assault/battery by inmates — 33 of them against CDCR staff — along with 11 riots/melees, and 29 weapon confiscations.

The California State Prison at Corcoran has an operational housing capacity of 4,954, but it currently houses 5,317 inmates, with 363 inmates housed in areas designed for other purposes. At the same time, in the last year, there were 147 incidents of assault/battery by inmates — 58 of them against CDCR staff — along with 5 riots/melees, and 111 weapon confiscations.

The California Rehabilitation Center has an operational housing capacity of 4,660, but it currently houses 4,856 inmates, with 196 inmates housed in areas designed for other purposes. At the same time, in the last year, there were 65 incidents of assault/battery by inmates — 28 of them against CDCR staff — 9 riots/melees, and 34 weapon confiscations.

The Correctional Training Facility has an operational housing capacity of 6,157, but it currently houses 7,027 inmates, with 870 inmates housed in areas designed for other purposes. At the same time, in the last year, there were 85 incidents of assault/battery by inmates — 26 of them against CDCR staff — along with 9 riots/melees, and 27 weapon confiscations.

Chuckawalla Valley State Prison has an operational housing capacity of 3,443, but it currently houses 4,292 inmates, with 849 inmates housed in areas designed for other purposes. At the same time, in the last year, there were 50 incidents of assault/battery by inmates — 11 of them against CDCR staff — along with 5 riots/melees, and 21 weapon confiscations.

[4] Deuel Vocational Institution has an operational housing capacity of 3,115, but it currently houses 3,911 inmates, with 796 inmates housed in areas designed for other purposes. At the same time, in the last year, there were 114 incidents of assault/battery by inmates — 54 of them against CDCR staff — along with 7 riots/melees, and 37 weapon confiscations.

High Desert State Prison has an operational housing capacity of 4,346, but it currently houses 4,706 inmates, with 360 inmates housed in areas designed for other purposes. At the same time, in the last year, there were 351 incidents of assault/battery by inmates — 44 of them against CDCR staff — along with 6 riots/melees, and 289 weapon confiscations.

Ironwood State Prison has an operational housing capacity of 4,185, but it currently houses 4,665 inmates, with 480 inmates housed in areas designed for other purposes. At the same time in the last year, there were 96 incidents of assault/battery by inmates — 19 of them against CDCR staff — along with 14 riots/melees, and 52 weapon confiscations.

Kern Valley State Prison has an operational housing capacity of 4,566, but it currently houses 4,686 inmates, with 120 inmates housed in areas designed for other purposes. At the same time in the last year, there were 146 incidents of assault/battery by inmates — 60 of them against CDCR staff — along with 10 riots/melees, and 46 weapon confiscations.

The California State Prison at Los Angeles has an operational housing capacity of 4,230, but it currently houses 4,698 inmates, with 468 inmates housed in areas designed for other purposes. At the same time, in the last year, there were 211 incidents of assault/battery by inmates — 123 of them against CDCR staff — along with 4 riots/melees, and 101 weapon confiscations.

Mule Creek State Prison has an operational housing capacity of 3,197, but it currently houses 3,929 inmates, with 732 inmates housed in areas designed for other purposes. At the same time in the last year there were 65 incidents of assault/battery by inmates — 35 of them against CDCR staff — along with 1 riot/melee, and 28 weapon confiscations.

North Kern State Prison has an operational housing capacity of 5,189, but it currently houses 5,365 inmates, with 176 inmates housed in areas designed for other purposes. At the same time, in the last year, there were 135 incidents of assault/battery by inmates — 43 of them against CDCR staff — along with 16 riots/melees, and 70 weapon confiscations.

Pelican Bay State Prison has an operational housing capacity of 3,444, but it currently houses 3,604 inmates, with 160 inmates housed in areas designed for other purposes. At the same time, in the last year, there were 256 incidents of assault/battery by inmates — 88 of them against CDCR staff — along with 9 riots/melees, and 106 weapon confiscations.

Pleasant Valley State Prison has an operational housing capacity of 4,368, but it currently houses 5,112 inmates, with 744 inmates housed in areas designed for other purposes. At the same time, in the last year, there were 205 incidents of assault/battery by inmates — 59 of them against CDCR staff — along with 12 riots/melees, and 26 weapon confiscations.

[5] The Richard J. Donovan Correctional Facility has an operational housing capacity of 4,120, but it currently houses 4,720 inmates, with 600 inmates housed in areas designed for other purposes. At the same time, in the last year, there were 244 incidents of assault/battery by inmates — 118 of them against CDCR staff — along with 11 riots/melees, and 96 weapon confiscations.

The California State Prison at Sacramento has an operational housing capacity of 2,973, but it currently houses 3,213 inmates, with 240 inmates housed in areas designed for other purposes. At the same time, in the last year, there were 264 incidents of assault/battery by inmates — 159 of them against CDCR staff — along with 5 riots/melees, and 118 weapon confiscations.

The California Substance Abuse Treatment Facility and State Prison at Corcoran has an operational housing capacity of 6,360, but it currently houses 7,593 inmates, with 1,233 inmates housed in areas designed for other purposes. At the same time, in the last year, there were 120 incidents of assault/battery by inmates — 53 of them against CDCR staff — along with 20 riots/melees, and 124 weapon confiscations.

The Sierra Conservation Center has an operational housing capacity of 5,657, but it currently houses 6,107 inmates, with 450 inmates housed in areas designed for other purposes. At the same time, in the last year, there were 61 incidents of assault/battery by inmates — 18 of them against CDCR staff — along with 19 riots/melees, and 50 weapon confiscations.

The California State Prison at Solano has an operational housing capacity of 5,070, but it currently houses 5,858 inmates, with 788 inmates housed in areas designed for other purposes. At the same time, in the last year, there were 60 incidents of assault/battery by inmates — 26 of them against CDCR staff — along with 4 riots/melees, and 114 weapon confiscations.

San Quentin State Prison has an operational housing capacity of 4,933, but it currently houses 5,183 inmates, with 287 inmates housed in areas designed for other purposes. At the same time, in the last year, there were 262 incidents of assault/battery by inmates — 123 of them against CDCR staff — along with 15 riots/melees, and 118 weapon confiscations.

Salinas Valley State Prison has an operational housing capacity of 4,200, but it currently houses 4,680 inmates, with 480 inmates housed in areas designed for other purposes. At the same time, in the last year, there were 181 incidents of assault/battery by inmates — 82 of them against CDCR staff — along with 7 riots/melees, and 91 weapon confiscations.

Valley State Prison for Women has an operational housing capacity of 3,902, but it currently houses 3,958 inmates, with 56 inmates housed in areas designed for other purposes. At the same time, in the last year, there were 125 incidents of assault/battery by inmates — 75 of them against CDCR staff — and 15 weapon confiscations.

Wasco State Prison has an operational housing capacity of 5,838, but it currently houses 6,098 inmates, with 260 inmates housed in areas designed for other purposes. At the same time, in the last year, there were 226 incidents of assault/battery by inmates — 97 of them against CDCR staff — along with 32 riots/melees, and 82 weapon confiscations.

[6] WHEREAS, some of these 29 severely overcrowded prisons may even be housing more inmates, because the inmate population continually fluctuates among the CDCR prisons; and

WHEREAS, in addition to the 1,671 incidents of violence perpetrated in these 29 severely overcrowded prisons by inmates against CDCR staff last year, and the 2,642 incidents of violence perpetrated in these prisons on inmates by other inmates in the last year, the suicide rate in these 29 prisons is approaching an average of one per week; and

WHEREAS, the federal court in the Coleman case found mental-health care in CDCR prisons to be below federal constitutional standards due in part to the lack of appropriate beds and space; and

WHEREAS, the use of common areas for inmate housing has severely modified or eliminated certain inmate programs in the 29 prisons with severe overcrowding; and

WHEREAS, the severe overcrowding has also substantially limited or restricted inmate movement, causing significantly reduced inmate attendance in academic, vocational, and rehabilitation programs; and

WHEREAS, overcrowded prisons in other states have experienced some of the deadliest prison riots in American history, including:

In 1971, the nation's deadliest prison riot occurred in Attica, New York, resulting in the death of 43 people. On the day of this riot, the prison — which was built for 1600 — housed approximately 2,300 inmates.

In 1981, a riot occurred in the New Mexico State Penitentiary. More than 30 inmates were killed, more than 100 people were injured, and 12 officers were taken hostage, some of whom were beaten, sexually assaulted, and/or raped. On the day of this riot, the prison — which was built for 900 — housed approximately 1,136 inmates.

In 1993, a riot occurred in Lucasville, Ohio. One officer was murdered, four officers were seriously injured, and nine inmates were killed. On the day of this riot, the prison — which was built for 1600 — housed approximately 2,300 inmates.

WHEREAS, I believe immediate action is necessary to prevent death and harm caused by California's severe prison overcrowding; and

WHEREAS, because of the housing shortage in CDCR prisons, the CDCR has current contracts with four California counties to house 2,352 additional state inmates in local adult jails, but [7] this creates the following overcrowding problem in the county jails:

According to a report by the California State Sheriffs' Association in June 2006, adult jails recently averaged a daily population of approximately 80,000 inmates. On a typical day, the county jails lacked space for more than 4,900 inmates across the state.

Based on the same report, 20 of California's 58 counties have court-imposed population caps resulting from litigation brought by or on behalf of inmates in crowded jails and another 12 counties have self-imposed caps.

Most of California's jail population consists of felony inmates, but when county jails are full, someone in custody must be released before a new inmate can be admitted.

The 2006 Sheriffs' Association report states that last year, 233,388 individuals statewide avoided incarceration or were released early into local communities because of the lack of jail space.

WHEREAS, overcrowding conditions are projected to get even worse in the coming year, to the point that the CDCR expects to run out of all common area space to house prisoners in mid-2007, and will be unable to receive any new inmates; and

WHEREAS, in January 2006, I proposed $6 billion in the Strategic Growth Plan to help manage inmate population at all levels of government by increasing the number of available local jail beds and providing for two new prisons and space for 83,000 prisoners to address California's current and future incarceration needs; and

WHEREAS, the California Legislature failed to act upon this proposal; and

WHEREAS, in March 2006, a proposal was submitted as part of my 2006-07 budget to enable the CDCR to contract for a total of 8,500 beds in community correctional facilities within the state; and

WHEREAS, the California Legislature denied this proposal; and

WHEREAS, on June 26, 2006, I issued a proclamation calling the Legislature into special session because I believed urgent action was needed to address this severe problem in California's prisons, and I wanted to give the Legislature a further opportunity to address this crisis; and

WHEREAS, the CDCR submitted detailed proposals to the Legislature to address the immediate and longer-term needs of the prison system in an effort resolve the overcrowding crisis; and

[8] WHEREAS, the California Legislature failed to adopt the proposals submitted by the CDCR, and also failed to adopt any proposals of its own; and

WHEREAS, in response, my office directed the CDCR to conduct a survey of certain inmates in California's general population to determine how many might voluntarily transfer to out-of-state correctional facilities; and

WHEREAS, the CDCR reports that more than 19,000 inmates expressed interest in voluntarily transferring to a correctional facility outside of California; and

WHEREAS, the overcrowding crisis gets worse with each passing day, creating an emergency in the California prison system.

NOW, THEREFORE, I, ARNOLD SCHWARZENEGGER, Governor of the State of California, in light of the aforementioned, find that conditions of extreme peril to the safety of persons and property exist in the 29 CDCR prisons identified above, due to severe overcrowding, and that the magnitude of the circumstances exceeds the capabilities of the services, personnel, equipment, and facilities of any geographical area in this state. Additionally, the counties within the state are harmed by this situation, as the inability to appropriately house inmates directly impacts local jail capacity and the early release of felons. This crisis spans the eastern, western, northern, and southern parts of the state and compromises the public's safety, and I find that local authority is inadequate to cope with the emergency. Accordingly, under the authority of the California Emergency Services Act, set forth at Title 2, Division 1, Chapter 7 of the California Government Code, commencing with section 8550, I hereby proclaim that a State of Emergency exists within the State of California's prison system.

Pursuant to this proclamation:

I. The CDCR shall, consistent with state law and as deemed appropriate by the CDCR Secretary for the sole purpose of immediately mitigating the severe overcrowding in these 29 prisons and the resulting impacts within California, immediately contract for out-of-state correctional facilities to effectuate voluntary transfers of California prison inmates to facilities outside of this state for incarceration consisting of constitutionally adequate housing, care, and programming.

II. The CDCR Secretary shall, after exhausting all possibilities for voluntary transfers of inmates, and in compliance with the Interstate Corrections Compact and the Western Interstate Corrections Compact, and as he deems necessary and appropriate to mitigate this emergency, effectuate involuntary transfers of California prison inmates, based on criteria set forth below, to institutions in other states and those of the federal government for incarceration consisting of constitutionally adequate housing, care, and programming. In such instance, because strict compliance with California Penal Code sections 11191 and 2911 would prevent, hinder, or delay the mitigation of the severe overcrowding in these prisons, applicable provisions of these statutes are suspended to the extent necessary to enable the CDCR to transfer adult inmates, sentenced under California law, to institutions in other states and those of the federal government without consent. This suspension is limited to the scope and duration of this emergency.

A. The CDCR Secretary shall prioritize for involuntary transfer the inmates who meet the following [9] criteria:

1. Inmates who: (a) have been previously deported by the federal government and are criminal aliens subject to immediate deportation; or (b) have committed an aggravated felony as defined by federal statute and are subject to deportation.

2. Inmates who are paroling outside of California.

3. Inmates who have limited or no family or supportive ties in California based on visitation records and/or other information deemed relevant and appropriate by the CDCR Secretary.

4. Inmates who have family or supportive ties in a transfer state.

5. Other inmates as deemed appropriate by the CDCR Secretary.

B. No person under commitment to the Division of Juvenile Justice may be considered for such transfer.

III. The CDCR Secretary shall, before selecting any inmate for transfer who has individual medical and/or mental-health needs, consult with the court-appointed Receiver of the CDCR medical system and/or the court-assigned Special Master in the *Coleman* mental-health case, depending on the healthcare needs of the inmate, to determine whether a transfer would be appropriate.

IV. The CDCR Secretary shall, before effectuating any inmate transfer, carefully and thoroughly evaluate all appropriate factors, including, but not limited to, the cost-effectiveness of any such transfer and whether an inmate selected for transfer has any pending appeals or hearings that may be impacted by such transfer.

V. The CDCR shall, as deemed appropriate by the CDCR Secretary, contract for facility space, inmate transportation, inmate screening, the services of qualified personnel, and/or for the supplies, materials, equipment, and other services needed to immediately mitigate the severe overcrowding and the resulting impacts within California. Because strict compliance with the provisions of the Government Code and the Public Contract Code applicable to state contracts would prevent, hinder, or delay the mitigation of the severe overcrowding in these prisons, applicable provisions of these statutes, including, but not limited to, advertising and competitive bidding requirements, are suspended to the extent necessary to enable the CDCR to enter into such contracts as expeditiously as possible. This suspension is limited to the scope and duration of this emergency.

I FURTHER DIRECT that as soon as hereafter possible, this proclamation be filed in the Office of the Secretary of State and that widespread publicity and notice be given of this proclamation.

[Seal] IN WITNESS WHEREOF I have hereunto set my hand and caused the Great Seal of the State of California to be affixed this 4th day of October 2006.

ARNOLD SCHWARZENEGGER

Governor of California

James E. Tilton
Secretary
California Department of Corrections and Rehabilitation

K.W.Prunty
Undersecretary, Operations
California Department of Corrections and Rehabilitation

Marisela Montes
Chief Deputy Secretary
California Department of Corrections and Rehabilitation

June 2007

* * * *

[vii] Executive Summary

Research shows that correctional programs reduce recidivism by changing offender behavior. However, research also shows that to achieve positive outcomes, correctional agencies must provide rehabilitation programs to the appropriate participants in a manner consistent with evidence-based programming design. California has been offering rehabilitation programs to its adult offenders for over 50 years; yet California's adult offender recidivism rate is one of the highest in the nation. Clearly something is wrong. Either something is preventing the programs from achieving their intended effects or something is wrong with the programs themselves.

The Panel believes that both explanations are true. First, a combination of various factors has caused these programs to be less effective than they should be in reducing criminal behavior. These factors, which must be resolved before California can have any hope of achieving rehabilitation programming success, include dangerous overcrowding (that makes prisons unsafe and reduces space to run programs) and lack of incentives for offenders to participate in rehabilitation programming. Second, the California Department of Corrections and Rehabilitation (CDCR) does not offer enough quality rehabilitation programs to its adult offenders, and it currently assigns offenders to programming in a way that all but ensures that most offenders will not get to the programs they really need.

The Panel

The CDCR created the Expert Panel on Adult Offender Reentry and Recidivism Reduction Programs (the Panel) in response to authorization language placed in the Budget Act of 2006-2007. The Legislature directed the CDCR to contract with correctional program experts to complete an assessment of California's adult prison and parole programs designed to reduce recidivism. Additionally, the CDCR tasked the Panel to provide it with recommendations for improving the programming in California's prison and parole system. This Panel of nationally recognized experts in the field of corrections includes experienced correctional agency administrators and leading academic researchers.

The Roadmap

This Report to the California State Legislature: A Roadmap for Effective Offender Programming in California provides an assessment of the state of correctional programming in California's adult prison and parole systems. This report also includes recommendations intended to guide California in creating a model rehabilitation programming system. The word system is emphasized to underscore the fact that the external environment plays an important role in determining the outcomes of rehabilitation programs. In other words, the activities that occur in the cellblocks, institutional common areas, parole offices, and communities either diminish or enhance the changes offenders make as a result of their rehabilitation programs.

The essential test for each of the Panel's recommendations is: Is it evidence-based? In the Panel's view, "evidence" comes from research and experience. The Panel presents recommendations based on research that represents a broad range of disciplines including rehabilitation, education, corrections administration, psychology, and organizational development. On the experience side, the Panel's recommendations include proposals that within the profession are regarded as best and promising practices and are being used by corrections agencies in other states that have faced situations and challenges similar to California's.

[viii] The target audience of this report is a mixture of policymakers in the legislative and executive branches of California government, as well as practitioners within and outside the CDCR. California's leaders will enhance the value of this report to the extent that they share it with the citizens of California, who are the true stakeholders for what happens in CDCR prisons and parole offices.

External Factors Preventing Programming Success

Beginning in 1976, with the passage of California's Determinate Sentencing Act (DSL), the state began a thirty-year cycle of increasingly stringent "tough on crime" laws. In fact, during this time frame, Californians enacted 80 sentencing laws (Little Hoover Commission, 2007). These laws, like California's "Three Strikes and You're Out" ballot initiative (Proposition 184), resulted in more and more people being sentenced to state prison terms for longer periods of time. In 2005, the California Department of Corrections (CDC) changed its mission to include rehabilitation and was renamed the California Department of Corrections and Rehabilitation (CDCR). But, by that time California's external legal environment had created two significant barriers to the CDCR's internal rehabilitation efforts:

- California's prisons are dangerously overcrowded.
- California treats offenders who complete rehabilitation programs nearly the same way it treats those who do not.

Dangerous Overcrowding

At the time of this report, the CDCR was housing 172,385 prisoners in facilities designed to hold 100,000. The CDCR was housing more than 18,000 of those prisoners in space designed for programming and other activities. The other side of the overcrowding coin is that when wardens implement security lockdowns, they usually shut down all programming in the affected areas. Not only is this disruptive to programming but, the Panel believes the number and duration of lockdowns in California prisons is excessive. (The Panel provides specific space and safety recommendations in Appendix F) In parole offices, space is limited for programming. In some cases this requires the CDCR to offer programming in off-site facilities that are less accessible to parolees and are often crowded themselves.

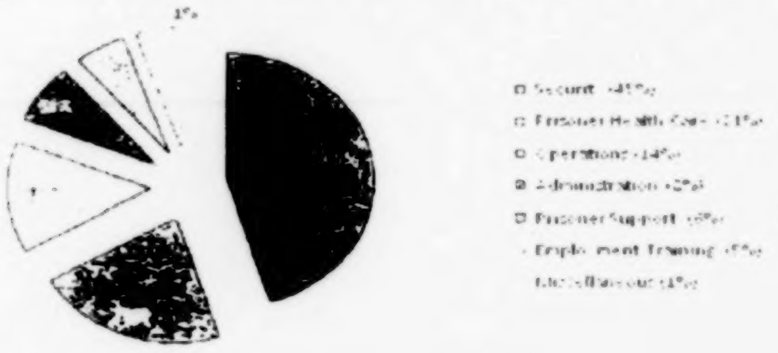
Recommendation 1-Reduce overcrowding in its prison facilities and parole offices.

The Panel recommends that California take the necessary measures to reduce overcrowding in its correctional facilities. Doing so will not solve California's recidivism problems, but it will give its adult offenders the ability to access much-needed rehabilitation programming, which is a "pre-condition" to success.

Lack of Incentives to Complete Programs

The Panel believes that California's correctional culture is oriented more towards control and punishment, than rehabilitation. This has resulted in offenders receiving few incentives to participate in rehabilitation programming. While the Panel agrees that control and safety within prison are essential, it also recognizes that the CDCR needs to balance its custody and rehabilitation missions. Additionally, California needs to reflect this balance in its allocation of correctional resources.

[ix] Figure A: California Annual Costs to Incarcerate a Prisoner



Source: California Legislative Analyst's Office, January 31, 2007

Figure A shows the current imbalance in the CDCR's resource allocations. According to the latest data from the California Legislative Analyst's Office (2007), of the $43,287 that California spends on each prisoner per year, 45% ($19,561) is spent on "Security" concerns, while only 5% ($2,053) is spent on programming ("Employment/Training").

The Panel believes that it is critical for California to institute a system of positive reinforcement of offender behavior that supports rehabilitation. One of the best ways to shape behavior is to provide positive rewards for people when they engage in positive activities. Other states like Pennsylvania, Washington, and Ohio have used such reinforcement systems to encourage positive behavior of offenders in their correctional systems. However, the Panel found that the CDCR does not have a system of sufficient incentives that rewards program completion for all of its programs. Thus the gains that prisoners make in their rehabilitative programming are diluted by a correctional environment that treats offenders who participate in these programs virtually the same as those who do not.

Recommendation 2-Enact legislation to expand its system of positive reinforcements for offenders who successfully complete their rehabilitation] program requirements, comply with institutional rules in prison, and fulfill their parole obligations in the community.

The Panel recommends that California enact the necessary legislation to expand its system of positive reinforcements for program participation and good behavior for offenders in its prison and parole systems. AB 900, which was enacted in May 2007, directed the CDCR to develop incentives for offenders who complete academic and vocational education programs. The Panel believes that further legislation should be enacted that provides incentives for completing any of the evidence-based rehabilitation programs that the CDCR offers to its adult offenders.

Additionally, the Panel recommends that the CDCR implement those positive reinforcements that do not require legislation. For example: expanded visitation privileges, locating prisoners in prisons closer to their homes, providing long distance phone calls, and issuing

* * * *

[10] Table 2: CDCR Adult Institution Lockdown Summary, 2006

Mission-Based Facility Type*	Number of Lockdowns/ Controlled Movements	Average Days in Lockdown	Events over 60 Days
Calendar Year 2006			
General Population Levels II & III	169	12	6
General Population Levels III & IV	114	18	5
High Security & Transition Housing	134	7	17
Female Institutions	32	3	0
Source: CDCR [illegible]			

On the parole side, a legacy of budget and policy decisions has created a situation where parole agents have unmanageable case loads of parolees to supervise and community-based program providers have more offenders needing treatment than they can treat. As Petersilia (2005) has shown, fully two-thirds of more than 120,000 California parolees only see their parole agents once every six weeks. This infrequent visitation schedule causes us to wonder how effective this system is at reducing recidivism.

Recommendation 1-Reduce overcrowding in its prison facilities and parole offices.

We recommend that the CDCR reduce overcrowding in its prison facilities to make it easier for offenders to access rehabilitation programming. This will also create a safer environment for correctional officers, program providers, and prisoners. On the parole side, California needs to either reduce the numbers of parolees to which it provides services or increase the funding to the CDCR Parole Division and community-based program and service providers.

We do not believe the only answer to reducing overcrowding is to build more prisons. Experience from other states demonstrates that at some point those responsible for authorizing and funding adult institutions come to the conclusion that they can no longer afford to keep building more prisons. The expenditures become too costly and can force states to the margins of bankruptcy. With California already spending more than $10 billion a year on its correctional system, we believe that it is only a matter of time before this state is forced to consider alternatives besides prison building to solve its overcrowding problem. Solving the overcrowding problem is not the mission of this Panel. To that end, we direct the reader to Appendix A for specific recommendations provided by other groups as to how California may potentially reduce its correctional system overcrowding. Nonetheless, some of the evidence-based programming recommendations that we make will potentially reduce the numbers of prisoners in California prisons. We provide a detailed discussion in Appendix E.

* * * *

[12] Research by Wright, Caspi, Moffitt, and Paternoster (2004) and Taxman, Soule, and Gelb (1999) determined that punishment, particularly severe punishment, does not deter behavior and that it might actually cause offenders to be more defiant. Defiant offenders do not willingly participate in the rehabilitation programming that they need. According to Andrews and Bonta (1998) to effectively influence behavior there must be a ratio of four rewards to one consequence, since rewards serve to "shape" responses to positive actions.

At the correctional system level, if correctional agencies do not motivate offenders to complete rehabilitation programs, fewer offenders will be willing to participate in those programs. At the program level, those programs that do not have positive reinforcement structures or capacities will not effectively shape offender behaviors.

2a. *Award earned credits to offenders who complete any rehabilitation program in prison and on parole.* While California currently provides earned credits to offenders: (a) who the CDCR assigns to conservation camps to fight fires and perform other public service tasks (the California Work Incentive Program or WIP) and (b) offenders who participate in the Bridging Educational Program, offenders who complete other rehabilitation programs do not receive earned credits. With the enactment of AB 900, we anticipate that the CDCR will soon award earned credits for offenders who complete academic and vocational education programs. We recommend, therefore, that California enact laws that would allow the CDCR to award earned credits to offenders who complete any rehabilitation program, such as substance abuse treatment or life skills development, in accordance with the terms of their behavior management plans. These earned credits would provide motivation for offenders to participate in and successfully complete their assigned rehabilitation programs to earn reduced sentences. Offenders who participate in quality evidence-based prison programming have lower recidivism rates. We believe that the public safety benefits of adopting this recommendation will be a vast improvement over California's current practice of releasing offenders who have not completed rehabilitation programming.

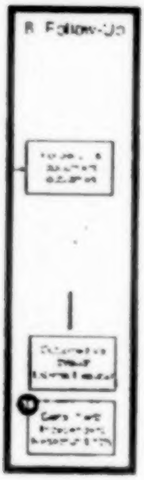
2b. *Replace Work Incentive Program (WIP) credits with statutorily-based good time incentive credits.* Most prisoners in the CDCR are serving sentences that were handed down under California's Determinate Sentencing Act (DSL). California's DSL allows offenders to earn, with some exceptions, as much as a day-for-day "good time" rate (50% reduction), *but only if they are able to receive WIP credits.* While most offenders (with the exception of those serving 3- and 2-Strike sentences, life sentences, and those convicted of violent crimes) are eligible to receive the day-for-day WIP credits, because of program capacity limits, they cannot access the WIP-specific programs. In most cases, offenders are assigned to WIP-specific programs on a first-come, first-served basis, which is contrary to the tenet of assigning the right offender to the right program. We recommend, therefore, that the Legislature pass a law that would allow the CDCR to grant good time credits to those offenders who comply with institutional rules in prison. These good time credits would provide motivation for prisoners to manage their behaviors in prison to earn reduced sentences.

* * * *

[47] *Finding—The CDCR does not have a graduated parole sanctions policy to provide community-based alternatives to incarceration for parolees who violate their parole conditions.*

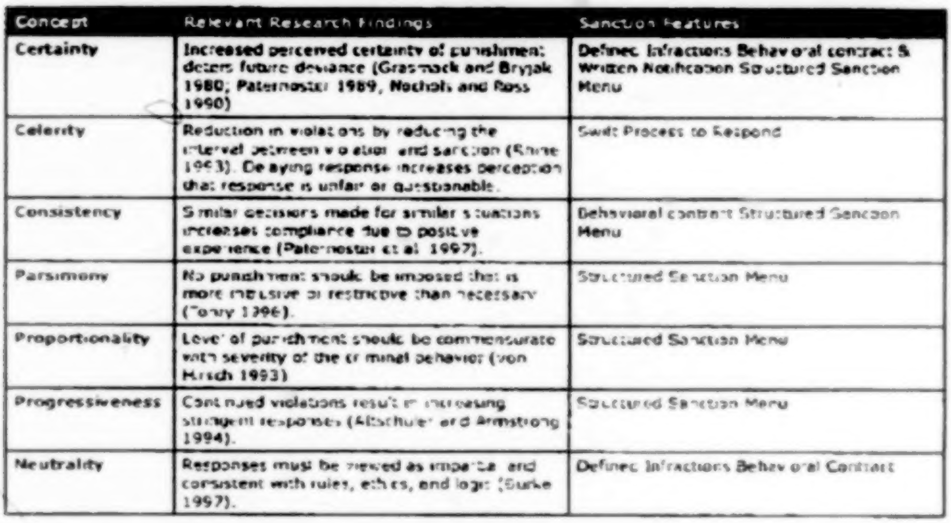
The ultimate goal of parole supervision is successful completion of parole with no new crimes committed. Compliance with parole conditions is intended to produce reductions in crime by reducing the offender's risk to reoffend. However, there is no evidence to support that the current practice of locking up offenders for technical parole violations (not related to their criminal behavior patterns and/or criminogenic needs) reduces crime. Incarceration is a destabilizing factor for the offender, family, and community, and therefore even short-term interruptions contribute to more negative behaviors in the community,[ab] such as unplanned pregnancies and higher rates of sexually transmitted diseases. Anything that contributes to the removal of individuals from the community has a negative impact, some of which is not measurable. But, Maruna (2001) has shown how difficulties in reintegration are only exacerbated by repeated incarceration periods.

> Recommendation 11-Develop structured guidelines to respond to technical parole violations based on risk to reoffend level of the offender and the seriousness of the violation.



[ab] Thomas & Torrone (2006); Rose & Clear (1998); Kubrin & Stewart (2006); Thomas & Sampson (2005); Clear, Rose, Waring, & Scully (2003)

[48] Table 8: Summary of Graduated Responses Concepts, Relevant Research, and Sanctions



Concept	Relevant Research Findings	Sanction Features
Certainty	**Increased perceived certainty of punishment deters future deviance (Grasmick and Bryjak 1980; Paternoster 1989, Nichols and Ross 1990)**	**Defined Infractions Behavioral contract & Written Notification Structured Sanction Menu**
Celerity	Reduction in violations by reducing the interval between violation and sanction (Shine 1993). Delaying response increases perception that response is unfair or questionable.	Swift Process to Respond
Consistency	Similar decisions made for similar situations increases compliance due to positive experience (Paternoster et al. 1997).	Behavioral contract Structured Sanction Menu
Parsimony	No punishment should be imposed that is more intrusive or restrictive than necessary (Tonry 1996).	Structured Sanction Menu
Proportionality	Level of punishment should be commensurate with severity of the criminal behavior (von Hirsch 1993)	Structured Sanction Menu
Progressiveness	Continued violations result in increasing stringent responses (Altschuler and Armstrong 1994).	Structured Sanction Menu
Neutrality	Responses must be viewed as impartial and consistent with rules, ethics, and logic (Burke 1997).	Defined Infractions Behavioral Contract

11a. Restrict the use of total confinement for parole violations to only certain violations. We recommend that California enact legislation that restricts the use of total confinement (e.g., prison) for technical parole violations to only those violations that are: (a) new felony convictions or (b) technical parole violations that are directly related to the offender's criminal behavior patterns, specific dynamic risk factors, and that also threaten public safety. All other parole violations should result in intermediate, community-based sanctions other than prison.

The most recent data from the US Department of Justice shows that for most states, new prison admissions consists of 71% new felony court convictions and 29% parole violators.[ac] California's new prison admissions, however, consists of 36% new felony court convictions and 64% parole violators, which is nearly the exact opposite of most other states. As mentioned before, part of the disparity between California and other states has to do with the sentencing laws that have been passed in California. For example, in California when a parolee absconds from parole, although it is considered a technical parole violation, state law mandates that serious and violent parolees be referred to the state Board of Parole Hearings (Petersilia, 2006). In 2006, the CDCR admitted nearly 70,000 parole violators to prison. If California were to begin diverting some percentage of less serious (based on an empirical risk assessment) parolees to community-based sanctions instead of prison, it would have less need for prison beds.

[ac] Bureau of Justice Statistics, National Prisoner Statistics Series, August 2, 2000.

[49] Currently in California, sanctions for technical parole violations are determined by three entities: (a) California state law, (b) the California Board of Parole Hearings (BPH), and (c) the CDCR Division of Adult Parole Operations. All three of these entities base their parole violation sanctions on the seriousness of the violation, but not on the risk to reoffend level of the violator. We recommend that California develop and implement structured sanctions-based on seriousness of the violation and offender risk to reoffend-for technical parole violators. The sanctions should address the offenders' criminogenic needs and ensure that offenders are engaged in services and controls appropriate to those needs (Burke, 2000).

11b. Develop a parole sanctions matrix that will provide parole agents with guidelines for determining sanctions for parole violations. The CDCR Division of Adult Parole Operations (DAPO) determines sanctions for approximately 18,000 (24%) of the CDCR's 75,000 total parole violators. Nearly 16,500 of these are non-technical parole violators and the remaining

1,500 are technical parole violators. We recommend that the CDCR create a matrix that incorporates graduated responses in the parole supervision process that support supervision goals and facilitate successful reentry. Having agency guidelines for responding to parole violations serves multiple purposes. Establishing structured parole guidelines will:

- Allow responses to violations to be more fair and consistent throughout the agency, based on a common set of guidelines that provide a set of options appropriate to offender risk level and the seriousness of the violation. While each individual case must be assessed, responses to violations should be viewed as impartial and consistent with rules, ethics, and logic. Similar decisions made for similar situations increases compliance of parolees, whereas dramatically different responses from officer to officer undermine trust and legitimacy of the system.
- Provide parolees with clear supervision expectations and consequences for violations.
- Hold offenders accountable by responding swiftly and certainly to all violations.
- Support maintaining treatment in the community and pro-social activities when feasible.
- Structure efficient use of time, resources, and delegation of authority.
- Allow the delegation of authority and informed decision-making at all levels of the agency.
- Support the agency and staff working together toward a common purpose.

- Facilitate performance measurement and quality assurance.

The graduated responses approach emphasizes using incentives to shape behavior and is based on the concepts in Table 8.

By law, Washington State law does not confine its parole (community custody) violators in prison. Consistent with the principle of just deserts, if parolees commit crimes while on supervision, the state prosecutes them. For non-criminal violations of parole supervision, the Washington DOC created a prescriptive sanctioning grid that specified what punishment was allowed for a range of violations. The grid allows parole officers to return to custody only those high and moderate risk offenders who have committed violations directly related to their criminogenic needs. The WA DOC, through a separate administrative hearing unit, imposes parole sanctions.

[77] Appendix A—Reports Previously Published Reports On California's Correctional Crisis

Summary of Previous Reports

We agree with the Little Hoover Commission (2007) in that California doesn't need another report outlining correctional reform measures. What California needs to do is implement some of the proposals that have already been presented to it. Since 1990, there have been more than a dozen reports published that deal with the crisis in California's adult prison system. The major recommendations made in all of these reports are entirely consistent with the recommendations contained in our report. In fact, a review of these 15 reports by Panel co-chair Joan Petersilia revealed that all of the reports recommend essentially the same ten things, which are:

1. Stop sending non-violent, non-serious offenders to prison. This particularly pertains to technical parole violators, who could better be served in community based, intermediate facilities.
2. Once in prison, use a standardized risk and needs assessment tool to match resources with needs and determinate appropriate placements for evidence-based rehabilitation programs.
3. Develop and implement more and better work, education, and substance abuse treatment programs for prisoners and parolees.
4. Reform California's determinate sentencing system to reward prisoners for participating in rehabilitation programs and allow the system to retain prisoners who represent a continued public safety risk.
5. Move low risk prisoners to community-based facilities toward the later part of their sentences to foster successful reintegration and save more expensive prison-based resources. Subpopulations, such as women, the elderly and the sick, are ideal candidates.
6. Create a sentencing policy commission or some other administrative body that is authorized to design new sentencing statutes into a workable system that balances uniformity of sentencing with flexibility of individualization.
7. Reform California's parole system so that non-serious parole violators are handled in community

based intermediate facilities and more violent parole violators are prosecuted for new crimes.

8. Create viable partnerships between state and local corrections agencies that would expand sentencing options, enhance rehabilitation services, and strengthen local reentry systems. Suggestions have been made that include Community Corrections Acts (to get greater funding for local criminal justice initiatives) and a Community Corrections Division of the CDCR charged with developing alternatives.
9. Evaluate all programs and require that existing and newly funded programs are based on solid research evidence.
10. Promote public awareness so that taxpayers know what they are getting for their public safety investment and become smarter and more engaged about California's prison system.

[78] List of Previous Reports

Blue Ribbon Commission on Inmate Population Management (1990) established by the California legislature in 1987, chaired by Grover Trask (District Attorney Riverside County. It issued its final report in 1990 with 38 recommendations. Recommended alternative sanctions, and more programming, reentry programs.

Prison Population and Criminal Justice Policy in California (1992). California Policy Seminar. Frank Zimring and Gordon Hawkins. Analysis of the recent expansion of California prisons and alternative policy responses.

Crime and Punishment in California: Full Cells, Empty Pockets, and Questionable Benefits (1993).

California Policy Research Center, Joan Petersilia describes the growing problem of parole violators in California prisons.

Putting Violence Behind Bars: Redefining the Role of California's Prisons (1994). The Little Hoover Commission found that the State's sentencing system was unduly complicated and inequitable to both victims and offenders and there was little distinction between the way violent and non-violent criminals were handled. The Commission recommended that the State create a sentencing commission to develop a sentencing structure that protects public safety, tailors the punishment to fit the crime, addresses the needs of victims, fosters responsibility in prisoners and balances costs with benefits.

Estimating the Effect of Increased Incarceration on Crime in California (1995). California Policy Research Center, Franklin Zimring and his authors describe the impact of increased prison populations on crime rates in California.

Minimizing Harm as a Goal for Crime Policy in California (1997). California Policy Seminar Report. Edited by Edward Rubin, with analysis and chapters by Zimring, Greenwood, Petersilia, Skolnick, and others. Purpose was to draw on the work of leading criminologists to consider ways to address the critical problems facing California criminal justice system.

Beyond Bars: Correctional Reforms to Lower Prison Costs and Reduce Crime (1998). The Little Hoover Commission found that state and local correctional systems were not integrated and that the State's response to offenders needed to include an expansion of local sanctions and community correctional facilities for low-level offenders. The Commission also recommended expanding programs for prisoners and parolees, developing separate facilities for parolees returned to custody who are most likely to re-offend and re-evaluating the organizational structure of parole.

Challenges of Prisoner Reentry and Parole in California (2000). Joan Petersilia, California Policy Research Center. Describes the unique challenges of California's prisoner reentry problem.

Back to the Community: Safe and Sound Parole Policies (2003). Little Hoover Commission found that the State's parole policies resulted in far too many parolees returning to overcrowded prison facilities for technical violations. The Commission proposed expanding evidence-based rehabilitative programs for prisoners and parolees and recommended policymakers review the sentencing laws that place every offender on parole following incarceration.

Breaking the Barriers for Women on Parole (2004). The Little Hoover Commission studied the unique barriers facing the more than 10,000 women in California's prisons and 12,000 women on parole.

[79] *Governor's Plan to Reorganize the Youth and Adult Correctional Agency* (2005). Corrections Independent Review Panel: Reforming California's Youth and Adult Correctional System ("The Deukmejian Report"). The Commission reviewed Governor Schwarzenegger's plan to reorganize the Youth and Adult Correctional Agency into the Department of Corrections and Rehabilitation. This reorganization, which the Commission supported, placed a renewed emphasis on rehabilitation for prisoners and parolees.

Understanding California Corrections, California Policy Research Center (2006). Joan Petersilia wrote a primer on the California corrections system, from arrest through release on parole and return. She recommended greater emphasis on in-prison and parole planning, presumptive sentencing or a sentencing commission, and a return to indeterminate sentencing.

Task Force on California Prison Crowding, National Council on Crime and Delinquency (2006). This report offers policy and program options to address the severe problems in California prisons.

Reducing the Incarceration of Women: Community Based Alternatives, National Council on Crime and Delinquency (2006).This report describes effective treatment for women in prison in California.

Solving California's Corrections Crisis: Time is Running Out (2007). The Little Hoover Commission studied the correctional crisis facing California from a financial expenditure perspective.

* * * *

[87] Appendix E—Estimating the Impacts of Our Recommendations

In this section of the report, we present the impact of our recommendations from three perspectives: (a) recidivism reduction, (b) prison and parole population reductions, and (c) financial costs and benefits associated with recidivism and correctional population reductions.

None of the recommendations made by the Panel will have any impact on the number of persons being sentenced by the courts to the CDCR or their sentence lengths. Rather our recommendations will only affect the large numbers of persons who are being returned to custody for violating their parole conditions and the amounts of time served in prison or on parole.

Our estimates are grounded in a large number of studies and the experiences of other states that have successfully implemented such reforms without adversely impacting public safety. However, we emphasize that the major recommendations require legislative, administrative, and programmatic changes before California can implement them.

The legislature, with the consent of the governor, must modify California's current sentencing laws, which affects how much good time prisoners receive. We are mindful that this may be more difficult to do for offenders sentenced under the state's two and three strikes laws, so we have separated our recommendations accordingly.

The CDCR must enact new administrative policies that reasonably restrict the large number of parolees being returned to prison for technical violations, This has been done before in California and is being done in other states. Finally, the CDCR, with proper funding from the legislature, will need to make significant changes in the number and types of programs it offers to prisoners and parolees. Ineffective programs that hold little, if any, promise of reducing recidivism need to be identified and de-funded as quickly as possible. Then, new and effective programs need to be created. For this to occur, the CDCR will need to re-organize its own operational capabilities as outlined in Appendix J.

It is important to note that these estimates are based on the data that were made available to the

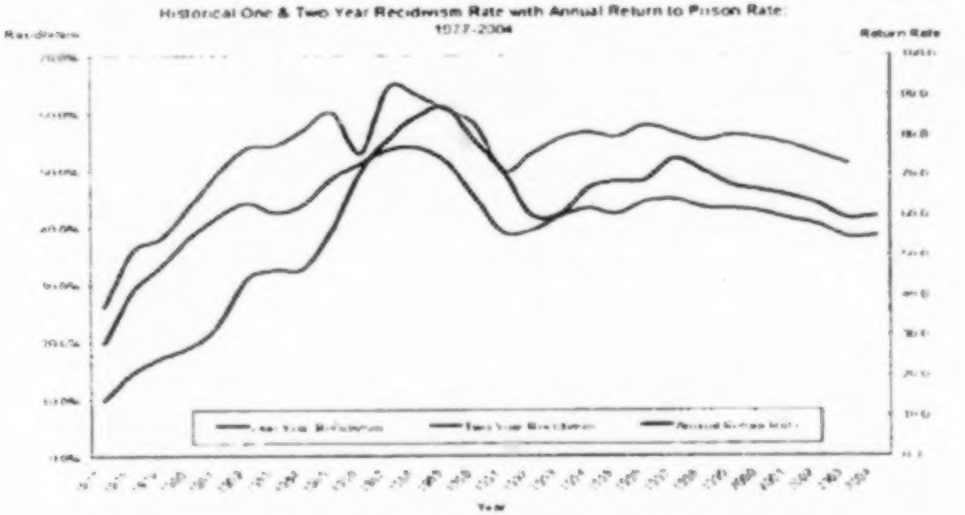
Panel by the CDCR as well as the experiences of the other state correctional systems. As such they are preliminary in nature and subject to modification based on further analysis that may be required. Once it becomes clear on the extent to which the recommendations will be adopted and implemented more precise estimates should be made. It is also important to note that the CDCR has neither authenticated nor endorsed our estimates.

Nonetheless, we believe that if California were to implement our recommendations, the state may significantly reduce the large number of parolees who are currently violating their parole conditions and being returned to prison. Further, by expanding its incentive system, the state will encourage prisoners and parolees to participate in and complete programs. This could lower California's projected prison population with no major increase to the parole population. Coupled with the appropriate investments in prison and community based programming, we believe that our plan would increase public safety, reduce crime, and save taxpayer dollars.

Impact on Recidivism

One of the key objectives of the Panel's recommendations is to lower the CDCR's high recidivism rate. Recidivism rates are typically measured by tracking a cohort of prisoners [88] who were released in a given year and following them for several years. Traditionally, a recidivism rate is based on a three year follow-up period. The three measures of recidivism are (a) re-arrest, (b) reconviction, or c) a return to the prison system for either a new court conviction or a parole violation. California's recidivism rate as measured by the return to prison rate is one of highest in the nation (only Utah has a higher rate). However, this high rate reflects the California Board of Prison Term's and the CDCR's policy of returning to prison a large proportion of parolees that have been revoked for technical violations.[af]

Figure E-1: California Department of Corrections Historical Recidivism Rates, 1977-2004[ag]



California's return to prison recidivism rate was not always this high. As shown in Figure E-1, beginning in the late 1970s the CDCR's recidivism rate was much lower (below 30%). What is responsible for the dramatic increase? No single cause can be identified but contributing factors may include: (a) the passage of California's Determinate Sentencing Law

---

[af] Petersilia (2006); Jacobson (2003); US Department of Justice, Bureau of Justice Statistics (2001).

[ag] The recidivism rate shown in this chart is based on "first releases to parole." This means that the cohort consists of prisoners who were experiencing their first release to parole and does not include parole violators who were being re-released. Excluding parole violators decreases the overall return-to-prison rate.

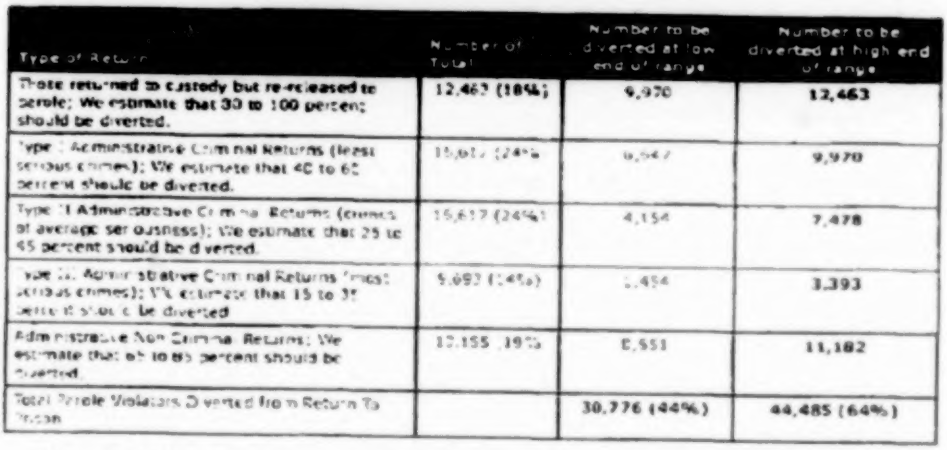
(DSL) in 1977, which eliminated discretionary parole statutorily awarded good time credits, (b) the massive expansion of the CDCR population, and (c) the associated construction of "mega prisons"—large facilities designed to house several thousand prisoners. We believe that while it may not be possible to quickly or easily return to the recidivism rates of the late 1970's, it is possible to achieve significant reductions in the current return to prison rate.

[89] Three of our recommendations deal directly with recidivism reduction strategies:

11a. *Restrict the use of total confinement for parole violations to only certain violations.* The largest reduction in the return to prison rate would occur if the state adopts the recommendation to divert between 44% and 64% of the parolees who are now being returned to prison for non felony criminal behavior and technical violations (see Table E-1). The CDCR could achieve this by developing and implementing a system of graduated responses to parole violations which provides for swift and certain punishments in the community.

These reductions in technical violations may seem large to some, yet if accomplished, it would result in California approaching the same percentage of parolees being returned to prison as reported by other states for either a technical or new felony. The most recent data from the US Department of Justice shows that 27% of all admissions to prison consist of parole violators (either technical or new felony crime).

Table E-1: Technical Parole Violator Diversion Estimates by Type of Return Based on 2006 Admissions



Type of Return	Number of Total	Number to be diverted at low end of range	Number to be diverted at high end of range
Those returned to custody but re-released to parole; We estimate that 80 to 100 percent should be diverted.	12,463 (18%)	9,970	12,463
Type I Administrative Criminal Returns (least serious crimes); We estimate that 40 to 60 percent should be diverted.	16,617 (24%	6,647	9,970
Type II Administrative Criminal Returns (crimes of average seriousness); We estimate that 25 to 45 percent should be diverted.	16,617 (24%)	4,154	7,478
Type III Administrative Criminal Returns (most serious crimes); We estimate that 15 to 35 percent should be diverted	9,693 (14%)	1,454	3,393
Administrative Non Criminal Returns; We estimate that 65 to 85 percent should be diverted.	13,155 (19%	8,551	11,182
Total Parole Violators Diverted from Return To Prison		30,776 (44%)	44,485 (64%)

If California were to divert approximately 35,000 technical violators from re-imprisonment within the CDCR, total admissions would drop from approximately 142,000 to 107,000 (see Table E-2).

But even this reduction would not match the norm of other state prison systems. The third column of Table E-2 shows that if the CDCR were to have the same policies as other states, the total number of admissions would decline to approximately 71,000. This estimate assumes that 40% of the offenders admitted to prison would return after being released on parole (the same rate reported by BJS minus California's data). As shown in Table E-2, were California to reach the national recidivism average, the percent of admissions to prison who are parole violators would be reduced to approximately 20,000 or 29% of all admissions-which is virtually the same as the national rate (27%). We believe that this is a very achievable outcome given the experience of the other states.

[90] Table E-2 Estimated Impact of Recommendation 9a on Prison Admissions by Type of Admission

	Current		Recommended		Based on Other States*	
Admissions Type	N	%	N	%	N	%
Felony Court	50,708	36%	50,708	47%	50,708	71%
Parole Violators	91,173	64%	56,555	53%	20,283	29%
Technical	69,237	49%	34,619	32%	10,142	14%
Non-Felony	21,936	15%	21,936	20%	10,142	14%
Total	141,881	100%	107,263	100%	70,991	100%

[illegible]

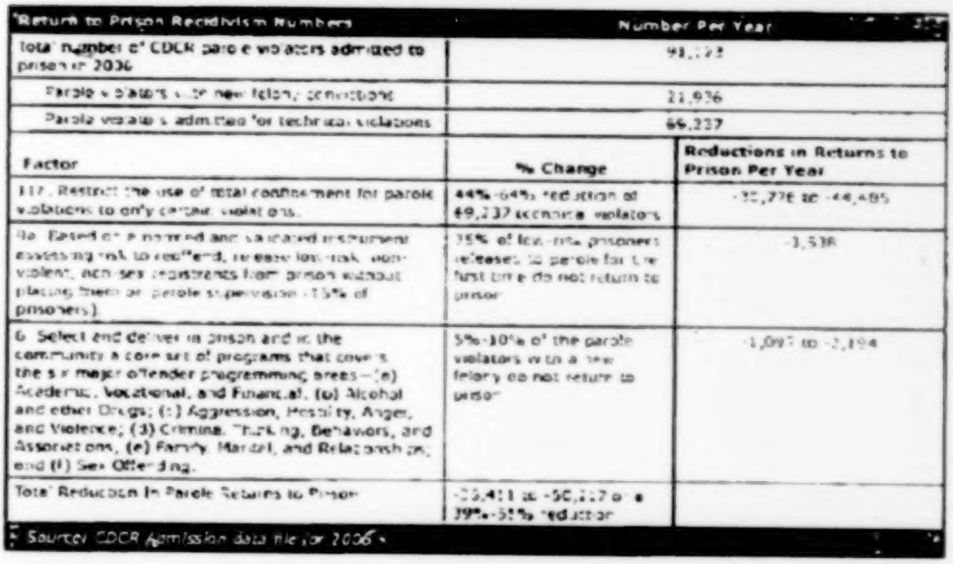
9a. Based on a normed and validated instrument assessing risk to reoffend, release low-risk, non-violent, non-sex registrants from prison without placing them on parole supervision. The second way to reduce returns to prison is to not supervise low risk parolees. Previous studies have shown that imposing parole and probation supervision conditions on those who are unlikely to recidivate serves to actually increase recidivism rates. Table E-2 shows the results of several studies of the relatively effects of supervision on offenders by risk level. Here one can see that supervised low risk offenders have higher recidivism rates. By not supervising them the recidivism rates will actually decrease.

6. *Select and deliver in prison and in the community a core set of programs that covers the six major offender programming areas-(a) Academic, Vocational, and Financial; (b) Alcohol and other Drugs; (c) Aggression, Hostility, Anger, and Violence; (d) Criminal Thinking, Behaviors, and Associations; (e) Family, Marital, and Relationships; and (f) Sex Offending.* The third way for California to reduce its recidivism rate is by offering prisoners and parolees programs that will address and treat their educational, vocational training, mental health, and related criminogenic needs. As offenders receive programming that

addresses theses needs, there should be a modest but significant reduction in their criminal behavior.

Table E-3 summarizes the expected return to prison recidivism reductions for each of these three major recommendations. This table is based on the total number of persons who were admitted to the CDCR in 2006 for failing parole for either a new felony conviction or a technical violation. As suggested previously, the largest reduction in the 91,173 now being returned back to prison each year would be persons who have failed parole for technical violations (a reduction of 30,776 to 44,485). In total, the recommendations would reduce the total number of returns to prison by between 35,000 and 50,000 or approximately 39-55%.

[91] Table E-3 Estimated Impact of Recommendations of Released Prisoners Being Returned to Prison



Return to Prison Recidivism Numbers	Number Per Year	
Total number of CDCR parole violators admitted to prison in 2006	91,173	
Parole violators with new felony convictions	21,936	
Parole violators admitted for technical violations	69,237	
Factor	**% Change**	**Reductions in Returns to Prison Per Year**
11. Restrict the use of total confinement for parole violations to only certain violations.	44%-64% reduction of 69,237 technical violators	-30,776 to -44,485
9a. Based on a normed and validated instrument assessing risk to reoffend, release low-risk, non-violent, non-sex registrants from prison without placing them on parole supervision (15% of prisoners).	35% of low-risk prisoners released to parole for the first time do not return to prison	-3,538
6. Select and deliver in prison and in the community a core set of programs that covers the six major offender programming areas – (a) Academic, Vocational, and Financial; (b) Alcohol and other Drugs; (c) Aggression, Hostility, Anger, and Violence; (d) Criminal Thinking, Behaviors, and Associations; (e) Family, Marital, and Relationships; and (f) Sex Offending.	5%-10% of the parole violators with a new felony do not return to prison	-1,097 to -2,194
Total Reduction In Parole Returns to Prison	-35,411 to -50,217 or a 39%-55% reduction	

Source: CDCR Admission data file for 2006.

Impact on Prison and Parole Populations

There are three operational requirements for successful offender programming: (a) adequate program space for the programs to function, (b) the physical locations where the programs are being delivered must be safe, and (c) there must be incentives for offenders to participate. Few of these conditions exist currently within the CDCR.[ah] Space-wise, although we don't have the precise figures, we know that because of overcrowding, designated program spaces have been converted to housing units. From a safety standpoint, there is growing evidence of increased violence and disruptive behavior within the CDCR—the rate of serious incidents increased from 4.7 per 100 prisoners in 1990, to 7.9 per 100 prisoners in 2005 (CDCR, 2006). And in the area of incentives, with California's DSL, there are few incentives for prisoners to participate in meaningful programs as they know that they will be released at the same time as prisoners who do not participate.

In Appendix L, we provided information concerning the CDCR's current population. It should be noted that the CDCR latest projections estimate that by the year 2012, the CDCR's prison population will increase from 172,385 to 190,000, and its parole population from 123,781 to 133,000.

We developed our own estimates of the impacts of our recommendations on the CDCR prison and parole populations. We based these estimates on data provided by the CDCR on admissions and releases for the prison and parole systems. Our estimates only assume a "steady state" environment and do not indicate how our recommendations would impact future sized populations. Again, we note that the CDCR has neither authenticated nor endorsed our estimates.

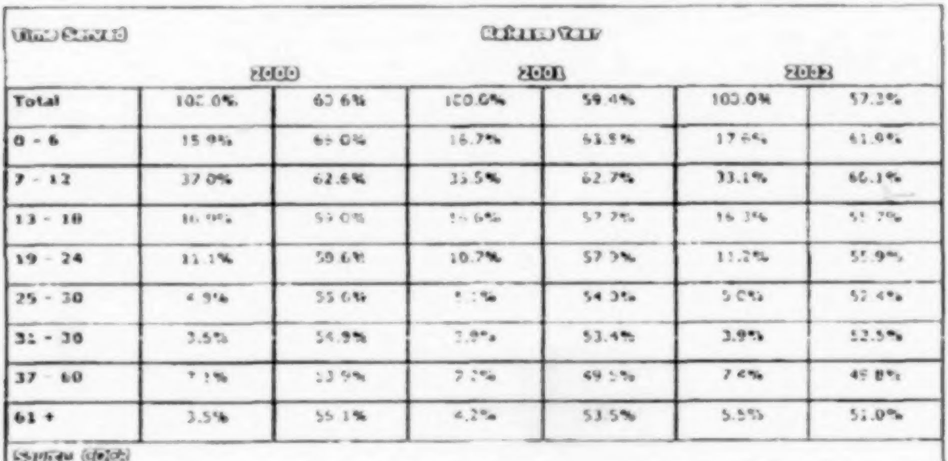
[ah] There are some individual facilities that are successfully delivering effective programs, however, systemically, the CDCR has to resolve its issues with space, safety, and incentives.

[92] We believe that if all of our recommendations are adopted, the current prison population would be reduced by approximately 41,000 to 48,000 prisoners and the number of admissions to prison for all parole violators (including new felonies) will be reduced by between 35,000 and 50,000 parolees. We believe that there are three recommendations that deal directly with reducing the offender populations:

2. *Enact legislation to expand its system of positive reinforcements for offenders who successfully complete their rehabilitation program requirements, comply with institutional rules in prison, and fulfill their parole obligations in the community.* The three sub-recommendations of this recommendation must be applied to have the desired population reduction effect. We also note that each component will require new legislation that would modify the current California Penal Code (CPC).

2a. *Award earned credits to offenders who complete any rehabilitation program in prison and on parole.* This recommendation would allow prisoners who complete education, vocational training, and substance abuse treatment programs the opportunity to receive an average of four months off of their prison release dates (including all sentenced felons regardless of their offense or strike levels). It would encourage prisoners (who could benefit) to participate in well-structured and effective rehabilitative programs and thus help lower their reoffending rates. At the same time, prisoners who complete these programs would benefit by having their period of imprisonment reduced. Virtually all of the other states plus the Federal prison system allow for prison terms to be reduced if a prisoner completes rehabilitative services. Further it has been widely established by a number of studies, including those conducted by the US Department of Justice and the CDCR, there is no relationship between time served and recidivism (US Department of Justice, 2006). Therefore, releasing prisoners early as a result of earning program credits will not increase their recidivism rates. In fact, because they will have participated in effective programming targeted to reduce their criminogenic needs factors, we expect their recidivism rates to decrease. Table E-4 demonstrates the relationship between length of stay and recidivism using CDCR data.

Table E-4 CDCR Recidivism Rates for First Releases by Time Served, 2000-2002 Time Served Release Year



Time Served	Release Year					
	2000		2001		2002	
Total	100.0%	63.6%	100.0%	59.4%	100.0%	57.2%
0 - 6	15.9%	65.0%	16.7%	63.5%	17.6%	61.9%
7 - 12	37.0%	62.6%	35.5%	62.7%	33.1%	66.1%
13 - 18	16.9%	59.0%	16.6%	57.7%	16.3%	55.7%
19 - 24	11.1%	59.6%	10.7%	57.3%	11.2%	55.9%
25 - 30	4.9%	55.6%	5.1%	54.3%	5.0%	52.4%
31 - 36	3.5%	54.9%	3.9%	53.4%	3.9%	52.5%
37 - 60	7.1%	53.9%	7.2%	49.5%	7.4%	49.8%
61 +	3.5%	55.1%	4.2%	53.5%	5.5%	51.0%
Source: CDCR						

[93] *Impact: Based on an assumption that 50,000 to 56,000 prisoners of a release cohort would complete such a program and receive an average*

four-month award, the number of beds saved would be approximately 17,000 to 19,000.[31]

2b. ***Replace Work Incentive Program (WIP) credits with statutorily-based good time incentive credits.*** This recommendation would allow offenders to earn good time credits based upon statute, rather than program participation. This would provide more equity and certainty to the punishment being handed out by the courts. Table E-5 shows the numbers of prisoners who are statutorily eligible for day-for-day ("good time") credits and the percentage of their sentences that they are actually serving. Here one can see that on average, prisoners eligible for day-for-day work incentive credits are actually serving over 60% of their sentences when jail credits (the amount time spent in local jails awaiting the disposition of their case(s) and transfers to the CDCR) are added to the calculations (see Table E-5).

If they were receiving day-for-day, their time served in prison would be reduced by a modest 2-4 months. And since Table E-4 shows that there is no relationship between length of stay (at far greater amounts) and recidivism we know this policy would not adversely impact public safety. This conclusion is further buttressed by a large number of studies showing no relationship between length of stay and recidivism rates (NCCD, 2007).

Many other states allow prisoners to receive day-for-day credits statutorily, rather than based on participation in some type of program or work assignment. Indeed before the passage of DSL, California's laws allowed all prisoners to be eligible for parole at 1/3rd of their sentences thru the application of statutory credits. Returning back to that concept would provide more equity and certainty to the punishment being handed out by the courts.

---

[31] Table E-7 shows that between 55,000 and 62,000 offenders would be eligible for in-prison programming in a given year. Assuming that 10% (5,500 to 6,200) fail to complete the program, we estimate that approximately 50,000 to 56,000 offenders successfully complete programs.

Table E-5: Percent Time Served For New Court Commitments and Parole Violators with New Terms Only Eligible for Day-for-Day Credits 2006 Releases

Good Time Earning Class	Releases	Average Sentence	[illegible] Credits	CDCR Time	Total Time Served	% of Sentence
50%	56,397	31 mos	7 mos	12 mos.	19 mos	61%
20%	7,6[illegible]	59 mos.	[illegible] mos.	42 mos.	50 mos.	84%
15%	5,082	63 mos	9 mos	42 mos	55 mos	89%

Source: CDCR [illegible]

Impact: Assuming that those prisoners now eligible for the WIP day for day credits were to receive them statutorily, the number of prison beds saved would be approximately 14,000. This estimate takes into account the amount of good time that is being revoked by the CDCR for rules infractions. The effects would be even greater if prisoners in the 20% and 15% earning classes who have much longer sentences were to be eligible for the 50% class. Specifically if the 20% earning class was modified to 50%, the long term effects would be approximately 13,000 bed reduction. If applied to the 15% earning class, the bed savings would be approximately 10,000. So if applied to all prisoners, the net effect would be about 37,000 in bed savings.

[94] 2c. *Implement an earned discharge parole supervision strategy for all parolees released from prison after serving a period of incarceration for an offense other than those listed as serious and violent*

under CPC 1192.7(c) and 667.5(c) criteria. This recommendation would serve to reduce the time parolees spend on parole supervision based on good conduct and-or program participation. If the recommendations 6a and 6b are implemented, it is likely that the parole population will significantly increase unless similar efforts are enacted to reduce the time served on parole and-or successful parole completion rates are increased. The California legislature recently introduced several bills that would make such reductions possible. For example, Senate Bill 1453 would reduce the period of supervision by six months when a parolee completes a substance abuse program while on supervision. It is estimated that 5,250 parolees would be impacted by this bill, which would reduce the parole population by 2,500. Our recommendation builds upon these bills.

> *Impact: Since these reforms are tied to yet unknown risk levels of the parole population as well as their capacity to meet the behavioral standards, it is not possible to make a precise impact estimate. However, we believe that the parole population would be reduced by approximately 29,000 parolees, based on the assumptions that:*
>
> - *about 85% of the 67,000 prisoners being admitted to parole for their first release will be in the moderate to high risk to reoffend category (an estimated 57,000 first parole admissions), and*
> - *that at least 50% of them (28,500) will meet the threshold for having their periods of parole supervision reduced by at least a year.*

9a. Based on a normed and validated instrument assessing risk to reoffend, release low-risk, non-

violent, non-sex registrants from prison without placing them on parole supervision. This recommendation would simply eliminate supervision for low risk parolees.

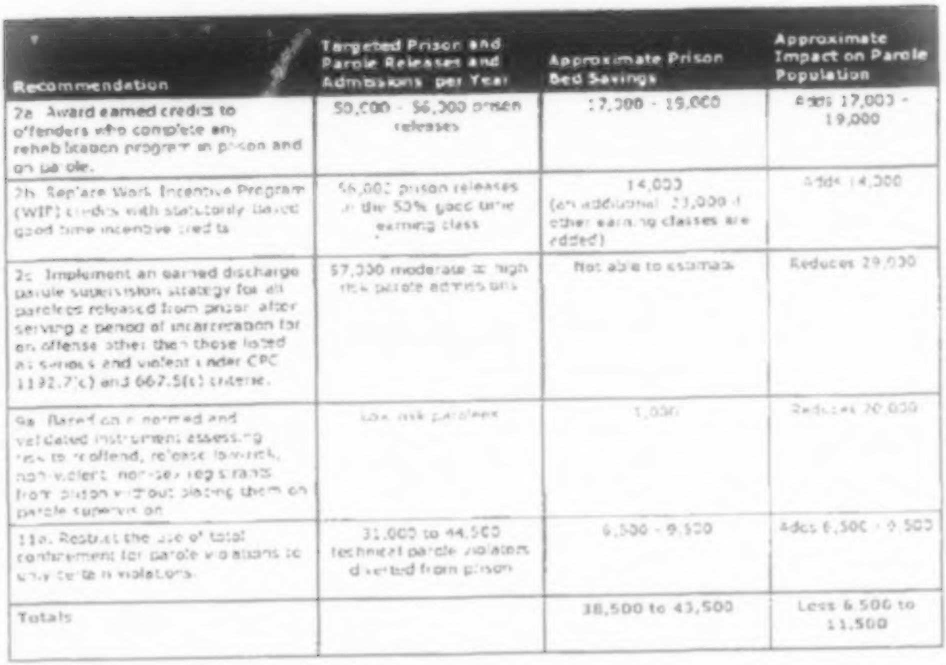
> *Impact: We believe that approximately 875 prison beds would be saved, based on the assumptions that:*
>
> - *approximately 15% of the 67,000 first-time admissions to parole being reinstated or re released are low risk (an estimated 10,000 parolees), and*
> - *35% of them (approximately 3,500) are being returned for technical violations for which they return to prison for approximately 3 months.*
>
> *More importantly, the projected parole population would decline by approximately 20,000 assuming these low risk parolees currently are being supervised for an average of 2 years.*

11a. Restrict the use of total confinement for parole violations to only certain violations. The large numbers of technical violators returned each year represents an ineffective approach to managing non-compliant behavior on the part of CDCR parolees. While we do not expect to completely turn off the technical violation stream without a statutory prohibition, as was done in Washington State, we do believe it reasonable and desirable to considerably reduce the current rate by establishing new policies and implementing an array of graduated parole violation sanctions. By diverting these prisoners from supervision, fewer be returned to prison for technical violations.

> *Impact: Based on an assumption that over a two year period there will be a 44-64% reduction in the return rate for technical violations, the number of persons admitted to the CDCR for technical violations would decline from 69,000 to between 25,000 and 38,500. Of those diverted, 10,000-12,500 would only have been returned to the CDCR for 2 weeks and then re-released to parole. The number of prison beds saved for this group would be approximately 500 beds. For the remainder, based on their [95] current average length of stay of three months, the number of prison beds saved would range from approximately 6,500 to 9,500.*

Table E-6 provides a summary of our population reduction impacts. In total the current CDCR prisoner population would be reduced by between 38,500 and 43,500 prisoners-largely by establishing a programs incentive system along the lines adopted by other state prison systems. The parole population would be reduced by between 6,500 and 11,500.

Table E-6: Summary of Population Reduction Impacts Rounded to Nearest 500



Recommendation	Targeted Prison and Parole Releases and Admissions per Year	Approximate Prison Bed Savings	Approximate Impact on Parole Population
2a. Award earned credits to offenders who complete any rehabilitation program in prison and on parole.	50,000 - 56,000 prison releases	17,000 - 19,000	Adds 17,000 - 19,000
2b. Replace Work Incentive Program (WIP) credits with statutorily based good time incentive credits	56,000 prison releases in the 50% good time earning class	14,000 (an additional 23,000 if other earning classes are added)	Adds 14,000
2c. Implement an earned discharge parole supervision strategy for all parolees released from prison after serving a period of incarceration for an offense other than those listed as serious and violent under CPC 1192.7(c) and 667.5(c) criteria.	57,000 moderate to high risk parole admissions	Not able to estimate	Reduces 29,000
9a. Based on a normed and validated instrument assessing risk to reoffend, release low-risk, non-violent, non-sex registrants from prison without placing them on parole supervision	Low risk parolees	1,000	Reduces 20,000
11a. Restrict the use of total confinement for parole violations to only certain violators.	31,000 to 44,500 technical parole violators diverted from prison	6,500 - 9,500	Adds 6,500 - 9,500
Totals		38,500 to 43,500	Less 6,500 to 11,500

How quickly California can achieve these reductions will depend upon a number of options available to the state. If the legislature makes the necessary changes in good time laws for the non-two and three strike prisoners retroactive to all prisoners currently incarcerated, most of the effects would occur within two years. Similarly, if the CDCR were to make administrative changes in its policies toward parole violators, most of the effects would be realized within two years. Changes based on additional and more effective treatment will take many years to realize. It will take several years to develop proper risk assessment systems, start assigning prisoners by risk, and ramp up the needed programs.

* * * *

[101] Appendix F—Expanded Space and Safety Recommendations

This section of the report contains the Panel's detailed recommendations concerning the physical context of CDCR programming.

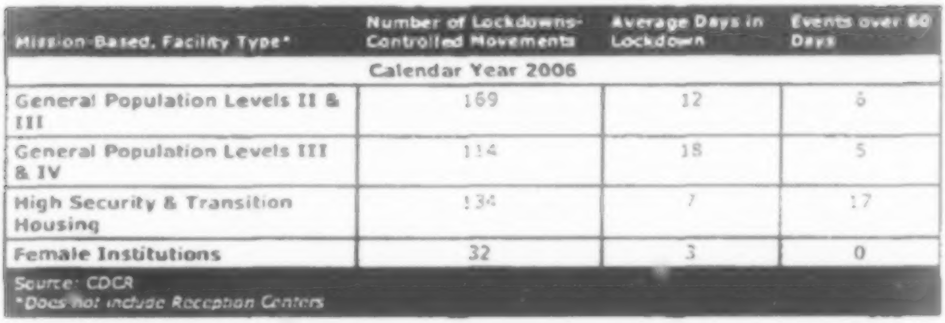
Program Space Concerns

The largest barrier that the Panel identified to delivering effective programming in CDCR prison facilities is its current state of overcrowding. CDCR facilities were built to hold 100,000 offenders; however, at the time of this report, the CDCR was currently housing 172,385 offenders in its prisons. Because of this overcrowding situation, there is simply not enough space to conduct effective programming-this applies to both the male and female offender populations. Due to time and budget constraints, we were unable to obtain data concerning specific details as to how the CDCR is utilizing its designated program spaces, although we suspect that some of them are being used to house offenders.

Physical Safety Concerns

The CDCR tracks the number of prisoner population lockdowns and controlled movement events by each institution. The degree to which the CDCR quickly re-opens the affected facility within an institution to allow prisoner access to programming or allows the non-involved prisoners to attend programs, will impact its ability to support effective program delivery.

Table E-1: CDCR Adult Institution Lockdown Summary, 2006



Mission-Based, Facility Type*	Number of Lockdowns-Controlled Movements	Average Days in Lockdown	Events over 60 Days
Calendar Year 2006			
General Population Levels II & III	169	12	6
General Population Levels III & IV	114	18	5
High Security & Transition Housing	134	7	17
Female Institutions	32	3	0

Source: CDCR
*Does not include Reception Centers

Table E-1 provides data concerning the number of lockdown days during 2006, among the 33 adult prison institutions (except Reception Centers).

The frequency and duration of lockdowns and controlled movement at any given time, among the 33 institutions, is a daily challenge to the CDCR, and one which most California citizens are unaware. Institution or facility lockdowns (or controlled movements of prisoners) occur when serious incidents happen that require additional levels of control. The employees who deliver programming to the prisoners are present five days a week, eight hours each day, with some down time for program audits, training, and program adjustments. The security protocols that the CDCR applies immediately after a serious incident within an institution, in an attempt to ensure safety to prisoners, staff, and the public, causes the prisoners to be absent from their assigned program areas, and away from the program staff. The overcrowding conditions also contribute to the challenge handled by those employees who are ready and able to deliver programming to the prisoners, that is, not enough program space and not enough employees to deliver essential programs to meet [102] the needs of the prisoners.

The CDCR should continue its progress in reviewing its lockdown and lockdown lifting protocols, and its controlled movement protocols, at each institution to determine the extent to which prisoner programming can be safely and quickly resumed following a serious incident. This periodic review is a good security practice and supports the ever-changing types of prisoners being housed in a facility within an institution. Where lockdowns are prolonged, CDCR should expect staff to develop alternate delivery methods of programming to housing areas, without serious detriment to program fidelity and without serious interference with security needs.

Recommendations

In addition to what we have already stated, we offer these recommendations, which are based primarily on the fact the CDCR is overcrowded and violence and safety issues are related to overcrowding in any system. These recommendations are also based on comments from CDCR staff members whom we interviewed who shared with us their perspectives about the negative effect that lockdowns were having on programming in their facilities. *For staff to be able to appropriately deliver programs and for offenders to be able to fully benefit from them, adequate and safe spaces for programming must be created.* The CDCR must take steps to reduce the overcrowding in its facilities. If this does not occur, the positive impact of increased and/or more focused programming will be adversely affected.

While it is reducing its overcrowding, there are additional steps the CDCR can and should take to improve staff and offender safety.

First, the CDCR should review assaults, disturbances, and lockdowns by facility to determine which facilities offer a safe environment and which are problematic. Those facilities that the CDCR deems to be safe should be the first facilities where it implements new or improved programs. Those facilities that the CDCR deems to be problematic should be reviewed to determine what steps need to be taken to improve safety in those locations. As those facilities improve their safety levels, the CDCR should implement programming in those facilities that enhances those safety improvements.

Second, experience shows that drugs are often the source of disorder within facilities. Experience at the Pennsylvania Department of Corrections demonstrates that it is possible with the implementation of a comprehensive drug interdiction program to reduce the random positive rate to less than 1%. Such a program would include interdiction (dogs, drug detection devices, and searches of vehicles and everyone who enters the facility); facility searches (cells and common areas); regular random and target drug tests; penalties (loss of contact visiting, loss of visits, and banning from facilities); treatment for those with drug problems; and tracking of various outcome measures. In this regard it must be remembered that visits are the most frequent sources of contraband entering facilities. Most states search visitors and use cameras in visiting areas to attempt to stem the flow of drugs and other contraband into their prisons. Additionally, while it is unfortunate that a few staff get involved in bringing contraband into facilities, it is critical for the safety of all concerned that the CDCR implement measures to limit this potential additional avenue for drugs to enter its system. Regular use of metal detectors on everyone (including staff), random staff pat searches, and use of electronic drug detection devices must be a part of any overall safety program.

[103] Third, the CDCR should begin to use walk-through and hand-held metal detectors throughout its facilities. These tools can aid significantly in reducing the amount of weapons used by offenders. The CDCR can set up stations for these valuable tools at entrances to yards, cell blocks, and work areas.

Fourth, the CDCR should develop a vulnerability analysis (VA) program similar to what is used by the Pennsylvania Department of Corrections. The VA program involves training staff members to routinely assess institutions on a variety of security measures. Trained staff members from other institutions conduct the assessment, which differs from a normal review of policy compliance, in that they actually performance test various security systems. This activity, coupled with a policy that requires ongoing complacency drills that test such things as escapes, contraband introduction, prisoner accountability, tool control, etc., can significantly improve staff and offender safety, as well as increase the public safety of surrounding communities.

Finally, if facility reviews reveal that one or more facilities have significant issues, the CDCR should consider the possibility that the issue may be systemic rather than local. In these cases, the CDCR should develop a comprehensive approach to addressing these issues. Other states with similar issues have used staff from other facilities to conduct unannounced lockdowns and searches of problematic facilities. Another best practices approach is to permanently or temporarily transfer and re-assign staff and offenders to different facilities. Both of these approaches have proven to be effective in turning around problematic facilities.

[1] A Reorganization Plan for Corrections

To a significant extent, the problems of California's Correctional system grow out of its structure. The Secretary of the Youth and Adult Correctional Agency, for example, has no control over line operations. Instead, the state's 32 prison wardens and eight juvenile institution superintendents each operate independently, with little consistency in procedures and minimal help from headquarters. Lines of responsibility are blurred by layers of bureaucracy between managers and functions. Accountability is conspicuously absent, as is transparency for the public into the system's inner workings. Clear, uniform policies governing the system's most vital functions—fiscal matters, personnel and training, internal affairs, information technology, and health care—are equally lacking. Boards, commissions, and other entities that have evolved over the decades perform duplicate and overlap-ping functions. And the system's organizational structure has not kept pace with the massive growth in inmate population or with the vast geographical spread of the institutions.

The sheer size and complexity of the correctional system, the critical nature of its mission, and the severity of the problems dictate the need for wholesale reform, and that reform should begin with the system's organizational structure. The Corrections Independent Review Panel therefore proposes that the state's correctional agencies be reorganized according to the plan described in this chapter. While the restructuring alone will not produce the necessary reforms, it will serve as the foundation for cleaning up the prison system, reining in costs, curbing misconduct, holding correctional administrators accountable for the system's performance, and making communities safer by doing more to ensure that inmates and youth wards leave custody better prepared to function in society.

Background

The state correctional system is presently comprised of the Youth and Adult Correctional Agency and its subordinate departments, boards, and commissions, which consist of the Department of Corrections, the California Youth Authority, the Board of Corrections, the Board of Prison Terms, the Youth Authority Board, the Narcotic Addict Evaluation Authority, the Prison Industry Authority, and the Commission on Correctional Peace Officer Standards and Training. The agency is organized as follows:

The Youth and Adult Correctional Agency. The Youth and Adult Correctional Agency was established in January 1980 with the enactment of California Government Code Sections 12850-12856. The agency is headed by the Secretary of the Youth and Adult Correctional Agency, who reports directly to the Governor and is responsible for general oversight of the agency's subordinate entities. The Secretary represents the Governor in overseeing correctional agencies and reports to the Governor on legislative, budgetary, and administrative matters affecting corrections, but has no direct operational responsibility for the subordinate departments, boards, and commissions. The Secretary is appointed by the Governor and is subject to Senate confirmation.

* * * *

[122] To address the length of time inmates spend in prison, the panel recommends eliminating the current time-credit system for non life-term offenses and adopting instead a "presumptive" sentencing structure that more effectively encourages inmates to achieve identified goals during incarceration. As an immediate measure to shorten prison terms, the panel recommends enhancing time credits inmates can earn in return for accomplishing specified goals. As a further means of reducing the prison population, the panel recommends identifying older inmates who could safely be released early, consistent with similar programs operating in several other states. To better prepare inmates for release, the panel recommends providing inmates with much greater access to in-prison education, vocational classes, life-skills training, re-entry services, and drug treatment. Those efforts should be guided by a research-based needs and risk assessment of each inmate upon entry into

prison and should include a programming plan designed specifically to address the inmate's identified needs.

To reduce the number of parolees who return to prison, the panel recommends changes that will enable parole agents to concentrate the most intensive supervision on parolees who represent the greatest risk to the community and improving services to help parolees reintegrate into society. The changes should include a risk-assessment of each parolee. The risk-assessment tool should be updated regularly to reflect any changes in the demographics of the parole population. Parolees identified through risk assessment as very low risk should be discharged from parole after three months. In addition, the panel recommends increasing the number of substance abuse treatment beds in the community and continuing implementation of the Department of Corrections "new parole model," which includes prerelease planning, electronic monitoring, and residential treatment as an alternative sanction for technical parole violations. The new Department of Correctional Services should also implement effective research and data-collection capabilities to precisely identify the most effective and efficient methods of supervising parolees.

In implementing these reforms, the first order of business should be determining the operable capacity of the state's prisons-the maximum capacity of the prisons to house inmates safely and securely while providing effective education, training, and treatment. The second order of business should be to determine the appropriate staffing needed to operate each prison and to provide inmates with needed programming. To improve strategic planning capabilities, the panel recommends that the new Department of Correctional Services contract with one of the state universities to undertake responsibility for inmate population projections.

Fiscal Impact

The department saves money with each inmate and parolee it safely removes from the prison and parole population. The present average cost of housing an inmate is $28,439 per year, and the average cost of supervising a parolee is $2,930 per year. Some of the recommendations presented here require an initial investment, but can be expected to save money in the future by improving the chances for inmates and parolees to succeed, thereby reducing the numbers who return to prison and shrinking the overall prison population. [123] Other recommendations may immediately reduce prison and parole populations and thereby produce savings upon implementation.

Laying the Groundwork for Reform

Every day, hundreds of thousands of inmates and parolees are housed, supervised, and moved around within the state prison and parole systems. Managing this population is complex and challenging. In today's environment, prison administrators must contend with severe overcrowding, the potential for violence, court mandates to provide constitutionally adequate conditions of confinement, budget cuts that have reduced staffing, and burgeoning inmate population levels, fueled in large part by former inmates cycling back into prison.

The key to reforming the system lies in reducing the numbers. That effort will require attention to sentencing practices, time-credit policies that allow inmates to reduce sentences, early-release for low-risk offenders, and a commitment to programs that help inmates and parolees reintegrate into society. For programming to succeed, in turn, the system must free up programming space and provide adequate staffing to provide program services and run the institutions. Strategic planning for that task will require accurate population projections, knowledge of the system's basic operable capacity, and a determination of necessary staffing levels.

Background

Operable prison capacity—the maximum capacity of the prisons to securely house in-mates and provide effective programming—differs from both design capacity and maximum "safe and reasonable" capacity. "Design capacity" is the term used for the past 50 years to designate the number of inmates a prison is designed to accommodate according to standards developed by the Commission on Accreditation and the American Correctional Association.[1] The number can be based on any combination of single-occupancy cells, double-occupancy cells, single- or double-bunked multiple occupancy rooms, or dormitories. The standards take into account the need for humane conditions, as well as the need to prevent violence and move inmates to and from programs, such as mental health care, education classes, and drug abuse treatment. In California, design capacity is based on one inmate per cell, single bunks in dormitories, and no beds in space not designed for housing. The design capacity of California's male prison system, including the capacity of the state's new prison at Delano, is 76,879 inmates. (*See* Table 1).[2]

---

[1] California's actual prison capacity has never been limited to design capacity due to an ever-growing prison population. Actual prison population is represented here as a percentage of design capacity to provide a conceptual framework to convey the volume of prisoners that must be managed within the existing fixed environment.

[124] Maximum "safe and reasonable" capacity, in contrast to design capacity, refers to the maximum number of inmates who can safely and reasonably be housed in the prison system. That number takes into account the "safe and reasonable" capacity of individual housing units according to inmate custody levels, staffing levels, and the physical structure of the units. Level IV facilities, with a greater potential for violence, for instance, have a lower maximum safe and reasonable capacity than Level II and Level III facilities. The safe and reasonable capacity of each prison can be determined by totaling the safe and reasonable capacities of each housing unit in the prison, and the safe and reasonable capacity of the system can be estimated by combining the totals for each prison. The Department of Corrections has determined the maximum safe and reasonable capacity of the general population and reception center housing to be 190 percent of design capacity, while other housing can be filled only to between 100 and 160 percent of design capacity. Overall, the department has determined that the maximum safe

---

[2] This report focuses primarily on the male prison population, which comprises 88 percent of the state's total prison population. According to the Department of Corrections "Monthly Report of Population as of April 30, 2004," compiled by the Offender information Services Branch, the institution population on that date totaled 161,394, with 141,763 male inmates and 9,638 female inmates in the state's prisons and 9,993 male and female inmates in other types of facilities, such as contracted jail beds, public and private community correctional facilities, and other placements.

and reasonable capacity of the state's male prisons is 137,764 inmates - 179 percent of design capacity.

Defining operable capacity. Operable capacity, which takes into account space needed for effective programming in addition to safety and security, is greater than design capacity, but far less than maximum safe and reasonable capacity. A group of experienced California prison wardens told the panel at a recent forum that the operable capacity of the state's prisons to support full inmate programming in a safe and secure environment is 111,309 inmates, or 145 percent of design capacity.

The state's prison system presently far exceeds operable capacity. California prisons are presently filled to the breaking point, with populations exceeding both design capacity and "safe and reasonable capacity," and far exceeding operable capacity. With 141,763 male inmates in a prison system designed to hold 76,879, as of April 30, 2004, the state's prisons were operating at more than 184 percent of design capacity. That number exceeds the prison system's safe and reasonable capacity by 4,000 inmates—and it exceeds operable capacity by 30,000 inmates.

Even those numbers understate some of the overcrowding. Accommodating the present inmate population has been accomplished by confining two inmates in cells designed for one, by double- and triple-bunking inmates in dormitories designed for single bunks, and by converting activity space into inmate housing areas. As Chapter 9 of this report notes, more than 9,500 male inmates are presently housed in activity space that was never designed for housing. Because Level IV inmates are generally more violent and cannot be crowded to the same degree as other inmate levels, Level IV celled housing units have now reached 152 percent of design capacity and may not realistically be filled beyond that point. As a result, greater numbers of inmates are forced into other housing, which has raised Level III housing to 201 percent of design capacity, and Level II housing to 220 percent. Consequently, the overall population of male prisons exceeds a safe maximum, and individual housing units in some prisons are so severely over-crowded as to be at a crisis stage. Reception centers, for example, which house all inmates entering prison, are housing a population of 20,000 male inmates in space designed for only 8,500—putting reception centers at 236 percent of design capacity.

* * * *

[130] mates to take the responsibility of completing the program plan and to officials who will have the responsibility of developing and administering it.

It is important to note that the recommendation for a presumptive sentencing model is to replace the current structure of determinate sentences only, as a means of including this sentencing method in a comprehensive correctional approach focusing on successful reentry. It does not include the current structure for life sentences or the "two-strike" and "three-strike" sentences, which are beyond the scope of this recommendation. In December 2003 there were about 90,500 inmates (58 percent) serving determinate sentences. The remaining 42 percent of the inmates were serving life sentences, two-strike, or three-strike sentences.[10] (Programs for these inmates should be developed as a secondary priority and are not considered in this report.)

---

[10] California Department of Corrections, "Characteristics of the Inmate Population," Table 10, February 2004.

The Corrections Independent Review Panel expects that once fully implemented, a presumptive sentencing model would generate significant savings as inmates become better prepared for reintegration into society. The presumptive sentencing model would require further development by the new department, and the panel recommends that the new department charter a special commission to fully develop this important sentencing reform.

Goal-oriented sentence reduction credits could be increased quickly. Under the current sentence-reduction credit system, most of the department's inmates are limited to day-for-day credits, although some can earn more. (Fewer than 4,000 inmates housed in conservation camps earn two-for-one credits.) Inmates earn their day-for-day credits by participating in work, academic, or vocational activities; however, there is no requirement that the inmate fulfill any specific goals or even complete the training. The panel proposes that the department create a bonus sentence-reduction credit that would supplement existing credits and reward completion of education, vocational, or drug-treatment programs that are proven to reduce inmate recidivism.

This bonus sentence reduction credit would provide incentives for inmates' work activities by rewarding *completion* of academic, vocational, or drug-treatment goals. For example, an inmate could earn a 90-day sentence reduction for completing a literacy program or a college-level class, or a 180-day reduction for completing a drug-treatment course or a vocational certificate. Larger sentence reductions could be awarded to inmates who complete more rigorous programs, such as a two-year college degree. To implement this concept, the department would need to develop specific policies and procedures, and develop legislation to amend the California Penal Code to grant the authority for inmates to earn additional time credits.

Release of low-risk inmates to community supervision. Other states have successfully formed partnerships with law schools to identify and consider for release low-risk older [131] and geriatric inmates. The California Department of Corrections currently houses more than 3,700 inmates who are between 55 and 59 years of age, and nearly 3,100 aged 60 or older[11]. The Legislative Analyst's Office, in its fiscal year 2003-04 Budget Analysis, recommended that California consider early release of elderly inmates. In its analysis, the Legislative Analyst noted that California does not track the cost of incarcerating elderly inmates, but that several other states do and that these other states have estimated that elderly inmates cost two to three times the amount needed to house younger inmates. The Legislative Analyst further reported that New York, for example, estimated its annual cost of housing elderly inmates to be between $50,000 and $75,000 each. The National Center of Institutions and Alternatives estimated the annual cost of confining elderly inmates at $69,000 – nearly three times the national average of $22,000 to incarcerate other inmates.[12]

---

[11] Department of Corrections, "Prison Census Data," December 31, 2003, Table 5.

[12] Legislative Analyst's Office, "Budget Analysis, Fiscal Year 2003-04," p. D-39

The Legislative Analyst's Office noted that housing nonviolent elderly inmates is not a good use of scarce resources when they represent a low risk to society.[13] While the majority of these offenders should remain in custody because of the serious, violent, or sexual nature of their crimes, a small percentage could be considered for early release. Statistics published by the U.S. Department of Justice indicate that recidivism drops significantly as inmates age—from over 50-percent nationally for inmates between ages 18 and 29 to about 2-percent for inmates aged 55 or older.[14]

In a December 2003 analysis for the Legislative Analyst, the Department of Corrections estimated that release of non-serious, non-violent inmates aged 55 or older would reduce the inmate population by 657 and result in savings of $10.5 million in fiscal year 2005-06, if these provisions become effective on January 1, 2005. In the first fiscal year, the institution population would be reduced by about 332 inmates, resulting in savings of $5 million. Full-year savings would occur in fiscal year 2006-2007, when institution population would be reduced by 657 inmates, resulting in savings of $11 million. The institution savings would be offset by the cost of supervising these offenders on parole. Also, these savings are based on the average cost of incarceration for all inmates.[15]

---

[13] *Ibid* p. D-40

[14] U.S. Department of Justice, Bureau of Justice Statistics, "Trends in State Parole, 1990-2000."

[15] Is Department of Corrections, Legislative Estimates Unit, "Legislative Analyst Request 6," December 16, 2003.

In its calculations, the department assumed certain elderly inmates would be excluded from eligibility. Parole violators-returned to custody, inmates with life terms, second-striker inmates, sex registrants, and persons whose current or prior offenses are serious or violent (as defined in Penal Code, sections 1192.7(c), 1192.8, and 667.5(c)) were considered ineligible for early release.

Several states have released elderly inmates under a program created by George Washington University professor Jonathan Turley. Turley is the founder of the Project for Older Prisoners program, which uses a partnership between law schools and corrections depart-[132] ments to assess inmates for early release. To date, more than 200 inmates have been released under the program without a single act of recidivism.[16]

The Project for Older Prisoners program is likely to result in fewer early releases than the 657 figure estimated by the department because of its careful risk analysis and assessment of each inmate. This method is recommended, however, because of its conservative approach and excellent track record. Even if only one-quarter of the 657 inmates identified by the department met the more conservative criteria of the Project for Older Prisoners program, savings of $2.75 million could ultimately be realized.

Contracting with private companies for low-level inmates. The Department of Corrections currently contracts with several private corrections companies for about 2,500 beds for lower level inmates. In January 2004 the department discontinued contracts for about 1,000 beds. Privatized beds provide a high degree of flexibility because the department has no long term investment in the infrastructure or the staffing and can renew contracts on an as-needed basis.

---

[16] George Turley, speaking at a sentencing seminar hosted by McGeorge Law School, April 16, 2004; Web-page viewed on March 25, 2004: www.gwu.edu/~ccommit/law.htm

Based on the projected Level I male institution population in 2009, the department will need more than 10,000 additional beds in order to house Level I inmates in a safe environment with programming opportunities.[17] Renewing contracts with the existing facilities and reentering into agreements with the previously closed facilities would help to provide the beds needed for this population, with no capital outlay costs to the state.

Recommendations

The Corrections Independent Review Panel recommends the following actions:

- Begin to create the environment in the prisons that is needed for inmate programs to be effective, which requires the following:
  - Implementation of a Violence Control Program;
  - Opening up program space by reducing prison population through lower returns to custody;
  - Adding staff necessary to implement, specific, effective inmate programs;
  - Exploring creative measures for the use of existing resources.

Notes for Table 1

[1] "Design Capacity" (DC) is based on the following assumptions:
  (1) one inmate per cell,
  (2) single bunks in dormitories, and
  (3) no inmates housed in spaces that were not designed for housing, such as dayrooms, hallways and gymnasiums.
The numbers used here provide a basis for expressing the actual capacity of the prisons as a percentage of design capacity.
Includes new beds at the Delano II facility.

[2] The population reflected here is the male felon and civil addict population housed in CDC institutions and camps. This population does not include (1) women, (2) inmates housed in various community correctional centers, (3) inmates housed in the Department of Mental Health state hospitals, and (4) inmates housed in county jail beds.

[3] "Maximum Operable Capacity" (MOC) is determined through an assessment of experienced Wardens and is expressed as the percentage of design capacity of the various housing units within the institutions wherein the prison can be operated both safely and can provide programming for every inmate, consistent with the inmate's ability. Programming means the provision of education, vocational education, drug and alcohol prevention and other programs especially for inmates serving a determinate sentence or PV-RTCs, which is consistent with a renewed emphasis on preparation for re-entry. For the purposes of the process of determining Operable Capacity, it is assumed that (1) all "bad beds" are closed, thus freeing up program space, and (2) staff with requisite experience are available to manage an effective program.

[4] Ad Seg and Level III maximum operable capacities are a weighted average based on the number of beds and the recommendations by bed type for the different designs.

[5] Based on Table 6 in the the Spring 2004 Population Projections, which has fewer breakdowns for inmate/bed types. Campers, Administrative Segregation, Substance Abuse Treatment, Condemned, Youthful Offenders, EOP, and PSU inmates are included in the projections for Levels I through IV.

[6] Camp beds are included in Level I figures. Ad Seg beds are broken out between Level III and Level IV. Substance Abuse treatment beds are included in Level III. Condemned, Youthful Offenders, EOP and PSU beds are included in Level IV.

CPCR REPORT

Understanding California Corrections

* * * *

[64] When the sentencing system allows for some level of discretion related to release, the benefits of improved behavior are immediately apparent to inmates. In the absence of any hope to affect the amount of time they will serve, they are hardly going to line up to demonstrate that they can become model citizens. If the state's well-intentioned return to rehabilitation is to succeed, a careful reexamination of its approach to sentencing must be part of the overall picture. Inmates will choose rehabilitation only when it makes sense for them to do so.

Discretionary Parole Release

The shift away from indeterminate sentencing in 1976 spelled the end of discretionary parole *release*, but left in place post-prison parole *supervision* for all offenders, establishing an unusual hybrid system whose policy ramifications do not appear to have been fully clear to the individuals who created it. The historic record of the passage of the determinate sentencing law in the California Legislature reveals virtually no serious discussion of parole supervision at all, and interviews with those central to the law's passage indicate that the subject of parole supervision did not arise in the debate over sentencing. The assumption shared by all parties was that the previous post-prison parole system should and would simply remain intact. As an intellectual matter, the decision seemed to make sense. Over the long term, however, operation of the hybrid system has proven to be a significant contributor to California's unusually high recidivism rate.

The vast majority of state prisoners serve a period of parole upon release. Technically, a prisoner could avoid parole if the Board of Prison Terms exercised its power to waive parole, but a waiver of the entire parole period is extremely rare[168] In the overwhelmingly majority of cases, an inmate is simply released to parole supervision on the expiration of his or her prison term, with the parole term functioning not as a reward for good behavior (as it would in an indeterminate system) but as a period of extended surveillance and scrutiny during which the parolee may be recalled to jail on fairly minimal grounds.

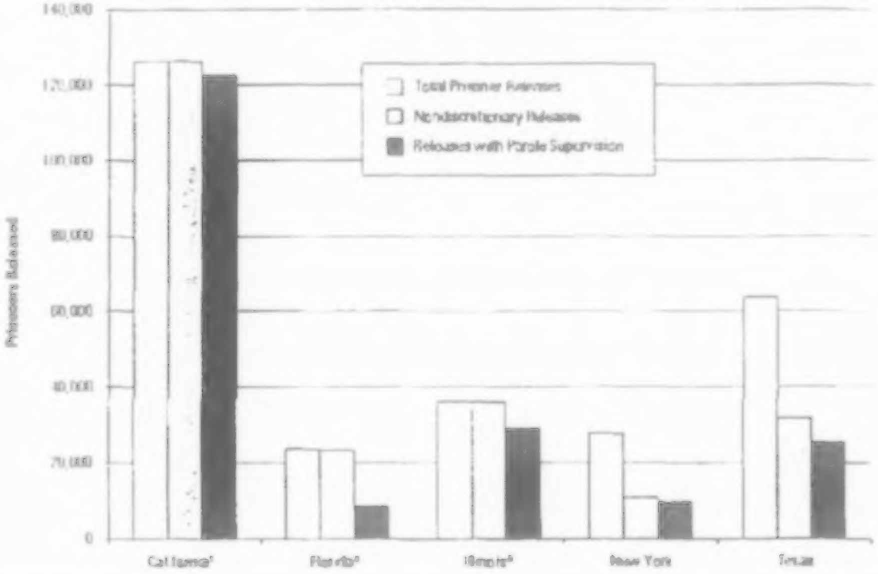
While on parole, a prisoner remains in the legal custody of the Department of Corrections and Rehabilitation. Thus, individuals who have been sentenced to prison are not free from restraints on their liberty until they have completed or are "discharged" from parole. During that period, a parolee is supervised by a parole agent, and must comply with parole conditions. If a parolee violates the conditions, the agent can refer the case to the Board of Prison Terms, which can revoke parole and order a return to custody to serve a parole revocation term. In addition, prisoners who are considered to be sexually violent predators or mentally disordered offenders may be subject to civil commitment proceedings and committed to a state hospital instead of being released from prison.

The length of a person's parole period is determined by statute. Most prisoners—those serving determinate terms for crime occurring on or after January 1, 1979—are subject to a three-year parole period, with a maximum parole period of four years.[169] However, the length of parole terms has been extended in recent years for certain offenders. Certain types of sex offenders, for example, are subject to a five-year parole term as a result of a 2000 amendment to the California Penal Code.

California's nearly universal application of parole supervision stands in sharp contrast to the approach used in most of the rest of the nation. Several other states supervise only certain high-risk prisoners after release. A few states, including Maine and Virginia, have abolished parole supervision altogether. Michigan supervises parolees for only two years, compared to California's three-, four-, or five-year supervision period. Other states, such as New York and Texas, release fewer inmates through a nondiscretionary process but apply parole supervision to

[65] FIGURE 32

Prisoners Released Without Parole Board Review and Parole Supervision, by State, 2004



Note:
a. Indicates determinate sentencing states.

Source: Data compiled from 2005 Directory, American Correctional Association, Lanham, Maryland.

all inmates who are released. Still others, such as Florida, release all inmates through a nondiscretionary process but apply parole supervision to fewer than half of those individuals. Only one other state in the nation—Illinois—follows the California hybrid, applying both a determinate sentencing system and universal parole supervision for nearly all released inmates. Figure 32 illustrates how unusual the hybrid approach is compared to the techniques applied in other states with large inmate populations.

Because California releases virtually all prisoners subject to the determinate sentencing law, with no opportunity to retain even the most likely reoffenders, and then places all of them on parole supervision, the state's parole officers end up supervising some individuals who pose a far more serious threat to society than the typical parolee in a state with discretionary release. In states that use discretionary release, these highly dangerous individuals aren't simply being put back on the street. In Texas, for example, only 63,790 inmates were released onto parole, with the state deciding to keep more risky individuals incarcerated. In California, on the other hand, parole officers often point out that their high revocation rates are caused by the behavior of parolees who were almost certain to reoffend and should not have been released from prison in the first place.

REPORT ON SUICIDES COMPLETED IN THE CALIFORNIA DEPARTMENT OF CORRECTIONS AND REHABILITATION IN CALENDAR YEAR 2006

I. Introduction

This is the eighth annual report on completed suicides in the California Department of Corrections and Rehabilitation ("CDCR" or "Department"). It is submitted as part of the Special Master's continuing review of the Defendants' compliance with court-ordered remediation in *Coleman v. Schwarzenegger*. This report includes the demographic and mental health characteristics of those CDCR inmates who completed suicides during calendar year 2006, the timeframes for clinical and executive review and documentation of those suicides, plus individual case reviews by the Special Master's psychiatric expert ("this reviewer") of all 43 inmate deaths that, more likely than not, were the result of suicide.

As in past years, the *Coleman* Special Master's experts and monitors reviewed completed suicides during their regular site visits to CDCR institutions. They examined institutional records on completed suicides[1] and implementation of corrective action plans that were developed in response to past suicides. The Special Master's experts and staff further reviewed this information, which helped clarify the roles and responsibilities of the CDCR institutional and central office staff in the suicide review and prevention process.

---

[1] Following the Special Master's distribution of this Report in draft form and accompanying case reviews of each completed suicide in 2006, defendants stated in their response that they had failed to provide any of the mental health records within

In addition, Plaintiffs notified the CDCR and the Special Master of their objections to the classification of some inmate deaths as non-suicides, the adequacy of the corrective action recommendations that emanated from the CDCR suicide review process, and facility responses concerning both clinical and custodial operations.

The demographic and mental health characteristics of the inmates who committed suicide are summarized in Tables 1 and 2, respectively. Appendix A summarizes the timeframes for clinical and executive review and documentation of completed suicides. Appendix B contains the case

* * * *

- [8] insufficient communication among clinical, medical, and custodial staffs
- failure to review documented histories in medical records, central files and/or referral forms

---

the Unit Health Record for "Inmate T." Defendants then produced the missing records and asked this reviewer to conduct a second review of Inmate T's suicide, which has been done and is attached as part of Exhibit B. Defendants must ensure that no such lapses in their production of information occur again. Review of incomplete records can lead to erroneous conclusions and recommendations, and ultimately to allowing deficiencies in the defendants' suicide prevention efforts to remain undetected and uncorrected.

- lack of adequate and timely screenings and assessments of inmates on intake, placement in administrative segregation, transfers to other facilities, and referrals to clinicians for assessment of suicide potential in correctional treatment centers or other clinical settings

The finding that 72.1 percent of completed suicides in 2006 involved some measure of inadequate treatment or intervention and were, therefore, most probably foreseeable and/or preventable is consistent with findings of 74.4 percent in 2005, 76.9 percent in 2004, and 74.2 percent for 2003. These numbers are marked increases over the 45 percent rate of inadequate treatment that was found for suicides that occurred in 2002. In 2006, there continued to be inmates who were not considered for referral to higher levels of care, or were not placed on the mental health caseload, despite indications of their need for mental health interventions and/or psychotropic medications. There were also cases with documented concerns about the need for assessment of inmates who demonstrated significant mental illness, past suicidal behavior, or suicidal ideation or statements, and for their placement in higher levels of care.

The annual suicide rate per 100,000 inmates in CDCR since 1998 has been as follows:

1998 - 22 suicides in a population of approximately 158,159 Completed suicide rate of 13.9/100,000

1999 - 25 suicides in a population of approximately 160,970 Completed suicide rate of 15.5/100,000

2000 - 15 suicides in a population of approximately 160,855 Completed suicide rate of 9.3/100,000

2001 - 30 suicides in a population of approximately 155,365 Completed suicide rate of 19.3/100,000

2002 - 22 suicides in a population of approximately 158,099 Completed suicide rate of 13.9/100,000

2003 - 36 suicides in a population of approximately 155,722 Completed suicide rate of 23.1/100,000

2004 - 26 suicides in a population of approximately 163,346 Completed suicide rate of 15.9/100,000

2005 - Population of approximately 164,179. Completed suicide rate for 43 suicides of 26.2/100,000

[9] 2006 - Population of approximately 171,340 Competed suicide rate for 43 suicides of 25.1/100,000

III. Summary of Observations and Recommendations

From 1999 to 2006, the suicide rate for inmates in CDCR ranged from a low of 9.3 per 100,000 in 2000 to a high of 26.2 per 100,000 in 2005. Overall, for this eight-year period, the average annual suicide rate for suicides per 100,000 inmates was 18.5. For 2006, there was a slight drop in the suicide rate to 25.1 per 100,000, down from 26.2 per 100,000 in 2005.

As in past reports, a contrast appears between these rates and the national average for correctional institutions which was estimated at 14 to 17 per

100,000 during the period from 1998 through 2006, and most recently at 14 per 100,000. The difference between the national rates and CDCR rates has provided a standard by which the Department's record in dealing with suicides can be measured. It also provides a measure against which to determine the adequacy of the Department's suicide prevention efforts.

This report indicates that 72.1 percent of the suicides completed in 2006 involved some measure of inadequate assessment, treatment, or intervention, and were therefore most probably foreseeable and/or preventable, based on the definitions used in this review and the information that was or should have been available to clinical staff. This finding is consistent with similar findings in 2003, 2004, and 2005, as stated above. There continued to be significant substantive inconsistencies and inadequacies in the application of policies and procedures, as well as in staff performance with regard to suicide prevention and management.

As in past years, in 2006 there were improvements in the Department's policies and procedures. There were some advancements by CDCR toward improved suicide prevention policies and procedures during 2006. On October 2, 2006, CDCR submitted to the *Coleman* court its Plan to Address Suicide Trends in Administrative Segregation Units ("Plan"), and on December 1, 2006, it filed its amended Plan. This Plan was drawn in response to a court order entered on June 7, 2006, following a set of recommendations made by the *Coleman* Special Master to curb a disturbing rising trend of completed suicides in CDCR administrative segregation units. Although development and implementation of the Plan was still incomplete by the end of 2006, CDCR had begun taking positive steps toward it implementation. In October 2006, CDCR began requiring thirty-minute welfare checks of inmates during the initial three weeks of their stays in administrative segregation. It had also devised a plan to modify the large-mesh ventilation screens in 406 administrative segregation intake cells, with a schedule to modify 61 by April 2007, 85 by July 2007, and the remaining 255 by September 2007. In addition, CDCR submitted as part of its Plan a procedure and timetable for pre-placement screening of inmates endorsed for transfer to administrative segregation units, to be implemented by June 2007. CDCR also committed in its Plan to reviewing and proposing revised regulations in order to allow certain items of personal property for those inmates in administrative segregation for non-disciplinary reasons, and to providing those proposed revisions by December 29, 2006 to CDCR executive staff for their review.

* * * *

[1] REHABILITATION AND RECIDIVISM REDUCTION PRINCIPLES

In my opinion, the major barrier to the successful implementation of AB 900 is our long-term level of unacceptable overcrowding. One of our principle goals should be "100% employment in a work/training assignment for all available inmates."

- In order to attain 100% of the inmates available for assignment and to facilitate rehabilitation and recidivism reduction, the department's longterm goal must be to operate all of its prisons at design bed capacity.
- The department should establish an acceptable level of emergency overcrowding at:
  - 130% for celled institutions
  - 120% for dormitory institutions
- The above is based on the following:
  - Develop an assignment waiting list based on seniority.
  - "The number of inmates available for assignment will fluctuate based on the below-listed factors:
    - Mandatory inmate orientation – quarantine upon reception to the institution.
    - Administrative Segregation status
    - Medically unassigned
- The lower percent in a dormitory facility is based on the assumption that fewer inmates will require administrative segregation based

on discipline and/or special needs separation from the general population.

- The Federal Bureau of Prisons has a policy of an acceptable level of overcrowding of 130%.
- Based on the above principle/policy, we should establish as a point in our "infill bed" New Prison Policy Guidelines the following:
    - In order to achieve full employment/program in a wor/training assignment for all inmates in newly constructed "infill beds" and NOT jeopardize 100% employment for the existing inmate population at design bed capacity NO existing program and/or support space will be utilized to accommodate the additional infill population.
    - [2] Existing vacant program space was driven by continual unallocated budget cuts. Program staff is always the first to be cut. This is exacerbated by the level of overcrowding.
    - Unreasonable levels of long-term overcrowding has facilitated the following cause and effect:
        - Staff creates barriers between themselves and the inmates.
        - Principles of direct supervision disappear.
        - Loss of communication/knowledge regarding the inmate population.
        - Loss of control.

  - Drives up paper work; i.e., inmate disciplinaries and appeals which takes supervisors off the line to handle.
  - Higher levels of violence.
  - More frequent and longer lock-downs, etc.
  - Lack of health care space which has driven four major law suits *Plata*, *Coleman*, *Armstrong* and *Perez* and Federal receivership on Plata.
- In addition, the Receiver is building his team to reach out and provide the necessary Health Care space to fulfill his mission and will not be competing for space to build but will have first priority on any "dirt" available. This gets more complicated in that any infill beds we build inside the security area of an existing prison will require additional health care space. We can expect a negative response from the Receiver regarding this issue.
- You cannot have it both ways – we put the "R" back in CDC or we run a punitive overcrowded jail.

To me, these are a few basic threshold issues that need to be discussed.

5/31/07

AB 900 Strike Team ISSUE MEMO NO. __1__
(Revision #)____3_

SUBJECT: VALIDATION OF IN-FILL BED PLAN
Date: 8/13/07

Prepared by: Deborah Hysen,
Chair, Facilities Strike Team

Reviewed by: CDCR Executive Cabinet

ISSUE: VALIDATION OF INFILL BED PLAN

The CDCR In-Fill Bed Plan, drafted prior to AB 900, and for which AB 900 cost estimates were based, must be validated to ensure that the planning assumptions, including the selected sites and related feasibility assessments, building models, cost estimates and schedules appropriately meet the legislative intent of AB 900, the legal requirements imposed on CDCR in statute or through court order, and the expectations of the Administration in public safety and inmate rehabilitation.

PROBLEM AREAS OF IN-FILL BED PLAN:

1. Bed Types by Population/Level: There is no definitive forecast detail that illustrates the housing type that CDCR should be building to meet short, mid and long range bed needs of CDCR's inmate population at existing institutions. The original AB 900 in-fill bed solution assumes the Department's greatest need is to build "dorm" facilities for Level 11 offenders primarily despite the Infill Gap Chart identifying a significant gap of Level IV housing by 2012. Additionally, a number of unknown but critical factors that affect the population mix need to be considered and included before permanent construction can begin.

The Department should be building permanent solutions to meeting its population needs in the short, mid and long-range future and barring definitive determination of offender levels, it should provide the maximum flexibility to meeting the future inmate population and should have contingency planning in place that incorporates changes in populations based on unpredictable circumstances.

2. Housing/Program Space Allocations and Costs: The January 2007 In-fill Bed plan if implemented would not meet the AB 900 requirement which states "any new beds shall be supported by rehabilitative programming for inmates, including, but not limited to, education, vocational programs, substance abuse treatment programs, employment programs, and prerelease planning."

   [2] Additionally, if each housing unit is crowded to 200% of capacity, the efficacy of any program delivery method may be compromised. The costs authorized per AB 900 for housing and program space are based on project scope and cost estimates of the CDCR January 2007 In-fill Bed plan. A preliminary review of these costs indicates that they are insufficient to facilitate the rehabilitation envisioned per AB 900.

   The Department needs to build sufficient housing allocations and program space to deliver effective rehabilitation of inmates. If additional funding cannot be identified, strategies must be developed to maximize the funding available to the Department.

3. Construction Schedules: The In-fill Bed Plan provided unrealistic schedules for construction

based on a combination of accelerated construction methods for which it does not have authority to use (i.e. Design Build). Additionally, the schedules did not include a sufficient amount of time for the processes required in a state public works project such as finance and legislative approvals, public review periods, bidding and materials procurement, etc.. A preliminary review indicates that in order to develop accurate schedules for the proposed scope of work may add 6-15 additional months. With the current schedules, and the continued lack of special authority, the Department will not be able to provide permanent overcrowding relief for at least 2 years within its own facilities.

The creation of accurate schedules is critical to begin to prioritize and begin this work. Additionally, the current schedules must identify opportunities to compress forecasted timelines through the application of sound project management techniques, identification of "fast-track" methodologies and implementation on concurrent activities. CDCR management must seek remedy of several currently required state processes if it is to quickly mitigate its overcrowding through the construction of permanent facilities.

PROPOSED SOLUTIONS:

There are a number of things that must be changed within CDCR and with the full cooperation and collaboration of stakeholders engaged in these prison reform efforts in order to ensure the solutions brought about through construction address the basic mission of AB 900 - to ease the housing overcrowding condition confronting CDCR, as well as local jails, and its impact on providing adequate levels of inmate custody, health care and rehabilitation through a combination of new construction, increased programming, improved management function, and misc. departmental reform efforts. Some immediate changes have been identified to correct some of the deficiencies identified in the In-fill Bed Plan and are outlined in brief below. Additional modifications to the In-fill Bed Plan are being reviewed by the Strike Teams and various CDCR personnel and will be presented for further [3] consideration in a revised In-fill Bed Plan Addendum. These modifications should be complete by 8/31/07 and incorporated in the amended In-Fill Bed Plan.

The below recommendations represent the interim solution pending further resolution of the remaining beds to be constructed in the proposed In-fill Bed Plan Addendum. Further detail concerning these recommendations, and alternatives considered, is contained later in this memorandum.

Overall Recommendation and Goal Statement: Develop a revised In-fill Bed Plan that provides the right type of housing solution for the current and forecasted inmate population with the required amount of programming and support space within expedited timelines and with emphasis on cost efficiencies. This can be accomplished by implementing the following strategies to address the identified problem areas.

A. BED TYPES:

1. Build Fast-Track/High Impact Beds

a.) Erect Modular Level II housing dorms: Conduct cost/benefit analysis of permanent modular housing for Level II offenders within the secure perimeter of select facilities where existing infrastructure and contractor access facilitates expedient and cost-efficient construction. PIA does not currently offer modular housing alternatives, and prior studies have shown that upon final analysis, and in consideration of design criteria, financing limitations, site preparation and functionality, these units have not previously proven to be "cost effective". However, an updated analysis is warranted based on improvements in construction and delivery methods for this growing segment of the prison construction industry.

b.) Build "low-risk" Reentry dorms at select MSF sites: The In-fill Bed Plan should be amended to design and build some 100-bed dorm housing units at existing MSF sites to serve primarily Level II offenders classified as "low security risk" serving their last 6 months or less of incarceration. These sites will function as "mini-reentry" facilities. These dorms will be based on previously built prototypes and constructed at sites where CEQA (leverage reviews already in progress) and other site constraints provide the least impediment to their construction. With a negative declaration process, these beds can be delivered commencing in the Spring of 2009. These beds will have full and intensive programming aimed at a) modeling reentry programs on a small scale for full implementation on the larger community reentry facilities and b) providing successful reintegration opportunities for the initial prison population released either prior to the initial reentry facilities or those inmates returning to a county that has not planned a reentry facility. Sites selected will be within 100 miles of an urban population and inmates closest to that urban area will be housed in that facility.

[4] c). Develop Substance Abuse Level I dorm housing at select MSF sites: The In-fill Bed Plan should be amended to design and construct units of 100 beds each at select MSF sites to function solely as a self-contained Substance Abuse Treatment Facility for Level 1 offenders, including parole violators with identified substance abuse problems who would bypass general reception intake. This process would follow a similar timeline of Item 1b above, presuming a Negative Declaration process and use of prototype dorms previously installed by CDCR.

2. Build Mission Critical Beds

a.) Reception Beds: The CDCR needs to design and construct more reception beds to meet its intake needs. Existing institutions not designated as reception facilities are handling this load, though the designs are not conducive to these activities. By building additional reception facilities at existing institutions, existing prisons can return its currently designated reception centers back to their intended uses and gain greater operational capacity as a result.

The In-fill Bed Plan should be amended to construct up to 11 wing-nut celled housing units at North Kern State and Wasco State Prison for reception processing within the existing secure perimeter of those institutions. In addition, the Plan should be amended to design and build a 500-celled reception facility at the California Correctional Institution (CCI) - the intent being to refresh and harden the 500-bed "quick build" facility at CCI to a Level IV facility. All other institutions should be analyzed to assess the addition or relocation of reception center activities as part of the amendments to the Bed Plan.

b.) Substance Abuse Beds: The CDCR needs to expand substance abuse treatment services in prisons to accommodate at least 4,000 additional inmates within existing facilities. Since evidence-based research has indicated that these types of beds should be designed and located in an environment conducive to therapy and the creation of a self-contained "therapeutic community", it is imperative that these locations are identified and a plan to design and construct them, or otherwise designate them as "separate areas" within existing housing units, is included in the amended In-fill Bed Plan. There are currently no designated sites for these beds in existing institutions and no agreed-upon building prototypes for new construction of these beds.

c). Secure Housing Facilities: The In-fill Bed Plan proposed the addition of a number of secure housing facilities within the secure perimeter. These facilities should be built in the areas identified in the Infill Bed Plan provided that a site survey is conducted at each proposed site and the conclusions regarding placement and building adjacencies indicates that the housing units are appropriately located. (Note: The standard prototype for these facilities shall be reviewed and modifications considered during the design process to meet the rehabilitation goals of AB 900 and any previous court-ordered design changes).

[5] d). Health Care Facilities: The Federal Receiver in the Plata court case is in charge of administering health care, and the court-appointed representatives overseeing mental health and dental services, have vested interests and/or designated roles in the design, construction, and operation of health care facilities within CDCR's prison popula-

tion. The Infill Bed Plan must be amended through collaboration with and approval of these various authorities to site, design and construct facilities both inside and outside of the secure perimeter of the affected prisons. These additions must be incorporated early in the planning process to identify costs, design and construction activities (as applicable), and accurately reflect these locations because of construction, adjacency and operations issues.

3. Build Appropriate Security Level Beds

a). Increase celled housing proposed in In-fill Bed Plan: The In-fill Bed Plan illustrated a significant shortage of celled housing by 2012 for Level IV offenders. Inasmuch as it is unlikely the reentry facilities will provide a significant amount of Level IV housing, CDCR must build more cells to accommodate this population.

The In-fill Bed Plan should be amended to design and build a 500-bed semiautonomous unit at Kern Valley State Prison initially. This site will be constructed on "green fields" outside of the secure perimeter where contractor access is easily provided. This should serve as a model that can be deployed state-wide and can be modified as necessary to provide either celled or dormed housing, or a combination of the two within the same unit.

b) Forecast cell vs. housing needs: The Strike Teams, OFM, DAI, and other CDCR entities should analyze the remaining prisons and amend the In-fill Bed Plan to identify changes to the ratio of cell vs. dorm housing. The amended plans should optimize the ratio of beds by need and further the goals of rehabilitation and recidivism reduction.

B. HOUSING/PROGRAM SPACE ALLOCATIONS (AND RELATED COSTS)

1. Build Housing Space to Industry Standards

a). Establish new AB 900 Housing Goal of "Not to Exceed 145% Design Bed Capacity (DBC): The In-fill Bed Plan, combined with the plan for Reentry Facilities, should drastically reduce the inmate overcrowding occurring in CDCR in terms of overall population, but not in terms of individual housing allocations. The In-fill Bed Plan proposed to build new housing units at roughly 200% of design capacity, thereby crowding inmates in less space than is ideally designed and operated. This plan perpetuates a past practice of CDCR in contrast to industry [6] standards and in spite of the concerns of federal authorities on the conditions of overcrowding. The benefits of overcrowding to a % above DBC are the reduced requirements of square footage in some proportion to the number of beds. By amending the In-Fill Bed Plan assumptions to build beds at a "not to exceed" figure as proposed by the Independent Review Panel, it should be clear that this does not meet federal guidelines nor national standards but does begin to moderate and control the department's overcrowding practices. The AB 900 construction plans should revise the housing allocations to no greater than 145% average of DBC for inmate housing – if value analyses cannot reduce the overall costs of construction, and/or funding cannot be increased to meet this change, the total number of beds constructed pursuant to AB 900 should be reduced.

b) Establish Long Term Goal of "Not to Exceed 130% Design Bed Capacity (DBC): Upon completion of AB 900 construction, CDCR should ensure that as part of its Master Plan process that all new construction shall be based on planning assumptions that housing allocations shall not exceed 130% average of Design Bed Capacity. This limit is based on national standards for prisons. Further, consideration should be given to establishing planning capacity and oversight mechanisms to prevent the occurrence of exceeding this threshold.

2. Build program space relative to housing allocation/inmate population

a.) Reaffirm AB 900 goal of providing programming for all newly constructed beds: AB 900 provides for full programming for all new beds but AB 900 budget estimates covered only 50% of the beds. Given the extensive costs identified to correct this circumstance, it may not be feasible to build the requisite amount of permanent space. CDCR entities and Strike Team members should assess the ability of CDCR to now effectively deliver programming via double shifts to determine the programmatic viability of constructing less programming space maximizing the utilization of space to be constructed. The In-fill Bed Plan should be amended to reflect those changes if they are viable.

b.) Optimize existing program space to benefit remaining inmate population: The existing population has been deprived in many instances of full programming, partly as a result of CDCR's historical practice of building jobs and space for 100% of design bed capacity for the inmate population, which has then been overcrowded to a system average of 200% or more, and due to funding cuts, staff shortages and use of programming space to house inmates below 100% has resulted in further reduction of program capability below 100%. The Infill Bed Plan should identify opportunities within the existing funding constraints to renovate and reactivate dormant program areas for existing inmate populations.

[7] C. CONSTRUCTION SCHEDULES

The In-fill Bed Plan construction schedules are unrealistic, particularly in light of the lack of authority to accelerate construction based on proven industry-standard design and construction principles. The Infill Bed Plan must be amended to reflect accurate construction tasks, steps for review and approval, including the development of accompanying "master plan" documents required by AB 900 and incorporation of outside activities ongoing and related to institution operations, including installation of technology, recruiting efforts, medical facility construction and ongoing repair and improvements. A "master schedule" by site and in total is necessary to accurately predict, coordinate and report on these efforts.

APPROVAL TO PROCEED

The Facility Strike Team requests approval to proceed to continue its efforts with CDCR entities to finalize and amend the In-fill Bed Plan for presentation in full to CDCR, the Administration and other designated entities immediately after amendment on or about 8/31/07.

"The Department of Corrections owns the responsibility to assist inmates who are willing to change their ways with basic tools, of education, life skills, drug treatment and mental health, so they can get better when they leave Corrections—not worse. But until I get overcrowding reduced—then I don't have the opportunity to provide the program that I believe is my charge."

CDCR Secretary James Tilton

Memorandum

Date: August 20, 2007

To: James Walker, Warden (A)
Jasdeep Bal, M.D., Chief Medical Officer
Michael Jaffe, M.D., Chief of Mental Health
California State Prison – Sacramento

Subject EXECUTIVE SUMMARY OF SUICIDE REPORT

A clinical review of this case found the following

Name: CDC Number: Age: 31

Date of Death: May 28, 2007

Time of Discovery: 1644 Hours

Institution: California State Prison - Sacramento

Location of Death: B1-219, Mental Health Outpatient Housing Unit

Mental Health Level of Care: Correctional Clinical Case Management System

Manner of Death: Hanging

Summary:

On Monday, May 28, 2007 (Memorial Day holiday), at about 1644 hours, two officers in the Mental Health Outpatient Housing Unit approached cell 131-219, -Solely occupied by inmate [Redacted] a 31-year-old Caucasian (Italian-American) inmate who was on Suicide Precaution (q 15 minute checks) at the time.

When they approached the cell, the two officers saw that Inmate [Redacted] had a noose around his neck that appeared to be fashioned from strips torn from his suicide safety blanket, with the other end tied to the air vent. One officer immediately. activated his personal alarm while the other called for the cut-down kit. A third officer retrieved the kit from the control booth officer and responded to the cell, At perhaps 1648 hours (time difficult to read on fax), the officers called for the door to be opened, and entered the cell. An officer supported the inmate while cutting the noose and two officers lowered him to the floor. The program sergeant had arrived, and Checked for a pulse while an officer checked for breathing. When no pulse or respiration were detected, the officer immediately started chest compressions while a responding licensed psychiatric technician supplied breaths using a micro shield clear mouth barrier.

At approximately 1650 hours, the inmate was placed onto a Stokes litter and rolling gurney, and transported to the B Facility Clinic arriving at 1652 hours, with cardiopulmonary resuscitation continuing throughout the transfer. At the clinic the officer retrieved the automatic emergency defibrillator, applied the pads, and turned it on. Per the voice instructions of the device, officers [000216] continued cardiopulmonary resuscitation. Efforts to revive the inmate continued under the guidance of the rover registered nurse, the A-Facility registered nurse, the &-Facility licensed vocational nurse, a licensed psychiatric technician, and several officers. At 1653 hours the crash cart was opened, and an intravenous line started. At 1655 hours the medical officer of the day was called, who ordered an ambulance be called.

Epinephrine and atropine were administered several times. At approximately 1715 hours, the City of Folsom Fire Department paramedics arrived, and assessed the situation. After assessing the inmate and attempting life support, the paramedics ordered life support terminated at 1725 hours.

There was no suicide note.

Investigative Services processed the damaged suicide blanket and strips into evidence. This reviewer examined the blanket. It appeared that the strips had been cut from blanket with a very sharp object, such as a razor. Due to construction of this blanket, it could not possibly have been torn in such a straight line through all the quilted stitching. A long strip approximately six inches wide had been cut straight along two sides of the blanket, joined at the corner by the heavy banded seam. The shorter end was roughly cut through cross-wise; this was where the officers had cut to release the inmate from the vent attachment. Photos showed how this thick strip had been rather remarkably threaded through the small ventilation grid, and tied to itself. No blade was found in the cell following the suicide; and the inmate had been strip-searched when first placed into the cell.

Inmate [Redacted] apparently grew .up in an intact family in Long Beach, California. He reported a history of mental illness and heavy substance abuse including methamptamines. He reportedly history graduated from high school, but had virtually not work history, and evidently received disability for his mental disorder. His adult criminal history from 1995 - 2005 included arrests/convictions for carrying a concealed weapon on his person, reckless driving, making a false report of an emergency, theft, threatening crime with intent to terrorize, possession of marijuana, and arson. The controlling offense was arson of an inhabited structure. He set fire to a house with people inside, because he was angry at the owner. He was sentenced to eight years prison including an enhancement for another arson offense for which he had been serving probation. This was his first prison term.

The Probation Officer's Report noted that the inmate carried a diagnosis of Bipolar disorder and had taken medications for five years. He had perhaps a half-dozen psychiatric hospitalizations in the community, and a history of self-injurious behaviors and suicide attempts including jumping off a freeway bridge. His attorney asked the court to recommend Atascadero State Hospital, and the court agreed that he needed placement at a mental health facility. At the time of his sentencing, Inmate [Redacted] was in the jail psychiatric ward on suicide watch.

He was received at the North Kern State Prison Reception Center on May 19, 2006. Upon entering prison the inmate indicated he was currently taking medications and was immediately referred to mental health. His medications were continued just as they had been ordered in jail. Depakote ER 1000 mg pm, and Seroquel 400 mg pm. He had a Mental Health Screening on [000217] May 23, 2006, and a Mental Health Evaluation on June 7, 2006, placing him at the Correctional Clinical Case Management System level of care.

In prison Inmate [Redacted] was not a management problem. He had a minimal disciplinary history, and attended an education program. He did have a period where he had some conflicts with other inmates due to the fact that he had been mistakenly identified as Hispanic and custody had housed him with Hispanics. This was later corrected.

One month after entering prison, Inmate [Redacted] had the first of many emergency psychiatric evaluations and the first of about six mental health crisis bed status placements while he was at North Kern State Prison reception center. On each of these admissions he was described as extremely maniac and psychotic with grave disability, including symptoms of confusion, disorganization, lability, flight of ideas, pressured speech paranoia, irrational behavior, restlessness, confabulation, and suicidal ideation. However he quickly responded to medication, usually adjusted dosages of Depakote and Seroquel, and the controlled setting. He did not seem to recall his psychotic or manic episodes very well after he had been stabilized, as he would typically deny that he had ever been suicidal or had experienced the other symptoms that brought him to the crisis beds.

After one of his discharges at the end of August 2006, he was recommended for Enhanced Outpatient Program. A clinician followed him as "EOP" for a few weeks. However, this designation somehow got lost as subsequent chronos and documents continued to list him as Correctional Clinical Case Management System. He was seen for a final level of care assessment just before he transferred in January 2067, and at that time he had actually been stable for about six to eight weeks, so was continued as Clinical Case Management System level of care and transferred to Folsom State Prison on January 23, 2007. At that time his medications were Depakote, Seroquel, and Risperdal.

On February 28, 2007, Inmate [Redacted] saw the psychiatrist and expressed a desire to stop his Depakote, saying he had been skipping it and felt better without it, so it was discontinued. His Seroquel was also tapered off in 100 mg increments over 4 weeks (last dose 50 mg) until discontinued, and at the same time he was started on Geodon and titrated up in 20 mg increments over 3 weeks to 60 mg. He then saw the same psychiatrist again for follow-up on March 29, 2007, and complained of anxiety and shaking. He mentioned a family history of cancer. Geodon 40 mg am was added, continuing 60 mg pm. Risperdal was continued at 2 mg HS.

On April 12, 2007, Inmate [Redacted] saw his case manager, and complained that he was depressed and the medications did not seem to be helping. From that point forward, the inmate had numerous clinical contacts, sometimes several in one week. At his next contact, April 19, 2007, he started talking about the fear that he might have cancer or AIDS, and requested a medical follow-up.

The Medication Administration Record for April 2007 appeared to indicate that the inmate was not showing up for medication more often than not. Medication compliance had not seemed to be [000218] an issue before that time. He was again seen by a psychiatrist on April 23, 2007, and counseled about adherence to treatment. He was noted to be ambivalent about psychotropics, but willing to try just one medication. The Geodon was stopped, risperidone continued, and Benadryl added.

On April 29, 2007, the inmate told his case manager that he felt like he was dying of a disease, and was extremely anxious, hyper-vigilant, with excessive motor movements. He was immediately referred for a blood test that was performed "on the spot" to help reduce his anxiety about his medical condition. The case manager saw him again on May 3, 2007, and shared the results of his blood test, which were negative. Clinician noted that the inmate was somewhat unbelieving of the results at first, but seemed somewhat relieved. Some anxiety was still noted but talk therapy was encouraged.

He saw the psychiatrist again on May 8, 2007, who noted that he appeared depressed and anxious with some paranoia, and planned a trial of antidepressant as no manic symptoms were noted. Corresponding medication orders were for risperidone I mg am and 2 mg HS, Benadryl 25 mg am and 75 mg pm; and mirtazapine (Remeron) 15 mg HS.

On the morning of May 21, 2007, Inmate [Redacted] presented to mental health as a "walk-in" and saw another psychologist (not his regular case manager). He presented with "nervousness and physical shaking, and complained of "side effects". from his medications. He was referred for another medication review. He was noted to deny suicidal ideation at that time.

On the morning of Thursday, May 24, 2007, the inmate, again self-referred to mental health and was seen by the senior psychologists. He told her he had been feeling suicidal for one week, and could no longer keep from hurting himself. He said that he wanted to throw himself off the tier to kill himself. He described anxiety racing thoughts; and effects of drug 'addiction. He stated he had stopped taking Depakote, and that his current medications were not working. He wanted to get back on Depakote. He was noted to be depressed, malodorous, and coherent, with psychomotor agitation. A Suicide Risk Assessment was completed, noting High Risk.

Inmate [Redacted] was referred for crisis bed placement and transferred to the Mental Health Outpatient Housing Unit at the California State Prison, Sacramento. There he was admitted at 1015 hours and placed on suicide precaution ordered as Q 30 minute check, with a diagnosis of Amphetamine Dependence and rule/out Bipolar Disorder not otherwise specified. The only medication ordered was Remeron (mirtazapine) 30 mg Q HS. The Suicide Observation Record indicated that the checks were only done on an hourly basis, starting at 1445 hours when the inmate was actually placed in a Menial Health Outpatient Housing Unit cell.

The next day, May 25, 2007, Inmate [Redacted] told the psychologist that he was "ok" but did not want to come out of his cell to talk. He appeared to be depressed and while not suicidal at the moment, stated the ideation "comes and goes." The interdisciplinary Treatment Team meeting was held, indicating that the inmate did attend, and recommended admission to the Correctional Treatment Center Mental Health Crisis Beds. The Suicide Observation Record of May 25, 2007, [000219] had "Suicide Precautions Q 1 HR" pre-printed at the top; and "Q 15 min" written in as the ordered observation time, but the checks were only performed once an hour.

Over the next several days the inmate was seen cell side each day as he reportedly refused to leave his cell. He denied suicidality and appeared stable. On May 28, 2007, He was described as alert, cooperative, stable, absent of suicidal ideation for several days, and appeared ready to return to regular housing. The inmate was quoted as saying "I'm OK and ready to go back." The note was timed at 1146 hours. Suicide precautions at Q hourly checks were continued pending his return to custody, planned for the next day. He was found hanging that afternoon during hourly checks.

This inmate had a severe mental illness and rather poor insight. It appears that he responded well to mood-stabilizing and antipsychotic medication, and his frequent decompensations while at North Kern State Prison suggest the possibility that he was less than fully compliant with his medication, which would be consistent with poor insight. His lack of understanding of the nature of his Bipolar illness also led him to request medication changes that in hindsight may not have been wise, particularly the discontinuation of his mood stabilizer at the end of February 2007. When he saw the psychiatrist a month later, he was experiencing anxiety and shaking. Thereafter, he necessitated frequent clinical contacts, and continued to decompensate, experiencing strong anxiety and restlessness along with depression and paranoia. He developed the possibly delusional idea that he had a life-threatening Medical problem. He also talked about his past drug abuse. It seems that he was seeking an explanation for his severe internal discomfort, which was in fact most likely due to his mental disorder and decompensation as the medications wore off. At the last, he realized that he needed to be back on his Depakote, and requested this from the clinicians at Folsom State Prison.

He was appropriately referred to a crisis bed setting. He was prescribed an antidepressant, not a Mood stabilizer as he had requested. The standard of care was not adequate, as he was only given hourly checks and orders for more frequent checks were apparently disregarded. State policy requires checks at least every 15 minutes at staggered intervals. Had such frequent checks been done, the likelihood that he could have successfully completed an act of suicide would have been substantially decreased.

Recommendations:

Two issues noted without recommendations are whether the inmate should have been in the Enhanced Outpatient Program, and how he obtained a cutting instrument while in a Mental Health Outpatient Housing Unit.

The inmate was evidently referred for Enhanced Outpatient Program while at North Kern State Prison, but then this designation somehow disappeared and he remained in Correctional Clinical Case Management System when not on crisis bed status. It was not clear from the documentation that any formal decision was made about his designation at the time. His frequent moves in and out of crisis bed status likely contributed to any mix-up. However, just before his transfer, his [000220] level of care designation was reviewed and he was considered appropriate for Correctional Clinical Case Management System. Therefore, there is no recommendation.

At Folsom State Prison, the inmate programmed without incident for several months, until he stopped taking his mood stabilizer and started requiring frequent staff contact in mid-April 2007. Had the inmate lived, he should probably have been considered for referral to Enhanced Outpatient Program, however, given that he functioned well on medication, it is understandable that the staff were making an effort to re-adjust and stabilize him on his medication before making such referral. Therefore, there is no recommendation.

Documentation indicates that the inmate was stripped searched before being placed into his cell. According to custody, razor blades are easy to hide and extremely difficult to find. Another inmate could have fished a blade to him. After he used it, he likely flushed it. The other inmates were interviewed at the time by investigative services staff, and denied knowledge of precipitants or signs that the inmate was planning to kill himself. (Due to the high turnover of this unit, these inmates were not available when the reviewer visited the institution.) It is not clear what else could have been done to prevent the inmate from obtaining a blade, and of course it is not known for certain that he even had a blade. Therefore, there is no recommendation.

Identified Problem	Quality Improvement Plan	Required Supporting Documents
1. The standard for Suicide Precaution at California State Prison – Sacramento was Q 1hr checks. Policy requires Q 15 min checks. More frequent checks would have made it	California State Prison – Sacramento to ensure that local procedure complies with the policy of staggered Q 15 minute random checks (i.e. not less than five checks per hour at intervals not greater than 15	Copies of new procedures and forms. Documentation of training given to nursing staff regarding Q15 minute staggered checks as the standard for Suicide Prevention

more difficult for the inmate to have opportunity to create a noose.	minutes) and that any forms such as pre-printed orders and nursing check sheets accurately reflect the standard of Q15 minute checks	
2. At North Kern State Prison, the inmate was in crisis beds or on crisis bed status multiple times, but was never considered for referral to Department of Mental Health as per policy	North Kern State Prison to submit copies of crisis bed placement los and Department of Mental Health referral logs, and audit admissions and discharges based on log for past 6 months for compliance with policy.	Copies of logs for the past three months, and summary of audit results.

According to the Suicide Prevention and Response chapter of the September 2006 Mental Health Program Guide the, Quality Improvement Plan shall be implemented within 60 days of the date of [000221] this memorandum. The institution is responsible for all recommendations unless otherwise indicated. A final report of the completed Quality Improvement Plan and supporting documentation are to be submitted to Helen Steenman, Ph.D., Senior

Psychologist Specialist, Mental Health Programs, Division of Correctional Health Care Services (DCHCS), within 30 days of implementation (i.e., 90 days after the date of this memorandum). The Warden and Health Care Manager must sign off on the final report.

If you have any questions, please contact Dr. Steenman, at (916) 327-0948. Her fax number is (916) 322-2838.

[000228] 62 were offered as the diagnoses, the Axis II deferred. The problem identified for focus of treatment was mood swings. Current medications were noted to be Risperdal, Seroquel, and Depakote. A routine Suicide Risk Assessment Checklist did not note his many past suicidal behaviors at north Kern State Prison, and indicated No Apparent Significant Risk. On February 6, 2007, he was diagnosed with Bipolar Disorder, Methamphetamine Dependence, and a Global Assessment of Function score of 62 per MH-2 Mental Health Treatment Plan and chrono of care.

Inmate [Redacted] saw the psychiatrist on February 28, 2007 and expressed a desire to stop his Depakote saying he felt better without it, so it was discontinued. His Seroquel was tapered off in 100 mg increments over 4 weeks (last dose 50mg) until discontinued, while he was started on Geodon and titrated up in 20 mg increments over 3 weeks to 60 mg.

He saw the same psychiatrist again for follow-up on March 29, 2007. At that time he complained of anxiety, and his leg was shaking. He mentioned a family history of cancer. Geodon 40mg am was added, continuing 60 mg pm. Risperdal was continued at 2mg HS.

On April 12, 2007, Inmate [Redacted] saw his case manager, and complained that he was depressed and the medications did not seem to be helping. From that point forward, the inmate had numerous clinical contacts, sometimes several in one week. At his next contact, April 19, 2007, he started talking about the fear that he might have cancer or AIDS, and requested a medical follow-up.

The medication Administration Record for April 2007 appeared to indicate that the inmate was often not showing up for medication. Medication compliance had not presented as an issue before this time. He was seen by a psychiatrist on April 23, 2007, and counseled about adherence to treatment. He was noted to be ambivalent about psychotropics, but willing to try just one medication. The Geodon was stopped, risperdone continued, Benadryl added.

He saw his case manager on April 26, 2007, an appeared stable at that time.

On April 29, 2007, the inmate told his case manager that he felt like he was dying of a disease, and was extremely anxious, hyper-vigilant, with excessive motor developments. He was immediately referred for a blood test that was performed "on the spot" to help reduce his anxiety about his medical condition. The case manager saw him again on May 3, 2007, and shared the results of his blood test, which were negative. The clinician noted that the inmate was somewhat unbelieving of the results at first, but seemed somewhat relieved. Some anxiety was still noted, but talk therapy was encouraged.

Notes indicate he also saw the case manager on April 20, 2007, after being referred by medical for anxiety, again purported to be due to his concerns about his medical condition.

Department of Corrections and Rehabilitation State of California

Memorandum

Date June 18, 2007

To Claude Finn, Warden
Tamara Robinson, M.D., Chief Medical Officer (A)
Anthony Coppola, M.D., Chief of Mental Health
Deuel Vocational Institution

Subject: Executive Summary of Suicide Report

A clinical review of this case found the following:

Name: ______________________

CDCR Number: ______________ Age: 29

Date of Death: March 9, 2007

Time of Discovery: 1515 hours

Location Of Death: West Hall Cell 238, Special Processing Unit

Mental Health Level of Care: Not in Mental Health Services Delivery System

Manner of Death: Hanging

Summary:

On Friday, March 9, 2007, Inmate _________, was discovered hanging in his assigned cell at approximately 1500 hours. Another inmate, newly arrived, had just come over from Receiving and Release and was assigned to the cell occupied by Inmate _________. The new inmate entered the cell, and the control officer closed the door. The new inmate noticed that a privacy sheet was hanging across a portion of the cell, and property was scattered across the floor. The new inmate looked behind the sheet, saw Inmate ____________ hanging, and immediately started kicking the door and yelling, "Man down! Get me out of here!"

The control booth officer opened the door and a floor officer entered the cell and pulled the sheet aside, observing Inmate ___ hanging from a sheet that was attached to the top of the cell window frame and affixed to his neck. The officer immediately activated the unit alarm and called for a cut-down tool. Staff responded and a sergeant lifted the inmate's body to take the weight off his neck, while another officer cut the sheet that was around the inmate's neck. The inmate was placed on the floor and pulled out of the cell. Officers placed him on a Stokes litter and started carrying him to the institution infirmary. Once outside of West Hall, they were met by a licensed vocational nurse with an electric gurney. The inmate was placed onto the gurney and rushed to the infirmary. Upon arrival, medical staff noted that the inmate was not breathing, and immediately called an outside ambulance and initiated cardiopulmonary resuscitation. A physician at San [000265] Joaquin County General Hospital pronounced Inmate ______ dead via telephone at approximately 1546 hours.

***

[000266] ****

The inmate's Defense Attorney sought to have the inmate housed in a state hospital, either under the jurisdiction of the Department of Mental Health, or the Department of Developmental Services, pursuant to Penal Code 2684. Two complete psychological evaluations were conducted for the court's consideration. The conclusions were that he was severely mentally ill, but did not meet criteria for an insanity defense. He did not have a criminal mentality, and was rated as low risk for sexual offending on the Static 99. The recommendation was that he should be hospitalized rather than imprisoned; however, there was evidently no legal mechanism for this to occur.

Upon arrival at Deuel Vocation Institution Reception Center on March 5, 2007, Inmate ____ informed the registered nurse in Receiving and Release that he had a diagnosis of schizophrenia, and was taking medication (Zyprexa and Prozac) although no documentation arrived with him to support this. In fact, the "Confidential Medical/Mental Health Transfer" form from the Sacramento County Jail indicated no medications. The nurse wrote a "Request for Mental Health Services Staff Referral" chrono indicating undocumented medication, Prozac and Zyprex, "last dose two days ago." Staff indicated that typically they will try to verify undocumented medication if the inmate returns from a Parole Outpatient Clinic, but they do not follow-up with local jails due to lack of resources to do so.

The referral was received by mental health the next day, but no psychiatrist was scheduled to see the inmate with in 24 for a medication evaluation. The practice at this institution, developed when there was a shortage of psychiatrists, is for the screening to occur within 24 hours, and the screening clinician to refer to psychiatry at their discretion.

When Inmate ______ arrived at Deuel Vocational Institution, he was placed directly from Receiving and Release into the West Hall "Special Processing Unit", which is where "soft" protective custody inmates are housed as an alternative to administrative segregation. Within this unit, non-protective custody inmates also program, e.g. take meals there. Therefore, the cell doors are locked while the non-protective custody inmates are present in the common areas.

The following day, a social work intern went to see Inmate, and conducted the 31-item Brief Mental Health Screening through the cell door. That was his last mental health contact. The inmate was referred for further evaluation, scheduled for March 14, 2007.

When asked about her impressions of the inmate at the screening, the intern primarily focused on the fact that the cellmate, a rather intrusive individual, had at first refused to allow Inmate ______ to come to the door, and the intern was concerned that the cellmate was attempted to control Inmate ______. However, when asked if she thought the inmate's responses on the screening would have been different if she had seen him face to face in a confidential setting, she said she did not. When asked why the screening was not conducted outside of the cell, the intern's supervisor implied that custody staff was not cooperative with bringing inmates out due to the fact that they [000267] also program non-protective housing inmates in that area. The intern also reported that she had told custody staff she was concerned about the cellmate pressuring Inmate ______.

This reviewer sought to discover why the mental health screening was not conducted face to face in a private setting, as required by the Mental Health Program Guide. (It was the opinion of this reviewer that had the screening occurred in such a setting, most clinicians would have noticed his level of disability and hopefully the inmate would have been referred for an immediate evaluation and been seen by a psychiatrist. In this case, however, the inmate would not have had the opportunity to resume his medications until nearly two weeks after he had reportedly last taken them.) After further inquiry at the direction of the Chief Deputy, it became apparent that the mental health clinicians were not asking for inmates to be removed from their cells for interviews, in the interest of getting them done the day after their arrival to the institution (a local policy). If they had waited until the following day, or even perhaps come at a different time of day, the inmate could have been screened outside his cell.

Inmate ____________'s former cell mate reported that as soon as Inmate ___________ was placed into their cell, he started saying he needed his medication. Other inmates also said that Inmate _______ had asked a nurse for medication, and was told to "see the psych." The cellmate said that Inmate ________ was very religious, was crazy, was afraid of being in prison, and would not come out to shower. Inmate ________ reportedly kept telling officers that he needed to get out of the cell and tried at least four times to actually leave the cell with his property, but that the officers just put him back and told him to wait for courtesy moves on the weekend. Inmates reported they had no yard that week.

The cell mate also wanted a change. He asked officers at breakfast one Friday if they would be doing courtesy moves that weekend. He was told no because of TB testing. Therefore, he simply refused to go back into the cell. He was placed in Administrative Segregation for a few days, for refusing to rehouse with Inmate _______.

That afternoon, a new inmate was sent to house with Inmate _______ and discovered him hanging.

***

[000269]

Identified Problem	Quality Improvement Plan	Required Supporting Documents
3. The mental health screening was conducted through the cell door, in front of the cellmate. The cellmate may have been pressuring Inmate _______, and may have influenced his responses. Furthermore, it is extremely difficult to observe an inmate while talking through the side of a solid door. This does not allow for adequate clinical assessment. The September 2006, Mental Health Program Guide mandates that all reception center mental health screenings and evaluations shall be conducted in a private confidential setting (September 2006 12-2-3.)	Clinical staff must conduct all mental health screenings in a confidential setting. The Chief Deputy indicated that custody will work with clinical staff to facilitate this, but clinical staff must make their needs known and be willing to work around program needs. A Quality Improvement Team is recommended for Deuel Vocational Institution to develop a process for both clinical and custody staff to follow to ensure that inmates are screened out of cell. Additionally, the local procedure must be updated.	Quality Improvement in Team charter, minutes, final recommendation, and outcome of recommendation.

State of California

Memorandum

Date:

To: Michael Martel, Warden (A)
Brett Williams, M.D., Health Care Manager
Cyrus Moazam, Ph.D., Chief of Mental Health
Mule Creek State Prison

Subject: EXECUTIVE SUMMARY OF SUICIDE REPORT

A clinical review of this case found the following:

Name: CDC Number: Age: 34

Date of Death: 01/22/08

Time of Discovery: 2123 Hours

Institution: Mule Creek State Prison

Mental Health Level of Care:
Enhanced Outpatient Program

Manner of Suicide: Hanging

Summary:

On Tuesday, January 22, 2008, at approximately 2123 hours, during a security check of the first tier in the Administrative Segregation Unit in Facility C, Building 12, at Mule Creek State Prison, a correctional officer observed [Redacted], a 34- year old Caucasian male, hanging between the sink and the bunk, with a sheet tied around his neck and the other end of the sheet secured to the top bunk. The officer immediately activated his personal alarm and the control booth officer was notified via institutional radio of a Code One Medical Emergency. The emergency cell extraction team assembled, the inmate's cell door was opened, and the officers entered with caution. A clear protective shield was placed over Inmate [Redacted] and the cut-down tool was used to detach the sheet from the upper bunk. The part of the sheet around the inmate's neck was loosened and no longer obstructed his airway. Officers reported that the inmate's skin tone was described as pale and he was to the touch. Inmate [Redacted] pupils were fixed and dilated and he was incontinent of bowel and bladder.

The officers placed handcuffs and leg restraints on Inmate [Redacted] and removed his body from the cell. An officer started chest compressions for the cardiopulmonary resuscitation as a licensed vocational nurse began rescue breaths with the Ambu bag. An officer retrieved the Automated Electronic Defibrillator and the pads were attached to the inmate's chest. At approximately 2128 hours, the inmate was placed on a gurney by an officer and licensed vocational nurse. Cardiopulmonary resuscitation was continued while Inmate [Redacted] was transported on an electric

* * *

[4] Inmate [Redacted] was transferred from Mule Creek State Prison to the Correctional Treatment Clinic at California State Prison, Sacramento, due to increased psychotic symptoms and suicidal ideation. Records indicated that the inmate was relatively stable for the next two years.

A psychiatric report, dated January 11, 2006 noted that Inmate [Redacted] had been admitted to the Outpatient Housing Unit at Mule Creek State Prison after he came into the Treatment and Triage Area screaming that people wanted to harm him and demons were after him. At the time, the inmate was compliant with his medication, but symptoms of his mental illness appeared to be out of control. The inmate was then transferred to Correctional Treatment Clinic where he remained until December 12, 2006. The psychiatrist provided a diagnosis of Schizophrenia, Paranoid Type, and a Global Assessment of Functioning score of 35 (severe impatient).

On January 27, 2007, Inmate [Redacted] was brought to the Treatment and Triage Area due to acute stress, odd affect, delusions, and sad mood following a decrease in medication due to his desire to get off medication. He denied any thoughts of self-harm at that time and he was discharged. On January 30, 2007, the psychiatrist wrote the Inmate [Redacted] became angry over having his medication increased and asked that it be decreased. Psychiatry noted the inmate was "paranoid and blaming"

Inmate [Redacted] was placed in administrative segregation on June 7, 2007, for threatening a peace officer. A day later, a psychiatrist noted that Inmate [Redacted] wanted to taper off his medication and the inmate was monitored for a return of psychotic symptoms. Documentation by his case manager indicated Inmate [Redacted] missed his evening medications that caused sensitivity to heat. On June 29, 2007, Inmate [Redacted] was seen by his case manager again following a head-banging incident. He reported racing thoughts and being afraid of demons and presented as disorganized, paranoid, and delusional. He was placed in Mental Health Crisis Bed on June 29, 2007. He was removed from Suicide Precaution on July 2, 2007, and subsequently discharged.

During five-day follow up, his case manager noted that the inmate appeared to be fatigued, confused, delusional, and internally preoccupied, and he returned to the Correctional Treatment Center after three days. A medical report dated July 5, 2007, described Inmate [Redacted] as "crying a puddle of tears" earlier in the day, but he later exhibited angry, fearful affect. He again expressed fear of demons. Records indicate the inmate had been refusing his evening dose of Seroquel for two days. The discharge summary dated July 23, 2007, indicated that Inmate [Redacted] was selectively mute at the time of admission and shook his head positively when asked if he was suicidal. A foreign body was removed from his ear. Following a medication adjustment, he began responding verbally and when he was no longer suicidal, he was discharged back to his prior program. The inmate was given primary diagnosis of Schizoaffective Disorder and Borderline Personality Disorder. It was also noted that the inmate had an ear infection.

Progress notes in the unit Health Record indicated that Inmate [Redacted] become selectively mute from time to time and communicated with staff by writing notes. An undated letter written to the warden

* * *

[7] smile/grimace. The case manager consulted with the psychiatrist and noted the inmate would be evaluated for a possible Keyhea order.

Also January 10, 2008, at 0650 hours, the psychiatrist wrote an order that the inmate be weighed and results reported in the "vita signs" section of the Unit Health Record, to be repeated the first of every month for three months. On the same order, the psychiatrist wrote, "Please notify me in person or by note what IM's weight is today or tomorrow." There was no explanation for the charting of the inmate's weight. In fact, there were no progress notes in the Unit Health Record from the psychiatrist from November 13, 2007 until January 22, 2008.

On January 17, 2008, the case manager wrote that Inmate [Redacted] was selectively mute but responded to her questions by gestures. He denied thoughts of self-harm, but was vague about having thoughts of harming others, though he denied wanting to harm staff. The case manager thought the inmate was likely decompensated and wrote that she would again consult with the psychiatrist regarding the possibility of initiating a Keyhea.

On January 19, 2008, a correctional officer reported that Inmate [Redacted], while handcuffed, attempted to assault another inmate but was prevented from doing so when the officer grabbed Inmate [Redacted] and took him to the ground. On January 21, 2008 correctional officers conducted a preplanned cell extraction after Inmate [Redacted] barricaded his door with a mattress, covering the window and the food port, and refused to respond to the request to cuff up and exit the cell. On January 22, 2008 the case manager reviewed and summarized recent behavior in her progress note and wrote that she discussed the case with the psychiatrist. Her plan was to "send I/M to TTA/CTC for evaluation for Keyhea process." The same day the licensed psychiatric technician wrote that he had initiated his personal alarm when Inmate [Redacted] attempted to push the cell door open against correctional officers who were closing it. After this incident, Inmate

[Redacted] was seen by both his case manager and psychiatrist together.

Later January 22, 2008, the case manager saw Inmate [Redacted] for a crisis evaluation. She wrote that Inmate [Redacted] outlined a conspiracy against him by racial bigots and stated he would hurt others to protect himself. When asked if he would take medication, the inmate stated he was not crazy and accused the case manager and the psychiatrist of being part of a racist hate group and conspiracy to harm him. The case manager reported that, "The I/M became increasingly agitated, screaming so hard spittle flew from his mouth." Although he had no suicidal ideation or intent, the inmate admitted to having thoughts of harming others to protect himself. Inmate [Redacted] adamantly refused Psychotropic medication and the plan was to have the psychiatrist admit the inmate to the Correctional Treatment Clinic and begin the Keyhea process.

On January 22, 2008, the psychiatrist wrote that he was asked to see Inmate [Redacted] who had exhibited increasing hostility, aggression, paranoia and delusional behavior. He reported that the inmate also told him that he would hurt people in order to protect himself and noted that the inmate became angrier the more he talked. The psychiatrist wrote that the inmate refused medication and stated he would fight everyone "including physically assaulting me". The psychiatrist noted there [8] was no restraint room available and he recommended starting Keyhea process in the morning when a bed would be available. The psychiatrist wrote that Inmate [Redacted] denied suicidal ideation but endorsed thoughts of harming others in order to protect himself. At approximately 2123 hours, Inmate [Redacted] was found hanging.

Although the case manager consulted with the psychiatrist about initiating a Keyhea protocol on three separate occasions during the last two weeks of Inmate [Redacted] life, it was never done. Both custody and mental health staff expressed shock that Inmate [Redacted] committed suicide. Based on his recent and continued aggressive and assaultive behavior, staff believed that Inmate [Redacted] was a danger to others but not a risk for suicide. It appeared that Inmate [Redacted] was not seen by a psychiatrist from November 13, 2007, until he was evaluated on January 22, 2008.

Several factors appear to have contributed to Inmate [Redacted] suicide. The Inmate [Redacted] returned to Mule Creek State Prison from the Department of Mental Health, California Medical Facility, Acute Psychiatric Program, on November 2, 2007, where he had been stabilized on medication prior to discharge. The inmate returned to the Administrative Segregation Unit at Mule Creek State Prison. He was not on a Keyhea order and decided to discontinue taking his psychotropic medication.

Within a month or so of being off psychotropic medication, Inmate [Redacted] began to show subtle signs of decompensation, but he was still stable. In January 2008, he learned that he would be going to court for assaulting a peace officer in August 2007. This stressful situation exacerbated his mental disorder and he begun to destabilize. On January 10, 2008, Inmate [Redacted] learned the assault was considered a second strike and he was sentenced to four additional years in prison. While he was out to court, Inmate [Redacted] attacked another inmate, apparently unprovoked, and received an additional Rules Violation Report for Mutual Combat. He was selectively mute from that point on until his suicide.

It seemed that the inmate continued to decompensate mentally and on January 19, 2008, Inmate [Redacted] attempted to assault another inmate, but was stop by a correctional officer who took him to the ground. This resulted in another Rules Violation Report for Resisting and/or Obstructing a Peace Officer resulting in the use of force. On January 21, 2008, Inmate [Redacted] barricaded his door with a mattress and correctional officers conducted a pre-planned cell extraction. On the day of his death, January 22, 2008, Inmate [Redacted] attempted to push the cell door open against correctional officers who were closing it and an alarm was sounded. The psychiatrist and case manager saw Inmate [Redacted] and described him as agitated, delusional, paranoid, and threatening to the psychiatrist. Inmate [Redacted] adamantly refused psychotropic medication.

In the two weeks prior to Inmate [Redacted] death, the case manager consulted with the psychiatrist on three different occasions about the possibility of initiating a Keyhea order. Inmate [Redacted] was not considered a suicide risk and was not on Suicide Precaution. No suicidal gestures or attempts were noted in nearly three months since his return from the Department of Mental Health. However, after the suicide, shoes with laces were found in his property and one lace was removed from the shoe and appeared as though it may have been used for practice tying knots. Further, a piece of

[11] Identified problem	Quality Improvement Plan	Required Supporting Documents
2. On the day of the suicide, the restraint was not available and there was no other bed open in the Correctional Treatment Clinic. As a result, the inmate was left in his cell with no prescribed observation	Division of Correctional Health Care Services plans to open an additional 50 Mental Health Crisis Beds at the California Medical Facility on June 16, 2008. In addition, additional training will be provided to all staff through the monthly Suicide Prevention Videoconference regarding emergency placement options when no bed is available in Mental Health Crisis Beds.	Videoconference attendance sheets.
Inmate displayed increased hostility, aggression, paranoia, and delusional behavior on the last day of his life. Although the inmate had an extensive history of suicidal behavior, mental health staff did not consider the potential that his psychotic symptoms would create a heightened suicide risk.	Division of Correctional Health Care Services will provide additional training to all staff through the monthly Suicide Prevention. Videoconference regarding the connection between suicide risk and mental status.	Videoconference attendance sheets.

According to the Suicide Prevention and the Response chapter of the September 2006 Mental

Health Program Guide, the Quality Improvement Plan shall be implemented within 60 days of the date of the cover of this report. The designated institution or office is responsible for all recommendations as indicated. A final report of the completed Quality Improvement Plan and supporting documentation are to be submitted to Connie Hoglund, Ph.D., Senior Psychologist Specialist, Mental Health Programs, Division of Correctional Health Care Services (DCHCS), within 30 days of implementation (i.e, 90 days after the date of the cover of this report). The Warden, Health Care Manager and Chief of Mental Health must sign off on the final report.

Please understand that the Quality Improvement Plan report from each institution will subsequently be forwarded to the *Coleman vs. Schwarzenegger*, Item 7.b. "Defendants shall provide a copy of the report on implementation of a follow-up suicide corrective action plan to the special master's experts within 180 days from the completed suicide . . . "

State of California

Memorandum

Date: April 16, 2007

To: Suzan Hubbard, Warden (A)
Nadim K. Khoury, M.D., Chief Deputy Clinical Services
Victor Brewer, Program Director, Vacaville Psychiatric Program
California Medical Facility

Claude Firm Warden
Tamara Robinson, M.D. Chief Medical officer
Deuel Vocational Institution

Subject: EXECUTIVE SUMMARY OF SUICIDE REPORT

A clinical review of this case found the following:

Name: [redacted]:

CDC Number [redacted]:

Date of Death: January 27, 2007

Time of Discovery: 1445 Hours

Institution: Department of Mental Health Vacaville

Location Of Death: [Illegible]

Mental Health Level of Care: Acute Psychiatric Program

Manner of Death: Hanging

Summary:

Inmate-patient [Redacted] was a 19-year-old Latino male, who completed suicide on January 27, 2007, while housed in the Department of Mental

Health Acute Psychiatric Program at California Medical Facility. An order for one-to-one direct visual observation for the purpose of suicide watch was in effect at the approximately 1430 hours, Inmate-patient [Redacted] was smearing feces on his window and velling obscenities at staff. A medical technical assistant and senior medical technical assistant responded to the cell, and tried to talk to Inmate-patient [Redacted]. At approximately 1445 hours, when Inmate-patient [Redacted] did not respond, the senior medical technical assistant requested an extraction shield and opened the food port. The medical technical assistant holding the shield looked into the cell and saw that Inmate-patient [Redacted] was kneeling in front of his desk with a noose around his neck. The medical technical assistant activated his personal alarm. Thirteen medical assistants and one senior medical technical assistant were involved in lifesaving measures including retrieving the cut-down tool, simultaneously successfully removing the noose, which was made of a two-inch strip of the green safety blanket in the cell. Inmate-patient [Redacted] was removed from his cell and cardio-pulmonary resuscitation efforts began at cell front. Cardiopulmonary resuscitation continued until he was

* * *

[4] by mouth. He began to flood his cell, and was taken out to the day room. He spoke to staff about his concerns about being discharged to P-2. He agreed to cooperate upon return to his cell. When he returned to his cell at 1430 hours, he began to flood again, and smeared feces on the window. He continued to yell, until approximately 1445 hours.

[Identified problem	Quality Improvement Plan	Required Supporting Documents
The Department of Mental health administration requested to have 124 cells [to remove the desks and stools replace the beds, doors, and vent and window screens	The department of Corrections and Rehabilitation Facilities Management will seek Funding for the expeditious physical plant modifications, and will provide a schedule for completion of these physical plant modifications to the Coleman Court as soon as possible. see department of Mental Health Root cause Analysis Issue # 5	Log of modifications made and dates completed.
2. One-to one watch was not conducted appropriately on January 27, 2006. As soon as the inmate-patient could no longer be seen, the food port should have been shielded and opened for constant observation.	The Department of Mental Health will revise policies to specify that if an inmate-patient begins to cover his on her window, the response shall be activate an alarm immediately. See Department of Mental Health Root Cause Analysis Issue # 5	Revised policies from the Department of Mental Health
3. The response time to open the door may have been too slow. There is no time frame indicated between Inmate-patient [Redacted] failure to respond and the opening of the food port. Mitigating this problem is the fact that the sr. MTA bypassed standard Universal Precautions in order to intervene more quickly	The Department of Mental Health will revise policies regarding opening the food ports for the purpose of observation and emergency response see Department of Mental Health Root Cause Analysis Issue # 5	Revised policies from the Department of Mental Health

[5]Identified problem	Quality Improvement Plan	Required Supporting Documents
4. Suicide Precaution documentation indicated that Inmate-patient [Redacted] was observed every fifteen minutes. The intervals of observation were not staggered, and the documentation indicated very little	The department of Mental Health will revise policies regarding quality and time intervals for suicide precaution rounds. These policies will require increased interaction and staggered time intervals. see Department of Mental Health root Cause Analysis Issue # 13	Revised policies from the Department of Mental Health
5. Inmate-patient [Redacted] was able to use a safety "no-tear" blanket to create a noose.	The Department of Mental Health will research the availability of "no-tear" blankets that are more tear-proof, and will purchase alternate blankets if they are available. See Department of Mental Health Root Cause Analysis Issue # 9.	Department of Mental Health Audit of documentation for a sample of inmate patients discharged to the Enhanced outpatient Program.

* * *

[8] Identified problem	Quality Improvement Plan	Required Supporting Documents
13. Inmate-patient Redacted] remained at CCCMS level of care despite several Mental Health Crises Bed admissions from deuel Vocational Institution for the risk level indicated.	Deuel Vocational Institution shall develop a Quality Improvement Team to ensure all staff trained in suicide Risk assessment and documentation, using the training by Dr. Thomas white, before March 31, 2007. The quality Improvement team shall audit at least one Suicide risk assessment per [illegible], or create a peer Review for this purpose, shall provide follow-up training for any [illegible] determined by the audit.	Audit of suicide Risk Assessments completed by Deuel Vocational Clinicians
14. The Outpatient Housing Unit at Deuel Vocational Institution was used frequently, without referral to a Mental Health Crisis Bed, including for a serious suicide attempt on January 22, 2006. This problem is mitigated by the fact that Inmate-patient [Redacted] was sent to a Mental Health Crisis Bed three times while at DVI..	Deuel Vocational Institution shall refer inmate-patients who are repeatedly placed in Outpatient Housing Units or Mental Health Crisis Beds for [illegible] review teleconference at headquarters. A log of patients referred for clinical review including name, date referred, date of clinical review, and outcome shall be maintained for 60 days.	Log of inmate-patients referred for clinical review.

15. The Development Disability assessment on January 22, 2006 is inconsistent with all other reports of cognitive functioning. The chrono should not indicate an inmate is Normal Cognitive Functioning after he has already been identified as part of the Developmentally disabled Program.	Deuel Vocational Institution shall develop a Quality Improvement Team to ensure that no assessments for Development Disability are conducted without checking prior history	Report form the quality Improvement Team including methods of correcting the problem, and follow-up audits.

State of California

Memorandum

Date: April 20, 2007

To: Suzan Hubbard, Warden (A)
Nadim K. Khoury, M.D., Chief Deputy Clinical Services
Victor Brewer, Program Director, Vacaville Psychiatric Program
California Medical Facility

Robert Hernandez Warden
[Illegible]
[Illegible]

Subject: EXECUTIVE SUMMARY OF SUICIDE REPORT

A clinical review of this case found the following:

Name: [redacted]:

Age: 31

CDC Number [redacted]:

Date of Death: January 29, 2007

Time of Discovery: 1958 Hours

Institution: Department of Mental Health Vacaville

Location Of Death: [Illegible]

Mental Health Level of Care:
Acute Psychiatric Program

Manner of Death: Hanging

Summary:

On Monday, January 29, 2007, at approximately 1958 hours, two medical technical assistants on unit

Q-2 of the Department of Mental Health Vacaville Acute Psychiatric Program noticed that Inmate-patient [Redacted] had covered the window of his cell door with a sheet. One medical technical assistant covered the food port with a Plexiglas shield while the other reached in and removed the sheet. They then saw that Inmate-patient [Redacted] was hanging at his door from a sheet that was around his neck. One of them activated his alarm and yelled, "we have a hanger" while quickly retrieving the cut down tool. He told two other medical technical assistants at the scene to prepare for entry, and they opened the cell door. Two of them lifted the body while the other cut the sheet above the inmate-patient's head, which was tied to the vent above the door. They then lowered Inmate-patient [Redacted] of the floor. One medical technical assistant detected a weak, irregular [illegible] and another medical technical assistant [illegible] assistants at the scene. They lifted the inmate-patient on to the backboard and then onto the gurney, and began to transport him to the B-1 clinic. Assisted breathing was continued and is pulse was monitored. As the transport team entered the elevator, the pulse was lost. One medical technical assistant climbed

[Identified problem	Quality Improvement Plan	Required Supporting Documents
9. When the inmate covered his window, staff had to obtain a shield and open the food port before they could see that he was hanging. This caused a slight delay in the emergency response.	The Department of Mental Health has already issued a memo instructing their staff to active alarm immediately in response to a patient commencing to cover his cell window. (See Department of Mental Health Root cause Analysis Issue # 5.) this will be incorporated into revised policy	Copy of memo and/ or revised polices, and evidence of training.
10. The Department of Mental Health has been attempting to have the vents retrofitted in patient rooms since the last hanging in December 2005. The California Department of Corrections and Rehabilitation must facilitate the physical plan modifications requested.	The California Department of Corrections and Rehabilitation shall expeditiously seek funding to retrofit patient rooms including modifications to vents, doors, beds, desks and stools, to minimize opportunities for easy access to self-harm behaviors. (see Department of Mental Health root Cause Analysis Issues #6 and 7)	Descriptions of the work done including timelines for completion, and photographs.
11. When emergency equipment is in use, there are no back-ups in case of concurrent emergency situations.	The Department of Mental Health shall ensure that emergency equipment is available and maintained in a standardized locations, with procedures in place to ensure accountability. See Department of Mental Health Root cause Analysis Issues #6 and 7)	Documentations of policy and training.

[Identified problem	Quality Improvement Plan	Required Supporting Documents
12. The primary therapeutic modality provided in the Acute Psychiatric program is medications management. This does not address co-morbid Axis II disorders, which are seen with increasing frequency.	Department of Mental Health will train staff on current methodology and intervention for treating Axis II diagnoses. Additionally, they will utilize a "positive Behavior Support Team" to helf staff understand the functions of "manipulative behaviors, and make specific recommendations for therapeutic interventions incorporated into the overall treatment plan. (See Department of Mental Health Root Cause Analysis issues #9 and 10.)	Documentations of policy and training.

Senator Michael J. Machado
State Capitol, Room 5066
Sacramento, CA 95814

Re: *Senate Bill 1665*

Dear Senator Machado:

Thank you for sponsoring Senate Bill 1665, which provides full funding for the construction program set forth in the *Plata* Receiver's strategic plan.

I understand that support for SB 1665 may be wavering with this week's news recording a possible settlement of the proceedings before a three-judge court, of which I am a member, concerning prison overcrowding. Those proceedings concern whether overcrowding is the primary cause of the unconstitutional nature of medical and mental health care delivery to inmates. Although no settlement has yet been presented to the judges for their approval, and I therefore do not know the terms under consideration, resolving the overcrowding issue would only remove one barrier to achieving the delivery of constitutionally adequate health care to inmates. Without more, a reduction in prison overcrowding will not ensure that the delivery of medical health care to California's inmates will reach constitutional standards. Thus, without more, a settlement to reduce the prison population will not address the core issue in *Plata*, nor will it alleviate the reasons for the Receivership and my oversight over the prison's medical health care delivery system. Instead, a reduction in the prison population would simply resolve the plaintiffs' argument that overcrowding is the primary cause of the constitutional violations.

In addition, as you may know, three other federal district court judges and I are coordinating our efforts in four statewide prison class action lawsuits over which we individually preside. These cases concern medical health care (*Plata*), mental health care (*Coleman*), dental care (*Perez*), and disability access issues (*Armstrong*) in California's prisons. As the attached order demonstrates, the three other judges and I have approved an agreement for my Receiver to take the lead on prison construction projects, including the plan under consideration to construct new health care facilities that will serve the needs of up to 10,000 inmates. I have been briefed on [2] numerous occasions concerning the proposed construction program, as set forth in SB 1665, and I believe strongly that the program—particularly in the phased fashion in which it will be undertaken—represents an appropriate, cost-effective plan that will address the major treatment and housing concerns in all four federal class actions.

I appreciate that SB 1665 asks for a significant amount of funds, but please rest assured that I am extremely concerned about spending funds from the public fisc in an efficient manner. To that end, I will not permit my Receiver to continue to undertake a construction program that becomes unnecessary due to changed circumstances, including any future reductions of the prison population in such a way that eliminates the need for additional medical facilities. My Receiver has made a similar commitment to me that he will carefully evaluate the need for additional facilities on a phase-by-phase basis.

In light of all of the above, I hope you will continue to communicate with your colleagues about the urgency of passing SB 1665. I have directed my Receiver to continue working with you and other members of the Legislature to ensure the bill's expedited passage.

Sincerely,

/s/ Thelton E. Henderson

II. Addendum to Statement of Opinions and of the Bases and Reasons Therefore

1. On December 6, 2007, I had the opportunity to fly to California to evaluate several California Department of Corrections and Rehabilitation facilities. These included San Quentin State Prison, the California Medical Facility and California Institution for Men. During this evaluation I had the opportunity to observe daily and weekend functions of the prison and medical facilities, talk to staff, inspect medical records, interact with physician providers, nursing staff and correctional officers. I was also able to witness pharmaceutical functioning, direct care delivery including triage, chronic illness clinics, acute care response, individual provider interactions and system functioning.

II. Addendum II to Statement of Opinions and of the Bases and Reasons Therefore

1. On September 1, 2008, I had the opportunity to fly to California to evaluate several California Department of Corrections and Rehabilitation facilities. These included North Kern State Prison, the Substance Abuse Treatment Facility, Pleasant Valley State Prison, California State Prison in Solano, and High Desert State Prison. During this evaluation I had the opportunity to observe daily functions of the prison and medical facilities, talk to staff, talk with inmates, inspect medical records, interact with physician providers, nursing staff and correctional officers. I was also able to witness pharmaceutical functioning, direct care delivery including triage, chronic illness clinics, acute care response, individual provider interactions and system functioning.

[2] 2. Prior to traveling to California I had the opportunity to review the material sent to me including the reports of Dr. Craig Haney, Pablo Stewart, reports of the receiver to the court (Turnaround, 7th and 8th), several internet web sites concerning individual prisons as well as the California Department

of Corrections and Rehabilitation and several other various items.

Expert Report re:
Coleman et al. v. Schwarzenegger et al.

Ira K. Packer, Ph.D., ABPP (Forensic),
December 10, 2007

Referral issue:

I was retained by the State of California in reference to the plaintiffs petition (in *Coleman et al. v. Schwarzenegger et al.*) for a prisoner release based on the finding that the State has not remedied the deficiencies in delivery of constitutionally adequate services to mentally ill inmates. I have been asked to address the issues of whether: (1) crowding is the primary cause of the violation of the Federal right; and whether (2) no other relief will remedy the violation. I submitted a preliminary report on November 8, 2007. This represents my final report, based on review of materials (as noted below) as well as my tour of prison facilities between November 26-30, 2007 (as documented below), which included interviews with inmates, mental health staff, as well as correctional staff.

Prison facilities toured:

Between November 26-30, 2007, I toured the following prison facilities, which included interviews with health and mental health staff and administrators, correctional officers and administrators, interview of inmates (at both the CCCMS and EOP level) who were chosen randomly, and review of randomly selected charts. During these tours I was accompanied by attorneys for the plaintiffs, attorneys for CDCR (and, for the last day, an attorney from the Attorney General's office), as well as representatives from CDCR headquarters.

- California Medical Facility (CMF) –Vacaville, November 26, 2007 (including DMH units)
- California State Prison – Sacramento, November 26, 2007
- Valley State Prison for Women (VSPW), November 27, 2007
- Central California Women's Facility (CCWF), November 27, 2007

- Salinas Valley State Prison (SVSP), November 28, 2007 (including DMH units)
- California Institution for Men (CIM), November 29, 2007
- R. J. Donovan Correctional Facility, November 30, 2007

Qualifications of expert:

I have attached my curriculum vitae which provides information about my professional qualifications. In terms of specific expertise relevant to this assessment, I would highlight the following aspects of my experience:

I am a Board Certified Specialist in Forensic Psychology (from the American Board of Professional Psychology) with over 28 years experience in forensic and correctional psychology. I have worked in maximum security forensic hospitals whose populations included prison inmates. My first such experience was at the Center for Forensic Psychiatry in Michigan (1979-1985), a Department of Mental Health facility, which included units for transfers from the state prison. I also worked for 6 years (2001-2007) [5] at Bridgewater State Hospital in Massachusetts, a Department of Correction facility, which provided evaluations and treatment for, among others, state prisoners. At that facility I served as the Director of Forensic Services as well as Chief of Psychology. I was a member of the Hospital Executive Committee; this leadership committee developed and implemented policies and procedures, and was responsible for coordinating the successful attempt to obtain JCAHO accreditation for that facility (obtained for the first time in the facility's history in 2003) as well as re-accreditation (2006). A significant policy change which we implemented clarified admission and discharge criteria for prisoners, tightened the procedures for screening and triaging admissions, and improved communication between the hospital and the prisons.

I also was involved in program development, policy development, and operational implementation of mental health services to the 18 Massachusetts Department of Correction prison facilities. From 1998-2001, I served as Deputy Mental Health Program Director, during which time significant improvements were made in the delivery of mental health services to inmates in the Massachusetts prison system. From 2001-2007, as noted above, I served at Bridgewater State Hospital, but also maintained responsibility For oversight of the psychologists in the prison system (as Director of Psychology).

In addition to my experiences in the prison system, I also have extensive experience with county correctional facilities. From 1985-1993, I was program director for a community forensic program in Western Massachusetts, which included provision of services to the local courts as well as to three County Correctional facilities. In that capacity, I was responsible for development of a mental health program at the Hampden County Correctional Center, which has served as a model for other facilities in the Commonwealth. During that time, I also provided direct clinical services at the facility. During the later years of this period, we provided mental health services in an overcrowded facility, which was subject to court monitoring (unrelated to the mental health program), pending building of a new facility.

[6] I also served, from 1993-1996 as Assistant Commissioner for Forensic Mental Health in the Massachusetts Department of Mental Health (DMH). In that position, I was responsible for oversight of forensic mental health services to over 70 courts, as well as to 13 county correctional facilities. During my tenure, we developed standards for evaluation of quality of services at these facilities. In addition, we initiated a new program called the Forensic Transition Team (FTT). This service was developed in response to concerns that mentally ill inmates were being discharged from the prisons and county correctional facilities without adequate community services in place. The FTT program involved Department of Mental Health clinicians working with inmates and the facilities prior to discharge to ensure a coordinated plan in the community. FTT clinicians work with the newly released inmates for a period of several months until care can be transitioned to DMH case management and/or community providers. This program has been very successful and was recently significantly expanded.

Note on Methodology:

This report is based on my review of the documents listed above, augmented by information obtained during my visits to the facilities. I interviewed approximately 20 inmates and also reviewed a number of charts. I utilized the information I obtained on-site to either corroborate or raise questions about data contained in the documents I reviewed, and/or to direct me to obtain additional information. I also attempted to corroborate, whenever possible, information obtained from inmates. In most instances, their reports were consistent with other sources of information (but not always so). To the extent that I utilize statements from staff and inmates in this report, this is done to illustrate a point, rather than as evidence of a particular practice. I believe this is an important caveat, since the aim of this assessment is to identify the primary cause of system deficiencies, which cannot be done on an anecdotal basis.

[7] Also, to provide a context for this report, the high prevalence rates of mental illness in prisons is a national phenomenon, not limited to CDCR.[1] Many of these individuals enter prisons with a history of mental illness. Prisons were not designed with this population in mind, and prison environments, whether overcrowded or not, are not conducive to the treatment of mental illness. Furthermore, many of the mentally ill inmates in prisons present not only with psychiatric disorders but also with antisocial traits, making them particularly difficult to treat. Prisons have been required to develop mechanisms to provide treatment, without compromising security. For instance, CDCR and some other jurisdictions employ what are called "Treatment Modules" to provide group therapy to inmates requiring high levels of security (such as in ad-seg units). These modules are booths, which are designed to allow the inmates to see and hear each other and the group leader, but prevent any direct contact. Although a neutral observer may be taken aback when first seeing these modules, the alternative (as in Massachusetts, which does not employ them) is simply not

---

[1] For example: James, D.J. & Glaze, L.E. (2006). Mental health problems of prison and jail inmates. *Bureau of Justice Statistics*, Special Report, Sept. 2006; Pinta, E.M. (1999). Meta-analysis of prison mental health studies. *Correctional Mental Health Report*, p. 33.

to provide any group treatment to such inmates. I point this out as an example of the need to evaluate the mental health services in CDCR within the context of appropriate treatment in a prison environment, as opposed to treatment in community settings. My opinions expressed here thus reflect my assessment of the problems preventing CDCR from providing adequate mental health services to the *Coleman* class within the context of a prison environment.

Although I interviewed a number of inmates/patients, I did not record their names (referring to them in my notes only by the first initial of their last name), in order to preserve confidentiality and privacy as much as possible. However, the plaintiffs' attorneys who accompanied me did record their names and prison i.d. numbers, so they have the opportunity to corroborate or disconfirm points made in my report based on those interviews.

[8] Scope of opinion:

I am addressing the impact of overcrowding specifically on the *Coleman* class, which includes inmates with "serious mental disorders." My assessment incorporates the following determinations which have been presented in the various documents, and which I am not independently evaluating:

1. The California Prison system is overcrowded, as there are currently approximately 173,000 inmates in CDCR facilities.
2. The Court has determined that CDCR's provision of mental health services is not in compliance with Constitutional requirements (8th amendment).

Thus, the question is whether the overcrowding is the primary cause of the lack of compliance and whether compliance can be achieved by means other than an order for prisoner release.

Based on my review of the documents above, it is my professional opinion that the overcrowding in CDCR significantly contributes to the difficulties in providing adequate mental health services, but is not the primary cause of the deficiencies. In my professional opinion, the lack of adequate intensive mental health treatment beds (EOP, Mental Health Crisis Beds, Acute Psychiatric Hospital Beds, Intermediate Care beds) is the primary cause of the deficiencies in providing mental health care to mentally ill inmates in the CDCR. However, this is not primarily a function of the large population in the prisons (as the number of mentally ill patients is not simply a fixed percentage of prisoners, but is primarily impacted by factors that lead to the mentally ill being disproportionately incarcerated). Rather, the lack of sufficient beds and resources at the "high end" of the mental health system in the CDCR reflects both the unanticipated influx of mentally ill prisoners into the correctional system over the past 2-3 decades, and the delay in the state's response to this situation. Only more recently has the state undertaken a more comprehensive and planful approach to this issue (as evidenced by the [9] development of the strike teams, the new bed plan and other responses to recent court orders).

As noted above, the increasing numbers of mentally ill individuals becoming incarcerated is a national problem, likely attributable to a number of causes (including lack of adequate mental health care in the community, lack of access to such health care for many vulnerable individuals, and other factors unrelated to the prison system). These factors impact the California system, which is also plagued by a high number of parole violators (including many who are mentally ill) being returned to prison, discussed below on the section on Reception Centers. Focusing on a prisoner release is thus likely to provide only a modicum of relief to the problems in providing services to mentally ill inmates; the main efforts need to be directed specifically towards programming and resources for this vulnerable population.

The sections that follow represent specific analyses of a number of the most significant issues impacting mental health care in the CDCR. For each issue, I present my opinion as to whether overcrowding is the primary cause of problems noted and, if so, if there are alternatives to a prisoner release that could remedy the situation.

Lack of beds and treatment space

My observations corroborated the documentation that indeed there are not enough beds available for mental health programming at the highest levels of intensity, including Mental Health Crisis Beds (MHCB), EOP program beds, and acute and intermediate care DMH beds. I have reviewed the Declaration of Deborah Hysen (May 24, 2007) regarding the Facilities Construction Strike Team's plans for increasing bed and programming space, the Supplemental Bed Plan developed by CDCR in August, 2007, as well as the Special Master's report noting the use of mobile trailers to increase programming space. It is my opinion that these strategies, if properly implemented, can reasonably be expected to ameliorate the problems posed by the current lack of an adequate number of beds at the higher levels of mental health care.

[10] The completion of the construction projects, though, is several years away. In the interim, one of the strategies has been to convert existing space for use with these populations (retro-fitting). However, the effectiveness of this strategy is limited by the fact that existing space was not designed to serve the functions required for these units. A good example of this problem was noted at Salinas Valley (SVSP), where there is both a free-standing DMH building, as well as intermediate care DMH units in the D building of the prison. The differences in the units is quite striking, as the free-standing building has a therapeutic "feel" to it, appears designed to provide therapeutic services, and has reasonably adequate space to provide those services. By contrast, the unit in the D-building (which has been designated as temporary space) is standard prison unit, without adequate space for treatment, and difficulties in providing confidential 1:1 treatment environments. The problem is not with the census in the unit, but rather that the space is not appropriate for the purposes of providing intermediate care treatment to mentally ill inmates. Similarly, the EOP ad-seg unit which I visited at SVSP (for example) was also using retrofitted space, and had similar problems. Groups (using Treatment Modules) are run in the laundry room, which is a non-therapeutic milieu. The difficulties posed by using existing spaces in a manner not consistent with its original design are not limited to SVSP. The issue of overcrowding is not the cause of this problem, and a reduction in the number of inmates in the CDCR would not solve this problem. Rather, the most appropriate solution appears to be the one being pursued - construction of mental health units designed for that function. In some situations (such as SVSP), mental health staff and administra-

tors reported that they have requested to move the existing unit to another building, with better space, which would provide better accommodations for both group and individual work. To the extent that such resources can be identified, this would represent an improvement over the current arrangement, pending the new construction.

EOP beds

In terms of other issues related to efficient use of existing resources, some of the earlier documents suggested difficulties in utilization management (that is, patients staying too long in higher level beds, such as DMH beds and crisis beds), thus creating lack of beds [11] for other patients who need them. I have been impressed that good progress has been made in this area. For instance, Vic Brewer, of DMH informed me that the length of stay (LOS) in the DMH intermediate care beds is now approximately 8 months, down from 16 months a couple of years ago (and right within the expected LOS of 7-9 months). Similarly, mental health staff provided me with reasonable explanations for some EOP inmates being maintained for long periods of time in that program, rather than being returned to GP. They explained that these are clinically driven decisions (in that some individuals are simply not capable of ever functioning well in GP, but do quite well in EOP, and do not require a higher level of care). For these individuals, prolonged stay in EOP programs is the clinically appropriate response and does not reflect a census problem or a systems failure. Indeed, one of the women I interviewed exemplified this point well, as she had a history of abuse and depression, was able to function reasonably well within the sequestered EOP program, but did not feel that she could tolerate the additional demands of a GP setting.

However, it is also clear that some inmate patients remain in EOP units pending transfer to DMH units. The system is "clogged" in the sense that the higher intensity beds are usually full, creating long waiting lists at other levels. As noted above, this is not an issue related to overcrowding in general (that is, not primarily a function of the total number of incarcerated inmates), but rather is primarily a function of the lack of adequate beds and programs for the most seriously mentally ill. Even if the total census of the prisons were to be reduced, there would still likely be a need for more EOP beds as well as other programming for mentally ill inmates (as discussed below).

Mental Health Crisis Beds

Another identified area which has a shortage of beds is the mental health crisis beds. These are being addressed in the supplemental bed plan. In the interim, the shortage of crisis beds is problematic as inmates requiring more intensive observation and/or treatment must remain in other settings, which are not clinically appropriate. This problem is more acute in some facilities than others. For instance, some of the facilities I visited did not have all the crisis beds filled, some (like R.J. Donovan) have an overflow [12] unit (which is not licensed), which they have used for those not considered acutely suicidal, but which has not been used often recently. However, in SAC, one inmate was being "housed" in a "ZZ" booth in a passageway, monitored by an officer. He had been there over the long Thanksgiving week-end. I was informed that this was not a common occurrence, but did occur at times when the other beds were filled. This is clearly not an acceptable standard of practice.

However, given the alternatives which are available for observation of such individuals this is a problem which could be addressed by better management, including increasing the recognition that such an arrangement is never acceptable and requires immediate response, even on a holiday or week-end. In terms of alternatives, for instance, SAC has additional beds in an OHU and MHOHU, and there is a process for transferring to crisis beds in other facilities. Although all the beds in OHU and MHOHU are filled before the "ZZ" cells are employed, in such situations a triage process, either at a facility or central level, should be undertaken, to free up an appropriate observation cell for such an inmate.

In terms of the crisis bed issue - some facilities use their unlicensed OHU's as an alternative or precursor to the crisis bed. From my observations, this does not necessarily reflect a less desirable practice. I was repeatedly informed that many of the individuals so observed were deemed not to be in genuine mental health crisis and could be treated and managed appropriately without taking up a high intensity crisis bed. I have experience working in correctional facilities that indeed used such observation cells (for 1-2 days) as a means of determining whether the individual truly required a crisis or hospital bed. As long as this system is used based on clinical judgment, with an understanding that those deemed in imminent crisis (such as the system described to me at R.J. Donovan) must go directly to a licensed bed, this would be considered a reasonable practice.

DMH beds

Consistent with the documents reviewed, during my tour of the facilities staff confirmed that there is often a long waiting list for DMH beds, resulting in patients remaining either in crisis beds or in EOP level of care. Again, this is not a reflection of the general issue of crowding, but rather the need for more higher intensity beds, which will be addressed by [13] the bed plan. However, an additional issue relates to some difficulties between the agencies (CDCR and DMH) in terms of determining when an inmate is appropriate for DMH care. A number of staff reported that they had difficulty getting DMH to accept some patients who were considered to be high security. Although I am not in a position to judge the validity of DMH's concerns, the solution to this problem requires higher level administrative intervention (at a level higher than either CDCR and DMH), and is not primarily related to crowding.

In terms of space issues for DMH beds, it is clear that space designed specifically for the purpose of providing licensed mental health care is much more effectively used than retrofitting existing prison units. The latter is a necessary stop-gap measure, but is not a long-term solution. Thus, even if more prison units were to be available for use as mental health units as a result of a prisoner release, this would not be a good alternative to the current plan to build newer facilities (which is underway, as I observed).

Access to yards

Another space issue identified by the Special Monitor and acknowledged by CDCR relates to design problems that limit the opportunities for inmates in ad-seg to go out to yard. I reviewed the Small Management Yard Plan submitted by Ms. Hysen (October 25, 2007), and in my opinion, this represents a reasonable approach to this problem and would serve to improve conditions for mentally ill inmates in administrative segregation. During my tours I viewed some of these yards and they do provide a means to increase the out-of-cell time for these individuals, which is a significant issue in particular for mentally ill inmates. The ability to utilize these yards maximally is limited by shortages in custodial staffing (which is directly related to overcrowding). I understand that the CDCR has proposals for increasing its recruitment of correctional officers. It is beyond my expertise as a mental health professional to comment on whether these plans will succeed in recruiting sufficient officers to address this problem.

[14] Lack of adequate staffing:

I have reviewed the State's pay parity plan to increase the salaries of mental health professionals. This plan appears reasonable and is likely to increase the number and quality of professional staff willing to work within the prison system. (I would also note that the plan was amended to increase pay for DMH staff, in anticipation that failure to do so would likely result in DMH staff transferring to CDCR. This speaks to the likelihood of the pay parity plan being successful in recruitment and retention). During my tours I was informed by administrators (and this was confirmed in the documentation that I reviewed) the pay raises have helped significantly with recruitment of mental health staff. I also met a number of psychologists, for example, who had recently been hired as a result of the pay increases. The pattern with psychiatrists was more mixed, as some areas of the state have been more successful than others. I was also informed that parity raises for nurses has not yet been implemented, a strategy that would likely help improve that situation. Some of the facilities have filled their vacancies with contract staff, which is less desirable than permanent staff, due to turnover. To the extent that the state can develop longer term arrangements (that is for a longer minimum length of service) with contractors, this would be desirable. For example, in some facilities I was informed that some contractor staff have been there for many years and thus function, for all practical purpose, in the same capacity as permanent employees.

A general reduction in the prison population is unlikely to have a significant impact on the size of the *Coleman* class and the need for mental health professionals to provide services to this class. As mentally ill inmates constitute approximately one-fifth of the population, a general reduction of census would, at most, result in reduction of one *Coleman* class inmate for each five inmates released. Even if there were to be a reduction of *Coleman* class inmates within each institution, this would not necessarily translate into a real ability to redeploy staff resources across institutions, due to issues of geography and patient needs. Thus, if there is decreased need for mental health staff in a particular institution (e.g., due to a smaller number of CCCMS inmates), this does not necessarily mean that these staff can be deployed in other institutions which may be in a different part of the state, or that these staff are best suited for working in different settings.

[15] The staff shortage issue is more prominent on the custodial side. In some parts of the state, there continue to be difficulties in hiring and maintaining adequate correctional staff, which is primarily a function of the census. Although this is a significant problem which impacts the prison system in general, it is not, in my opinion, a primary cause of problems

in mental health service delivery for the most impaired inmates. The CDCR model of classifying mentally ill individuals by level of severity and providing, for the most part, separate services and housing for the EOP population, in many ways insulates these individuals from the consequences of this problem for the general population inmates. There is some impact in terms of access to yards being limited at times when correctional staff are stretched thin, but across all my tours (and review of documents), it does not appear that programming for EOP inmates is detrimentally impacted.

The shortage of correctional officers does appear to have more of an impact on CCCMS inmates, who are housed in General Population and may experience difficulties in movement (to yard and to appointments, as well as to groups). In some facilities I visited (for example, CIM), mental health staff reported that it was difficult to run groups for CCCMS inmates due to other demands on officers. However, the staff did not report difficulties in providing individual services even in those facilities. Furthermore, the difficulties in providing treatment were not simply a function of lack of officers; for example, some of the gangs forbade their members to attend groups or to participate in treatment, an issue unrelated to staffing shortages or census issues.

Similarly, significant problems in delivering services to CCCMS patients were noted at SVSP, C-yard. This yard houses some of the most violent inmates, including many with gang involvement. This results in very frequent lockdowns on those units, which prevents groups from occurring. The frequent cancellations of such groups makes them almost useless for these CCCMS inmates. However, the mental health staff I interviewed reported that they were not hampered in their ability to see their clients individually. They also did not report a pattern of a large number of their CCCMS clients decompensating and requiring higher levels of services.

[16] I interviewed a Captain on the C-Yard and he insisted that even if there were fewer inmates in his facility, he believed the problems would persist because of the high violence level of this particular class of inmates. I cannot comment on whether the frequent lockdowns represent a strategy imposed by the lack of a sufficient number of officers (and too many inmates) or whether other strategies to control this yard would be more effective. This is an issue for a correctional professional, not a mental health professional. It is clear, though, that the current situation does impede mental health care in this and similar settings. Also, as noted above, the CDCR has plans for increasing the recruitment of correctional officers, an area that I do not have the expertise to comment upon.

Direct impact of overcrowding on *Coleman* class:

I will address several specific areas in which overcrowding may impact the *Coleman* class directly.

1. Does the stress of overcrowding causes inmates who were not in the *Coleman* class upon admission to become dysfunctional, thus entering the class? Although this may seem like a "common-sense" assumption, this issue should be addressed by looking at empirical data. The data I have reviewed to date does not provide quantitative evidence of this process. In her declaration, Margaret

McAloon, Ph.D. notes that the percentage of inmates who require mental health services upon admission to the prison system (Reception Centers) is higher than the percentage in the population (which she estimated at 18% and the Special Master estimated at 19%). Her testimony is consistent with data provided by the CDCR on the percentage of mentally ill inmates in reception vs. those endorsed for placement. This is also consistent with my experiences in the reception facilities (which will be discussed in more detail below in the section on Reception Centers) that the inmates entering the prison system are likely to have a higher prevalence of acute mental illness. Furthermore, during my tour I questioned staff and interviewed inmates and did not find evidence that indeed the mental health [17] caseload has been significantly impacted by individuals who had no history of mental illness prior to incarceration. There is a category called "medical necessity" which refers to individuals who do not meet the diagnostic criteria for CCCMS or EOP but who require mental health services. This includes individuals who experience symptoms in response to the stressors in their environment (e.g., adjustment disorders). Over the course of all of my tours, I asked staff about this issue and was repeatedly told that although there are some individuals in all the caseloads who fit in this category (as would be expected in a prison environment), this is a small percentage of the caseload. Thus, although for certain individuals the stresses of overcrowding lead to need for mental health services, this is not the primary factor impacting on the size of the *Coleman* class. Rather, factors outside of the prison setting, including lack of adequate community services, contribute to the increasing number of mentally ill individuals who become incarcerated.

2. Are conditions of crowding causing decompensation among the *Coleman* class? One of strengths of the CDCR system is the classification of mentally ill inmates into categories reflecting severity of symptoms and level of function (CCCMS and EOP). The various court orders and the Program Guide provide for the more severely mentally ill inmates to be shielded from the most overcrowded settings. Thus, for example, EOP inmates are generally not housed in the "makeshift" dormitories (that is, gyms and day rooms which have been converted to housing units). These units are clear examples of overcrowding, as inmates are double and, in some cases, triple-bunked in spaces that are not designed for housing. The gym in CIM, for example, had peeling paint, was not clean, and was cramped. However, as noted there were no EOP patients housed there.

   There are CCCMS patients in these units. However, I did not find evidence that these environments resulted in significant decompensation among these inmates (based on my interviews with staff, augmented by interviews with inmates). One CCCMS inmate in the. CIM gym highlighted a paradox of these settings. He described feeling stressed in the gym and asking his psychiatrist to recommend [18] moving him to a 2-man cell, two to three months prior to my visit. He reported that the psychiatrist encouraged him to remain in the gym. I then asked him if he would ask his psychiatrist again, after the additional period in the gym, to recommend that he be moved. His response was that with the holidays arriving, he thought that he would be more at risk of becoming depressed in a cell, than being around a lot of other people. I offer this example not to minimize the problems with housing people in such inappropriate settings, but to emphasize that the focus of the inquiry is on the extent to which particular conditions can be directly related to exacerbating mental health problems.

In this regard, I queried both mental health professionals and correctional officers about whether there was any screening or mental health input about placing specific CCCMS inmates in the dormitory settings. I received variable responses, with some describing a process involving input from mental health (e.g., VSPW) and others no such process (e.g., SAC). If there are instances in which a dormitory would be unsuitable to a mentally ill inmate, therefore, it appears that this could be addressed by developing mechanisms for mental health input in those institutions which currently do not have such a process.

3. Does the high census result in inmates/patients being misclassified in terms of level of mental health need? Although acknow-

ledging the small sample size (20 individual inmates randomly chosen for interviews), it was my impression that the individuals that I met were appropriately classified. That is, the CCCMS inmates appeared psychiatrically stable, for the most part (with one exception in a Reception Center which will be discussed below), and the EOP patients were more acute, but did not appear to require a hospital bed. I understand that there are some EOP inmates who do require higher level of care who are awaiting placement, and this reflects, as noted above, the lack of sufficient higher intensity mental health beds in the system. However, for the most part, the clinical staff confirmed this impression about their ability to appropriately classify inmates in terms of mental health needs (that is, CCCMS vs. EOP).

[19] There was one circumstance, described to me by mental health staff, at CCWF where demand for beds in the EOP program led to an expedited review of patients in that unit, resulting in a number being reclassified as CCCMS. I reviewed three charts of such inmates to assess whether the decisions were clinically appropriate. In one instance, it appears that the patient had been scheduled to move out a short time later and this was moved up by one or two weeks. Another patient was deliberately moved to CCCMS because she was not cooperative with treatment and the clinical staff believed that if she continued with that pattern in general population, it would allow them to get a Keyhea order, which they felt they could not make a

case for in the more structured environment of the EOP unit.(I am not commenting on whether this is a reasonable strategy or not, but rather noting that this was not simply a decision based on needing to free up bed space.) The third chart was of an inmate who did not want to be in general population, but the clinical staff thought she could manage there - in this case I could not determine whether the decision was justified or not. These cases suggest that there should be a quality improvement process to verify that such decisions are clinically justified. If indeed patients' mental health classification is changed due to demands for mental health beds (and, aside from this situation, I did not come across this as a recurring pattern), this would reflect the lack of mental health beds and not a response to general conditions of crowding.

4. Medical records problems: In several institutions there were difficulties in clinical staff obtaining charts in a timely manner (that is, the charts were not available when needed for a clinical assessment) as well as difficulty in updating the charts (that is, delays in notes being placed in the records). Staff referred to a category of "Flimsy" charts, meaning that they sometimes had limited information available when doing an assessment. The documentation I reviewed also described institutions in which there were significant numbers of charts unified. In my opinion, this is a direct effect of overcrowding, as the number of charts in the institutions is proportional to the population (noting that charts

[20] include both medical and mental health information). This problem does impact directly on the ability to provide timely and appropriate care. In my opinion, the most reasonable solution to this problem should be focused on improving information technology, such as an electronic medical record, or at the minimum, enhanced ability to track information in an accessible database. I understand that this is an issue being pursued by CDCR and the Plata receiver, and is the most reasonable solution to this problem, in my opinion.

5. Reception Centers: In my opinion, crowding is the primary cause of the particular difficulties in providing services to the *Coleman* class at the reception centers. The percentage of inmates at the male reception centers I visited (CIM and R.J. Donovan) who were returned to prison for parole violations was extremely high (staff estimated between two-thirds to ninety percent of all admissions were parole violators). I was impressed with the ability of the mental health staff to complete their initial screenings and evaluations of these inmates in a timely manner. At CIM, for instance, staff reported that they completed these evaluations well in advance of the Program Guide requirements. However, difficulties were more apparent in terms of treatment and discharge planning. Mentally ill inmates are disproportionately represented among this group, often entering the prison system with a more acute mental health presentation, not having received adequate treatment in the community and/or

having abused substances there. Furthermore, many of these inmates receive relatively short sentences, which means that they spend their entire sentence at the reception center. Thus, even when deemed appropriate for referral to an EOP program in another prison, by the time they are processed, they are too close to discharge to warrant such a transfer. In recognition of this issue, the Reception EOP's were developed. As these are relatively new, the problems are just beginning to be worked out (as noted in the Revised Reception EOP Plan, December 3, 2007).

Furthermore, the ability to develop appropriate community plans for these individuals is limited, thus creating a vicious cycle, as they decompensate in the [21] community and quickly return ("revolving door" phenomenon). Thus, for the *Coleman* class inmates in the reception centers, it is my opinion that the difficulties in providing adequate treatment are primarily attributable to the census being too large.

One patient whom I interviewed at CIM exemplified this problem (which staff confirmed was not unique to this individual).This individual, classified as an EOP inmate (and placed in a 2-man cell rather than the day room which was being used as a dormitory), had a significant history of mental illness and was serving a short sentence (5 months) due to parole violation. It appears that he was stabilized during his brief period of incarceration but was due to be released 2 days after my visit. He reported that he would be homeless when released (confirmed by mental health staff) and appeared to have regressed during the last few days of his incarceration (he appeared depressed to me, and his psychologist confirmed that he appeared less stable on that day than he had previously).Although he claimed that he was not taking any medications, his psychologist (and the chart) confirmed that he was still being prescribed medications and was to be given a 30 day supply upon release. Nevertheless, it was clear that his community discharge plans were not adequate to maintain stability in the community. The psychologist reported that there are often difficulties working with parole in these cases, since the parole officers do not necessarily want the prison clinicians to make specific mental health referrals in the community that they do not agree to.

It is my opinion, though, that a prisoner release would not remedy this situation relative to the Reception Centers. Indeed, it would likely exacerbate the problems. As more inmates are released, even if recidivism rates remained steady (although it is reasonable to believe that an increase in releases might increase recidivism rates), this would likely result in an increase in admissions at the Reception Centers. Thus, a more reasonable solution to this issue would be to focus on better discharge planning and improved services to inmates (particularly mentally ill inmates) who are paroled into the community. Several initiatives are underway or [22] are being planned in this regard. Dr. Petersilia's affidavit discusses this issue directly, describing the Rehabilitation Strike Team's efforts, as does Scott Kernan's affidavit regarding initiatives related to parole and reentry. I am also aware of a contract with the V.A. to sign inmates up for entitlements (such as disability) prior to their release, to minimize the gap in ability to engage services in the community. Furthermore, it appears that there may be a need for better coordination between mental health clinicians in the prisons and parole in terms of recommendations for community placements (based on the report from CIM documented above). These strategies are more likely to be effective than a prisoner release.

6. Suicides in the CDCR: Based on the data reviewed, including the suicide reports from 2005 and 2006 (including the detailed case reviews of all 2005 suicides) and my interviews with staff, it is my professional opinion that the increase in suicides in the California prison system is not primarily a function of census and overcrowding. For those suicides which were considered to have been either foreseeable and/or avoidable, the problems noted were not identified as due to overcrowding issues. The data do not suggest that a higher staff/inmate ratio would significantly impact on the number of suicides. Rather, deficiencies were noted in room design (that is, failure to make the rooms more suicide-resistant, by removing grates, for example), failure to follow policy, and lack of follow-through on the institutional level to previous

recommendations. For instance, Dr. Patterson noted (p. 10) that "there continued to be significant substantive inconsistencies and inadequacies in the application of policies and procedures and in staff performance with regard to suicide prevention and management." These are issues that need to be addressed to reduce successful suicides in the prison, and are independent of the size of the prison and *Coleman* class population.

Consistent with data from other jurisdictions, the analysis of suicides identified particular problems in ad-seg settings. These problems are not primarily a function of overcrowding (as confirmed by the Special Master's Report and [23] Recommendations on Defendant's Plan to Prevent Suicides in Administrative Segregation, filed December 18, 2006). From my review of the documents and interviews with staff, I concur with these assessments that crowding is not the primary cause of the suicides in the ad-seg (or in any of the other settings). Rather, changes in policies and practices, as identified in the Special Master's report, are required. One additional issue, which I observed and noted in the documents is that some inmates are placed in ad-seg not for rules violation, but for their own safety. This policy should be re-examined, or at the least, more focused mental health services should be assigned to these individuals.

Summary and conclusions:

Based upon my review of the documentation listed and my tours of the facilities, it is my opinion that the primary issue impacting service delivery to the

Coleman class is the lack of sufficient resources at the higher intensity levels. This is not primarily attributable to the overcrowding in general, but is specific to the difficulties that have plagued the system in planning for and providing mental health services to individuals with severe mental illnesses who become incarcerated. The facilities were not designed to provide such services, and until recently, there was not adequate and comprehensive planning for the needs of this particular population. Appropriate services will require construction of units specifically designed to provide mental health treatment to inmates, as proposed in the Supplemental Bed Plan.

As noted in this report, for most of the problems noted, overcrowding is not, in my opinion, the primary reason for deficiencies in mental health care provision. I identified two areas, though, for which I thought that overcrowding was the primary factor: 1) medical records, and 2) reception centers. For the medical records problem, the most appropriate solution appears to be enhanced information technology (e.g., electronic databases, more computerized records). For the reception centers, improvements in policies and procedures for discharge planning and improved services to parolees are more likely to be effective in reducing the overcrowding at the Reception Center than [24] would a prisoner release (which may, paradoxically, increase the problems at the Reception Centers).

Ira K. Packer, Ph.D., ABPP (Forensic) Date

Addendum to Expert Report from

Dr. Ira Packer, Ph.D, ABPP (Forensic)

Addendum to **Report**
re: *Coleman et al. v. Schwarzenegger et al.*
Ira K. Packer, **Ph.D., ABPP** (Forensic),
August 15, 2008

Introduction:

On December 10, 2007 1 submitted an "Expert Report re: *Coleman et al, v. Schwarzenegger et al.*" This addendum reflects additional information I have obtained since that time From July 28, 2008 - August 1, 2008, 1 toured the following CDCR facilities, interviewing both staff and inmates.

- California Substance Abuse Treatment Facility (CSATF): July 28, 2008.
- CCI Tehachapi: July 29, 2008
- California Medical Facility - Vacaville (CMF): July 30, 2008
- North Kern State Prison: July 31, 2008
- Wasco State Prison: August 1, 2008

The tour of CMF was done in conjunction with a tour by plaintiffs expert, Pablo Stewart, M.D., as well as plaintiffs attorneys. The remaining tours were done in conjunction with tours by plaintiffs expert

Craig Haney, PhD., as well as plaintiffs attorneys. In addition, an attorney from CDCR as well as attorneys from intervenor parties were present during the tours. I interviewed inmates who had been selected by the plaintiffs, in addition to two interviews of inmates whom I selected at random at North Kern State Prison. A plaintiff's attorney was present during all of my interviews with inmates.

[2] In addition, I reviewed the Special Master's draft 20th monitoring report on the above facilities. I have also reviewed the following documents:

1. Court Order approving a Construction Agreement, which will include 5,000 medical beds and 5,000 mental health beds, dated 2/26/08.
2. Court Order approving Information Technology Coordination Agreement, dated 3/10/08.
3. Court Order approving Chief Executive Officer Pilot Program Coordination Agreement, dated 4/1/08.
4. California Department of Corrections and Rehabilitation's Mental Health Bed Plan submitted to the Special Master, dated July 16, 2008.
5. Transcript of deposition of Ralph Coleman, dated December 13, 2007.
6. Transcript of deposition of Doyle Scott, dated December 13, 2007.
7. Transcript of deposition of Robert G. Kennard, dated January 28, 2008.
8. Transcript of deposition of Ronald M. Shansky, M,D., dated December 10, 2007.

9. Transcript of deposition of George Sifuentes, dated December 14, 2007.
10. Transcript of deposition of Pablo Stewart, M.D., dated December 11, 2007.
11. Transcript of deposition of Jeanne S. Woodford, dated December 18, 2007.
12. Navigant Mental Health Bed Need Study, Spring, 2008.
13. Declaration of William Proctor in support of the Receiver's motion for contempt, filed August 13, 2008.
14. URS Bovis Operational Guidelines Report for California Health Care Facility, dated July 8, 2008

I reserve the right to supplement this report as additional relevant information becomes available.

Significant changes since my last visit in November, 2007:

Crisis Beds:

The only facility which I toured on both visits was CMF–Vacaville. The most significant change since my last tour was the construction of a CTC, with 50 crisis beds. The facility had only been open for a few weeks, and was not yet up to capacity (39 of the 50 beds were filled on the day of [3] my visit), as the staff had asked for a phase in of admissions to allow for smooth operation. I was informed by staff that they were progressing ahead of schedule for full deployment. The facility was very impressive, with adequate space for treatment and for staff office space. This facility accepts inmates from other institutions who require licensed Mental Health Crisis

Beds (MHCB). The added capacity for crisis beds will help ameliorate some of the backlog for this level of service. Clinical staff at CCI Tehachapi commented that they have already accessed these beds, and that this has helped them manage their inmates in crisis. In addition, this is a demonstration of how new construction, which incorporates the necessary space and is designed with treatment needs in mind, can be effective (similar to the intermediate care – ICF – freestanding facility which I observed during my first visit to Salinas Valley State Prison).

DMH Acute Psychiatric Program

Another significant advance noted in CMH-Vacaville was that the waiting list for inmates into the Acute Psychiatric Program (APP) run by DMH had been dramatically reduced. On the day of my visit, the waiting list was only 15 (I was informed that this was down from a waiting list of over 50).

Reception EOP Programs

Both North Kern and Wasco State prisons have functioning 'FOP programs for reception inmates (RC). Although this is not a change since my last visit, the RC EDP programs are relatively new (begun in 2007) and appear to be functioning well at this point in time. Both staff and inmates in the program described the program in positive terms and there were indications that the inmates were receiving the required elements of the program without significant difficulty. Officers were specifically assigned to transport EOP inmates to programming, and from all reports this is working well.

I note that at North Kern, two inmates who were classified as CCCMS complained to me during my interviews with the that they wanted to be reclassified as FOP, as they observed the enhanced services those inmates received. (Parenthetically, it did not appear to me that these two inmates had been inappropriately classified as CCCMS.) This sentiment reflects a positive valuation by inmates, as it is considered desirable by them to get admitted to the program.

[4] I did have an opportunity to interview one inmate at North Kern, in Reception Status (that is, awaiting placement from the Reception Center to a mainline prison), who was classified as EOP and who had been placed in Administrative Segregation (Ad Seg) due to rules violations. He acknowledged that services he received while in the EOP general population were "alright" but complained that he was not receiving full services in Ad Seg. He had been endorsed to leave the Reception Center to go to an EOP program on a Special Needs Yard (as he was a gang drop-out, thus requiring a more protected environment), but this transfer was delayed. This inmate is an example of a group of inmates who are difficult to serve because of the difficulties inherent in dealing with inmates with complicated mental health and security needs. He was not only classified as EOP, but also Special Needs, as well as having security issues related to his rules infractions. I was informed that a Special Needs Yard for EOP inmates was about to come on line at Kern Valley.

Other observations:

Need for more EOP beds and more ICF (intermediate care provided by DMH)

Consistent with my initial report, during this visit I obtained similar information regarding the long waiting lists for FOP programs, as well as a very significant waiting list for Intermediate Care beds (I was informed that the waiting list for the ICF was 167, and that some inmates had been removed from the list as they were so low down as to be unlikely to obtain a bed in any reasonable time period). Inmates requiring these services are the most severely impaired by mental illness; as 1 indicated in my previous report, a general prisoner release is unlikely to significantly impact this problem. Additional resources for this population are needed and will continue to be needed even if the overall census in CDCR is reduced. In this context, I have reviewed the CDCR proposal for consolidated care facilities, which includes significant enhancement of EOP, ICF, and acute care beds (for a total of 5,000 mental health beds in these facilities). This plan appears reasonable in terms of meeting the needs for this population. It is [5] also my opinion that consolidating these beds in specific facilities is an excellent idea, as it will allow for ease of recruitment of staff as well as efficiency of service delivery.

Crisis beds:

I observed variability across facilities in terms of adequate number and management of crisis beds, CSATF appeared to be have few difficulties, reporting that they have rarely have "maxed out" their beds, and take inmates from other facilities. Clinicians at CCI Tehachapi reported that they had decreased their transfers to crisis beds over the past 6 months. One of their strategies was to have clinicians see inmates in OHU (Holding Unit cells) on a daily basis and discharge back to population those who did not really require a crisis bed. (There is a low threshold, appropriately, for placement in a holding cell; inmates who make suicidal statements are placed in such cells and observed closely. Many of these inmates are not genuinely suicidal and do not require hospital level of care as is provided in crisis beds; a period of observation to triage those genuinely requiring those beds is reasonable.)

North Kern had developed a capacity to use cells on another unit as observation cells, prior to those inmates being transferred to a crisis bed (MHCB), and this system appeared to be working reasonably well. On the day of my visit, they had no inmates in their holding cells. Although they had not received authorization from CDCR to staff these cells at a level required for an OHU, they were attempting to provide services to inmates in those cells comparable to an OHU. For instance, a psychologist from the MHCB visited the holding cell unit daily in order to provide continuity of care. Clinical staff informed me that 70% of inmates in the holding cells were discharged back to population within 3 days and the remaining 30% were admitted to a crisis bed.

Wasco State Prison appeared to have more difficulty accommodating the need for crisis beds. They too used another unit for holding cells, although on the day of my visit those cells were all full and these cells were on a unit which also had overflow beds on the floor. Of more concern in this facility, was a mentally ill inmate who had been admitted in Reception the night before and had to spend the night in a cell in the reception area (which had no bed, toilet, or sink). This [6] inmate was watched continuously, but had spent almost 24 hours in the cell in the reception area, which was clearly not an appropriate place. Staff indicated that this was a rare occurrence, and stated that this should not have occurred (that is, mental health leadership should have been notified to find an appropriate bed). Nevertheless, this appears to be a situation which resulted directly from a lack of adequate capacity for crisis beds in that facility.

Reception

As with my first visit, it appears that the reception centers are overwhelmed by the large number of admissions of individuals who are experiencing mental illness. Although clinical staff manage to do a good job of mental health triage, it is still difficult to provide adequate services to this particular population. North Kern, for example, had creatively converted a cell in the Reception area for a psychiatrist and psychologist to use, and they were thus able to interview inmates referred by the nurse in a timely manner and triage these cases. For the Coleman class in Reception, the RC EOP program is very helpful, but more crisis beds are needed and there are still significant delays getting these individuals into other programs (such as EOP programs in mainline prisons, or intermediate care programs). As noted above, the problems are exacerbated when inmates have multiple problems or issues (such as requiring a Special Needs Yard or the highest levels of security).

Treatment and office space

As with my first visit, there were clearly identified issues of finding adequate space in a number of the facilities for office space for clinicians. In CCI Tehachapi, for instance, a psychologist was using a converted broom closet, which she shared with another clinician. In Wasco, there was very limited space available to both clinical and clerical staff. North Kern had been able to convert a former visiting area into office space for their clinicians. CSATF did have a centralized Mental Health office with space for clinicians.

There were also problems in a number of the facilities finding adequate treatment space. Administrative and clinical staff were creative about using chapels and other spaces, although there were both conflicting demands for these spaces as well as heat issues in some places (that is, some rooms could not be used during the hottest days).

[7] Overflow beds

Across my tour, I observed gyms that had been converted to housing space (double or triple bunked). EOP patients were to be excluded from these spaces and I was repeatedly informed that indeed EOP patients were either not placed there, or if they were, were quickly identified and moved out CCCMS patients were found in these units. In addition, some of the units with cells had overflow beds on the floors (e.g., Wasco). Again, FOP inmates were not placed there, but CCCMS inmates were. On one of the units at Wasco, the sergeant informed me that the overflow beds were actually considered more desirable by the inmates than the cells, as they had more access to the TV and increased mobility.

I interviewed a number of CCCMS inmates who were housed in gyms. Their reactions to that space were mixed; some preferred it to being in a cell (as they were more restricted in the latter), while others found it too noisy and distracting. Correctional officers informed me that inmates were selected for these gyms based on lower security status and proximity to discharge. They also characterized these units as not having "a lot of drama," by which they meant not a lot of behavioral management issues. Clinical staff also reported that in their experience, they did not find that CCCMS inmates in these units decompensated (that is, experienced serious exacerbations of their mental health symptoms, thus requiring a higher level of care, or becoming suicidal) due to the environment. Thus, despite other issues which make use of such space undesirable, I did not find that this was having a significant impact on the CCCMS inmates in terms of exacerbation of psychopathology. I was also informed that if clinical staff determine that a particular inmate is not able to cope with these units, that this information is shared with administration and the inmate will be moved.

I interviewed 3 randomly chosen CCCMS inmates in a reception dorm at North Kern. These inmates all complained about lack of therapeutic activities for them in the facility. However, they all seemed to be psychiatrically stable, and did not appear to meet criteria for EOP (based on a very limited, cursory interview). These types of inmates are more likely to be appropriate for [8] additional therapeutic services after they have been moved out of the reception centers to mainline prisons.

Discharge planning

I found a mixed picture regarding discharge planning with parole for inmates with mental health issues. CCI Tehachapi has a designated pre-parole coordinator, and clinical staff reported that coordination was going well with parole, in terms of obtaining needed services for parolees. I also spoke with a social worker at North Kern who was assigned to work on pre-parole issues with EOP inmates. She indicated that the program had started about a year ago and appeared to be working well with most parole officers (although they did not have any outcome data, in terms of recidivism). By contrast, a psych tech at Wasco reported her experience of inconsistencies in working with the Transitional Case Management Program. I note that when I visited CIM last year, I was informed of significant problems coordinating with parole. I do not have data on whether the situation has improved in that facility. Based on the information from my current visit, it does appear that there are some successful models that are being implemented, but I cannot speak to the issue of how this is working system-wide.

Adequate numbers of clinical staff

Consistent with my previous report, there were differences across facilities in terms of ability to attract and retain clinical staff These issues tended to be a function of geography (i.e., more difficult to find permanent staff in more remote areas, away from large population centers). In some of these facilities (e.g., CCI Tehachapi), there was significant reliance on contractor staff However, it appears that most contractor staff were not transient, but stayed for a significant period of time. Indeed, the Chief Psychiatrist at that facility is a contractor himself, has been there for a while, and explained that there is often no difference in quality or commitment between state employees and contract staff, but rather some psychiatrists prefer the contractor status because of financial considerations. This is likely to be an ongoing issue, regardless of the census in CDCR. However, the plan for Consolidated Care Centers is likely to be helpful in attracting and retaining permanent staff.

[9] Summary

As noted, many of the issues identified in my previous report were confirmed during this current visit. However, there was also some significant evidence of improvement in some areas, particularly the new MHCB unit at CMF, progress at the RC EOP programs at North Kern and Wasco, and reduction in the waiting list for the Acute Psychiatric Program (APP) at CMF. Also, significantly, there is now a proposal, with a timetable, for development of Consolidated Care Facilities, with 5,000 mental health beds included. As I indicated in my previous report, it is my opinion that the major obstacle facing CDCR in providing adequate mental health care to inmates is the lack of adequate beds and resources to serve inmates with intensive mental health needs. The new proposed model, which includes these Consolidated Health Care facilities, should significantly address the problem by providing more beds, better facilities, more treatment space (including freeing up space in existing facilities), and increasing the likelihood that qualifred staff can be recruited and retained. These Health Care facilities are being constructed with a therapeutic goal in mind and thus are likely to be more effective than previous attempts at retrofitting existing space designed for correctional purposes only. As indicated in the Operational Guidelines for these facilities, prepared by URS Bovis (p. 4), the new facilities "will be unlike any correctional facility currently found within the existing California Department of Corrections and Rehabilitation (CDCR). . . . There will be an emphasis on achieving a therapeutic environment that is conducive to appropriate levels of treatment and restorative care and programs for both medical and mental health patients."

[1] I.

INTRODUCTION

In the Order filed February 15, 2007 the Court directed "the Receiver to report to the Court within 90 days of the date of this Order, his best assessment of the manner, and extent to which, overcrowding is interfering with his ability to successfully remedy the constitutional violations at issue." *Order* at 4:3 - 13. The Order also called for the Receiver to provide the Court with information concerning the "types of obstacles" that overcrowding presented to the Receivership. *Id.*

This report responds to the Order. It is organized as follows:

Section II. summarizes the findings which led to the Receivership. It also references the Receiver's Plan of Action concerning those remedial programs necessary to bring California's prisons up to constitutional standards.

Section III explains the special characteristics of prison overcrowding in California. As explained below, the specifics of prison crowding are far worse than previously explained by State officials. Furthermore, the characteristics of overcrowding within California's massive prison system have especially adverse consequences concerning the delivery of medical, mental health, and dental care. The impact of overcrowding presents complicated problems, challenges which further complicate the already difficult remedial challenge faced by the Receivership. Thus, very specific information relative to the real-life impact of overcrowding is necessary to provide relevant background data concerning the types and the scope of crowding related obstacles that interfere with the remedial programs developed by the Receiver.

Section IV summarizes the manner by which overcrowding interferes with the Receiver's remedial projects, discussing both "substantive" and "process" related interference. Section V analyzes the real life impact of the recent 2007 California Legislation.

Section VI provides a conclusion concerning the Court's directives of February 15, 2007.

[2] II.

CONSTITUTIONAL VIOLATIONS AT ISSUE

A. Introduction.

The California Department of Corrections and Rehabilitation ("CDCR") has failed to deliver constitutionally adequate medical care to the more than 170,000 prisoner/patients presently incarcerated in the State of California. There are three relevant frameworks of analysis within which it is possible to summarize the "constitutional violations at issue" referenced in the Court's February 15, 2007 Order.

B. Court's Findings of Fact and Conclusions of Law of October 3, 2005.

The Court's Findings of Fact and Conclusions of Law re Appointment of Receiver filed October 3, 2005 set forth facts which demonstrated that California' prison medical delivery system was broken beyond repair, holding that future injury and death was virtually guaranteed in the absence of drastic action. Those findings will not be repeated here; however, the Receiver believes it important to point out the following. As found by the Court, California's prison medical care crisis has persisted for decades. And while the State had ample opportunity to improve medical conditions, it failed to do so. The failure was caused, to a significant degree, by institutional paralysis and a lack of will. The State's response to decades of overcrowding is similar; despite various task forces, numerous studies and reports, and Special Sessions, California has not instituted any effective response to the worsening overcrowding crisis.

C. The Receiver's Bi-Monthly Reports.

The Receiver has submitted four Bi-Monthly Reports. Each provides up-to-date information concerning the deplorable state of California's prison medical care delivery. To summarize, the Receiver concludes that the degree of operational chaos within the CDCR, the institutional paralysis in many State agencies, and trained incompetence are even worse than indicated by the Court's findings.

[3] D. Defendants' Inability to Provide Basic Medical Care Services Required by Plata Stipulations.

1. *Introduction.*

The final relevant measure of the "unconstitutional violation at issue" is the twenty-eight basic prisoner/patients services called for by the June 13, 2002 Stipulation for Injunctive Relief. These are the services which the State, for more than five years, had failed to provide.

2. *Provisions for Prisoner/Patient Services.*

1. Health screening: A process for screening all patients for communicable disease, such as tuberculosis and sexually transmitted disease, and chronic disease, such as diabetes, renal disease, seizure disorders, cardiovascular disease, and pulmonary

disease; screening for cancer; review of vital signs, blood pressure, pulse, and weight; review of current medications; and nurse review and referral for patients with urgent or acute conditions; history and physical examination for all patients within 14 days of arrival at Reception Center; and routine laboratory tests, such as serum pregnancy, cholesterol screening, and optional HIV testing. (Stipulated Injunction ¶ 4)

2. Health transfer: Process to ensure continuity of care when patients transfer to another institution, transfer between levels of care, or are paroled, including continuity of medications, specialty referrals, and other treatment. (Stipulated Injunction ¶¶ 4, 6)

3. Access to Primary Care (Sick Call): System that allows patients to self-refer for medical treatment, including nurse review to identify the need for immediate referral to urgent or emergency treatment, an urgent walk-in procedure, and follow-up services; policies require face-to-face nurse triage for patients with symptoms within 24 hours, and an appointment with a primary care provider within 5 days for patients classified as urgent and within 14 days for patients classified as routine. (Stipulated Injunction ¶ 4)

4. Priority Ducat System: System for ensuring that custody staff treat health care appointments as high-priority. (Stipulated Injunction ¶¶ 4, 6)

5. Patient Health Care Education: Program to provide patients with instruction in wellness, lifestyle changes, disease prevention, newly diagnosed illness or disease, treatment [4] plans or proce-

dures, pre- and post-operative care, chronic care morbidity reduction. (Stipulated Injunction ¶ 4)

6. Preventive Services: Services to prevent disease and mitigate morbidity and mortality due to existing disease provided to select patient populations based upon risk factors, such as age and chronic conditions, that include cancer screening, immunizations, and health education (education regarding diet, exercise, smoking cessation, etc.). (Stipulated Injunction ¶ 4)

7. Outpatient Specialty Services: Program for providing specialty services, including procedures for urgent and routine referrals and required follow-up; policies require that high-priority consultations or procedures occur within 14 calendar days and routine consultations or referrals within 90 calendar days, with follow-up by a primary care provider within 14 calendars days after the consultation or procedure. (Stipulated Injunction ¶ 4)

8. Physical Therapy: Program to ensure timely access to physical therapy services, including specifications for the follow-up by primary care providers and provisions for transferring to an institution with these services if the home institution does not provide them. (Stipulated Injunction ¶ 4)

9. Diagnostic Services: Program for the appropriate processing of laboratory tests and other diagnostic testing, including procedures for prioritizing the urgency of laboratory orders (STAT, critical, urgent, routine) and required timeframes for review and follow-up of results (routine laboratory tests processed within 14 days of order, x-ray examinations completed within 30 days of order, primary care provider review of lab results within two business

days of receipt, notification of patient of results within 14 days of receipt). (Stipulated Injunction ¶ 4)

10. Medication Management: Services to dispense, administer, and distribute pharmacotherapeutic treatments, including provisions for medication error reporting, medication follow-up counseling, medication renewals and refills, medication for parole, and continuity of medication upon transfer; policies require that prescriptions for formulary medications be filled by the following day and that "stat" medications be issued within 1 hour. (Stipulated Injunction ¶ 4)

[5] 11. Urgent/Emergent Response: Program for the provision of urgent care services and 24-hour emergency medical treatment that includes basic life support, emergency response, and physician on-call services; policies require follow-up within five days for patients whose urgent encounter was due to chronic disease. (Stipulated Injunction ¶¶ 4, 6)

12. Medical Emergency Response Documentation and Review: Process for the review of deaths, suicide attempts, and calls for emergency assistance to determine compliance with existing policies and procedures, adequacy of response time, and appropriateness of custody and medical response and patient treatment, with follow-up actions to address identified deficiencies. (Stipulated Injunction ¶ 4)

13. Outpatient Housing Unit and Licensed Care: Specialized treatment services for varying levels of acuity, including outpatient services requiring specialized housing (Outpatient Housing Unit care), licensed skilled nursing facility care (Correctional Treatment Center care), General Acute Care Hospital care, and palliative care; policies require physician

evaluation within 24 hours of admission to a Correctional Treatment Center and an evaluation by a primary care provider within 5 days for all patients returning from an inpatient acute care facility. (Stipulated Injunction ¶ 4)

14. Outpatient Therapeutic Diets: Program for the provision of nourishments and supplements for patients who are pregnant, diabetic, immunocompromised, malnourished, or have oropharyngeal conditions causing difficulty eating regular diets and special diets for patients with renal failure or hepatic failure, or who require a Heart Healthy diet, gluten-free diet, or diet to preclude food allergies. (Stipulated Injunction ¶¶4, 6)

15. Medical Report of Injury or Unusual Occurrence: Process for documentation of patients' on-the-job injuries, physical contact with a staff member during an incident, and any self-reported injury due to self-injury or altercation, Administrative Segregation Unit placement, use of force, or other medical emergency situation. (Stipulated Injunction ¶ 4)

16. OC Contraindications: Process for the evaluation and treatment of patients prior to or after the use OC. (Stipulated Injunction ¶ 4)

[6] 17. Medical Evaluation of Patients Involved in Assaults: Process for the evaluation of patients who have been involved in the use of force, including review of the patient's mental health record. (Stipulated Injunction ¶¶ 4, 6)

18. Hygiene Intervention: Process for the identification, evaluation, and referral of patients who demonstrate poor hygiene or whose hygiene compromises the sanitation/hygiene of their personal and immediate housing area. (Stipulated Injunction ¶¶ 4)

19. Inmate Hunger Strike: Process for the identification, evaluation, and treatment of inmates on hunger strike, including required coordination and reporting between custody and health care staff. (Stipulated Injunction ¶ 4)

20. Comprehensive Accommodation Chrono: Process for the authorization and review of special equipment, housing accommodations, or other accommodations that are medically necessary or are required under the Americans with Disabilities Act. (Stipulated Injunction ¶ 4)

21. Pregnant Patient Care and the Birth of Children: Prenatal care and post-delivery services, including required screenings, frequency of prenatal treatment visits, vitamin and nutritional requirements, referrals for child placement services, and postpartum follow-up; policies require that patients be seen by a obstetrics provider within 7 calendar days of determination of pregnancy that each patient be provided six-weeks post-delivery for follow-up. (Stipulated Injunction ¶ 4)

22. Nursing Services and Protocols: Clinical protocols for nurses in the appropriate evaluation and treatment of patients presenting with specific systemic conditions or complaints. (Stipulated Injunction ¶¶ 4, 6)

23. Health Record Services: Provisions for the management, content, and archiving of patient health records, including policies for disclosure of information. (Stipulated Injunction ¶ 4)

24. Chronic Care Program: Diagnosis and management of chronic disease (diseases lasting longer than 6 months), including identification and treatment of high-risk patients; policies require an

initial intake evaluation within 30 days for patients referred to the Chronic [7] Care Program, and ongoing evaluations every 90 days. (Stipulated Injunction ¶¶ 4, 6)

25. Pharmacy Services: Provisions governing pharmacy operations, including pharmacy licensing, emergency drug supplies, drug storage, consultation with a pharmacist, prescription requirements, and the ordering, stocking, and receiving of medications. (Stipulated Injunction ¶ 4)

26. Public Health and Infection Control: Program for infection control, communicable disease reporting, and bloodborne pathogen control. (Stipulated Injunction ¶ 4)

27. Telemedicine Services: Program for the provision of specialty services through videoconferencing. (Stipulated Injunction ¶ 4)

28. Utilization Management: System to facilitate appropriate use of resources for patients requiring higher levels of care and select specialty services and medications, including reviews to determine placement at appropriate level of care and appropriate utilization of specialty care and pharmacy resources. (Stipulated Injunction ¶ 4)

3. *The Receiver's Plan of Action.*

On May 10, 2007 the Receiver filed his initial Plan of Action to remedy the unconstitutional medical care system in California's prisons. (Exhibit 1.)[1] As set forth in the Plan, the CDCR requires an entirely new infrastructure of medical delivery before necessary programs of clinical remediation can be effectively implemented in a sustainable manner. Therefore, when considering "the manner, and extent to which, overcrowding is interfering with his ability to successfully remedy the constitutional violations at issue," the Receiver necessarily referred not only to the stipulated injunctions re medical delivery (standards agreed to by the attorneys in this case), but also to the substance of the Plan of Action that will be necessary to successfully remedy the unconstitutional medical conditions in California's prisons.

---

[1] All exhibits referenced in this report are found in the Appendix of Exhibits Supporting the Receiver's Report Re Overcrowding filed concurrently with this Report.

[8] E. Unconstitutional Medical Conditions Are Only One Part of an Unconstitutional Prison Health Care Delivery System.

Context is critical. The State of California has allowed its massive prison system to operate with unconstitutional levels of medical care. At the same time, however, the State is under Federal Court mandated remedial plans concerning the delivery of Mental Health, Dental, and Americans With Disability Act services. Under the best of circumstances, correcting medical problems present a significant challenge; however when the medical remedial plan must also consider the legitimate remedial objectives of the *Coleman*, *Perez*, and *Armstrong* class actions, in addition to uncontrolled overcrowding, the scope, duration, and cost of Federal Court intervention may increase dramatically, as explained below.

III.

THE SCOPE AND CHARACTERISTICS OF PRISON OVERCROWDING IN CALIFORNIA

A. Introduction.

From the perspective of a Receivership tasked with creating a medical delivery system that meets constitutional minima, the size, scope, pervasiveness and specifics of overcrowding in California's prisons have special negative consequences, as explained below.

B. The Pervasiveness of Prison Overcrowding in California.

1. *Introduction.*

Prison overcrowding is not a new phenomenon in California. To the contrary, overcrowding has been a way of life in the CDCR for twenty years. For example, as demonstrated below, overcrowding is ingrained in the CDCR style of constructing and managing prisons. Crowding related policies that do not provide adequate clinical and program space are now an accepted practice of CDCR prison planning, as is California's practice of offering inadequate salaries and failing to provide adequate hiring programs which have created crisis levels of shortages of clinical personnel and correctional officers.

[9] 2. *The Long Term Continuation of California Prison Overcrowding.*

Despite spending billions of dollars on construction, the level of overcrowding in California's prison system has not decreased; indeed, despite waves of prison expansion overcrowding has now reached crisis levels.

Exhibit 2 charts prison by prison and system-wide overcrowding from June 30, 1997 to May 4, 2007.[2] To summarize, in 1997 there were a total of 32 prisons within the CDCR with an average overcrowding rate of 196.0 percent for Males and 175.3 percent for Females. In 2002 there were 33 institutions (with the additional of Substance Abuse Treatment Facility ["SATF"] and an average overcrowding rating of 191.3 percent for Males and 155.9 percent for Females. In 2007 the number of institutions remained at 33.[3] The Statewide overcrowding average for Male inmates increased to 196.4 percent and the Female overcrowding rating increased to 175.8 percent. In 1997 there were 11 institutions at or above 200 percent of overcrowding. By 2002 that number had increased to 12 institutions. By 2007, 19 institutions were at or above 200 percent of overcrowding. To summarize, despite massive waves of construction, prison overcrowding has grown worse in California.

---

[2] The chart was created based on the data obtained from the CDCR's Data Analysis Unit (from the "Monthly Report" for the dates specified).

3. *The Consequences of Decades of Overcrowding.*

No one disputes the consequences of decades of prison overcrowding; indeed, both formal studies and official proclamations affirm the crisis nature of today's overcrowding. For example:

a. Corrections Independent Review Panel.

Three years ago, June 30, 2004, an independent panel of experts, chaired by former Governor George Deukmejian issued a report entitled "Reforming Corrections." In a section titled "Inmate/Parole Population Management" the panel found California's prisons "filled to the [10] breaking point," exceeding both "safe and reasonable capacity" and "far exceeding operable capacity." (Exhibit 3.)[4] The panel also found that numbers alone understated the impact of overcrowding, that staffing reductions have accompanied overcrowding, and that overcrowding and inadequate staffing impedes programming. The panel made a number of crowding related recommendations, none of which have been implemented.

---

[3] Kern Valley State Prison ("KVSP") was activated and Northern California Women's Facility ("NCWF") was deactivated.

b. Little Hoover Commission Report.

On January 25, 2007 California's Little Hoover Commission issued a report entitled "Solving California's Corrections Crisis - Time is Running Out" finding that California's prisons are swelled past capacity, that as a result of crowding there was little room or budget for rehabilitation, that California had a recidivism rate of 70 percent (near the highest in the United States), and that thousands of correctional officer shortages have created huge overtime bills and mounting stress for those officers on duty. (Exhibit 4.)

c. Governor Schwarzenegger's Declaration of Emergency.

On October 4, 2006 Governor Arnold Schwarzenegger proclaimed a State of Emergency because of prison overcrowding, declaring that "the current severe overcrowding in 29 CDCR prisons has caused a substantial risk to the health and safety of . . . the inmates housed in them . . . The declaration further stated that overcrowding puts prisoner/patients in "increased, substantial risk for transmission of infectious illnesses."

---

[4] The entire "Reforming Corrections" report is found at cpr.ca.gov/report/indrpt/corr.

4. *A Progressive Lowering of Standards: CDCR Facilities Master Plans.*

A telling example of the CDCR's institutionalized acceptance of overcrowding and the lowering of correctional standards to accommodate overcrowding is found in CDCR "Facility Master Plan" documents. Exhibits 5, 6, and 7 contain relevant sections from the CDCR's Facility Master Plan for 1993-1998, 1995-2000, and 1998-2003. Reviewed in sequence, they provide insight into a correctional mindset that allows *overcrowding* rather than *sound correctional management* to drive crucial construction and prisoner management policy. Note [11] the following:

1. No Master Plan addresses overcrowding driven problems with the delivery of medical services. All the plans focus on corrections, as if medical, mental health, and dental care have no place in prison design, prison construction, or prison management.

2. As the CDCR failed to "build its way out" of the overcrowding crisis, crowding restrictions were steadily lowered, until by the issuance of the 1998-2003 Plan there were essentially no restrictions. For example, the 1993-1998 Master Plan (Exhibit 5) limited celled crowding to 130 of design percent and dormitory crowding to 120 percent of design capacity. By the 1995-2000 Master Plan (Exhibit 6), however, a 170 percent crowding standard was utilized for the *highest security prisoners, Level IV*. The 1998-2003 Master Plan (Exhibit 7) allowed for a 190 percent crowding rate at almost all prisons (and for the housing of prisoners in gyms). During these same years various CDCR housing definitions were repeatedly modified, and new terms were instituted such as "crisis" and "nontradtional" (the CDCR's designation

for prisoners housed in classrooms, hallways, etc.). Prison staff refer to such beds as "ugly" beds.

C. California Prison Overcrowding Is Accompanied by Severe Staffing Shortages.

1. *Clinical Staffing Shortages.*

The Receiver has previously reported to the Court about the serious clinical vacancy rates throughout the CDCR's medical delivery system. Likewise, reports have issued concerning staffing shortages in the *Coleman* and *Perez* class actions. When considering the manner and extent to which overcrowding is interfering with his ability to successfully remedy the constitutional violations at issue, the Receiver must take into consideration the fact that overcrowding is accompanied by serious staffing shortfalls for both clinical providers and correctional officers.

For example, Exhibit 8 provides a snap shot comparison of clinical staffing shortages between January 31, 2002 and January 31, 2007.[5] Concerning, every clinical category except for [12] registered nurses, vacancies are worse today than five years ago.[6]

---

[5] One difficulty encountered by the Receiver when preparing this report is that limited and at times inaccurate staffing data is maintained by the CDCR. The figures in Exhibit 8 were obtained from the State Controller's Office; thus, there may be a time lag in the reporting of actual staffing shortfalls, as well as hires. Nevertheless, these numbers represent accurate "ball park" estimates of the scope of staffing shortages between 2002 and 2007. These numbers do not, however, consider future staffing enhancements and roll-outs. According to CDCR staff, hundreds of additional dental, medical, and mental health clinicians will be needed to comply with remedial plan standards.

The true scope of clinical staff shortfalls is actually *far worse* than the numbers set forth in Exhibit 8 because there are additional staffing needs projected in each of the health care class actions as well as upcoming time-phased "roll-outs," none of which are yet listed on the chart.

2. *Custody Staffing Shortages.*

Correctional officer vacancies on April 30, 2002 were 1,179. As of January 31, 2007 "budgeted" correctional officer vacancies had risen to 1,915.[7] However, the actual total of officer vacancies is several hundred higher than the "budgeted" vacancies due to the practice of assigning "unbudgeted" positions for posts such as medical guarding at community hospitals, and monitoring and providing services for prisoners confined to "nontraditional" beds. CDCR officials estimate the actual officer shortage to be somewhere between 2,400 and 2,700.

Based on response to numerous inquiries by the Office of the Receiver, there appear to be no innovative or unique CDCR program that has been developed to address the correctional officer shortage. To the contrary, the existing system of recruitment and hiring is experiencing bottlenecks in its recruitment process that may have an adverse impact on the number of cadets admitted to future academy classes.

---

[6] Improved rates of hiring and retaining registered nurses are the result of the Receiver's salary increase and the Receivership's streamlined clinical hiring process.

[7] These figures were provided by the CDCR's Human Resources Division based on State Controllers Office data.

For example, according to CDCR personnel, as of Friday, May 11, 2007 there were somewhere between four to seven thousand "unassigned" background verifications awaiting processing (background checks are required for correctional officer applicants who successfully complete the CDCR's initial testing programs). The exact backlog is not known in that the background unit is behind in entering data into its computer tracking [13] system.

3. *Managerial and Executive Staffing Shortages.*

In addition to the severe staffing shortfalls within the ranks of clinicians and correctional officers, the CDCR has also experienced very significant turnover among its executive and managerial ranks, ranging from Secretaries to Wardens. Likewise, given the unconstitutional conditions in health services, turnover among prison Chief Medical Officers and Chief Physicians and Surgeons remains excessive.

D. The Short Average Length of Sentences Among California Prisoners.

According to CDCR statistical records, the average sentence for a California prisoner is 46.7 months, and the average time served is 24.1 months. (Exhibit 9.) Given the fact that California confines thousands of prisoners facing Life or Life Without the Possibility of Parole sentences, the CDCR average time served is indicative of two distinct classes of California prisoners: (1) longer term prisoners, a significant portion of whom (but not all) are confined to Level III and Level IV prisons; and (2) a group of short term prisoners (of whom a significant percentage are parole violators) who come into and go out of the CDCR with such frequency that the average length of CDCR sentences is pushed down to two years.

Each class of prisoner has different and distinct medical needs. Therefore, when implementing the Plan of Action, the Receiver must consider this characteristic of California prison crowding. Lifers, for example, will eventually age and require special housing as infirm patients. On the other hand, the constant churning of parolees into and out of the CDCR (and between CDCR institutions) requires special clinical and correctional support staff at reception centers and in the "receiving and release" units at each state prison.

E. The Impact and Severity of California Prison Overcrowding Varies By Institution.

1. *Introduction.*

The California prison system is unique not only in terms of its overall size and prisoner population, but also because of a wide variety of different types of prisons, the remote location of most prisons, and the different impacts of overcrowding at each specific institution. As a [14] result, overcrowding related negative impacts on the Plan of Action become both complicated and interrelated. There is no single fixed strategy that can be employed by the Receiver to bring medical care delivery in California's prisons up to constitutional standards. Invariably, the overcrowding problems at each specific prison are unique, and specialized remedial programs must be developed for each.

2. *Factors Which Determine the Impact of Overcrowding In California's Prisons.*

1. Degree of Overcrowding: As shown in Exhibit 2, not all CDCR prisons suffer from the same degree of

overcrowding. The .challenge of providing constitutional medical care at a prison with more than two hundred percent overcrowded will be different from the challenge at a prison that is less crowded.

2. Institution Size: California opted to construct mega-prisons in the 1980s and 1990s, a strategy rejected by other jurisdictions. In addition, California has a policy of adding new prisons to sites with older prisons, creating a number of prison complexes (e.g. the California Institute for Men ["CIM"] and the California Correctional Institution at Techachapi ["CCI"]). Ultra-large prisons and prison complexes which are severely overcrowded, as they are today, create special medical delivery challenges, as well as recruitment difficulties.

3. Remote Location: Many of mega-prisons constructed in the 1980s and 1990s have been sited in remote locations, far from the urban centers where it may be possible to recruit adequate numbers of competent clinicians. With the remote prisons so severely overcrowded, recruitment problems have intensified, not only for clinical personnel but also for correctional officers.

4. Institutional Design: Because of overcrowding, many California prisons which should have been decommissioned decades earlier remain not only fully operational, but operate at 200 percent of their design capacity. Thus in terms of real life remedial fixes, it is a far different problem addressing the impacts of overcrowding on the aged, poorly maintained and diverse housing units at San Quentin or Old Folsom, compared to the impacts of crowding presented by [15] a prisoner population of more than 260 percent of design capacity as at the more modern

but sprawling and remotely-located prison located at Avenal.

5. Institution Mission: Many CDCR prisons have been charged with special "missions." Because there has been no adequate long-term planning in CDCR, prison specific missions have been assigned in a manner that inhibits the establishment of a safe and effective medical remedial plan. In most cases the designation of CDCR prison "missions" are comprehendible only in a historical context. The diversity, lack of organization among missions, ad hoc and incompetent changes in mission combined with severe crowding will complicate the timely and cost effective implementation of the Plan of Action, especially when the Plan calls for assigning the appropriate patient to the appropriate medical delivery facility.

For example, Avenal State Prison has been designated for *Armstrong* class members and for housing older, low security prisoners - despite its remote location and the resulting difficulties hiring adequate numbers of clinicians. Salinas Valley State Prison contains a long term "Intermediate" mental health facility for high security inmates, despite being hundreds of miles from outpatient mental health units at Pelican Bay State Prison ("PBSP") and California State Prison-Sacramento (which feed patients into and accept patients from the Intermediate unit). Prisoners with medical conditions that may make them especially vulnerable to Valley Fever, for example, patients with serious kidney problems, are housed in prisons in the Central Valley, the primary locus of Valley Fever spores, because those facilities have been designated for the delivery of dialysis treatment. Correcting these types of anomalies will be difficult, requiring an entirely new program of cohorting patients, which will in turn require modifications to the manner by which CDCR classifies inmates and assigns them to specific prisons. This challenge is rendered far more difficult, however, because of the extent of the CDCR's overcrowding.

F. The Velocity of Prisoner Movement Within the CDCR.

1. *Introduction.*

Overcrowding creates increased prisoner movement as correctional officials struggle to [16] manage crowding by transferring prisoners from institution to institution in a constant search for "open" beds. This form of crowding driven movement adversely impacts on health care delivery in at least six important ways. First, adequate health care in the correctional environment requires some form of "intake" or "reception" screening whenever a prisoner arrives at an institution. The health care screening (medical, mental health, and dental) that takes place at a CDCR Reception Center is necessarily wider in scope and more complete than the intake screenings which take place as a result of inter-prison transfers; nevertheless, both processes call for specific clinical reviews, reports, and the coordination of necessary follow-up care. Thus, an increase in prisoner movement equals an increased workload concerning screening. Second, all "out" transfers from a CDCR prison require action by health care staff, including, in some cases, an evaluation of whether the prisoner is fit for transfer. Third, the appropriate medical records must accompany the transferring prisoner. However, given the existing transportation process, the speed by which transfers need to be effectuated, and the absence of any form of electronic record, this means that a paper record must be assembled, updated, transported to the intake and release area and physically placed inside the transportation vehicle with the transferring prisoner for delivery to the reception nurse at the receiving institution in time for the intake screening. Not surprisingly, many prisoners are transferred without their records. Fourth, some percentage of inmates who are transferred must be provided with medication during the transfer process, and plans must be initiated for the timely renewal of medications at the receiving institution, placing an additional work load on physicians, pharmacy personnel, nurses and correctional officers. Fifth, some percentage of transferring inmates must be afforded special transportation (and in some cases must be accompanied by clinical personnel) during the transfer, a staff intensive procedure for both clinical and correctional personnel. Finally, transfer often adversely impacts patient clinician relationships and clinical programs (whether medical, mental health, or dental oriented). Given the scope of overcrowding, however, and an unceasing need for more and more transfers, the present CDCR system functions in a manner whereby classification driven decisions are primary, with medical/mental health/dental issues assuming a secondary and in [17] every instance unacceptably low level of importance.

2. *The Scope of Prisoner "Moves."*

Given the State's decision to construct very large correctional facilities and given the decision to site many prisons in remote locations, it is not surprising that CDCR effectuates hundreds of thousands of prisoner moves each year. Movement into and out of the CDCR, as well as between CDCR prisons has now reached crisis proportions. For example, Exhibits 10 through 12 provide a prison-by-prison summary of inmate movement into and out of specific institutions, as well as a systemic total, for the months of January, February, and March 2007.[8] In total there were *more than 170,000 prisoner moves during the first quarter of calendar year 2007 alone*. CDCR reception centers were especially hard hit. For example, the California Institution for Men ("CIM"), a male reception center, averaged *more than 11,000 prisoner moves each month*.

3. *Mission Change and "Yard-Flips."*

In addition to an increasing velocity of prisoner movement and its adverse impact on attempts to deliver constitutionally adequate medical care, correctional officials in the CDCR are forced, because of the pressures of overcrowding, to constantly re-evaluate the correctional mission of each CDCR institution and to periodically alter those missions in order to provide housing for classifications of inmates for whom bed shortages have become especially acute.

Yard flips (a procedure whereby housing units or yards within a prison are designated for a different classification of prisoner) and mission changes (a procedure whereby an entire prison is designated for a different classification of prisoner) exemplifies yet another characteristic of California prison overcrowding: *the real life impact of crowding is not only in the overall numbers, but also in the population*

---

[8] Official CDCR statistics are reported by counting a prison transfer "out" and the resulting prison transfer "in" (at a different institution) as only one move. However, because both the transfer out and the transfer in require some form of health care intervention, this report totals all moves.

pressures created by a lack of beds for specific classifications of prisoners. For example, an increase in long term violent offenders classified as [18] Level IV prisoners requires an increase in celled housing. An increase in short term non-violent offenders calls for increased housing in dormitories/lower security housing.[9]

Yard flips and mission changes are necessitated by classification related housing shortage. In essence, one classification of prisoner is moved out of a specific yard or prison and transferred to other institutions while a different classification of prisoner is moved into those units. Exhibit 13 summarizes CDCR bed conversions from February 2003 through May 2007.

It is important to emphasize that with increasing overcrowding, yard flips and missions changes have become an unceasing process. *See*, for example, Exhibits 14 - 16, three CDCR Memorandums issued the same day – March 30, 2007. The first calls for 11 emergency revisions to previously issued "Institution Activation Schedules," the second converts Facility D of the California State Prison at Los Angeles County ("LAC") from a Level IV General Population housing unit into a Reception Center, and the third converts Centinela State Prison from a Level III prison to a Level IV prison.

4. *The Heightened Negative Impact of Overcrowding on CDCR Reception Centers.*

---

[9] As explained below, when analyzing the impact Assembly Bill 900, creating additional CDCR dormitories will not address the crisis shortage of Level IV cells.

Because of overcrowding, the Plan of Action faces special challenges relative to CDCR reception centers. For example:

1. One of the factors driving California prison overcrowding is the State's failure to implement rehabilitation programs. Therefore, in California, high percentages of paroled prisoners either "violate" their conditions of parole or "re-offend" with a new crime.

2. Thus CDCR reception centers have, during the past twenty years, encountered ever increasing prisoner movement pressures as more and more prisoners flow into the CDCR for relatively short terms of incarceration. As demonstrated by Exhibits 10 - 12, this flow into the CDCR has a special impact on reception centers such as CIM, SQ, the Deuel Vocational Institute ("DVI").

[19] 3. Reception centers are institutions which must be staffed and have the appropriate clinical space to provide a level of medical care and clinical evaluations above that of the general population institutions. When a former prisoner violates parole or re-offends, he or she returns to the CDCR through a reception center where a medical/mental health/dental health care appraisal must be performed. Once that appraisal is completed the newly received prisoner is transferred to an open bed at a prison which has been designated for his or her classification. However, none of the CDCR's designated reception centers were designed or constructed with adequate clinical space. To make matters worse, as the original prisons designated for reception became overwhelmed by the influx of parole violators, the CDCR was forced to "convert" general population prisons into reception centers. These "conversions,"

however, were not accompanied by adequate additions to clinical staff or clinical space. For example when San Quentin, the State's oldest prison, converted to a reception center it was allocated an entirely inadequate temporary relocatable structure, which until the Receiver began his San Quentin Pilot Project, had not been renovated or replaced.

The degradation of CDCR reception process continues to this day. As Exhibit 15 demonstrates, because of overloads at other reception centers, slowly but surely, yard by yard, LAC is mutating into a full blown reception center. Although chapels and libraries have been converted into some additional clinical space, LAC has neither the staffing nor the clinical space to accomplish the health care elements of reception.

G. The State's Failure to Plan, Design, and Build Appropriate Clinical Space In Its Newest and Most Modern Prisons.

The Receiver has discovered that the Plan of Action, as it relates to overcrowding, cannot assume adequate prison medical clinics/treatment area infrastructure exists even in California's newest and most modern prisons. To the contrary, when measuring the impact of overcrowding on his remedial efforts, the Receiver is forced to consider the following two facts:

(1) the newest CDCR prisons were designed with clinic space which is *only one-half that necessary for the real-life capacity of the prisons*; and

[20] (2) while millions of dollars have been allocated for prison health care space projects during the past five years, the great majority of the

project were never completed; indeed, some projects do not appear to exist.

1. *Inadequate Clinical Support Space in the State's Newest and Most Modern Prisons.*

In the beginning of the prison construction boom in the early 1980s, the CDCR developed a "Prototypical Prison Policy Design Criteria." (Exhibit 17.) This policy has been revised over the years and continues to reflect CDCR and the State's policy on what will be built at each new prison. In 1988 the policy was revised to clearly reflect the reality of overcrowding in the prison system even at that time The policy states that at Level II, III, IV and reception centers, certain functional areas of the new prison will be built to accommodate 130 percent overcrowding. Those functional areas included *only* personnel, accounting, inmate records, procurement, receiving and release and family visiting. The policy goes on to mandate that the infrastructure at new prisons, (which includes *only* water, wastewater, electrical, mechanical) will be designed to accommodate 190 percent overcrowding in celled prisons and 140 percent overcrowding in dormitory prisons. Thus, at a policy level, by default, the CDCR short-changed by at least 50% all health care related space needs.

Therefore, while the overcrowded populations of the modern facilities approach or exceed two hundred percent, and regardless of how the CDCR attempts to characterize the level of crowding, the available clinic space is *one half of what is necessary for daily operations*.

This CDCR policy and practice, for more than twenty years, to limit health care space, including staff offices, examination/treatment rooms and medical beds, to only the base staffing level of the institution, ignoring pre-existing plans to double-cell the prison up to 200 percent of capacity, adversely impacts the daily medical, mental health, and dental operations at the following prisons.

1. Avenal State Prison
2. California State Prison-Calipatria
[21] 3. California State Prison-Centinela
4. California State Prison-Corcoran
5. California State Prison-Solano
6. Chuckawalla Valley State Prison
7. California State Prison-Sacramento
8. High Desert State Prison
9. Mule Creek State Prison
10. Ironwood State Prison
11. Kern Valley State Prison
12. California State Prison-Los Angeles County
13. North Kern State Prison
14. Pelican Bay State Prison
15. Pleasant Valley State Prison
16. R.J. Donovan Correctional Facility
17. Substance Abuse Treatment Facility
18. Salinas Valley State Prison
19. Wasco State Prison

2. *A Case Study of How CDCR Construction Planning Ignores the Crowding Related Clinical Space and Staffing Needs of the CDCR Health Services Program - Kern Valley State Prison.*

Kern Valley State Prison ("KVSP"), the CDCR's newest prison, opened in June of 2005, was built to a standard of "base staffing", except for water, wastewater, electrical, mechanical. (Exhibit 18.) To summarize, absolutely no consideration was given to the real life impact on the prison's health care program that would result by the CDCR's plans to immediately double cell the entire prison. As a result of this policy, at KVSP the health care space on each of the four semi-autonomous facilities was limited to accommodate one Primary Care Provider's office based on the ratio of 1 doctor for every 500 inmates. Each of the four facilities was also built [22] with one Examination/treatment room, a medication distribution/sick call window, and a dental operatory/office.

Likewise, in KVSP's Central Health Care Services space the number of "infirmary beds" was determined by the prison's "design" bed capacity, even though CDCR officials knew before the construction began that the prison would be overcrowded. A Correctional Treatment Center ("CTC") was subsequently constructed in lieu of infirmary beds. KVSP has a design capacity of 2,448 inmates. Based on the CDCR's space standards this would then require KVSP to have 1 medical bed for every 125 inmates for a total of 19 beds. In fact KVSP has a total of 24 CTC beds. However, KVSP now confines not 2,448 inmates but, as of April 4, 2007, 4,952 inmates (202.3 percentage of overcrowding).

Based on the level of overcrowding at KVSP they should have at least 38 medical beds in order to accommodate the inmate-patient needs. Likewise KVSP now needs, even under the CDCR's own standards (which the Receiver finds inadequate as explained below) twice the number of clinical offices, clinical space, and infirmary beds as presently exist. In essence, KVSP was planned, designed, and subsequently constructed knowing full well that the medical, mental health, and dental space and staffing would be entirely insufficient for the prison's actual population.

3. *Millions of Dollars Allocated for Prison Health Care Space Projects and Little to Show for It.*

A summary of health care services Capital Outlay projects for the past five fiscal years is set forth in Exhibit 19. This information is significant when evaluating CDCR efforts to address the pervasive lack of health care space within its prison system. As stated above, each and every prison approved, funded and built by the State over the past twenty plus years was constructed to only accommodate "base staffing" only – except for infrastructure, water, wastewater, electrical, mechanical and certain other functions (such as receiving and release, family visiting, and accounting). The policy to build only to base staffing levels has left the CDCR in crisis regarding the clinical space needed to provide constitutional levels of access to health care.

[23] In a small effort to attempt to improve this flawed system, CDCR had obtained in the past five years approval to go forward with a limited number of health care space projects. For example, in fiscal year 2002/03 a total of $6.917 million was approved,

one-third of which was for a Ambulatory Care Center at CMF, which has in fact been completed. Many other projects, however, such as $375,000 allocated for a CTC at SQ and $1.9 million for a "Hospital" at DVI have not come to fruition. SQ does not have a CTC, nor does DVI have a hospital. Unfortunately, the CDCR construction program has a tendency to invest significant funds for the planning of projects which fail to come to fruition. For example, in fiscal year 2003/04 Ironwood State Prison ("ISP") received approved for an expenditure of $3.8 million for the completion of a CTC. These funds were in addition to $50,000 approved in 2002/03. As of this date the CTC has not been completed, as of today it does not house a single inmate or provide any health care services to inmates at ISP. Likewise, during fiscal year 2004/05 $1 million was approved for a nineteen chair dialysis center at SATF. The construction has finally, years later, been completed; however due to litigation over the contracting-out for the dialysis services, the operation of the chairs is not fully implemented. In fiscal year 2006/07 $2.5 million was approved for a "Hospital" at DVI, in addition to a fiscal year 2002/03 allocation of $1.9 million. After inquiries, the Receiver's staff were informed that this particular CDCR allocation is in fact controlled by the Department of General Services for a "seismic retrofit" of an "infirmary building." The Receiver has not approved this project; in fact, he was not aware of it until the preparation of this report, despite the allocation of $4.4 million.

In addition to the above projects, each year the CDCR has been allocated approximately $5 million for "Minor Capital Outlay" projects. These funds were allocated on a priority basis as determined by CDCR officials. Through this process, some CDCR institutions have received funds to provide additional health care space. For example, at Wasco State Prison a triple-wide trailer has been added for clinician office space, primarily utilized by mental health staff. A new health care building has been constructed next to the existing Central Health Clinic at Avenal State Prison, which, unfortunately, is located hundreds of yards of away from inmate housing [24] units. This space is primarily utilized for staff offices. At California State Prison Solano, a building was constructed on the Facility IV grounds approximately eight to ten years ago, to be utilized by mental health staff. In 2006 at R.J. Donovan custody staff moved out of their offices for use by health care staff, and a trailer has been placed in a plaza area for use as additional health care offices. At Sierra Conservation Camp ("SCC") an office has been converted into a telemedicine clinic, and at Mule Creek State Prison a former vocational area on Facility B has been converted into mental health clinics and offices. Nevertheless it cannot be disputed that, based on the CDCR budget of the last five years, very little health care space has been added to any of the prisons which now confined at least twice as many inmates as they were designed to hold.

IV.

THE MANNER IN WHICH OVERCROWDING INTERFERES WITH THE RECEIVER'S ABILITY TO SUCCESSFULLY IMPLEMENT TIMELY PROGRAMS WHICH WILL REMEDY THE UNCONSTITUTIONAL VIOLATIONS AT ISSUE

A. Introduction.

Overcrowding interferes with the Receiver's ability to successfully remedy the constitutional violations at issue in two significant ways: (1) substantive interference; and (2) process interference.

B. Crowding Related Substantive Interference With the Receiver's Remedial Programs.

As explained in the Plan of Action, in order to implement adequate and sustainable programs which will bring California's prisons up to constitutional standards of medical delivery, the Receiver needs to both establish the necessary correctional care infrastructure and to implement time phased, coordinated medical delivery programs. Overcrowding will inhibit this process in a number of significant ways.

1. *Crowding Related Obstacles to the Recruitment, Hiring, and Retention of Competent Medical Personnel.*

The Receiver's top priority during the next two years will involve recruitment, hiring and [25] the implementation of orientation and training programs to improve retention of necessary clinical staff (including physicians, mid-level providers, registered nurses, licensed vocational nurses), as well as support staff ranging from information technology staff to office assistants. Overcrowding adversely impacts this efforts in three ways:

a. The long-standing nature of California's prison overcrowding and the CDCR's policy of deliberately short changing the need for clinical space, combined with crisis levels of staffing shortages creates adverse barriers to the Receiver's ability to recruit and retain necessary, competent medical care staff. The Receivership will be building from "the ground up" a medical delivery system within a prison culture where what should be a relatively simple task – bringing a patient to a prison clinic – presents an almost insurmountable challenge because the number of patients who need care far exceeds the number of correctional officers available for escorts. Concerning some of the most basic elements of an adequate medical delivery system, the Receiver has found that the State's long standing acceptance of overcrowding, combined with staffing shortages, has created a culture of cynicism, fear, and despair which makes hiring and retaining competent clinicians extremely difficult.

b. The total number of clinicians and support staff needed because of the present levels of overcrowding is far above the number that would have been needed if all CDCR prisons operated at their design capacity. For the same reasons, the difficulties that would have been faced recruiting competent medical providers for the CDCR's remote prisons is also intensified, requiring necessary but costly remedial programs such as developing an air force to transport physicians out of urban areas to and from work assignments in rural prisons.[10]

c. Some of the special characteristics of California prison overcrowding will require [26] significant numbers of additional clinical personnel. For example, the number of additional clinical staff that will be needed at CIM to provide health assessments, monitor medical records, provide follow-up care, and ensure that appropriate medications are provided for more than 12,000 inmate moves each month will be significant to say the least.

---

[10] In similar fashion, overcrowding will render other infrastructure programs set forth in the Plan of Action more difficult to effectuate. For example, an increase in the number of clinicians needed to care for prisoner/patients will require an increase in the number of computer terminals that will eventually be installed as part of a new information technology system. Likewise the number of medical records needs to increase as the inmate population increases, and therefore additional space must be constructed for medical records. In similar fashion the amount of medical supplies must be increased, as well a pharmacy services, etc.

To summarize, the cost and the duration of the remedial effort of the Receiver's recruitment, hiring and retention programs will increase significantly because of overcrowding. In some rural counties, the number of clinicians and support staff needed to bring local prisons up to constitutional standards may well require additional salary increases for CDCR clinicians and a resulting disruptive impact on the availability of clinicians for county and private health care programs.

2. *Crowding Related Obstacles Re the Development of Competent Managers and Executives.*

In similar fashion, overcrowding has an adverse impact on the Receiver's ability to recruit and retain competent health care managers and executives. As the Court is aware the Receiver has filed a motion to establish Receiver Career Executive Assignment ("RCEA") positions. Given on-going intensification of overcrowding, not only will the recruitment of such personnel be more difficult, but the larger the remedy, the more managers and executive who will be necessary.

To summarize, the cost and the duration of the remedial effort of the Receiver's recruitment, hiring and retention of managers and executives will increase significantly because of overcrowding.

3. *Crowding Related Obstacles Preventing the Establishment of Constitutionally Adequate Reception Center And Inter-Prison Transportation Procedures.*

The stipulated *Plata* injunction, as set forth above, calls for adequate reception center health care appraisals and the appropriate programs to protect prison medical conditions during inter-prison transportation. However the present velocity of prisoner movement into and out of reception centers as well as between prisons creates a serious obstacle to meeting these [27] objectives. Given present conditions, hundreds of additional "budgeted" correctional officers and clinical staff will be required to appropriately manage the hundreds of thousands of inmate moves that take place every year, not to mention a vast fleet of transportation vans and escort vehicles.

To summarize, the cost and duration of the remedial effort of the Receiver's programs for adequate reception centers and inter-prison transportation practices will increase significantly because of the velocity of prisoner movement in the CDCR.

4. *Crowding Related Obstacles Concerning Provisions for an Adequate Number of Health Care Beds.*

An adequate number of different levels of medical care beds are an absolutely necessary component of the Plan of Action. Overcrowding presents an obstacle to achieving this objective because, as explained by the Receiver in his bimonthly reports, three different types of additional construction will be necessary:

1. The addition of approximately 5,000 new medical beds to provide the appropriate treatment, care,

and sheltered living for CDCR prisoner/patients. To a significant degree, these beds are necessary because the CDCR has neither planned for nor provided adequate medical beds for disabled prisoners, aged inmates, and prisoners who need some form of sheltered living due to their medical or mental health conditions.

2. The construction of an as yet undetermined amount of additional clinical space at existing CDCR prisons, primarily because of (a) the existing level of overcrowding and (b) the CDCR's long standing policy and practice of constructing new prisons with design capacity limitations on clinical space and thereafter operating those facilities at 200 percent of design capacity.

3. The construction of an as yet undetermined amount of clinical offices, medical records storage areas, medical supply warehouses, etc., primarily because of (a) the existing level of overcrowding and (b) the CDCR's long standing policy and practice of constructing new prisons with design capacity limitations on clinical space and thereafter operating those facilities at 200 [28] percent of design capacity.

To summarize, the cost and duration of the remedial effort of the Receiver's construction programs will increase significantly because of overcrowding.

5. *Crowding Related Obstacles Concerning Medical Delivery Support Services.*

California prison overcrowding will also impact those elements of the Plan of Action which provide for necessary medical support services. For example, the Office of the Receiver is presently involved with a program to completely restructure the CDCR's medical contracting process. Very positive initial results have been achieved. However an increasing number of prisoners in the more remote prisons has placed a heavy burden on a very limited number of hospitals and speciality providers which in turn has created obstacles in the Receiver's efforts to achieve a more efficient, patient oriented, and less wasteful contracting process. Overcrowding presents similar obstacles to other support services. For example, the use of telemedicine should be, and will be expanded for both improved patient care and cost containment purposes. However, even the most simple of necessary expansion steps; for example, finding a room adequate for telemedicine purposes often presents an unsurmountable barrier because California's prisons were constructed without adequate clinical or office space for the numbers of inmates housed at the prison.

To summarize, the cost and the duration of the remedial effort of the Receiver's Plan to implement necessary medical care support services will increase significantly because of overcrowding.

C. Crowding Related Process Interference With The Receiver's Remedial Program.

1. *Introduction.*

Every element of the Plan of Action faces crowding related obstacles. Furthermore, overcrowding does not only adversely impact the Receiver's substantive plans, it also adversely impacts on the very process of implementing remedies because overcrowding, and the resulting day to day operational chaos of the CDCR, creates regular "crisis" situations which call for action on the part of the leadership of the Receivership and take time, energy, and person power [29] away from important remedial programs. Examples of crowding related crisis/chaos situations which impact on Receivership's remedial activities include the following.

2. *Out of State Transfers.*

The Receiver and his staff worked in a diligent manner to support the Governor's efforts to effectuate out of state transfers. This effort required the implementation of a formalized health screening process; training nursing staff on screening; allocating staff to conduct screenings; allocating staff to inspect the private out-of-state prisons where CDCR prisoners would be confined; and reviewing contracts with private prisons to ensure that mechanisms existed to provide compliance with Court orders, etc. Suddenly, however, the process was halted due to State Court decisions. Recently, however, plans for out of state transfers have begun again due to the passage of Assembly Bill 900, although questions apparently remain concerning future State Court processes. Starting, then stopping, and then restarting these support efforts must be managed in a careful manner so that the Receivership does not begin to experience the day to day chaos which afflicts the CDCR.

3. *Responding to Mission Changes and Yard Flips.*

In a similar manner, the Receiver has attempted to work with CDCR concerning the various mission changes and yard flips associated with increased overcrowding. However it has been necessary on occasion to stop changes which would have put prisoner/patients in increased jeopardy of receiving inadequate medical care. Needless to say, monitoring mission changes and yard flips has become a full time activity. It may be necessary for the Receiver to provide direct oversight over CDCR yard flips and mission changes at some time in the future should this problem further exacerbate efforts to implement the Plan of Action.

4. *Disturbances.*

CDCR reports an increasing number of overcrowding related prisoner disturbances. Most disturbances are followed by prisoner "lock downs," and on occasion the lock downs are protracted. Lockdowns call for a radically different form of medical delivery than the services provided under normal general population conditions. Under normal operating procedures, [30] inmates housed in general population leave their housing units to go to yard clinics to see medical providers, to receive medications, etc. Under lockdown conditions, clinical staff must go from cell to cell to see the prisoner/patient, or small groups or individual prisoners must be escorted by correctional officers to and from clinic areas. In either case, lockdowns inhibit the delivery of medical care and increase the staffing necessary for such care. As crowding related disturbances increase, the Receiver may need to modify the Plan of Action in order to establish special clinical and correctional officer staffing standards for those institutions which function under lockdown conditions on a regular basis.

5. *Infectious/Communicable Disease Management.*

As reported in the Fourth Bi-Monthly Report, overcrowding has increased the number and seriousness of infectious and communicable diseases, jeopardizing prisoners, staff, and the public. Thus far system wide outbreaks have been avoided, however, given the number of prisoners, conditions in gyms and hallways converted to housing units, the velocity of prisoner movement between institutions and in and out of the CDCR itself, the risk of such an outbreak cannot be underestimated.

6. *The Inability to Deliver Basic Health Care Services Due to Staffing Shortage and Increased Numbers of Inmates.*

Many CDCR prisons are unable to sustain the basic delivery of medical, mental health, and dental services because of limited staffing (clinical and custody) and an overwhelming number of prisoner/patients who require care. Every day, many California prison wardens and health care managers make the difficult decision as to which of the class actions, *Coleman*, *Perez*, *Armstrong* or *Plata* they will fail to comply with because of staff shortages and patient loads. This in turn creates crisis conditions (as described in the Fourth Bi-Monthly Report concerning Avenal State Prison) which, because it requires immediate attention, diverts the Receiver's resources from Plan of Action related activities.

7. *Class Action Coordination Issues Aggravated by Overcrowding.*

Overcrowding combined with twenty years of CDCR construction practices has created [31] competition and tensions between medical and mental health providers concerning use of clinical space. For example, because of the failure, for more than fifteen years, to provide an adequate number of inpatient beds for prisoners with very serious mental illnesses, prison CTC beds confined many patients in a mental health "crisis" creating shortages of CTC beds for medical needs which, at times, pits medical staff against mental health staff. In similar fashion, the failure by the CDCR to plan for and construct beds for aged and disabled prisoners has lead to a practice of using the CTC beds for sheltered living housing, creating similar tensions. While these issues are being addressed in monthly coordination meetings between the Receiver, the Special Master in *Coleman*, and the Court experts in *Perez*, they present another series of serious, constant problems which divert attention from Plan of Action remedial programs.

The Receiver recognizes that he is responsible for a prison medical delivery system in crisis and therefore regular crisis situations, and the appropriate response, are to be expected. However, without question, overcrowding and the resulting chaos in the CDCR has an adverse impact on the Receiver's efforts to implement the Plan of Action, and the day to day problems created by overcrowding will increase both the cost and the duration of his remedial efforts.

V.

THE IMPACT OF ASSEMBLY BILL 900

A. Introduction.

This report would not be complete without the Receiver commenting on the possible impacts of Assembly Bill ("AB") 900. A summary of the bill follows.

B. Summary of AB-900.

Section 1. Name of Act.

Names act as "the Public Safety and Offender Rehabilitation Services Act of 2007."

Section 2. Prison Construction-Phase I

Requires the CDCR to add up to 7,484 beds at 10 specified prisons.[11]

Requires the CDCR to add an additional 4,516 beds after site assessments are completed [32] at other facilities:[12]

Requires that the above beds be supported by rehabilitation programming.[13]

Declares that purpose of new beds built under this phase is to replace "temporary beds"—not to house additional inmates:[14]

Authorizes construction of reentry program facilities for up to 6,000 inmates:[15]

Authorizes construction of new buildings at existing CDCR facilities "to provide medical, dental, and mental health treatment or housing for 6,000 inmates."[16]

Subjects all projects to approval and administrative oversight of State Public Works Board.[17]

Authorizes the State Public Works Board to issue bonds to finance construction.[18]

Authorized costs for medical, dental and mental health construction are $857,100,000:[19]

---

[11] Government Code 15819.40(a)(1)(A).

[12] Government Code 15819.401(a)(1)(B).

[13] Government Code 15819.40(a)(2).

[14] Government Code 15819.401(a)(3).

[15] Government Code 15819.40(b).

[16] Government Code 15819.40(c).

[17] Government Code 15819.401.

[18] Government Code 15819.403.

Section 3. Prison Construction-Phase II

In addition to the construction required in Phase I, authorizes the CDCR to construct 4,000 beds at existing prison facilities, and requires that such beds be supported by rehabilitation programming.[20]

In addition to the construction authorized in Phase I, authorizes the CDCR to construct new buildings at existing CDCR facilities "to provide medical, dental, and mental health treatment or housing for 2,000 inmates."[21]

In addition to the construction authorized in Phase I, authorizes the CDCR to construct reentry program facilities that will house up to10,000 inmates.[22]

Subjects all projects to approval and administrative oversight of State Public Works [33] Board.[23]

Authorizes the State Public Works Board to issue bonds to finance construction.[24]

Authorized costs for medical, dental and mental health construction under Phase II are $285,700,000.[25]

Provides that the board may not release funds for Phase II construction until a 3-member panel, composed of the State Auditor, the Inspector General and an appointee of the Judicial Council of Califor-

[23] Government Code 15819.411.

[24] Government Code 15819.413(a).

[25] Government Code 15819.413(a).

nia, has certified that 13 specified requirements have been met.[26]

Authority provided for Phase II construction expires on January 1, 2014, but projects already commenced may be completed.[27]

Sections 4 & 5. County Jail Facilities

Relates to the financing and construction of county jail facilities, and authorizes the issuance of up to up to $750,000,000 in bonds for that purpose.

Authorizes the issuance of an additional $470,000,000 in bonds for county jail construction if the 3-member panel has certified that certain conditions have been met.

Section 6. Rehabilitation Incentives

Requires CDCR to implement a system of incentives to increase inmate participation in academic and vocational education.[28]

Section 7. Management Deficiencies

Requires CDCR to implement a plan to address management deficiencies.[29]

Section 8. Rehabilitation Plan

Requires CDCR to implement a plan to obtain additional rehabilitation and treatment services for prison inmates and parolees.[30]

---

[26] Government Code 15819.417; Penal Code 7021.

[27] Government Code 15819.417.

[28] Penal Code 2054.2.

[29] Penal Code 2061.

[30] Penal Code 2062.

[34] Section 9. Inmate Payments; Report to Legislature

Requires CDCR to report to the Legislature on whether existing laws related to payments to inmates released from prison are hindering the success of parolees and resulting in their rapid return to prison for parole violations.[31]

Section 10. Substance Abuse Treatment

Requires CDCR to expand substance abuse treatment services in prisons to accommodate at least 4,000 additional inmates.[32]

Section 11. Interdisciplinary Assessments

Requires CDCR to conduct interdisciplinary assessments for the purpose of program placement.[33]

Section 12. Day Treatment and Crisis Care for Parolees

Authorizes CDCR to obtain day treatment, and to contract for crisis care services, for parolees with mental health problems.[34]

Section 13. Prison to Employment Plan

Requires CDCR to develop an Inmate Treatment and Prison-to-Employment Plan.[35]

Sections 14 & 15. OIG: California Rehabilitation Oversight Board

---

[31] Penal Code 2713.2.

[32] Penal Code 2694.

[33] Penal Code 3020.

[34] Penal Code 3073.

[35] Penal Code 3105.

Creates within the OIG the California Rehabilitation Oversight Board, which will examine and report on CDCR mental health, substance abuse, educational and employment programs.[36]

Section 16. Reentry Program Facilities

Relates to the establishment and operation of the re-entry program facilities authorized in Phases I and II of construction described above.

[35] Section 17. Master Plan

Expands provisions defining facilities "master plan" to include the department's plans to activate or remove temporary beds in dayrooms, gyms, and other areas.[37]

Sections 18 & 19. Submission of Plans and Reports to Joint Legislative Budget Committee

Requires CDCR to submit to the Joint Legislative Budget Committee (prior to submissions of preliminary plans to the State Public Works Board) (1) a preliminary facility plan, (2) an operating cost estimate, (3) a staffing plan, (4) a plan for medical, dental and mental health care, and (5) a programming plan.[38]

Requires CDCR to submit annual and quarterly reports to the Joint Legislative Budget Committee regarding the status of funded projects, including medical, mental health and dental projects.[39]

---

[36] Penal Code 6140 & 6141.

[37] Penal Code 7000.

[38] Penal Code 7003.

[39] Penal Code 7003.5

Section 20. Communication with Local Governments

Requires CDCR to meet with representatives of cities or counties related to new permanent housing units prior to CEQA review.[40]

Section 21. (Repeals]

Section 22. Phase II Construction Panel

Creates 3-member panel charged with verifying whether certain conditions have been met before the State Board of Public Works may release funds for Phase II construction.[41]

Section 23. Temporary Construction

Authorizes use of portable or temporary buildings for housing and rehabilitation programming.[42]

[36] Sections 24-26. Out-of-State Transfers

Temporarily authorizes (until 2011) out-of-state transfers of inmates, without inmate consent.[43]

Provides that "no inmate with serious medical or mental health conditions, as determined by the Plata Receiver, or an inmate in the mental health delivery system at the [EOP level of care or higher may be committed or transferred to an institution outside the state unless he has executed a written consent to the transfer.[44]

[41] Penal Code 7021.

[42] Penal Code 10007.

[43] Penal Code 11191(a).

[44] Penal Code 11191(b).

Section 27. Training Academy

Authorizes CDCR to establish a training academy for correctional officers in southern California.[45]

Section 28. Supplemental Infrastructure Capacity & Rehabilitation Funding

Appropriates $350,000,000 from the General Fund to CDCR for capital outlay to renovate, improve, or expand infrastructure capacity at existing prison facilities and to supplement funds for rehabilitation and treatment of prison inmates and parolees.

Section 29. Urgency Statute

Provides that Act goes immediately into effect.

C. CDCR Does Not Have An Adequate Plan to Create "In-Fill" Beds With the Necessary Support (Including Health Care Clinic) Space.

1. *Introduction.*

Following a first review by his staff of AB 900 and an evaluation of CDCR plans to implement AB-900, the Office of the Receiver can provided initial findings concerning possible impacts of the bill, as set forth below.

2. *Inadequate Space Allocations For Health Care Services.*

The CDCR's Infill Bed Plan is included as Exhibit 20. A summary of the space proposed to be allocated for health care space (medical, mental health, and dental) is attached as [37] Exhibit 21. As is apparent from the summary, the clinical space allocated to different prisons are wildly disparate, and in many cases obviously inadequate. For example, for clinical purposes, the proposed administrative segregation unit at Avenal (190 beds) is allocated 2,970 square feet of space, while the administrative segregation unit at Calipatria (190 beds) is allocated 2,127 square feet of space and the administrative segregation unit at Centinela (190 beds) is allocated 1,779 square feet of space.[46]

---

[45] Penal Code 13602.1.

The Receiver has not been informed concerning what elements of the January 2007 Infill Bed Plan will be utilized under AB-900. Regardless, there exists a fundamental error in the manner in which CDCR has traditionally approached health care clinic construction (in addition to the past practice of allocating only one-half as much space as actually necessary given the real prisoner population intended for new prisons). CDCR allocates *space only*, ignoring the real life differences in clinical requirement based on the characteristics of the patient population, security level and escort officers requirements, the need for clinical privacy, equipment requirements, and other critical factors.

In terms of all future clinic construction, the Receiver believes that, consistent with standards promulgated by the National Commission on Correctional Health Care ("NCCHC") and because of the vast differences among facilities, design, number of facilities in any given prison complex, and the age of buildings, rather than specifying square footage adequate space will be based on a number of different standards including the type of service provided, the need for pharmacy services, equipment need, inmate classification, supply needs, examination services, etc. (Exhibit 22.)

---

[46] In addition to requiring medical and dental treatment, inmates confined to administrative segregation require heightened levels of mental health care and monitoring. Historically, a very high percentage of CDCR suicides take place in administrative segregation housing units. Therefore it is essential that the planning and construct of administrative segregation housing provides for enhanced space for mental health clinical interview and staff offices. The January 2007 Infill Plan appears to ignore this.

3. *Inadequate Overall Health Care Space Allocations.*

It must be noted that the existing CDCR construction related space allocations for clinics [38] and clinical office space are inadequate. For example, the CDCR allocation of 60 square feet for a nursing station, given the need for examination equipment, escorts, records, etc. is grossly inadequate. Exhibit 23 provides a summary of certain of the major shortfalls of current CDCR allocations.

4. *Conclusion.*

The existing CDCR Infill Bed Plan, if allowed to be implemented without oversight by the Receiver, the Special Master in *Coleman*, and the Court representatives in *Perez* and *Armstrong* will jeopardize prisoner/patient care and have a serious adverse impact on the Receiver's ability to implement the Plan of Action in a timely and cost effective manner.

D. AB-900 Will Not Reduce the Number of "Temporary ("Ugly") Beds at the Ten CDCR Prisons Subject to AB-900.

Phase I of AB-900 identifies ten prisons that will have a total of 7,184 beds added to their design capacity. The stated intent of AB-900 is to build new prison capacity which will "replace the temporary beds currently in use, and they are not intended to house additional inmates." AB-900 defines temporary beds as "those that are placed in gymnasiums, classrooms, hallways, or other public spaces that were not constructed for the purpose of housing inmates."[47] The CDCR, in its Master Bed List refers to these same beds as "non-traditional overcrowding beds."

In order to determine if AB-900, if fully implemented as written will reduce the existing and overcrowding levels at these ten prisons, Exhibit 25 was created. The first column of this exhibit lists the ten prisons as specified by AB-900 followed by the current security level and number of "temporary beds". The third column sets forth the CDCR's proposed Infill Bed Plan for each of the ten prisons by security level. For example, at Pleasant Valley State Prison there currently exists 774 Level III "temporary" beds and 150 Level IV "temporary" beds. However, the CDCR Infill Bed Plan proposes to add only 600 Level II beds.

From what the CDCR has provided, it appears that the total number of beds that will be "replaced" as required by AB-900 will be limited to 472 reception center beds. Eight of the ten [39] prisons will have zero temporary beds replaced based on CDCRs In-Fill Bed Plan. Based on the fact that only 472 reception center temporary beds will be taken down per AB-900, the remaining 4,280 exiting temporary beds at these ten institutions will remain filled with inmates.

It may be possible to fill proposed Infill beds at these ten prisons with inmates from other prisons. However in Phase I of AB-900 the vast majority of the 7184 new beds being created are Level II beds

---

[47] A summary of "temporary beds," also know as "ugly beds" is attached as Exhibit 24.

(4,300 beds). The movement of Level II inmates from other institutions' "temporary beds" into the new housing units may have a positive impact on the sending institutions, *but only if they are then prohibited from back filling those temporary beds*. However considering the CDCR's history and practice of filling all available beds, coupled with the fact that AB-900 does not prohibit such action, we should anticipate that CDCR will continue to house inmates in these temporary beds even *after inmates are moved to the ten institution's new housing units*. In reality, therefore, AB-900 will serve only to increase the number of prisoner/patients who will required medical, mental health, and dental care.

E. AB-900 Does Not Address The CDCR's Most Serious Need For Additional Prison Beds.

The Infill Bed Plan proposes total (Phase I and II) addition of 16,238 beds, of which 9,440 are Level II beds, which will have some impact on the severe crowding at lower level prisons. The Infill Bed Plan, however, does nothing to address the serious levels of crowding within the CDCR's most dangerous high security prisons.

The top chart in Exhibit 26 summarizes the CDCRs projected Male population needs by security level from fiscal year 2007/08 through fiscal year 2011/12.[48] The first column identifies the fiscal year, the second through the eighth columns identifies the security level, and the last column is the projected grand total of Male inmates. The CDCR projects that the Male population for all security levels except Protective Housing Unit will increase over the next five fiscal years. The greatest increase is projected to be at security level IV with 3,830 additional [40] Male inmates to be accommodated within the existing overcrowded institutions. Level IV prisoners are considered by the CDCR to be the most dangerous in terms of escape risk and potential for in-prison misbehavior.

---

[48] This information was obtained from the CDCRs Spring 2007 Adult Population Projections 2007-2012 report.

The lower chart compares *only* the additional projected Male population needs with the CDCRs proposed In-Fill Bed Plan. Based on this comparison, there appears to be a significant disconnect between the CDCR's projected housing needs, especially in its most dangerous prisons, and what the CDCR is planning to build. For example, CDCR projects an increase of 3,840 Level IV inmates while the CDCR's Infill Bed Plan does not include a single Level IV bed. The same is true for Security Housing Unit (SHU) inmates with a projected increase of 425 inmates with no plan to increase the SHU beds by even one bed/cell.

Given current levels of overcrowding at two of the CDCR's Level IV and SHU institutions, a serious need for additional Level IV and SHU beds is clearly demonstrated. For example, as of April 4, 2007 Pelican Bay State Prison ("PBSP"), a SHU and Level IV institution was operating at 154.5% of design capacity. Salinas Valley State Prison ("SVSP") another Level IV institution as of April 4, 2007 was operating at 206.8% of design capacity. The failure to plan for additional Level IV beds based on the current level of overcrowding and the projected increase of Level IV and SHU bed needs, will create additional severe overcrowding within the CDCR's most dangerous and difficult to manage prisons at this time. If overcrowding intensifies in the CDCR's highest security institutions, the Receiver's effort to implement the Plan of Action will require more time and additional funding.

F. AB-900 Re-Entry Facilities.

AB-900 proposes to site and construct numerous re-entry facilities throughout the State. Each of those facilities will require clinical staff to provide intake and exit health care assessments. In addition, each facility will require on-site health care staff to delivery needed care. In essence AB-900 calls for a new set of institutions to be included in the existing Federal Court remedial plans. Given the record in this case, the Receiver must assume that adding more CDCR institutions will increase the cost and the time necessary to implement the Plan of Action.

[41] G. Staffing.

It is easy to talk of constructing prisons and jails. It is more difficult and expensive to staff correctional institutions with the appropriate clinical personnel and correctional officers. AB-900, however, is silent about how the jails and prisons beds cited in the bill will be staffed and managed. Unless and until adequate staffing is provided, the Receiver anticipates that the additional beds proposed in AB-900 institutions will increase the cost and the time necessary to implement the Plan of Action.

VI.

CONCLUSIONS

The Receiver summarizes his best assessment of the manner and extent to which overcrowding is interfering with his ability to successfully remedy the constitutional violations as follows:

1. The Receiver's Plan of Action will work. Failure is not an option. Over time the CDCR's medical delivery system will be raised to constitutional levels. However, the time this process will take, and the cost and the scope of intrusion by the Federal Court cannot help but increase, and increase in a very significant manner, if the scope and characteristics of CDCR overcrowding continue. For example, the Receiver can, over time and with great expense, develop a reception center medical delivery system that will appropriately handle the more than 11,000 prisoner moves into and out of CIM each month. The cost of such effort, however, may all but bankrupt the State of California and create a medical delivery problem in Riverside and San Bernardino counties because there may not be enough competent clinicians to both provide medical care for an unlimited number of State prisoners and for the public also. Thus, when the Court considers the issue of intrusion relative to controlling overcrowding, it should also consider the scope of intrusion that will be necessary to provide constitutionally adequate medical care in California's prisons if overcrowding is not managed.

2. The manner by which overcrowding is managed will have a fundamental and perhaps irrevocable impact on the Plan of Action. For example, if the State's response is limited to [42] effectuating out of state transfers, and thereafter filling empty beds behind departed prisoners, the overcrowding related challenges to the Plan of Action will only increase and it will take the Receiver longer and it will cost more to correct the constitutional violation at issue. Likewise, if the State charges off to construct infill beds in remote locations without adequate support services space, including adequate clinical space,

overcrowding related challenges to the Plan of Action will only increase, and as a result, it will take the Receiver longer and it will cost more to correct the constitutional violation at issue. Finally, unless steps are taken to stop the revolving door of a failed parole system and thereby manage the out-of-control number of prisoner moves, the churning related challenges to the Plan of Action will continue and it will take the Receiver longer and it will cost more to correct the constitutional violation at issue.

3. Finally, and perhaps more important, it is critical that the Court and counsel understand that the motion for a three judge panel can be separated and distinguished from the fundamental challenges faced by Receivership. While the attorneys for plaintiffs have filed three separate requests for a three judge panel in three different cases, it is important to emphasize that even if a three judge panel is appointed and even if the California prison system is, over time, capped, and even if its population is reduced by, for example, twenty-five percent (thereby releasing from existing housing units as many as 42,500 prisoners), the challenges faced by the Receiver and the Courts in *Armstrong*, *Coleman*, *Perez*, and *Plata* would remain a daunting one: to provide constitutional levels of prison health care for 125,000 prisoner/patients who will remain confined thirty-three inadequately constructed prison that function far above their correctional design capacity. Thus, even when assuming some form of population management, it will take years of effort and significant State resources to address the prison health care problems faced by the Federal Courts in California at this time.

To summarize, those who believe that the challenges faced by the Plan of Action are uncomplicated and who think that population controls will solve California's prison health care problems, are simply wrong. Population limits may help effectuate a more timely and cost effective remedial process. However, the cure to existing health care problems will be difficult [43] and costly to implement, regardless of population control efforts.

4. The following remedial actions in *Plata* are warranted now:

a. The CDCRS "in-fill" bed project, if allowed to proceed without oversight by the Receiver may well jeopardize prisoner patient health care. The Receiver recommends that the Court issue an order compelling the Secretary of the CDCR to file, within fifteen days, a report to this Court and to the *Armstrong*, *Coleman*, and *Perez* Courts concerning all aspects of the "infill" project, *including all studies and expert reports* that have been conducted relative to the issue of whether adequate space exists to construct additional non-medical beds with the appropriate support services, including clinical space. The Receiver has reviewed prior CDCRS submissions and recommends that the order should specifically require an executive summary of all proposed infill programs not to exceed ten pages.

b. The CDCR's long standing failure to hire an adequate number of correctional officers jeopardizes prisoner patient heath care. The Receiver recommends that the Court issue an Order to Show cause compelling the Secretary of the CDCRS to file, within fifteen days, a response as to why the Receiver should not begin to provide direct oversight over the CDCR's correctional officer recruitment and hiring program.

c. The Office of the Governor will be filing responsive pleadings to the Court's February 15, 2007 Order concurrently with this filing by the Receiver. The Receiver recommends that the Court consider whether the Governor should create his Plan of Action concerning how California will address the serious correctional problems afflicting the CDCR. Thus far, the Governor has worked to encourage the initial successes of the Receivership; however, for the Receiver's Plan of Action to be implemented in the most timely and cost effective manner possible, the State should develop a CDCR Plan of Action. As pointed out in this report, the CDCR's lack of planning, the day to day chaos within the CDCR, and its long standing failure to effectively perform basic correctional functions including prison construction and correctional officer hiring jeopardize prisoner patient medical care. The development of and adherence to a complementary correctional Plan of Action will enhance efforts by the Federal [44] Courts to bring California's prison health care up to constitutional standards of access and quality and will thereby hasten the return of the system back to the State.

Dated: May 14, 2007.

RECEIVER'S SUPPLEMENTAL REPORT RE OVERCROWDING

Receiver Robert Sillen submits this Supplemental Report Re Overcrowding, and accompanying Declaration of John Hagar, in response to this Court's Orders, dated February 15, 2007 and June 6, 2007.

A. *Summary of Key Features of The Receiver's Report Re Overcrowding.*

In his original Overcrowding Report, filed herein on May 14, 2007, the Receiver set forth in detail a history of the overcrowding crisis in California's prisons; described the manner in which overcrowding exacerbated the failings in the prison health care delivery system; and then discussed how overcrowding – and the State's inadequate and inconsistent responses to that [2] overcrowding – are currently interfering with the Receiver's mission to bring the medical care delivery system up to constitutional standards.

In particular, the Receiver identified five "Crowding Related Obstacles" that were and are interfering substantively with his efforts to bring the prison health care system up to constitutional standards in a timely fashion.

1) Overcrowding is interfering with the Receiver's ability to recruit, hire and retain competent medical personnel. The overwhelming number of prisoners needing care at the prisons, existing staffing shortages and inadequate clinical space are just a few of the consequences of overcrowding that make developing a competent medical staff a daunting challenge.

2) For many of these same reasons, overcrowding will make hiring competent managerial and executive staff more difficult.

3) One of the consequences of overcrowding has been extraordinary movement of prisoners between and among the prisons. A downstream effect of this movement is the need for

many more correctional and clinical staff to manage reception center and inter-prison transportation procedures insofar as they relate to health care. That staff is currently lacking and, as a result, the rapidity of movement between prisons is continuing to create chaos in the health care system.

4) There is a dire need for additional clinical space and medical beds in the prisons because the existing capacity has been swamped by the number of inmates in the system. Until additional and adequate clinical space is constructed to accommodate the real needs of the prison population, the Receiver's work will be made significantly more difficult.

5) The overcrowding crisis has also interfered with the Receiver's ability to provide medical support services. Large numbers of prisoners needing care in outlying and remote areas often mean that CDCR must contract out for services that can, and should, be provided internally. Looking outside the prisons is in turn stressing local community health care systems. Similarly, overcrowding means inadequate space for [3] programs such as telemedicine that, if properly used, could result in better care at less cost.

The Receiver also emphasized in his Report that overcrowding creates "procedural" obstacles to the work he and his staff are undertaking. He highlighted six areas to illustrate how the day-to-day work of the Receivership is hampered as a result of overcrowding.

1) The State has responded to overcrowding by attempting to transfer prisoners out of state. The Receiver has endeavored to cooperate with this process. But, because of litigation, the passage of AB 900 and other factors, the transfers have started, and stopped, and started again, resulting in inefficiencies and frustration.

2) The State has responded to overcrowding by so-called "mission changes" and "yard flips" which result in large numbers of prisoners and different classes of prisoners being moved between prisons. Staff resources that the Receiver could allocate elsewhere are being consumed by the need to monitor and respond to mission changes and yard flips.

3) Overcrowding has resulted in increasing numbers of prisoner disturbances and "lock-downs" by prison authorities in response. Because of the heightened security measures associated with lockdowns, medical care to the inmates is delayed and made substantially more time-consuming and cumbersome.

4) The risk of communicable disease outbreaks in the prisons, as well as their transference to local communities is increased substantially by overcrowding and the attendant rapid movement of prisoners between prisons. The Receiver must devote significant staff resources to protecting against the possibility of disease outbreaks in such circumstances,

5) The extent of overcrowding in the prisons means that the entire health care system medical, dental and mental health – is

increasingly burdened. Because of staffing shortages and the overwhelming number of prisoners needing care, prison staff often must decide with which set of class action remedial orders they will comply at the expense of others. That creates inevitable crises and tensions all their own that must [4] require Receivership resources to address.

6) Related to the foregoing, the inadequacies in the health care system have resulted in tension and competition between the various providers over resources, space, beds and the like. Although the Receiver, special master in *Coleman* and court representatives in *Perez* and *Armstrong* are meeting regularly in an effort to coordinate their respective functions, overcrowding creates additional burdens on an already stressed system.

The Receiver concluded his Report by recommending that the Court enter three specific orders: (1) require the CDCR to file a report in 15 days, with supporting documentation and a brief executive summary, setting forth the CDCR's plan with respect to the "infill" project, particularly as it relates to the construction of additional clinical and non-clinical space; (2) issue an Order to Show Cause why the Receiver should not assume direct oversight of the correctional officer recruitment and hiring program and require the CDCR to respond in 15 days; and, (3) require the Governor to create a Plan of Action to address the serious correctional problems endemic to the CDCR.

B. *Recent Developments Further Illustrate The Substantive And Procedural Burdens On The Receivership Caused By Overcrowding.*

The consequences of severe overcrowding in the prisons, including specifically the CDCR's disorganized response to overcrowding, have continued to divert the Receiver's resources from his primary task of building a constitutionally adequate health care system. As a result, the Receiver concluded that he should bring to the Court's attention additional information that has arisen since the filing of the Receiver's Report and that further illustrates the impact of overcrowding on his remedial plans. That information is set forth in detail in the Declaration of John Hagar ("Hagar Decl."), filed herewith, and is summarized below.

1. *The "Mission Change" at California Rehabilitation Center ("CRC") Norco To An All Male Level II Prison.*

CRC consists primarily of wooden barracks and support buildings constructed prior to World War II. Until recently, CRC provided rehabilitation services to male and female drug [5] offenders. In April, 2007, the CDCR announced that CRC would transfer its female population and, thereafter, would house only male offenders. *See* Exh. I to Hagar Decl.[1] According to CDCR, more than 600 female prisoners will be removed from CRC by June 28, 2008. An unspecified number will be sent to Community Correctional Facilities ("CCFs") and the remainder will be placed into "ugly beds" (day room floors, hallways, and gyms) at the California Institute for Women ("CIW"),

---

[1] Unless otherwise indicated, all Exhibit references are to the exhibits attached to Mr. Hagar's declaration.

California Central Women Facility ("CCWF"), and Valley State Prison for Women ("VSPW").

Although the CDCR planned these transfers as early as February 2007 and understood that the Receiver's approval and support would be required before the transfers could be accomplished (Exh. 2), the Receiver was not given sufficient notice of the contemplated changes to permit him to provide substantive input on the impact that the changes would have on the delivery of health care. In fact, specific information about the conversion was first provided to the Receiver's staff at a meeting on May 24, 2007. By that time, the movement of hundreds of female prisoners from CRC had already begun.

The conversion could have adverse impacts on the delivery of health care at CRC. The clinical space at CRC is already woefully inadequate and structurally unsound. For example, a new digital x-ray machine purchased by CDCR cannot be installed due to the fact that the flooring at CRC cannot bear its weight. Any additional medical demands at the facility as a result of the influx of Level II inmates may swamp an already stressed health care delivery system. Despite the significant changes contemplated at CRC, CDCR officials have indicated that no provision has been, or will be, made to improve or increase clinical areas at CRC.[2]

---

[2] The Receiver's staff managed to head off a disaster in the making as a result of the conversion at CRC. Several years ago, CRC was approved for a dormitory replacement project. The plans called for the construction of new 200-bed dormitories, each of which was to replace two older wooden dormitories. The first of the new dormitories is scheduled to be operational in September 2007, the second in March 2008. However, at the meeting on May 24, CDCR officials suggested that the 200-bed

Nor have the Receiver and his staff had adequate time to evaluate the impact on health [6] care delivery at the receiving prisons as a result of the mass transfers of women prisoners from CRC. Undoubtedly, the changes will have significant, negative consequences at the receiving prisons. For example, VSPW is already at a crisis stage insofar as efforts to provide medical care are concerned. An influx of new prisoners because of the conversion at CRC may well cause the medical delivery system at VSPW to collapse entirely. As Dwight Winslow, Statewide Medical Director at DCHCS wrote in an e-mail to the Receiver, dated May 24, 2007:

> . . . I got a call form [sic] Dawn Martin at VSPW this am and they are being overwhelmed with the influx of inmates and custody has closed down some of the off site transportation which is now causing a delay in care. She stated that they were at 200% of capacity and that there were inmates on the floors. She does not know how she is going to deliver care to these inmates.

Exh. 3.

The conversion at CRC will also result in potentially negative impacts on the delivery of mental health care in the receiving prisons. CRC is currently approved to house 299 CCCMS female mental health

---

dormitories might be *"additional"* beds and *not* replacement beds. Using the new dormitories as additional beds would have meant that CRC exceeded AB 900 projections and would have meant 400 new prisoners within a very short time. The health care delivery system at the prison could not withstand such an onslaught. The Receiver's staff raised this urgent issue with State officials and, fortunately, on June 6, 2007 CDCR officials informed the Receiver that the new dorms at CRC will be replacement beds only and not addition housing.

inmates. These CCCMS patients already have been, or soon will be, transferred to CIW, CCWF, or VSPW. However, each of these receiving prisons is already overcrowded with CCCMS patients. As of May 25, 2007, for example, (i) CCWF was operating at 132% of its CCCMS capacity, its Reception Center was operating at 145% of its CCCMS capacity, and its Administrative Segregation Unit housed 24 CCCMS patients; (ii) CIW was operating at 101% of its CCCMS capacity, its Reception Center was operating at 75% of its capacity and its Administrative Segregation Unit housed 89 CCCMS; and, (iii) VSPW was operating at 154% of its CCCMS capacity, its Reception Center was operating at 129% of its CCCMS capacity, its Administrative Segregation Unit held 15 CCCMS inmates and its Security Housing Unit housed another 32. *See* Exh. 4. In light of the existing overcrowding at these facilities, the influx of still more prisoners to these facilities may strain the system to the breaking point.

2. Conversion Of The Sierra Conservation Center ("SCC") Level III facility To A Level III Sensitive Needs Yard ("SNY").

On May 2, 2007, CDCR proposed that SCC be converted from a General Population Level III prison to a Level III SNY. Apparently, the reason for this mission change is the backlog [7] of Level III SNY inmates in reception centers and Administrative Segregation Units.

The Level III facility at SCC is known as "Tuolumne." As of May 16, 2007, it housed -1,192 inmates. Because its design capacity is only 500 inmates, as of May 16, it was at 238.4% of capacity and thus very seriously overcrowded. There were 49 CCCMS inmates housed in the Administrative

Segregation Unit in the Tuolumne facility, as well as an unknown number of general population CCCMS inmates. The tentative start date to begin moving inmates from SCC is June 25, 2007. *See* Exh. 5, p. 5.

The conversion at SCC will require the movement of more than one thousand inmates from SCC and the arrival of more than one thousand inmates into SCC. Each of these 2,000 inmate movements will require Nursing Services to conduct an inmate evaluation or screening. The burden on the health care delivery system will, therefore, be extreme.

It is also important to underscore that the mission changes contemplated at SCC (and elsewhere) have real-life consequences for the affected inmates. The Receiver has received an outpouring of letters from inmates who believe that they have benefited greatly from the rehabilitation programs at SCC and who are now fearful that they will be sent to facilities that lack the same kind and quality of programming. See Exh. 12.

3. Problems With the Delivery of Medical Care in CCFs.

Both AB 900 and the CRC conversion contemplate the placement of additional prisoners into community beds. In anticipation of these changes, the Office of the Receiver has undertaken to investigate the adequacy of medical care at CCFs and has found serious problems.

For example, after receiving telephone complaints about conditions at the McFarland Community Correctional Facility ("MCCF"), the Receiver ordered an unannounced inspection by a team of nurses and a physician. The report from that visit, prepared by Director of Nursing Operations Jackie Clark, raises a number of serious questions about not only patient care, but also fundamental questions of responsibility, authority, policy, and monitoring. See Exh. 6 to Hagar Decl. Just a few of her observations and conclusions are set forth below:

> 1. . . . There are no on-site clinical staff to identify and respond to emergency medical issues from 8:00 p.m. to 8:00 a.m. seven days a week.
>
> [8] * * *
>
> 4. There is no physician backup or oversight for the [nurse practitioner]. This factor and the clinical competency issues of the NP has [sic] resulted in the mismanagement of inmates medical problems.
>
> 5. Record keeping by [the private prison operator] staff is incomplete. There is no tracking system in place to track and follow[] chronic patients. There is no tracking system in place that tracks the inmates being sent out for medical (routine or emergent).
>
> 6. The arrangement with [North Kern State Prison] for emergency transfer of patients after hours is not adequate. There have been unnecessary and dangerous delays concerning the transfer of inmates who required urgent medical care.

Exh. 6, pp. 3-4.

The problems at MCCF are not unique. For example, in April 2007, the Facility Director of the Claremont Custody Center ("CCC") wrote a five-page, single spaced letter to Terry Dickinson, Correctional Administrator-Support Services at CDCR, to voice detailed concerns regarding various medical issues, including: (i) managing an influenza outbreak that spread from inmates to staff; (ii) the "10 inmates per week" limit on referring CCC patients to CDCR for medical or dental needs, regardless of the population at CCC or the seriousness of the medical or dental problem; (iii) the denial of funding to hire needed registered nurses; (iv) the expensive practice of sending CCC inmates to local hospitals via ambulance instead of transferring prisoners to Pleasant Valley State Prison ("PVSP"); (v) the waste of taxpayer funds concerning delayed officer transports; and (vi) the overall scope of practice necessary to deliver adequate care to CCC prisoners. See generally Exh. 7. Indeed, the available evidence indicates that these and other problems in the medical delivery system within the CCC system are of longstanding.[3]

Mr. Dickinson's one-and-a-half page response to the CCC Facility Director's letter is worthy of lengthy quotation for what it reveals about the bureaucracy and inaction characteristic of the CDCR medical delivery system.[4] He writes:

> This is in response to your letter to me dated April 10, 2007, in which you express concerns for medical needs for inmates and staff and request additional Registered Nurses at the Claremont Custody Center (CCC).
>
> [9] . . . As you know, the CCC and all other Community Correctional Facilities (CCF) have limited capabilities regarding medical and dental

---

[3] *See, e.g.*, Exh. 9 (E-mail from Assoc. Warden in Nov. 2006, stating that CCC "is no where close to being in compliance with Plata guidelines or timeframes.") *See also* Exhs. 10 and 11.

[4] The Receiver is not criticizing Mr. Dickinson. Instead, the Receiver focuses on the response because it provides a window into the CDCR/State's "trained incapacity."

> treatment for inmates . . . When it is determined . . . that an inmate medical problem exists that cannot be managed in a CCF, the contractor is required to contact the HCM/CMO or Medical Officer of the Day (MOD) at PVSP for direction. The HCM/CMO/MOD will decide the course of medical treatment for the inmate . . . The Community Correctional Facilities Administration (CCFA) cannot determine or authorize the medical/dental treatment of inmates at CCC or any other CCF . . .
>
> The CCFA has submitted the past two years a Budget Concept Statement (BCS) o requesting the Department require 24-hour, Registered Nurse (RN) coverage at each CCF/MCCF. . . . Unfortunately, we have not received funding authority for RN positions.
>
> It is recommended that you directly contact [the HCM or CMO] at PVSP to express your concerns for TB testing, Influenza vaccinations and inmate medical treatment for inmates at CCC. If we receive further information on converting your LVN's to RN's 24 hours a day, we will let you know. . . Thank you for bringing pp your concerns and feel free to contact me if you have any questions . . .

Exh. 8.

The net outcome of this perfectly bland response is that absolutely nothing changes – requests for staffing, improved transportation, improved communication, etc. are at best referred elsewhere and, at worst, ignored altogether. It is also worth noting that none of the documentation reflecting the longstanding problems in the CCFs has been shared with the

Receiver's Office by CDCR. It is quite possible that the private contractors providing services to the CCFs have never even been notified by CDCR that their medical functions were put into receivership more than one year ago.

After an initial review, the Receiver has concluded that significant changes will be needed to bring the delivery of medical care at CCFs up to constitutional standards. Accomplishing this objective will require very basic and far reaching structural changes with respect to how CCFA manages medical problems. At this point, until basic health care services are provided in CCFs, the establishment of yet more CCFs may well jeopardize the medical health of all prisoners assigned to community correctional facilities.

CONCLUSION

As discussed above, from what the Office of the Receiver has learned about the mission changes at CRC and SCC, CDCR's efforts to manage the overcrowding problem (i) has created hundreds of additional "ugly beds" for female prisoners; (ii) will exacerbate existing [10] inadequacies in the health care delivery system, while threatening to cause still others; and, (iii) until basic health care services are brought up to constitutional standards in. CCFs generally, the establishment of still more CCFs in response to overcrowding may jeopardize the health of all prisoners housed in such facilities. Mission changes, yard flips, and prison-to-prison transfers, aggravated by the limited alternatives imposed by overcrowding, are now assuming a size, scope and frequency that will clearly extend the timeframes and costs of the receivership and may render adequate medical care impossible, especially for patients who require longer term chronic care.

Analysis of CDCR Death Reviews 2006
Public Version

August 20, 2007

Kent Imai, MD
Consultant, California Prison
Health Care Receivership

BACKGROUND

The CDCR Death Review Committee (DRC) is a multidisciplinary committee chaired by the Statewide Medical Director and consisting of MDs, RNs, healthcare administrators, and correctional officers. The DRC meets 2-4 times monthly to discuss and analyze each death that occurs in the CDCR. Prior to the multidisciplinary reviews, an MD prepares a written report on each death. A subcommittee with representation from mental health, nursing, and custody reviews deaths from suicide. The main DRC reviews all other deaths.

The majority of the year 2006 death review reports were prepared by CDCR QMAT physicians. A minority of the reports were prepared by the Statewide Medical Director, by the Regional CMOs, or by the UCSD contract review physicians.

Each death review report was based on a reading of the patient's available medical record. The reviewer attempted to assess the patient's entire experience with medical care during his/her period of incarceration. The reports focused specifically on the cause of death and the quality of care provided to the patient. Upon identifying significant departures from the community standard of care and potentially problematic providers, the DRC referred cases to the Professional Practice Executive Committee (PPEC) for further evaluation of the provider's fitness for continued service in CDCR. The PPEC interpretation of community standard considers what a reasonable, similarly credentialed provider would do, given the situation in which the care in question was rendered.

The death reviews were valuable in identifying potentially unsafe practitioners. As one step in its practitioner assessments, PPEC conducted pattern of practice reviews for these individuals. Typically, the reviewer assessed a large sample of patient care interactions (usually 40-60 patient charts, including the index death case and any other deaths involving the clinician) for adherence to a community standard of care. After considering evidence from multiple sources, PPEC took one of several actions:

[DEFS053871] 1. Temporary restriction from practice in the CDCR, pending a complete review of the clinician's pattern of practice.

2. A program of remediation, e.g., taking a course in an area of deficiency, followed by close monitoring

3. Suspension of privileges

4. No adverse action.

Sixty-two CDCR practitioners (56 MDs and DOs and 6 Nurse Practitioners) have had adverse action taken by the PPEC, from June 2005 to July 2007. Of these, 41 were initiated by the death reviews.

PURPOSE

Until now, the Death Review Committee and PPEC have been focused on identifying and sanctioning individual practitioners. There has been little or no emphasis on identifying systemic deficiencies of care and acting on them.

The purpose of this analysis is to categorize each of the 2006 deaths as non-preventable, preventable, or possibly preventable, to summarize the major lapses in care (both individual and systemic) contributing to the patient deaths, and to make recommendations for quality improvement.

LIMITATIONS

There were significant limitations in the ability of the reviewers to conduct meaningful death reviews.

A major limitation was the absence of a well-organized, easily navigated medical record. This same limitation plagues the CDCR providers themselves during care provision. The physician portion of the CDCR medical records includes hand-written progress notes suffering from brevity, poorly documented reasoning, and illegible handwriting. The medical records available to reviewers were often incomplete, making it difficult to determine an accurate chronology of events or to "tease out" critical pieces of clinical information. An important laboratory or x-ray result might be misfiled, or the record might be missing recommendations of consultants or records of emergency room visits and hospitalizations.

There was variation in the quality of the death review reports, in part because of the difficulties in the medical record, and in part because there was no template or form for guiding systematic death review. Some reports were quite brief and superficial. Others went into great detail and reflected great effort at reconstructing events and determining clinical reasoning. There was a spectrum of fault finding. Some reports concentrated only on proximate causes of death and did not address the possibility of an early opportunity to make a diagnosis that might have affected a patient's prognosis. Some [DEFS053872] reviewers focused entirely on individual culpability and did not address possible systemic issues of care.

In early 2007 the DRC created a form for reports, leading to greater uniformity. The form prompts reviewers to address nursing issues, systemic issues of care, and preventability of death, in addition to individual practitioner lapses. Only the last 20 of the year 2006 reports used this template.

The majority of deaths did not trigger autopsies. This is usual in the non-CDCR world as well, but it makes complete clinical closure elusive, especially in the cases of sudden cardiac arrest.

There are also inherent limitations in conducting a retrospective, case-based analysis such as this one. There are no established criteria for attribution of "preventability." Research in this area is primarily epidemiological, comparing actual versus expected deaths in large populations over time. A search of the medical literature revealed no case-based studies for preventable deaths in adult primary care. Such studies would be difficult precisely because creating rigorous criteria for preventability would be difficult. Another limitation of this analysis is that it depends wholly on the judgment of a single reviewer. For example, several of the sudden cardiac arrests were judged to be possibly preventable because of a failure of clinicians to evaluate symptoms of syncope or chest pain in the weeks or months prior to the patient's death. Another reviewer might have judged these deaths to have been non-preventable, because there is no assurance that a proper evaluation of these red flag symptoms would in fact have prevented the patients' deaths. Many patients who have complete cardiovascular evaluations, who receive appropriate medications and who have appropriate interventional procedures nevertheless succumb to their disease. And without an autopsy, there is less assurance that the patient had a preventable cardiovascular death. In short, there is no easy methodology that can reliably quantify preventable deaths.

Despite the limitations in the death review process, it has proven useful in identifying many egregious examples of individual errors in judgment and failures to perform commensurate with community standards. This analysis consolidates findings for the year 2006 deaths.

DEFINITIONS

Non-preventable: The health care system and individual providers probably would not have been able to prevent the patient's death. (Homicides and drug overdoses fall here.)

Preventable: Better medical management or a better system of care would have prevented death.

Possibly preventable: Better medical management or a better system of care might have prevented death.

[DEFS053873] FINDINGS

Total year 2006 CDCR deaths	426
Suicides (not included in this analysis)	43

1996

Execution (not included)	1
Death Reviews unavailable for this report	1
Death reviews in this analysis	381
Non-preventable deaths	315
Preventable deaths	18
Possibly preventable deaths	48

A. Non-Preventable Deaths

1. *Causes of non preventable death*

105	Cancer
53	End-stage liver disease
28	Sudden cardiac arrest
17	AIDS
17	Drug overdose
16	Congestive heart failure
16	Homicide
14	Coronary artery disease (likely higher, because over 2/3 of cases of sudden cardiac arrest are attributable in autopsy studies to CAD)
11	COPD
10	End-stage renal disease
7	Stroke
6	Pneumonia
5	Upper GI hemorrhage
5	Cocciodioidomycosis
3	Sepsis
2	Pulmonary embolism
4	1 each of diabetic ketoacidosis, neuroleptic malignant syndrome, encephalitis, and subarachnoid hemorrhage
319	Total (Of the 315 cases, several had more than one major cause of death)

[DEFS 053874] 2. *Lapses in care in cases of non preventable* death

Lapses were noted in over half of the cases of non-preventable death. In many cases, these lapses in care may have contributed to an earlier death or more suffering in patients who had fatal diagnoses such as cancer or end stage liver, heart, or kidney disease.

Cases	Lapses
66	Poor primary clinician management – includes instances of clinical inertia in response to abnormal labs or x-rays, not treating to established guidelines and targets (blood pressure, blood sugar, etc), cursory evaluation of signs and symptoms (weight loss, new dementia, syncope, “can’t walk”, new ascites, chest pain, abdominal pain), delayed referral to a higher level of care, illegible handwriting, poor documentation, and fragmented care
15	Poor management of terminal event, including failure to administer narcan
13	System delays – medical records, delayed access to care, delayed response to 602 appeals, delays in obtaining tests, etc
13	Delays in diagnosis
9	Patient “refusal” of care/evaluation
9	Delays in obtaining specialty referral
6	Poor “handoffs” between clinicians, including coordination between inpatient and ambulatory, or at time of inmate transfers
5	Poor palliative care

B. Preventable Deaths

1. *Causes of preventable deaths*

6	Asthma
3	Sudden cardiac arrest
2	Congestive heart failure
1	Acute myocardial infarction
1	Duodenal ulcer, perforated
1	Hyperthermia [redacted]
1	Incarcerated hernia
1	Acute pancreatitis
1	Stroke (probable)
1	Testicular cancer
18	Total

2. *Lapses in care in cases of preventable death*

[DEFS053875] *Asthma* – failure of clinicians to follow published guidelines and standards of care in the evaluation and management of asthma, failure of RNs to appropriately triage sick asthmatics to an MD, failure to ensure timely follow-up after treatment of an acute exacerbation, failure to recognize the volatility of symptoms , failure to refer refractory asthma to a pulmonologist, and a botched handoff in which a steroid dependent asthmatic did not receive steroids for two days following transfer from a county prison to a CDCR facility.

Sudden death – failure by MDs and midlevels to adequately evaluate "red flag" symptoms such as exertional chest pain, chest pain associated with dizziness, and recurrent syncope occurring weeks to months prior to death in patients with cardiac risk factors.

Acute myocardial infarction – failure by MD to come in while on call to evaluate a pt with hypotension and tachycardia, failure to correctly interpret new edema and shortness of breath, and an 8 hour delay in access to MD evaluation while experiencing "constant and extreme" chest pain on the day of death.

Congestive heart failure – midlevel practicing beyond scope of practice in unsupervised or poorly supervised situations, botched handoff from acute hospital to CDCR facility, multiple failed appointments because of dialysis, and MD failure to entertain diagnosis of CHF in a patient with new orthopnea, exertional dyspnea and edema.

Perforated duodenal ulcer – failure by MDs and RNs to adequately respond to patient complaint about severe abdominal pain on multiple occasions over five days, resulting in prolonged delay in diagnosis and treatment.

Hyperthermia – unsafe transfer of [redacted] patient from one CDCR facility to another [redacted] resulting in death from hyperthermia.

Incarcerated hernia – five week delay in referral to specialist for a patient with recurrent severe abdominal pain, vomiting and known bilateral inguinal hernias.

Acute pancreatitis – failure of RNs and MDs to properly triage, evaluate and manage a patient who presented nine times over three days with severe "10/10" abdominal pain, resulting in prolonged delay in recognition and treatment.

Stroke - midlevel practicing beyond scope in poorly supervised setting who failed to evaluate a pt who had symptoms of weakness, inability to walk [redacted] and who was repeatedly known to be "down" for more than 48 hours.

Testicular cancer – two year delay in diagnosis of testicular cancer in [redacted] patient with chronic testicular pain, metastatic at time of eventual diagnosis, botched transfer with inadequate information passed from [DEFS053876] facility to facility (lost urology consult), failure of MDs to work up for cancer in a young man with 17 months of testicular pain.

C. Possibly Preventable Deaths

1. *Causes of possibly preventable deaths*

5	Sudden cardiac arrest
4	Coccidioidomycosis
4	AIDS
3	Acute myocardial infarction
3	Bowel perforation
3	Sepsis
2	Coronary artery disease
2	Congestive heart failure
2	Drug overdose
2	Gastrointestinal hemorrhage
2	Subdural hematoma
2	Colorectal cancer
2.	Opiate toxicity
12	1 each of COPD, gastric cancer, cholecystitis in end-stage liver disease, acute renal failure from rhabdomyolysis following trauma, cervical cancer, lung cancer, pneumonia, aortic dissection, drug induced hepatitis, diabetic ketoacidosis, carcinoma of thymus, seizure disorder
48	Total

2. *Lapses in care in cases of possibly preventable death –*

Cases	Lapses
30	Errors by individual physicians, nursing and midlevel staff – includes failure to adequately evaluate clinical "red flag" signs and symptoms, (chest pain, abdominal pain, weight loss, seizures, altered mental status, fever and tachycardia, poorly resolving pneumonia, joint effusion, history of significant trauma), failure to adequately pursue abnormal test results (leucopenia, abnormal blood sugars, abnormal radiology studies), failure to transfer patients to appropriate higher levels of care, inadequate clinical surveillance of known conditions (cervical cancer, immune compromised patients)
11	Delayed referrals for specialty care or special tests – (cardiology, gastroenterology, vascular surgery, stress tests, etc.)
9	Delays in access (delayed response to patient requests for care – "7362s")
7	Poor provider communication, including failure to act on specialist [DEFS053877] recommendations and lost medical information when patients undergo interfacility transfers
6	Missed abnormal test results (chest x-rays, CT scan, blood sugars, positive stress tests)
5	Fragmentation of care, multiple providers with no individual ownership of a patient's complaint or abnormal finding

3	Poor response to emergency or "man down" situations
2	Surgical or procedural complications (colonoscopy and herniorhaphy resulting in perforated bowel)

DISCUSSION

A. Lapses in Care

Significant lapses in care were noted in more than half of the death reviews. These can be divided into individual practitioner lapses, systemic lapses, and "no-fault" lapses

1. *Individual practitioner errors in judgment or attitude*

- Failure to appreciate potentially serious signs and symptoms (exertional chest pain, new onset shortness of breath and dizziness, unexplained tachycardia as harbingers of cardiac events, severe abdominal pain and abdominal distention as signs of acute abdominal catastrophe, increased use of inhalers as prelude to status asthmaticus),
- Failure to tailor the pace of evaluation to the clinical situation (rectal bleeding, testicular pain, indicating rapid workup to detect potentially curable cancers),
- Failure to perform the basic history and physical examination,
- Failure to follow well established guidelines for care (asthma, diabetes mellitus, hypertension, coccidioidomycosis)
- Failure to apply critical thinking or to enlist help in difficult cases

- Superficial or no documentation to indicate thought processes.
- Failure to take individual responsibility for patient outcomes

2. *Systemic lapses*

- A system that allows delays in triaging and processing patient requests for care resulting in patients with red flag symptoms not being evaluated in a timely manner.
- A system that allows fragmentation of care and clinical inertia, leading to lack of individual practitioner responsibility and accountability for each patient.
- Systemic and pervasive prolonged delays in specialty referrals
- [DEFS053878] No system for flagging abnormal test results,
- Incomplete medical records
- Poorly managed transfers of care - when patients move from one facility to another, there is increased risk of medical error.
- Practices which place mid level providers in vulnerable clinical situations, poorly supported or unsupported, with little or no mentoring.
- Practice environments (noisy, unkempt, crowded, lacking privacy) and patient characteristics (high rate of dual diagnosis, chronic pain, and manipulation for secondary gain) and other cultural factors which promote practice isolation and discourage collegiality and professionalism.

3. *"No-fault" lapses

- Patient "non-adherence" to suggested treatment
- Patient "refusal" of care or evaluation (sometimes masking frustration with the system of care or reflecting poor provider – patient communication)

B. Trends in Preventable Deaths Over Time

There was no clear trend indicating an increase or decrease in the number of preventable deaths over time. Unlike the situation in hospitals, in which quality improvements can lead to aggregate decreases in mortality within the space of a year, improvements in primary care may take longer before yielding mortality decreases.

Month	Deaths	Preventable	Possibly preventable	All preventable and possibly preventable deaths
January	42	0	3	3
February	35	3	4	7
March	46	1	4	5
April	31	1	8	9
May	36	1	4	5
June	39	0	6	6
July	40	2	3	5
August	36	2	1	3
September	25	1	3	4
October	32	3	6	9
November	32	0	3	3
December	29	4	3	7

[DEFS053879] C. Comment on CDCR Environment of Care

CDCR medical staff has been working in an environment of care characterized by crowded and poorly equipped clinical areas. The medical record systems are outdated and medical information is difficult to retrieve. The dispensing of prescribed drugs is often delayed, and there is an unreliable system for refilling medications for the treatment of chronic medical diseases such as diabetes, hypertension, asthma and coronary heart disease. The drug profile information is unreliable. Practices in many of the prisons focus on episodic care rather than continuity of care and preventive medicine. The environment does not guarantee patient confidentiality, and the culture does not promote patient advocacy.

The patient population has a number of unfavorable characteristics, such as a high incidence of dual diagnosis (serious mental illness coexisting with physical illness), chronic hepatitis, HIV infection, drug and alcohol addiction, and skillful manipulation for secondary gain.

Despite these barriers, it is noteworthy that 167 of the death reports contained no serious lapses in medical care. This is a reassuring indication that there are many conscientious providers and RNs who are doing a good job despite the environment in which they find themselves.

RECOMMENDATIONS

The CDCR must create a culture of patient safety, in which clinicians readily identify mistakes and system vulnerabilities and in which all staff share in the responsibility for optimal patient outcomes. Systems should be reviewed or redesigned to support this end.

To that end, the Death Review Committee should continue in on-going fashion the analyses piloted in this analysis, identifying not only individual performance issues but also the most common systemic lapses in care. The Committee should begin to standardize a list of the lapses and vulnerabilities that contribute to preventable deaths. The Joint

Commission provides examples of how to proceed in this area, e.g., in categorizing the causes of sentinel events or specifically the causes of delays in treatment (see the Sentinel Event Alert of June 17, 2002). The Committee should continue its efforts to standardize its methodology for classifying preventable deaths.

These overall recommendations and most of the specific recommendations which follow are contained in Goals B, C, and D of the California Receiver's Plan of Action of May 2007 (POA). Where applicable, relevant POA goals and objectives follow each numbered recommendation below.

[DEFS053880] 1. Continue PPEC evaluation of individual practitioners referred by the Death Review Committee.

2. Develop and circulate a Clinical Newsletter in order to improve communication, educate CDCR providers about important findings of the Death Reviews and to make meaningful clinical suggestions for improving care. (C.8.1, A.8.5.2)

3. Develop a system wide quality initiative focusing on the management of asthma. (B.2.5, B.2.6.1)

4. Develop system-wide quality initiatives on the recognition and management of "red flag" clinical signs, and other subjects, using death review cases as indicators. (C.1.1, C.1.2, C.6.1)

5. Pilot practitioner "daily reports" at each prison for purposes of peer collaboration and discussion of problem cases, mistakes, "near

misses," cases of patient nonadherence or refusal of care, local system process redesign, development of collegiality, and shared responsibility for patient care. (C.5, C.6, C.8)

6. Redesign CDCR processes for mid-level credentialing, privileging, supervision and mentoring. (A.8.5)
7. Redesign CDCR systems of care (including scheduling) to promote individual and shared responsibility for patient care outcomes, and to reduce fragmentation of care wherever possible. (B.3)
8. Redesign process of RN triaging of form 7362s to eliminate delays in care. (B.7.1, C)
9. Develop systems for tracking and following up abnormal laboratory and other test results. (B.12.1, B.12.2)
10. Create new templates for managing requests for specialty services in order to meet minimum standards for emergency (24 hour) urgent (7-14 day) and routine (60 day) priorities, and to ensure that consultation results are seen by ordering clinicians within one week of service. (B.3.1.8)
11. Review process for response to emergencies. (B.1)
12. Design and implement system-wide integrated health information systems. (goal D)
13. Redesign the environment of care to promote efficiency, teamwork, professionalism, and respect for patients, creating an ethically-based system of care. (B.3, B.10)

14. Wherever applicable, develop the standard quality metrics to support the foregoing recommendations. (POA, page 47)

[DEFS059781] COMPILATION OF SUMMARIES AND RECOMMENDATIONS FROM SPECIAL MASTER'S MONITORING REPORTS IN *COLEMAN v. SCHWARZENEGGER*

* * * *

[DEFS060220] SUMMARIES AND RECOMMENDATIONS FROM SPECIAL MASTER'S FIFTEENTH MONITORING REPORT IN *COLEMAN v. SCHWARZENEGGER*

* * * *

[DEFS060272] The problem of inadequate MHCBs, in all likelihood, will endure until at least mid-2008. A 12-bed MHCB unit is due to be activated imminently in the newly opened Kern Valley State Prison, and the construction of another unit of 12 beds is scheduled to be completed at CSP/Sac in December 2005. lithe defendants were able to get its full current complement of 177 MHCBs (182 less the non-existent five at CEN) for males actually up and running, add these 24 new beds, get ASH to accept the 25 MHCB referrals they are being paid to treat, and continue to place 15 to 20 CMP inmates in need of a MHCB level of care in DMH/APP, they just might be able to bridge the gap to the 2008 completion of the 50-bed MHCB unit at CMF. Fulfillment of all of these conditions, however, will require urgent, effective and coordinated action on the pan of CDCR, DMH and DHS. Moreover, updated and more accurate population plans and projections will need to be developed to determine whether the addition of 50 additional MHCBs in 2008 will suffice to meet the then-existing need, given the surging overall CDCR population.

PSUs: During the monitoring period, the list of inmates referred to a PSU but awaiting transfer also continued to climb, reaching 43 in early May. For some time, the defendants have assured the monitor and the court that a 64-bed PSU at CSP/Sac was under construction and would be ready for initial occupancy by March 2006. It is important that the projected timeline be met.

Reception EOP and 3CMS Transfers:

Whatever progress was reported in the preceding round of review, or in the early pan of the current review, in the timeless of transfers of MHSDS inmates out of reception into general population programs has been largely cancelled by the recently [DEFS060273] escalating growth in the overall CDCR population and the concomitantly increasing number of MHSDS inmates in reception. For example, in August 2003, the five major reception centers of CM, DVI, MOP, SQ and WSP housed a total of roughly 3,018 EOP and 3CMS inmates awaiting transfer or parole. By August 2005 that number rose to 3,988, an increase just short of a full third. The growth reflects several factors including, perhaps most importantly, the surge in CDCR's overall population and the untimely expansion of the capacity of general population MHSDS programs to meet actual program needs. Staffing for mental health programs increases only on a post facto basis, i.e., after CDCR reports to the Department of Finance (D0F) twice annually the actual growth of the MHSDS population by program. DOF then includes a request for expanded MHSDS staffing in the upcoming annual or supplemental budget proposal. To report the requisite population growth, seek and obtain funding for expanding program staff and actually obtaining the bodies to fill newly allocated positions generally takes eight to ten months. Thus, as long as the MHSDS caseload remains in a state of growth, program capacity in terms of staffing will continue to trail actual program population. Meanwhile, just because staffing is allocated does not mean physical space exists in the system for housing expanded MHDS programs, so further delays often occur.

It is difficult to see how the defendants can escape from this bureaucratic box. One response, and one included in the revised program guides, which are wending their way toward judicial approval, is to increase mental health staff in reception centers to enable the Provision of adequate interim monitoring and treatment for EOP and 3CMS inmates stuck overlong in reception. For the moment, pushing the program guide.

* * * *

[DEFS060297] The monitor's most recent reports have focused steadily and largely on this relatively small portion of the MJISDS caseload population most in need of intense mental health treatment and heightened security. And over the past (locale, the defendants have gradually developed programs to address the treatment needs of this core of seriously mentally disordered inmates at the apex of the MHSDS pyramid of treatment and security, including programs for Level IV EOP inmates in need of protective custody on a Special Needs Yard, EOP inmates in administrative segregation, PAP inmates with a SITU term (PSUs), inmates in need of a MHCB level of care and Level IV inmates with a history of violence in need of intermediate inpatient DMH cam.

The problem is that the availability of such programs has not kept pace with the expansion of the

MHSDS or the overall CDCR populations, and over the past decade, the population of the former has risen proportionally much faster and higher than the latter. In addition, the recently completed Unidentified Needs Assessment indicated that, in the absence of available beds, institutional clinicians were not referring numerous inmates actually in need of inpatient DWI mental health care, resulting in an instant expansion in the demand for inpatient Mill programs. Thus, CDCR now needs more MHCBs and PSU beds and lots more Level IV inpatient DMH beds than it currently possesses. Currently long waiting lists for these beds mean that suicidal and other seriously mentally ill and violent inmates lack access to clinically necessary levels of monitoring and treatment. Some plans for further expansion of these programs have been developed in response to court orders, but they proceed fitfully and awkwardly, beset by bureaucratic obstacles that threaten to delay their realization for years. Other plans lack essential legislative funding, without which they cannot advance it is time for the [DEFS 060298] defendants, not just CDCR, to finalize and expedite existing, disparate and uncoordinated plans to expand the capacity of MHSDS programs the most seriously mentally ill core population.

The defendants' recent history of developing erratic plants or plans they are unable subsequently to implement suggests the present need for something more than just another requirement for the gateman of yet snort plans. Whatever the formal response of the panics to the recommendations in this final version of the 15th report on compliance, the monitor respectfully requests the court to hold a hearing to ensure that the defendants understand precisely what burdens they will be expected to bear in response to whatever proposed recommendations are incorporated in the court's final order, or in the alternative, schedule a hearing for the end of April 2006 to assess the adequacy of the plans presented by the defendants in response lathe court's directives.

Respectfully submitted

[DEFS060302] conducted simultaneously, which had not occurred so far. Other institutions using video monitoring adequately included CGI, CIW and RD.

Suicide watches at SQ were conducted exclusively by video monitoring with five camera watch rooms in use and monitors in the officers' station. Two months before the monitor's visit, six cells with video cameras and a monitor in an additional officers' station were added. However, use of video monitoring at SQ was confusing and difficult to assess. Not surprisingly, one of the two horrific cases involving the use of video monitoring that led to the moratorium occurred at SQ.

Video monitoring at CIW and CCWF led to concerns about inordinate and sometimes inappropriate use and gender-related privacy problems.

Overall, the use of video monitoring was plagued by serious technical deficiencies and inadequate training and supervision locally, and an utter lack of any centralized direction, oversight or coordination. The moratorium was well-advised, and the department would do well to abandon permanently reliance on video monitoring to replace one-on-one personal observation of suicidal inmates. Examination and planning apparently were aimed, commendably, at reducing the cost of one-on-one observation by substituting trained mental health/medical nursing aides for high-priced correctional officers. The goal is constant observation and some modicum of interpersonal connection with the inmate(s) under surveillance.

Conclusion and Recommendations

The 166 monitoring round began in the summer of 2005, but was not physically completed until March 2006. The compilation and production of this report has been punctuated and delayed by a series of intervening events, including the approval [DEFS060303] in early 2006 of the bulk of the revised Program Guide and the ensuing struggle to secure adequate staffing to implement it; a series of hearings and reports on the defendants' plans for assessing and meeting the need for intensive treatment and high custody beds; a special session of the Legislature supposedly focused on CDCR's growing problems; and the initiation of the Plata receivership. All of these events, occurring against a backdrop of a steadily escalating overall prison population serious enough to impel the Governor most recently to declare a state of emergency, have contributed substantially to a long overdue report, a problem that will be addressed below. In the meantime, many of the critical issues raised in this report have already been defined in one or another of these competing forums, and the search for effective responses is already underway.

The single most serious problem chronicled in this report is the continuing deterioration of mental health staffing. The obvious cause of the problem is the inexorably expanding demand for services resulting from the bulging population. By early spring, CDCR's total institutional population topped 110,000. As of mid-April, the mental health caseload stood at 32, 212 inmates, 14.2 percent over existing program capacity. At the same time, 38.49 percent of the department's allocated psychiatrist positions were vacant, as were 24.96 percent of allocated psychologist and 25.8 percent of allocated psych social worker positions. Efforts to obtain the contracted services of temporary clinicians, moreover, also deteriorated due both to bureaucratic difficulties and a long-standing inability of the defendants to pay millions of dollars worth of pending contractor bills. By May 2006, the patient work of a decade, which saw the functional vacancy rate among psychiatrists in 2002 shrink to some five percent and among caseworkers to some two percent, was simply swept away. Even after contracting, [DEFS060304] clinical resources were 12 to 15 percent shy of existing program capacity, while the actual population exceeded program capacity by another 14 percent. Twelve years after the determination that mental health treatment in CDCR was unconstitutional, the defendants still lacked clinical resources to meet the needs of some 25 to 30 percent of inmates identified as seriously mentally disordered.

The defendants' scrambling efforts to calculate their need for intensive care units accurately and develop plans to meet the identified need have occupied much of the past two years. The resulting long term and interim plans are ambitious but still not final; they include substantial increases in inpatient DWI beds and MHCB units, as well as a considerable expansion of EOP beds. Meanwhile, clinical staffing allocated over the past few months to implement the interim programs, keep up with the growing population and meet the requirements of the revised Program Guide amounts to nearly a third of the already existing mental health staff. The resulting infusion of staff, clearly needed to meet the growing demand for services, exceeds considerably the size of the total mental health staff when the original remedial order was entered in *Coleman*.

The real difficulty, however, lies in the recruitment of clinicians to fill these allocations; without incumbents, the allocated positions are largely useless. The defendants have promised regularly for over a decade to reform and regenerate their recruitment efforts without effect. The administration of recruitment has been centralized and decentralized; the list of advertisements and "recruitment events" has steadily expanded; creative alternatives, including internships, educational loan repayment programs, etc. have been initiated with meager results. Meanwhile, the compensation of some categories of CDCR mental health clinicians has slipped further and further behind [DEFS060305] comparable levels of pay in both public and private sectors. The Department of Personnel Administration's most recent survey of comparable pay rates confirmed the substantial inequities reported anecdotally for CDCR staff psychiatrists, clinical psychologists and recreational therapists and to a lesser extent for psych social workers. To date, these findings have resulted in no proposals for pay increases to address these inequities. Whatever increases have occurred over the past ten years have come in the form of court orders or incremental bumps in differential recruitment and retention (R&R) rates for some positions in some institutions where recruitment was especially difficult, The major effect of these increases has been to sow uncertainty, chaos and increasing disparity in payment scales, while doing little to reduce the inequitable compensation paid to psychiatrists, psychologists, psych social workers and recreational therapists in CDCR.

In 2005, DMH began to recruit staff for its new Coalinga State Hospital (CSH), adjacent to CDCR's PVSP and close to ASP. While DMH had limited success in recruiting staff for its remote Coalinga site among clinicians in the general community, it was able to offer better salaries and higher entry level payments than the neighboring CDCR facilities were paying their clinicians. The new CSH facility, moreover, is a state-of-the-art structure; caseloads are significantly lighter than those in CDCR; overtime requirements are minimal; the primary function of CSH is mental health, not security. Not surprisingly, some mental health staff at PVSP and ASP opted to seek employment in CSH. Not one of the 63 allocated psychiatrist positions at PVSP and ASP had a permanent incumbent.

[DEFS060306] The receiver in *Plata* has now sought a waiver of applicable state laws from the court to implement substantial across-the-board pay increases, comparable with compensation in the private sector, for medical staff in CDCR. Why would any mental health RN in CDCR elect to continue working in the same facility with the same conditions of work for substantially less pay than her or his colleague on the medical staff? Why would any RN from the general community choose to work in mental health in a CDCR institution at a level of compensation significantly lower than that provided for RNs on the medical side of the house? The implementation of the new pay scale for medical staff without a comparable increase for mental health staff would deal a further crippling blow to the delivery of mental health services.

The general breakdown in transfers was another transcendent issue in the 16th round of review. As the overall caseload population continued to increase, so too did the percentage of the caseload in need of program beds with intensive care and high security, including specifically DMH inpatient beds, MHCBs, PSU beds and EOP administrative segregation placements. During the monitoring period, the inadequacy of MHCBs led to the particularly worrisome utilization of inappropriate and dangerous alternative placements in everything from so-called "ZZ" or contraband cells to metal holding cells or "cages" in open corridors, where neither monitoring nor treatment was regularly provided. To eliminate these inadequate alternatives, the defendants elected instead to create "Mental. Health OHUs" in a number of institutions, some with and some without MHCB units. This response followed a decade-long effort to wean institutions without MHCB units from reliance on understaffed and physically inadequate OHUs to observe and treat suicidal inmates and rigidly compel the transfer of such inmates within [DEFS060307] 72 hours. This new emergency strategy has the potential for reviving and institutionalizing a bankrupt concept. Only recently and belatedly have the defendants begun to address the policy and staffing implications of this crisis strategy.

The 15th round monitoring report, which described the growing crisis in the shortage of beds in intensive care programs for high custody inmates, resulted in recommendations and orders in early March 2006 that led to a series of court hearings, orders and reports designed to deal with the issue in both the short and long term. Meanwhile, as demonstrated in this report, access to appropriate levels of care for seriously mentally ill inmates remained a problem in almost every CDCR institution.

With regard to medication management, the *Plata* receiver commissioned a contract to review CDCR practices in the management and administration of medications. The contractor confirmed the inefficiency and inadequacy of the department's pharmaceutical-practices. The *Plata* court subsequently endorsed the finding, and the receiver has issued a RFP to take over and operate the department's pharmacy operations and management. This development will eventually shift to *Plata* responsibility for many of the medication-related issues that have occupied *Coleman* monitoring teams, including the use and maintenance of MARS, the acquisition of medication consent forms, continuity of medications, the administration of HS medications, laboratory testing and the distribution of parole medications. Some medication-related issues will need continuing *Coleman* involvement, including Keyhea orders, the DOT administration of medications and medication non-compliance. These latter issues will involve ongoing active *Coleman* monitoring, but even the former issues will need input from mental health to ensure that policies and protocols involving

  F. Conclusion 26

[3] I. Introduction

The mortality rate per 100,000 California prison inmates has decreased from 248.6 in 2006 to 230.3 in 2007 to 218.2 in January-June 2008. The decrease is even more impressive when taking normal seasonal variation into account. The January-June rates were 270.5 in 2006, 245.4 in 2007, and 218.2 in 2008. The number of clearly preventable deaths has also decreased.

The major clinical impact felt throughout the system since the beginning of the Receivership has been from improvements in the number and caliber of healthcare professionals. About half of the primary care physicians and over a third of the nurses working for California Prison Health Care Services (CPHCS) have been recently recruited. Most of the Receiver's other interventions that aim to improve the quality and cost-effectiveness of healthcare services are still in early, pilot, or planning stages.

The year 2007 death reviews also revealed at least 292 extreme departures from the standard of care. Refinements to the death review process focused on classifying these standard-of-care departures into a taxonomy of 14 lapses in care. Use of the taxonomy has begun to inform responses to individual provider error as well as systemic improvement strategies. This report concludes with interventions that could mitigate each of these 14 lapses in care.

II. Death Review Process

Clinician members of the Clinical Support Unit (CSU), all of whom have been trained in the process of death review, prepare initial Death Review Summaries of each death in the California Department of Corrections and Rehabilitation (CDCR). CSU physicians are all either board-certified in internal medicine or family medicine. Mid-level reviewers (nurse practitioners or physician assistants) also participate; their reviews are closely examined and approved by one of the physician members of the unit.

Each Death Review Summary is based on a reading of the patient's available CDCR medical record, which may include discharge summaries, specialist reports, and other documentation generated outside the institution. Using a standardized template, the reviewer assesses the patient's last 12 months of medical care during his/her period of incarceration. (For suicides, the reviewer assesses the entire patient record.) The purposes of this extensive review of each inmate's death are to:

- Determine the cause of death, using autopsy findings when available;
- Determine the preventability or non-preventability of the death;
- Identify significant departures from the community standard of care attributed to an individual provider;
- Identify significant health care system lapses in care; and
- Refer for appropriate action, situations in which individual or systemic lapses are noted.

[4] Every completed Death Review Summary is presented by the reviewing clinician to the Death Review Committee (DRC), a multidisciplinary group chaired by one of the three Regional Medical Directors. The DRC is multidisciplinary. Members of the DRC are the Statewide MediCal Director, the three

Regional Medical Directors, the three Regional Directors of Nursing, the Chief Medical Officers of the Clinical Support Unit, other healthcare administrators, nursing consultants and correctional officers.

The DRC may make referrals to several areas. For facility systemic lapses, referral is usually made to the local healthcare manager. For nursing lapses, referral is made to the Department of Nursing. In the case of individual provider lapses occurring while the patient is an outpatient, the case may be referred to the CPHCS Peer Review Subcommittee or directly to the Professional Practices Executive Committee (PPEC), the parent peer review committee for CPHCS. Non-CPHCS specialty consultants are notified of adverse peer review findings or asked to explain their decision-making. Occasionally another specialist may be asked to review the care provided. For lapses in care occurring in community hospital settings, cases may be referred to the Chief of Staff of the hospital in question for consideration within their internal peer review process.

Since the creation of the Receivership in 2005, the death review process has focused on identifying and sanctioning unsafe individual practitioners. Through July 2008, PPEC has taken adverse action on a total of 85 practitioners. The majority of these actions were initiated by a death review.

The Receiver has also increased salaries and diligently recruited new healthcare professionals. CPHCS hired 172 new primary care physicians between August 1, 2007 and July 31, 2008; all are board-certified in internal medicine or family medicine as required by the new credentialing criteria. This figure represents 47 percent of the 366 authorized positions in the physician pool. During this same period (August 1, 2007 through July 31, 2008), CPHCS added 488 registered nurses and 533 licensed vocational nurses to the prison healthcare delivery system. Of the total pool of authorized nursing classifications, 35% were hired during this 12-month period.

When the Death Review Committee refers an individual provider to PPEC in response to, practice concerns, PPEC may choose to conduct a pattern of practice (POP) review to evaluate the performance of the provider. This POP review is a detailed assessment using a large sample of patients and health care interactions (usually 30-50 patient charts, including the index death case and any other deaths in which the clinician may have been involved). The POP review evaluates adherence to a community standard of care. After considering evidence from this and other sources (such as the Chief Medical Officer, Chief Physician and Surgeon, and the provider), PPEC will take one of several actions, including, but not limited to:

1. Summary suspension of some or all clinical privileges;
2. Temporary restriction of practice, pending an even more complete review of the clinician's pattern of care;
3. A program of remediation (for example, taking a course in an area of clinical deficiency, followed by a period of monitoring); or
4. No further action.

[5] Beginning in late 2006, each death was assessed for three levels of preventability: possibly preventable, preventable, or non-preventable. The

death review template was revised to direct reviewers to assess and assign preventability whenever possible. The "Analysis of CDCR Death Reviews 2006," with assessment of preventability now available, offered a number of recommendations to reduce preventable deaths.

The death review process is also intended to identify significant lapses in the processes of care occurring in each death. Significant lapses in care have been identified in all types of deaths, whether preventable or non-preventable. In late 2007, a taxonomy was developed for these lapses (or departures from the standard of care), so that reviewers might be able to use a common "language" when discussing preventable deaths and develop plans of action designed to mitigate such lapses in care. Beginning in 2008, this taxonomy for lapses in care was incorporated into the Death Review Template. The Receiver and CPHCS leadership have begun to use the taxonomy to systematically address the deficiencies in care, with the ultimate goal of reducing the burden of preventable deaths and unnecessary suffering.

Also in 2008, the death review process began to incorporate the principles of "just culture." Just culture assessments distinguish "knowing violations" from three classes of human fallibility: human error (inadvertent), at-risk conduct (taking shortcuts leading to increased risk), and reckless conduct (choosing to put someone in harm's way). The overarching recommendation from last year's deaths analysis remains compelling: "The CDCR must create a culture of patient safety in which clinicians readily identify mistakes and system vulnerabilities and in which all staff share in the responsibility for optimal patient outcomes."[1]

A. Definitions

Non-preventable: In the judgment of the reviewer, the medical health care system and individual practitioners probably would not have been able to prevent the patient's death. (The majority of "natural - expected" deaths fall in this category. Most homicides, suicides, and drug overdoses, although theoretically preventable, are, for purposes of this analysis, placed, in the "non-preventable" category).

Preventable: In the judgment of the reviewer, better medical management or a better system of care would likely have prevented the patient's death.

Possibly preventable: In the judgment of the reviewer, better medical management or a better system of care may have prevented the patient's death.

Extreme departure from the standard of care: A lapse in care that a reasonable and competent clinician would not render under the same or similar circumstances.

Simple departure from the standard of care: A lapse in care that a reasonable and competent clinician might render under the same or similar circumstances

[6] B. Taxonomy for Lapses in Care

The Death Review Committee assigns extreme departures from the community standard to one of the following 14 lapses in care:

---

[1] Imai K. Analysis of CDCR Death Reviews 2006. August 20, 2007. Found at: www.cphmca.govfresource.aspx

1. *Failure to recognize important symptoms/ signs.* Failure to recognize, evaluate and treat clinical "red flags." Examples include acute chest pain in high risk patients, shortness of breath, abdominal pain, dizziness, abnormalities of vital signs, low oxygen saturation, acute confusion, weight loss, and increased frequency of medication use.

2. *Failure to follow clinical guidelines.* Failure to follow established guidelines for the screening, evaluation, monitoring and/or management of specific conditions, such as asthma, hepatitis C, diabetes, and chronic pain.

3. *Delay in access to care. Delays in access to care of sufficient duration to result in harm to the patient.* These may occur in any of the following areas or functions: triage, same day, primary care clinic, chronic care or specialty care/procedure.

4. *Failure to identify/follow-up abnormal test results.*

5. *Failure of appropriate provider-to-provider communication*, including specialty consultation, patient transfers between different levels or sites of care and other handoffs including shift changes.

6. *Fragmentation of care.* Episodic care provided in the absence of a primary care system; important elements of the patient's clinical picture are missed and the individual provider does not take responsibility for the patient's outcome.

7. *Surgical or procedural complications resulting in iatrogenic injury.*
8. *Medication prescribing error.* This includes failure to prescribe the indicated medication for a clinical condition, to do appropriate monitoring, or to recognize drug interactions.
9. *Medication delivery error.* Delays in patients receiving critical medications, or patients receiving the wrong medication.
10. *Practicing outside the scope of one's professional competence.*
11. *Failure to supervise mid-level (nurse practitioner or physician assistant) care.* This includes failure of assigned supervisors/ mentors to be readily available, as well as managerial failure to arrange appropriate supervision.
12. *Failure to communicate effectively with the patient.*
13. *Patient non-adherence with suggestions for optimal care.*
14. *Delay/failure in emergency response.* Includes failure to follow emergency response protocol as well as delays in activation.

C. Limitations of the Death Review Process

Reviewers face significant limitations on their ability to conduct high quality death reviews, including:

[7] *Medical record.* CPHCS does not have electronic medical records. The typical patient health record is not easily navigated and not well organized. The physician portion of the record includes handwritten

progress notes that may suffer from brevity, poorly documented reasoning and illegible handwriting. The health record is often incomplete, missing critical recommendations from consultants or records of off-campus procedures, emergency room visits and hospitalizations. These challenges plague CPHCS health care providers during the process of care.

Autopsies. The majority of deaths, as in the non-CPHCS world, do not trigger autopsies. This makes clinical closure elusive, especially in cases of sudden cardiac arrest. Nevertheless, knowledge of the cause of death should not alter recognition of and response to serious lapses in care. Furthermore, autopsies may only help to determine whether that lapse led to an adverse outcome.

Preventability. As discussed in last year's deaths analysis, there are limitations in attributing preventability. In one published study, for example, investigators in the Veteran's Administration had fourteen board certified internal medicine specialists, trained in implicit chart review, analyze 383 hospital deaths. In this study, 88 or 23% of the deaths were rated as possibly preventable by optimal care, and another 23 or 6% were rated as preventable. Inter-rater reliability for these ratings, however, was quite low at 0.34. The authors of the study noted that, to a large extent, "preventability is in the eye of the beholder."[2]

---

[2] Hayward RA, Hofer TP. Estimating Hospital Deaths Due to Medical Errors: Preventability Is in the Eye of the Reviewer. JAMA. 2001, 286; 4, 415.

D. Impact of Preventability

In this 2007 deaths analysis, there was no attempt to estimate the impact of preventability in terms of life expectancy. The preventable death of a young asthmatic, for example, may be more consequential in terms of years of life lost than the preventable death of an 80-year-old patient with multiple chronic illnesses.

In mid-2008, the death review committee began asking reviewers to answer three additional questions intended to add nuance to their judgments.

1. How likely was it that the patient's death could have been prevented or delayed by more optimal health care?
2. How likely was it that the patient's death was caused by or hastened by health care interventions?
3. How much longer would the patient likely have lived if the death had been prevented or delayed?

[8] III. Findings

A. Preventability

In 2007 there were 397 California inmate deaths. For purposes of this report, two reviews were unavailable, leaving 395 subject to analysis here. The majority of deaths, 83 percent (327 cases) were identified as non-preventable (Figure 1). Table 1 shows preventability by the type of death.

Figure 1. California inmate deaths, 2007

Figure 1. California inmate deaths, 2007

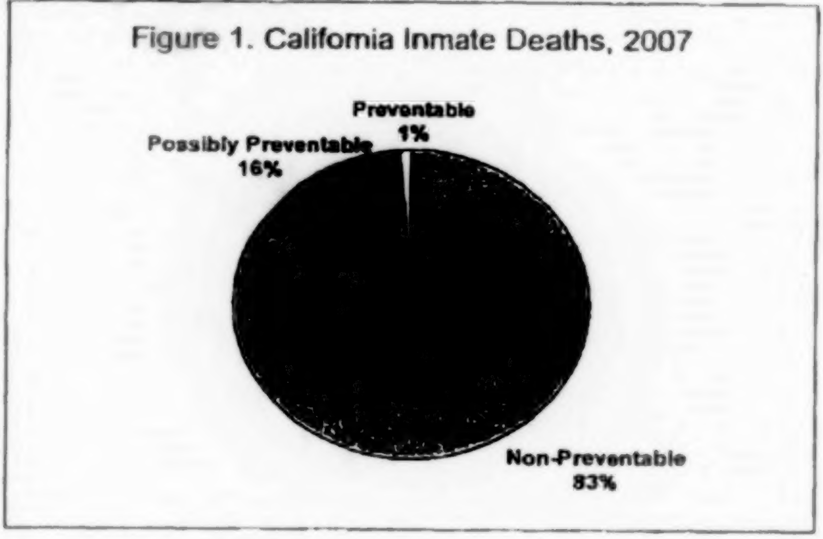

Table 1. Type of death and preventability.

	Non-Preventable	Possibly Preventable	Preventable
Suicide	33	1	-
Homicide	21	1	-
Accidental injury to self	9	2	-
Natural – expected	198	19	1
Natural – unexpected	66	42	2
Totals	327 (83%)	65 (16%)	3 (1%)

[9] B. Non-Preventable Deaths

Table 2 shows the causes of non-preventable death among California inmates in 2007. Cancer and end stage liver disease (all but a few secondary to chronic hepatitis C) together were responsible for 158 (48 percent) of the 327 cases.

Table 2. Causes of non-preventable death.

Cases	Cause of Death
104	cancer
54	end stage liver disease
33	suicide
22	sudden cardiac arrest
22	homicide
12	AIDS
9	stroke
9	drug overdose
7	pneumonia
7	acute myocardial infarction
7	congestive heart failure
5	end stage renal disease
3 each	coccidioidomycosis (valley fever), chronic obstructive pulmonary disease , dementia; pulmonary fibrosis
2 each	bowel infarction, cardiomyopathy, endocarditis, Parkinson disease, sepsis, urosepsis
1 each	amyotrophic lateral sclerosis, aortic aneurysm, coronary artery disease, cerebellar degeneration, pancreatitis, pulmonary embolism, systemic lupus erythematosis, subdural hematoma
4	unable to be determined
327	Total

Table 3 shows the number of extreme-departure lapses in care for non-preventable deaths using the 14-lapse taxonomy. In 161 (49 percent) of these 327 non-preventable deaths, no serious departures in care were noted. Many of these cases were cited for excellent and compassionate care. In the remaining 166 deaths, however, there were 172 lapses identified. Note that 1) a patient could suffer from more than one type of lapse and 2) if a specific type of lapse occurred more than once for a patient, it was counted only once.

[10] Table 3. Types of lapses in care (extreme departures) for non-preventable deaths.

Lapses	Types of Lapses in Care (Extreme Departures)
52	#1 - Failure to recognize, identify or adequately evaluate important symptoms or signs
19	#2 - Failure to follow established guidelines for evaluation and/or management of specific condition
31	#3 - Delay in access to care sufficient to result in harm to the patient
13	#4 - Failure to adequately pursue abnormal test results
4	#5 - Failure of provider-to-provider communications including botched handoffs
10	#6 - Fragmentation of care such that individual responsibility for patient is waived
1	#7 - Surgical/procedural complication resulting in iatrogenic injury

14	#8 - Medication prescribing error
5	#9 - Medication delivery error
4	#10 - Practicing outside the scope of one's capabilities
6	#11 - Unsupervised mid-level (nurse practitioner or physician assistant) care
0	#12 - Failure of communication with patient
5	#13 - Patient non-adherence with recommendations for care
3	#14 - Delay in emergency response or failed to follow emergency response protocol
5	Other (including unavailability of medical record)
172	Total number of extreme departure lapses (many cases had more than one extreme departure)

C. Possibly Preventable Deaths

In 2007, 65 deaths were identified as possibly preventable. Table 4 shows the causes of death and Table 5 shows the lapses in care noted in these 65 cases.

[11]Table 4. Causes of possibly preventable deaths.

Cases	Cause of Death
14	sudden cardiac arrest
7	cancer
6	end-stage liver disease
5	stroke

3	each pulmonary embolism, sepsis
2 each	AIDS, aneurysm (aortic), congestive heart failure , coccidioidomycosis, pneumonia, suicide
1 each	acute myocardial infarction , bowel perforation, coronary artery disease (CAD), cardiomyopathy, colitis, chronic obstructive pulmonary disease (COPD), diabetic ketoacidosis , drug overdose, ependymoma, homicide, metabolic acidosis, spinal stenosis, ulcer, urosepsis, volvulus
65	Total

[12] Table 5. Types of lapses in care (extreme departures) for possibly preventable deaths.

Lapses	Types of Lapses in Care (Extreme Departures)
43	#1 - Failure to recognize, identify or adequately evaluate important symptoms or signs
6	#2 - Failure to follow established guidelines for evaluation and/or management of specific condition
20	#3 - Delay in access to care sufficient to result in harm to the patient
5	#4 - Failure to adequately pursue abnormal test results
5	#5 - Failure of provider-to-provider communications including botched handoffs
7	#6 - Fragmentation of care such that individual responsibility for patient is waived

3	#7 - Surgical/procedural complication resulting in iatrogenic injury
7	#8 - Medication prescribing error
3	#9 - Medication delivery error
1	#10 - Practicing outside the scope of one's capabilities
3	#11 - Unsupervised mid-level (nurse practitioner or physician assistant) care
0	#12 - Failure of communication with patient
0	#13 - Patient non-adherence with recommendations for care
4	#14 - Delay in emergency response or failed to follow emergency response protocol
2	Other (including unavailability of medical record)
109	Total number of extreme departure lapses (many cases had more than one extreme departure)

D. Preventable Deaths

In 2007, three cases were identified as preventable. Table 6 shows the causes of death and Table 7 lists the eleven lapses in care observed in the three cases.

Table 6. Causes of preventable death.

Cases	Cause of Death
1	drug induced hepatitis
1	adrenal insufficiency, disseminated cocci
1	pulmonary embolism

3	Total

[13] Table 7. Types of lapses in care (extreme departures) in preventable deaths.

Lapses	Types of Lapses in Care (Extreme Departures)
1	#1 - Failure to recognize, identify or adequately evaluate important symptoms or signs
3	#2 - Failure to follow established guidelines for evaluation and/or management of specific condition
1	#3 - Delay in access to care sufficient to result in harm to the patient
1	#4 - Failure to adequately pursue abnormal test results
1	#5 - Failure of provider-to-provider communications including botched handoffs
0	#6 - Fragmentation of care such that individual responsibility for patient is waived
0	#7 Surgical/procedural complication resulting in iatrogenic injury
1	#8 - Medication prescribing error
2	#9 - Medication delivery error
0	#10 - Practicing outside the scope of one's capabilities
0	#11 - Unsupervised mid-level (nurse practitioner or physician assistant) care
1	#12 - Failure of communication with patient

0	#13 - Patient non-adherence with recommendations for care
0	#14 - Delay in emergency response or failed to follow emergency response protocol
11	Total

It is instructive to look at each of these cases in some detail. As seen in the case examples below, more than one extreme departure lapse occurred in each of the cases. A single lapse was not enough to result in a patient's death, but multiple lapses lined up to produce an adverse outcome.

Case 1. Drug-induced hepatitis.

> A 40-year-old Spanish-speaking patient was prescribed isoniazid (INH) for a poorly documented "positive" tuberculin skin test (medication prescription error). Baseline liver functions were ordered but apparently not done (failure to follow clinical guidelines). One month later, a liver function panel showed elevation of the liver enzyme ALT to 4 times normal. This report was not noted until two months later (failure to identify abnormal lab result), when the patient presented with dark urine, and jaundiced eyes that had been present for at least one month (failure to communicate effectively with patient about the warning signs of INH hepatitis). The patient died three weeks later of INH-induced hepatitis (several notations indicated the patient was "Spanish speaking only" yet another note indicated "patient understands English").

Case 2. Acute adrenal insufficiency in a patient on high dose continuous steroids.

A 62-year-old patient died after abrupt cessation of high dose dexamethasone which he had been receiving continuously for 4 1/2 months. On 4/3/07, he had a 48-hour delay in evaluation for high fever, chest pain and night sweats (delay in access to care). The [14] initial evaluation consisted of chart orders without a clinical note, and he was then seen several times in clinic with abnormal chest x-rays, shortness of breath, and low oxygen saturation (88-91%) but was managed as an outpatient (failure to properly evaluate/manage "red flag' symptoms and signs). Coccidioidomycosis pneumonia and pneumothorax were diagnosed on 4/09/07 and he was started on antifungal therapy. He was in hospital continuously and had lumbar laminectomy on 5/25/07. High dose dexamethasone was prescribed post operatively for severe pain and weakness, and this dose was not tapered (failure to follow clinical guidelines for prescribing steroids for pain). He remained in the hospital for 4 1/2 months after the laminectomy because of postoperative staphylococcal wound infections. During his prolonged hospital stay, a cardiologist evaluated another patient with the same last name and for several days the patient received medication, atenolol, intended for the other patient (medication delivery error) without adverse consequence. When discharged back to prison on 10/09/07, neither the transfer note nor the phone conversation between the discharging physician and the accepting physician indicated his prolonged course of high dose dexamethasone (failure of provider-to-provider communication at time of handoff). He did not receive dexamethasone on return to prison on 10/9/07. Two days later he developed hypotension and tachycardia, was hospitalized (at a different hospital from which he had been discharged), intubated, received vasopressors and high dose antibiotics but no corticosteroids and died as a consequence of unrecognized acute adrenal insufficiency.

Case 3. Pulmonary embolism.

A 39-year-old patient died of preventable pulmonary embolism. He was placed in 5-point restraints after ingesting razor blades. Restraints were ordered because he was having auditory hallucinations directing him to hurt himself. The patient reported he had failed to receive his antipsychotic medication for a few days (medication delivery error). The restraints were re-ordered for five days continuously despite indication that the patient was quiet and cooperative during this period (failure to follow clinical guidelines – medically non-indicated restraints per restraint protocol). Range of motion (therapy) was ordered but not documented to have been given at the ordered frequency. The patient had sudden cardiac arrest and autopsy showed massive pulmonary embolus at the bifurcation of the pulmonary artery.

IV. Discussion

A. Lapses in Care and Preventable Death

Predictability and preventability are two different concepts. It is difficult for even trained, highly qualified physicians to determine that a death is preventable using retrospective case review. To a large extent, "preventability is in the eye of the beholder." It is easier to identify predictable deaths, based on cause of death (patients with certain types of conditions such as metastatic or high grade cancer, congestive heart failure, or multiple chronic diseases, commonly believed to shorten life expectancies).

[15] In the CPHCS death review process, reviewers are asked to identify all lapses in care, and to grade each lapse as either a "simple departure" or a "serious (extreme) departure" from the standard of care. Simple departures are much more common than serious departures, and there are often disagreements in committee over each designation. For this review, only the serious (extreme) departures have been collected and tabulated.

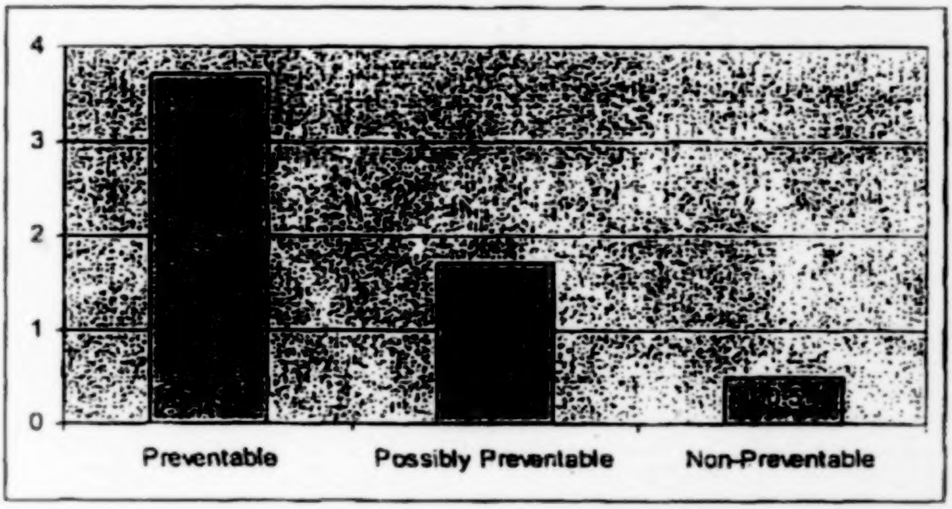
There has been strong support for the 14-category taxonomy of lapses. The list has been reviewed and accepted by all of the members of the Clinical Support Unit who conduct the death reviews. Three other nominees for inclusion did not make the final list. These were "failure to address addiction," "failure to identify and treat serious psychiatric conditions" and "failure to address spiritual emptiness."

Lapses in care occurred in all three types of deaths-preventable, possibly preventable, and non-preventable-but lapses occurred most frequently for the preventable cases (Table 8 and Figure 2). Preventable deaths had an average of 3.7 lapses per death, possibly preventable deaths had an average of 1.7 lapses and non-preventable deaths had an average of 0.5 lapses. These findings support the idea that adverse outcomes, in general, are a consequence of multiple errors: the Swiss cheese model of adverse events in which multiple "holes" in the system all line up.

Table 8. Number of lapses by preventability.

Preventability	Lapses	Deaths	Lapses per Death
Preventable	11	3	3.7
Possibly preventable	109	65	1.7
Non-Preventable	172	327	0.5

Figure 2. Average number of lapses per death by preventability.



[16] B. Trends in Death Rate and Preventability

Tables 9-11 show significant declines in the CDCR death rate from the first quarter of 2006 through the second quarter of 2008.

Table 9. Death rates per quarter and annualized among California inmates, 2006-2008.

Quarter	Number of Deaths	Number of Inmates	Quarterly Rate per 100,000 inmates	Annualized Rate per 100,000 Inmates
Q1 2006	124	170,475	72.7	290.9
Q2 2006	108	172,561	62.6	250.3
Q3 2006	103	173,101	59.5	238.0
Q4 2006	93	172,528	53.9	215.6
Q1 2007	112	172,284	65.0	260.0
Q2 2007	100	173,312	57.7	230.8
Q3 2007	91	172,645	52.7	210.8
Q4 2007	94	171,444	54.8	219.3
Q1 2008	99	169,949	58.3	233.0
Q2 2008	87	170,983	50.9	203.5

Table 10. Change in the death rate among California inmates, 2006 to 2007.

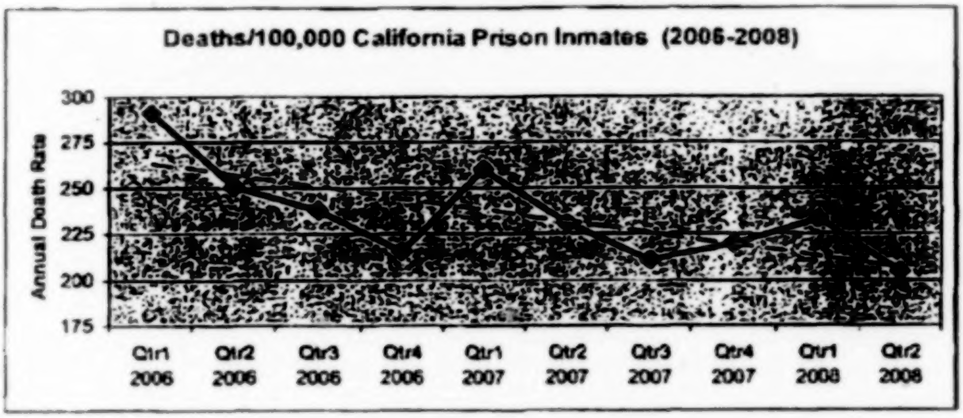
Year	Number of Deaths	Number of Inmates	Annualized Rate per 100,000 Inmates	Change
2006	428	172,166	248.6	-
2007	397	172,421	230.3	-7.4%

Table 11. Change in the death rate among California inmates by prior year quarters 1 and 2 combined, 2006-2008.

Quarter	Annualized Rate per 100,000 Inmates	Change
Q1-2 2006	270.5	–
Q1-2 2007	245.4	-9.3%
Q1-2 2008	218.2	-11.1%

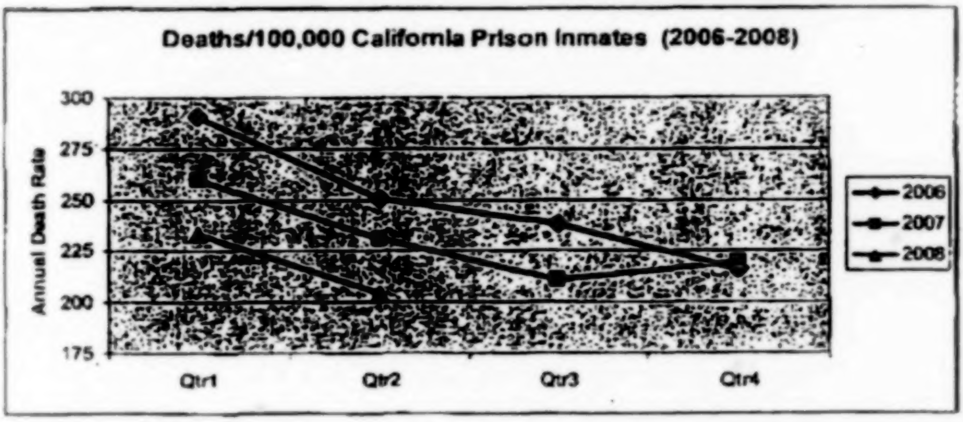
Figure 3 displays the decreasing trend in overall mortality from January 2006 through June of 2008 as well as the calculated linear regression line.

[17] Figure 3. Trend in annualized mortality rate per 100,000 inmates, 2006-2008



Displaying the same data in lines one-year long demonstrates the seasonal variation pattern, correlating with circulation of winter viruses, that is usually seen in population-based mortality studies (Figure 4).

Figure 4. Trend in annualized morality rate per 100,000 inmates, 2006-2008, displayed by year



[18] C. Trends in the Attribution of Preventability

Compared to 2006,[3] in 2007 there were far fewer cases identified as preventable and more that were identified as possibly preventable (Table 12 and Figure 5). Because the death review process was less standardized in 2006, it is likely that the total number of preventable deaths was under-estimated in the analysis of the year 2006 deaths..

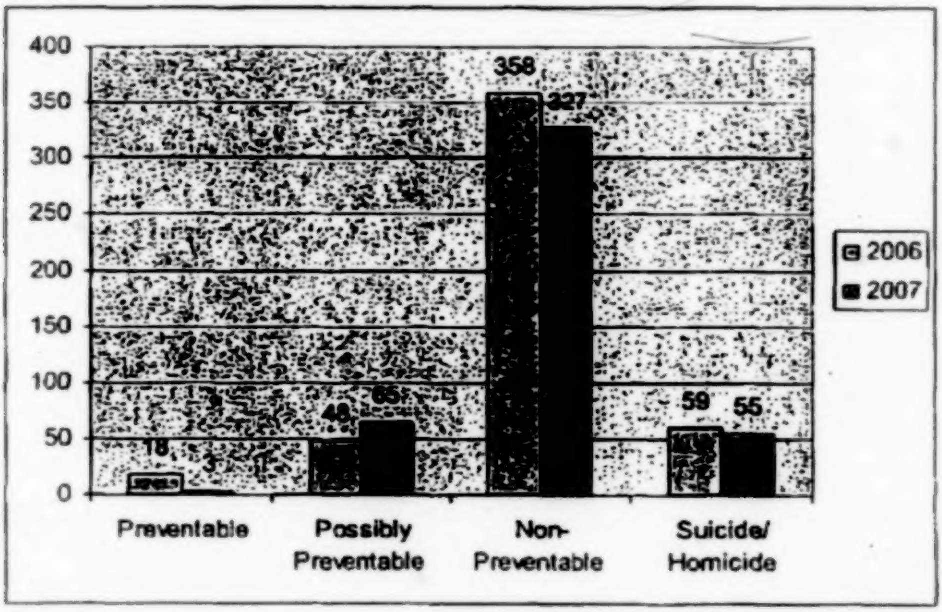
---

[3] Imai K. Analysis of CDCR Death Reviews 2006. August 20, 2007. Found at: www.cphcs.ca.gov/resource.aspx

Table 12. Types of preventability of deaths among California inmates, 2006 and 2007.

Year	Preventable	Possibly Preventable	Non-Preventable	Suicides / Homicides
2006	18	48	358	43 / 16 (total 59)
2007	3	65	327	33 / 22 (total 55)

Figure 5 Number of deaths by preventability, 2006 and 2007. The suicides and homicides are included as non-preventable deaths and shown separately as well.



D. Interventions to Decrease Preventable Deaths

The vast majority of lapses in care do not lead to death, but in cases of preventable death, there were a higher number of lapses per case. Strategies to decrease or mitigate lapses, if successful, will decrease the number of unnecessary deaths. Table 13 shows the total number of lapses in care identified an all 396 death review cases.

[19] Table 12. Summary of lapses of care (extreme departures), 2007.

Lapses of Care Types (Extreme Departures)	# of Lapses in the 327 Non Preventable Deaths	# of Lapses in the 65 Possibly Preventable Deaths	# of Lapses in the 3 Preventable Deaths	Total # of Lapses
#1 - Failure to recognize, identify or adequately evaluate important symptoms or signs	52	43	1	96
#2 - Failure to follow established guidelines for evaluation and/or management of specific condition	19	6	3	28
#3 - Delay in access to care sufficient to result in harm to the patient	31	20	1	52
#4 - Failure to adequately pursue abnormal test results	13	5	1	19
#5 - Failure of provider-to-provider communications including botched handoffs	4	5	1	10
#6 - Fragmentation of care such that individual responsibility for patient is waived	10	7	0	17
#7 - Surgical/procedural complication resulting in iatrogenic injury	1	3	0	4
#8 - Medication prescribing error	14	7	1	22
#9 - Medication delivery error	5	3	2	10
#10 - Practicing outside the scope of one's capabilities	4	1	0	5
#11 - Unsupervised mid-level (nurse practitioner or physician assistant) care	6	3	0	9
#12 - Failure of communication with patient	0	0	1	1
#13 - Patient non-adherence with recommendations for care	5	0	0	5
#14 - Delay in emergency response or failed to follow emergency response protocol	3	4	0	7
#15 - Other	5	2	0	7
Total	172	109	11	292

[20] The most frequent lapse was the failure to recognize, evaluate and treat important signs and

symptoms. Fully one-third of all identified lapses (96/292 or 33%) occurred in this category. In fact, lapses numbers 1, 2, and 3 together account for 60% of all identified lapses. The Receiver and CPHCS have already begun many steps intended to reduce lapses in care in the California prison system and more are planned. The following lists interventions to be taken to address each of the 14 lapses.

#1. Failure to recognize or evaluate important signs and symptoms.

The majority of these lapses involved patients presenting for non-routine care with chest pain, shortness of breath, abdominal pain, severe headache, dizziness, acute confusion, new neurological symptoms, weight loss, and abnormal vital signs including low oxygen saturations. Many of these cases occurred after clinic hours, at night and on weekends, when healthcare staff are most isolated.

a. Strengthening hiring criteria. New criteria for employment have been adopted, which includes board certification or demonstrated competence in a primary care specialty. As of August 2008, 85 providers have left employment or been suspended and these have been replaced with providers who meet the new criteria. As the committee continues to meet, the number of poorly qualified providers has significantly declined.

b. Redesign of on-call policy and system. The PPEC will soon revisit the on-call policy to address the issue of after-hours evaluation of red flag symptoms.

c. Reducing provider isolation. Renovation of clinical areas in existing prisons and creation of the

Receiver's seven new healthcare facilities will reduce the current physical isolation of providers. Unlike providers in community hospitals and clinics who can readily consult with colleagues, CPHCS providers often find themselves making decisions in professional solitude.

d. Access-to-Care Initiative. A comprehensive redesign of the "sick call" (access to primary care) process is underway.

e. Provider case conferences and continuing medical education (CME).. The Clinical Support Unit now conducts regular case-based educational meetings at the individual prisons. Many are based on death review cases. Focused CME will be presented on the management of red flag symptoms.

f. Quarterly newsletter. A quarterly newsletter of the Peer Review Department began in September 2007. The newsletter contains articles on evaluation of critical clinical problems and highlights lessons from death reviews.

g. Local peer review. These and all other types of lapses should be discussed at a local level and incorporated into the local peer review processes.

#2. Failure to follow clinical guidelines.

These lapses involved failure to follow evidence-based guidelines of care for asthma, diabetes, chronic hepatitis C, suspected unstable coronary disease, congestive heart failure, and chronic pain management.

[21] a. Access-to-Care Initiative. The Receivership and CPHCS have recently begun the Access-to-

Care Initiative, which will create standardized, measurable, reliable, and sustainable access-to-care processes in the four domains of 1) reception, 2) sick call and primary care, 3) chronic disease care, and 4) specialty, infirmary and acute care. The first chronic disease initiative involves asthma, which was responsible for six preventable deaths in 2006 and two more in 2008. The changes created by this initiative will fundamentally change the way that medicine is practiced in CPHCS and should dramatically reduce lapses in these areas.

b. Promotion of disease guidelines. The Pharmacy and Therapeutics Committee continues to publish medication guidelines for common conditions. The chronic hepatitis C guidelines have recently been updated and will be rolled out in 2008-09. The pain management guidelines will be adopted and rolled out in 2009.

c. Availability of decision support at the time of care. Providers and nurses with access to web-connected computers now have access to UpToDate, the leading medical online reference resource, but continued deployment of health information technology will enable additional supports. Renovation of clinics and the Receiver's new healthcare facilities, as noted above, will also increase availability of support from colleagues.

d. Local peer review. These and all other types of lapses should be discussed at a local level and incorporated into the local peer review processes.

#3. Delays in access to care.

These lapses occurred throughout the spectrum of care, including lapses in triage, acute care, primary care, specialty care and higher levels of care (hospital and emergency department).

a. Access-to-Care Initiative. The Access-to-Care Initiative will generate practice changes in all of these major settings of care, especially the nursing triage, acute care, primary care, and specialty care domains.

b. Health Care Access Units. The Receiver has begun to establish dedicated health care access custody teams at each of the 33 prisons to ensure the availability of custody escorts.

c. Specialist and hospital provider network. The Receiver's initiatives in contracting and utilization management will improve availability and responsiveness of specialists and community hospitals. Cohorting chronically ill and disabled patients in the Receiver's seven new healthcare facilities will improve availability and quality of specialty and hospital care.

d. Local peer review. These and all other types of lapses should be discussed at a local level and incorporated into the local peer review processes.

#4. Failure to identify and pursue abnormal test results.

a. Primary care system redesign. A primary care system redesign will address this area, including creation of a culture of accountability.

[22] b. Health information technology. The clinical data repository will begin to be available to providers with computer connectivity in 2009.

c. Local peer review. These and all other types of lapses should be discussed at a local level and incorporated into the local peer review processes.

#5. Provider-to-provider communication.

These occur during handoffs of care, especially those involving specialty consultations, patient transfers from prison to prison, and transfers from prison to hospital or emergency department and back again.

a. Transfer communication. Contracted hospitals and specialists must be required to provide timely written and verbal communication at the time of transfer.

b. Primary care system redesign. A primary care system redesign will address this area, including creation of a culture of accountability.

c. Reducing provider isolation. Renovation of clinical areas in existing prisons and creation of the Receiver's new healthcare facilities will reduce the current physical isolation of providers and facilitate communication.

d. Redesign of on-call policy and system.

e. Health information technology. Computer connectivity and electronic records can help mitigate this lapse.

f. Local peer review. These and all other types of lapses should be discussed at a local level and incorporated into the local peer review processes.

#6. Failure of provider to assume responsibility for the patient.

This occurs when a system of care is fragmented and episodic, as is the case in the majority of the 33 prisons.

a. Primary care system redesign. A primary care system redesign will address this area, including creation of a culture of accountability.

b. Redesign of on-call policy and system.

c. Local peer review. These and all other types of lapses should be discussed at a local level and incorporated into the local peer review processes.

#7. Surgical/procedural complication.

a. Competency of specialists. If poor quality specialists are identified, their contracts should be pulled and new pools of specialists and hospitals should be found.

b. Specialist and hospital provider network. The Receiver's initiatives in contracting and utilization management will improve availability and responsiveness of specialists and community hospitals. Cohorting chronically ill and disabled patients in the Receiver's new seven healthcare facilities will improve availability and quality of specialty and hospital care.

[23] #8. Medication prescribing error.

a. Pharmacy system redesign. An electronic pharmacy system with embedded reminders and clinical guides is being rolled out (Maxor Guardian).

b. Local peer review. These and all other types of lapses should be discussed at a local level and incorporated into the local peer review processes.

#9. Medication delivery error

a. Pharmacy system redesign. An electronic pharmacy system with embedded reminders and clinical guides are being rolled out (Maxor Guardian).

b. Local peer review. These and all other types of lapses should be discussed at a local level and incorporated into the local peer review processes.

#10. Practicing outside the scope of one's capabilities

a. Redesign of privileging policy. New credentialing policies include "tiered credentialing," a privileging system in which providers are only privileged to work in settings where they have demonstrated competence.

b. Reducing provider isolation. Renovation of clinical areas in existing prisons and creation of the Receiver's new healthcare facilities will reduce the current physical isolation of providers and facilitate ready assistance for providers.

c. Local peer review. These and all other types of lapses should be discussed at a local level and incorporated into the local peer review processes.

#11. Failure to supervise mid-level providers (nurse practitioners and physician assistants)

a. Regular mentor/supervisor. All mid-level practitioners were assigned a regular physician mentor / supervisor in the 4th quarter of 2007.

b. Redesign of mid-level care. Initiatives in progress include primary care redesign, chronic care initiative, and creation of tiered credentialing.

c. Local peer review. These and all other types of lapses should be discussed at a local level and incorporated into the local peer review processes.

#12. Failure to communicate effectively with patient

a. Primary care system redesign. Redesign of primary care will support trust in physicians by patients (and vice-versa) and will enhance the roles of RNs and other members of the care team in communication, including patient education.

b. Local work with Men's Advisory Councils (MACs) and Women's Advisory Councils (WACs).

#13. Patient non-adherence with recommendations for optimal care without appropriate effort by providers to educate or convince the patient

a. Primary care system redesign.

[24] b. Access-to-Care Initiative. The Access-to-Care Initiative is promoting the chronic care model and care management initiatives.

c. Patient peer education. The Access-to-Care Initiative includes peer education as one component of the chronic care model.

d. Local peer review. These and all other types of lapses should be discussed at a local level and incorporated into the local peer review processes.

#14. Delay in emergency response or failure to follow emergency response protocol.

a. Emergency Medical Response Initiative. The Emergency Medical Response Initiative will touch every prison in the coming months.

b. Nursing practice review. The nursing staff have recently implemented new procedures for nursing practice review.

c. Local peer review. These and all other types of lapses should be discussed at a local level and incorporated into the local peer review processes.

E. Other Areas of Potential Improvement

Death reviews focus attention on a range of lapses in the processes of care in specific cases by specific clinicians. Valuable as this is, it is important to remember that medical record reviews shed only limited light on system contributions to errors and poor outcomes. Regarding hand hygiene, for instance, universally recognized as important to patient health outcomes, medical records reflect neither individual compliance with accepted practice nor the availability of necessary facilities and supplies. The CDCR has been notorious for its lack of hand-washing facilities in clinical areas.

The interventions mentioned above include a number of system strategies that go beyond individual provider recruitment and education. In addition, the interventions below highlight several of the more important "macro" interventions that will be necessary to facilitate reliable patient care.

1. Creating/redesigning the primary care system.

   The current system of care is episodic and characterized by patient-physician relationships that are often adversarial and symptom-driven. It should be possible to decrease serious lapses in care by changing to a primary care model that is characterized by an ongoing patient-physician relationship with built-in advocacy for patients and accountability for outcomes. Poorly trained and poorly motivated providers should continue to be replaced with providers who are competent to deliver primary care. Primary care physicians should help create and lead interdisciplinary patient management teams designed to manage panels or populations of patients.

2. Creating a chronic disease care model of care.

   The practice of medicine in many, if not most, of the prisons continues to be episodic and focused on acute symptoms rather than patient-centered continuity, prevention, and chronic disease management. With better health information technology, it will be [25] possible to identify patients at risk for preventable death based on age, functional status, and/or diagnoses. These patient groups have more chronic diseases, take more medication, and are subject to more testing, more hospitalizations, more specialist visits, and more medical handoffs. The chronic care model has proven effective in preventing unnecessary morbidity and mortality, producing measurable improvements in overall care, and reducing waste through implementation of care management, redesigned team-based processes, patient education, and decision support.

3. Improving supports for good primary care practice.

   The medical record system is still paper-based. Individual records, if available, are often in shambles, and essential patient medical information is often missing. The new pharmacy processes are far from fully implemented, so medication dispensing and administration are still fraught with potential for delays and errors. Even when California's largely rural prisons can recruit adequate numbers of physicians and nurses, specialists and ancillary services staff are often unavailable.

4. Facility upgrades and seven new facilities (10,000 bed project).

   The CPHCS clinical staff has been working in clinical areas that are dirty, cramped, crowded, noisy, and poorly equipped. Efficient team care, as called for in the chronic care model, is physically impossible where the requisite team members cannot fit in the clinical space, as is true for the majority of CDCR's yard clinics. The volume of care often far exceeds capacity, as at Avenal State Prison, where the 7525 inmates get care in spaces designed for 2320. Crowded patient care areas promote errors and prohibit confidentiality. Recruitment and retention of professional staff will be problematic so long as clinic environments are isolating and flagrantly unprofessional. There are plans to improve and enlarge the clinical areas in existing prisons, but these clinic remodels have only just started, and they will not address the challenge of providing adequate care in rural areas to large populations of patients heavily burdened with chronic disease. The 10,000 bed project will cohort sicker patients in urban or near-urban facilities, increase access to care, and dramatically improve efficiencies in care.

5. Redesigning the ways in which patient information is handled at care transitions.

   The inmate patient population is challenging. There is a high prevalence of dual diagnoses (serious mental illness coexisting with physical illness), chronic hepatitis, HIV infection, and drug and alcohol addiction. Depression is endemic. The extraordinary rate of transfers in the California prison system creates opportunities for botched handoffs and the loss of critical bits of clinical information at the point of transfer. The development of health information technology and the 10,000 bed project will decrease the number of botched transitions in care.

6. Collaboration with custody.

   Security issues complicate both access to care and provision of care in prisons. Taking patients for care outside the prison is a remarkably complex process. Cell searches can result in confiscation of regular medication, and lags in replacement may lead to lapses in [26] delivery of necessary medications. A strong relationship between custody and the medical department is essential when redesigning almost any aspect of care in CDCR.

F. Conclusion

Death rates in the CDCR are significantly decreasing in part because the high-quality CPHCS peer review process has resulted in the replacement of 85 potentially dangerous providers with new well-qualified providers.

The death review process offers an important but narrow window on the quality of healthcare delivery systems. There are inherent limitations on the information provided by this process. It focuses largely on physician practice as documented in the medical record. It does not reveal the adequacy of staffing; the performance of the interdisciplinary team working with the provider; the provision of information to support planned care rather than episodic care; the availability of decision support during patient encounters; the performance of supervisors, managers, and executives; the organization's commitment to education and training; or the adequacy of equipment and the physical environment.

In its continued examination of the causes of poor outcomes in American healthcare, the Institute of Medicine (IOM) has noted the need for "fair and just systems of safety that acknowledge both the individual and system contributions to successful as well as adverse events while emphasizing the systems approach to error reduction."[4] Healthcare systems must distinguish human errors from willful negligence and intentional misconduct, but they must also build strong defenses into the work environment. The IOM report quotes safety expert James Reason, "We cannot change the human condition, but we can change the conditions under which humans work."

---

[4] Institute of Medicine. *Keeping Patients Safe: Transforming the Work Environment of Nurses*. Washington, DC: National Academy Press; 2004.

In his Turnaround Plan of Action, the Receiver has committed to establishing the array of prerequisites to care that is safe, effective and efficient. The IOM has repeatedly pointed out that "piecemeal approaches will not be successful."[5] Recruiting new providers will not yield sustainable improvements in mortality if those providers are left practicing in the cramped yard clinics of existing CDCR prisons. The clinic upgrades and 10,000 bed project, together with computer connectivity and health information technology, will make it possible to achieve critical clinical redesigns with concomitant improvements in quality and cost-efficiency. Without them, care will continue to be wasteful and unsafe.

Patient safety requires creation of a culture in which clinicians readily identify mistakes and system vulnerabilities and in which all staff share in the responsibility for optimal patient outcomes. Given appropriate supports, such a culture should be possible in California's prison healthcare system. Sustaining and continuing improvements in lapses in care, unnecessary deaths, suffering, and waste will depend upon continuing progress of the Receiver's multifaceted interventions.

[7] **BE IT REMEMBERED that on Thursday, September 4, 2008, commencing at the hour of 9:43 a.m., at California State University, Sacramento, Alumni Center, 6000 J Street, Sacramento, California, before me, CARRIE PEDERSON, a Certified Shorthand Reporter in the State of California, duly authorized to administer oaths and affirmations, the following proceedings were had:**

* * *

CHAIRMAN SHAW: Good morning, everyone. My name is David Shaw, and as the Inspector General, I'm the chairperson of the California Rehabilitation And Oversight Board, and I would like to call this meeting to order.

I would first like to introduce our staff and board members. With us today from the Inspector General's Office is Barbara Sheldon, our chief counsel and counsel to the board; Ann Bordenkircher, the board secretary, is sitting next to her; Heather Konvalin back in the back, and Jamie Sammut who will help you with board materials at the back table; Laura Hill who is our executive director for the board.

I'd like to thank all the board members

* * *

[112] Thank you.

At this time we're going to take a lunch break, and we will reconvene at one o'clock back in this room.

(Noon recess taken.)

CHAIRMAN SHAW: Okay. It's 1 p.m., 1:05 or so. I'd like to reconvene California Rehabilitation Oversight Board, and we'll move on to agenda item number eight, prison healthcare needs. I'd like to welcome Clark Kelso, the federal receiver.

Mr. Kelso, the board members are looking forward to hearing the latest from the receiver's office on healthcare. Take it away, Clark. Good. Thank you.

MR. KELSO: This is on, I take it.

Good afternoon. Thank you for inviting me to join you here today and accommodating my schedule for today. I appreciate that. I do have a Powerpoint presentation. I should ask, about how long would you expect I should be talking, or do you have an expectation?

CHAIRMAN SHAW: We programed an hour for you.

MR. KELSO: Oh. Well, goodness. I'll [113] stretch, I'll stretch.

DR. BIKLE: We'll ask you some questions.

MR. KELSO: I'll be happy to answer questions as I go along.

What I've done in the presentation here is essentially described the state of the receivership as of August and September, and I'm happy, then, to provide additional details and my answers, or, if need be, we can supplement any of my responses with additional materials.

I'm going to assume some general—and tell me if I shouldn't, but I'm going to assume some general understanding of the litigation background here and the fact that the receivership has been in existence for almost two years now. I assume that that's appropriate, or should I give you a little bit of background about that?

CHAIRMAN SHAW: Any board members would like to have a—

MS. ZITO: I would.

MR. KELSO: A quick review of how we got here. The quick review is that there have been a series of class actions challenging various aspects of the constitutionality of healthcare [114] being provided by California's—in California's prisons, a series of class actions, not just one, a number of them, and this litigation has been under way for, in some cases, 15 years or so.

The particular case that led to the creation of the receivership is a case called Plata versus Schwarzenegger. It began in an earlier administration, and it was a challenge to the constitutionality of how medical care was being delivered. The basis for the challenge was the 8th Amendment, cruel and unusual punishment clause, and in 2002, essentially there was a settlement—or a stipulation rather—between the plaintiff's counsel and the state that the court accepted in which essentially there was a concession that prison medical care was not up to constitutional standards.

The stipulation contained—was a very lengthy stipulation—contained lots of provisions about what the state then was supposed to do to bring its prison medical care system up to constitutional standards. This is something like a 60-page order. It had lots of things that the state was supposed to accomplish.

Over the course of the next four years, [115] between 2002 and 2006, essentially the state did not accomplish very many of those, and ultimately the court decided to appoint a receivership, which was an extraordinary remedy, one of the most extraordinary remedies that a federal court uses in this sort of class action litigation, and the receivership—the theory behind a receivership is that if a defendant is unable to comply with court orders or unwilling to comply, that the federal court has the ability to appoint someone who will then exercise the powers of that agency essentially as a receiver in a bankruptcy would. The receiver comes in and takes over a portion or all of the affected agency. And in this case the court ordered the creation of a receivership where the receiver becomes responsible for and has all of the powers of the secretary of the Department Of Corrections And Rehabilitation with respect to medical care, and the order takes those powers away from the gubernatorially appointed secretary for corrections and rehabilitation.

The court entered that order, appointed the first receiver, Bob Sillen. Bob spent the first 12 to 18 months essentially beginning to [116] build his own staff and doing an assessment of conditions in the prisons in order to make a decision about how best to correct those conditions. Under Bob's direction, the receivership and staff had assembled a good six or seven hundred pages worth of planning documents and had 35 to 40 different initiatives that they were going to be pursuing to bring medical care up to constitutional standards.

The court, late in 2007, reviewed those six or seven hundred pages with the assistance of an advisory panel and decided that this just wasn't quite enough of a plan that the court could approve, and the court had been seeking from Mr. Sillen basically a plan for a good 12 months, and the court essentially got a little bit impatient that it did not get a plan in place and decided that the receivership was at a point where, in addition to getting a final plan produced, it was clear we were going to be entering a phase where, in the court's words, the receivership needed a different style of leadership. I think it's fair to say Mr. Sillen's style of leadership was a highly visibly combative one, and it helped, very early [117] on, get the legislature's attention and the administration's attention and the state's attention, but the judge ultimately decided that to finish out the planning program in more collaborative style of leadership was required.

The court appointed me in January of this year to replace Bob, and I've really done essentially two things since then of—I think of significance. The first is we did take the six or seven hundred pages and reduce it to an understandable, relatively short plan of action, what we call a turnaround plan of action. That's available on our website, and that's what will be the basis for the presentation that I'll give very shortly.

And the second thing I've been doing is then trying to secure all of the necessary resources to implement that plan, and I'm very close to completing essentially that task as well. There are a lot of other things going along on a day-to-day basis, but in terms of sort of leadership role that I exercise as receiver, those are the two big accomplishments that we needed to—we needed to achieve this year.

Is that a sufficient background for [118] members? The intention is, in terms of the future, that the receivership stays in place as long as it takes to bring the system up to a constitutional level, and at some point, then, the receivership winds down, goes out of existence. The court probably will continue to monitor the state's progress for some period of time, but the clear hope of the court is and my mission is to raise the level of care quickly to constitutional level so that the court can end the case. The federal court has no great desire to be running the state's prison healthcare system.

Let me make a few brief remarks about other cases. This case, Plata, is medical care. There are three other important cases in the federal courts dealing with healthcare. One is a case called Coleman versus Schwarzenegger. That deals with mental health, and Judge Karlton has been presiding over that case for a good 12, 14 years, and it's basically sort of the same constitutional challenge. Judge Karlton, in that case, did not appoint a receiver. In that case, the judge appointed a special master, which is another thing that a federal court can do, who

* * *

[121] the environment, quite favorably because I am a federally court-appointed receiver, and that does give me rather extraordinary freedoms that a normal department director or cabinet secretary does not have, and I was fairly confident simply because I knew so many of the control agency directors and players and was familiar with the legislature and the governor's office, that I would be able to secure a great deal of cooperation in what we're doing, and in fact that has been proven to be true.

We have very few disagreements at this point with the control agencies or even with the legislature.

Basically all of the resources that I have asked for—with one exception, all of the resources we've asked for, we've been given, and so I'm feeling rather upbeat about the progress that we know is already being made and about the progress that will be made over the next three or four years.

Let me describe a little more, then, about what the plan is, and this plan is available, of course, on our website. The basic vision here of the turnaround plan is up on the screen. I can take you through it very quickly, [122] and, again, I'll take questions at any time. I'm used to being interrupted.

As soon as practicable. The court does not want to be in this business for the next ten years. There was, I think, a concern that the receivership was heading towards something where it could easily be 10, 15 years before it would finish its work, and that simply is too long a time frame. Federal courts have, frankly, had a rather spotty record in managing state and local institutions whether it's prisons, jails, schools. There are a number of areas where federal courts have involved themselves in administrative matters, and the record is not all that great at times. Some of the school cases have dragged on for 25, 30 years of federal court supervision. Judge Henderson would like to retire and go fishing, and so I told him I would get this done more quickly. My own horizon, my estimation is we will have turned the system around in about four years. It's a fairly aggressive time frame given what you're going to see in the rest of the plan, but, you know, we'll never know if we can make it unless we try.

It has to be constitutionally adequate.

Katherine Wyatt, CSR 9866, RMR
Official Court Reporters, U.S. District Court

[6] will consider extending the time for plaintiffs and CCPOA only if the defendants agree to give up part of their time to plaintiffs.

We should note that the joint pretrial statement calculations are based on 5-1/2 hours of actual court time per day, while the court's calculation reflects 5-3/4 hours per day. So keep that in mind.

Second, the excerpts from Robin Dezember's depositions that plaintiff seeks to introduce into evidence appear to be admissible statements of a party opponent. Thus, pursuant to the court's November 12th order, defendant shall have five court days to file and serve any objections to these deposition excerpts and any counter designations thereto.

Third, plaintiffs and defendants are hereby ordered to file by 8:30 a.m. tomorrow morning revised copies of their revised exhibit lists that include objections and responses thereto. The ones you filed didn't include objections responses.

Fourth, defendants' motion for reconsideration of the courts' order denying defendants' motion to dismiss or, in the alternative, motion for summary judgment is denied. Having carefully considered the defendants' motion for reconsideration, the court finds no basis for altering its original decision.

Finally, defendants' motion for reconsideration of the courts' oral ruling prohibiting evidence of constitutional [7] compliance at trial is also denied. If, as defendants contend, there are no longer any constitutional violations at issue in Plata or Coleman, then there will be no reason to continue either the receivership in Plata or the special mastership in Coleman. Those are matters for an individual court to decide, and defendants should, therefore, file motion for appropriate relief before me or Judge Karlton individually in those cases. These three-judge court proceedings are not the place for those arguments.

Having made these preliminary rulings we will proceed with opening statements. Remember that each statement will be no more than 15 minutes. You may proceed when you are ready, counsel.

And I will ask you, Ms. Espinosa, to let counsel know when they have five minutes remaining.

The clerk: I will.

Judge Henderson: You may proceed, counsel.

Opening statement by Mr. Specter

Mr. Specter: Good morning, Your Honors. My name is Donald Specter. I am appearing on behalf of the plaintiffs in this case.

I stand before you today representing more than 150,000 individuals who are completely dependent on the Governor and the officials of the California Department of Corrections and Rehabilitation for all of their basic needs. Among those

* * *

[46] plans in the system, improved provision and access to specialty care and hospital services, improved peer review and death review programs. He's working on the establishment of a comprehensive, safe and efficient pharmacy program, including the development of the drug formulary and the rollout computerized pharmacy system—

The Clerk: Time's up, counsel.

Mr. Mello: One more moment.

—designed to improvement medication management in CDCR institutions.

Crowding has never been identified as a significant barrier to constitutionally adequate medical care in California's prisons. In fact, at no time before the filing of this motion to convene a three-judge panel was crowding identified as a significant impediment to the delivery of care, let alone a primary barrier to it.

Defendants, however, do not dispute that crowding impacts services and programming in CDCR prisons, including the delivery of medical care. The evidence will show, however, that crowding is not the primary, most important, principal cause of the alleged unconstitutional delivery of medical care.

The state takes very seriously its obligations to inmates and the public. This is evidenced by the funding it devotes to CDCR healthcare systems, and it is undisputed that medical care has improved dramatically in the last few years.

* * *

[56] clinicians and sufficient beds.

It's not about the release of any inmates, and certainly it's not about the release of the mentally ill inmates. It's about providing beds, providing those specialized beds, those specialized mental health clinicians to care for the mentally ill inmates.

Defendants respectfully thank this court for hearing the Coleman defendants' separate opening statement.

Opening statement by Mr. Kaufhold

Mr. Kaufhold: Good morning, may it please the court. My name is Steve Kaufhold from Akin, Gump, Strauss, Hauer & Feld. I am counsel for the legislative intervenors and speaking this morning on behalf of the defendant intervenors in this action that oppose the issuance of a prisoner release order.

We appreciate having the opportunity to participate in this phase of the litigation and to make heard the voices of the scores of individual law enforcement personnel, district attorneys, county officials and state legislators that we're privileged to represent.

In order to proceed beyond this first phase of the bifurcated proceedings, the plaintiffs must demonstrate by clear and convincing evidence that, quote, "crowding is the primary cause of the violation of a federal right," end quote, and the plaintiff classes must meet the burden separately in the Plata and Coleman cases.

[57] In addition, the law enforcement, district attorney, and legislative intervenors are participating in this phase in order to emphasize two key issues.

First, from the evidence that is provided—has been provided to date by the plaintiff classes, the plaintiffs will not be able to make the requisite showing that crowding is the primary cause of any violation of their federal rights. This is particularly true in light of the testimony of plaintiffs' own experts during their depositions and the high clear and convincing standard and burden of proof that they must satisfy.

Second, the plaintiff classes have disclaimed the need to demonstrate that there are any current constitutional violations of their federal rights, and our understanding is that the court has held that no such evidence will be presented in this phase of the proceeding. We respectfully believe this ruling is contrary to the terms of the Prison Litigation Reform Act accordingly—

Judge Karlton: Sir, I am the very source of patience. If you believe that, I'll sell you a piece of the Brooklyn Bridge really cheap. Twice this Court has said we will not receive that evidence. You have made as clear a record as you can. Please don't waste our time.

Mr. Kaufhold: I am not trying to waste your time, Your Honor.

Judge Karlton: But you are.

[58] Judge Henderson: Move on.

Judge Karlton: Move on.

Judge Henderson: You preserved the record. Don't make it in your opening statement. The record is clear you don't like that ruling.

Mr. Kaufhold: And since we—

Judge Henderson: move on, counsel.

Mr. Kaufhold: Yes, Your Honor. Since we had not raised that, I just wanted to make that clear.

Judge Karlton: Move on, counsel. I think you must have some trouble understanding. Move on.

Mr. Kaufhold: That was my second and final point, Your Honor. Thank you for your consideration.

Judge Henderson: Okay. I think we will take a 15-minute recess before we present our first witness and—

Judge Karlton: Sir, were you speaking for the DA and Law enforcement as well?

Mr. Kaufhold: Yes, Your Honor, I was, but not for the counties.

Judge Karlton: But not for the counties.

Ms. Keck: My name is Anne Keck for Sonoma County intervenors.

Judge Karlton: I'm having trouble hearing you, Anne.

Ms. Keck: May it please the court, the counties and Sonoma County intervenors are not going to present a separate

* * *

[62] (Thereupon, the witness was sworn.)

The Clerk: Have a seat. Speak into the microphone and state and spell your full name for the record.

The Witness: My name is Pablo Stewart. P-A-L-B-O S-T-E-W-A-R-T.

Ms. Whelan: Your Honors, Dr. Stewart's qualifications are set forth in paragraphs 1 through 19 of his November 9th, 2007 report, and in his co, which is appended a to both his initial November 9, 2007 report and his August 15, 2008 supplemental report.

We offer both of his reports into evidence at this time. And they appear as Coleman docket numbers 3217 and 3221 through 3221-2.

Ms. Tillman: Your Honors, Lisa Tillman on behalf of the Coleman defendants. We state the objections we previously filed with this court in regards to those expert reports.

Judge Karlton: That's fine. You really don't have to do that anymore. If you stated it, we're aware.

We will become aware of it, if we hadn't, when we sit down and try to resolve this case. Thereupon—

Dr. Pablo Stewart

Was called as a witness on behalf of the plaintiffs, and after having been first duly sworn, was examined and testified as follows:

* * *

[66] Coleman class members were housed and also housing units where Coleman class members were not housed.

During the course of these—of my walking portion of the tour, I was able to speak with a variety of custody staff, as well as clinical staff, asking them very particular questions on the provision of mental healthcare. And also during these walking tours I had the opportunity to conduct—and, again, this is over the course of all of my tours—approximately 60, what I'll describe as formal interviews, where I had private interviews with various members of the Coleman class. And those people I also had the opportunity to review their unit health record, and, you know, to review their medical care and psychiatric care.

In the addition to these formal interviews, which was approximately 60 over the course of these six prisons that I visited, I had an opportunity to speak with at least 100 inmates, some of them in the Coleman class, some of them not in the Coleman class.

And these were I would describe as very informal. I would see people waiting in the pill line, and I would talk with them.

I would go to various housing units and speak with various members of the Coleman class. And again, that totaled to around 100.

Q. You were asked to form an opinion as to whether overcrowding [67] in the California prison system is the primary cause of constitutional violations in the delivery of medical and mental healthcare.

What did you conclude?

A. I concluded that overcrowding was the primary cause of the ongoing constitutional violations.

Q. Can you explain why you reached that conclusion?

A. A variety of reasons that I used to reach this—that opinion. I'm very aware that the Coleman class has had the ability of being monitored by the Coleman court for a number of years. I believe it began around 1994, 1995.

Unidentified speaker: Your Honor, we can't hear the witness, if you could ask him to speak up.

Judge Karlton: Can you speak up? I must confess there's a lot of echo, so it's hard for me to fully hear.

The Witness: Your Honor, I'm sorry. Is this better here?

I'm rarely accused of being soft spoken, so I was taken a little aback by that.

Getting back to what I—why I felt that the overcrowding was the primary cause of the ongoing constitutional violations is that based on my experience as being a court-appointed monitor during a federal oversight of an institution regarding mental healthcare, it's remarkable to me that after over 10 years of very close monitoring and hundreds

* * *

[75] But as equally as dangerous is the fact that in a prison word gets out really quickly based on my experience. So it's the people who would utilize mental health services are very aware that these are the conditions in which they would be placed if they come forward expressing their suicidal thoughts to a staff member, to a custody officer, to another inmate who would then report it.

And in my experience, this significantly inhibits people from coming forward to expressing their true state of their mental illness, their true levels of suicidal ideation or plan, et cetera.

So that's, to my view, a very dangerous aspect of the prolonged use of these very inadequate housing modules.

Q. You also mentioned your tour at Salinas Valley State Prison.

Ms. Whelan: And I believe we also have some pictures from that. Tour, if we could show plaintiffs' trial exhibit 338, pictures 11, 12 and 13.

By Ms. Whelan:

Q. Dr. Stewart, Could you describe what we're seeing here?

A. What we're seeing there is—it's really difficult to comprehend. This is where people who cannot—who are in mental health crisis, who are unable to access mental health crisis beds because of the fact of overcrowding have to wait. These are cages. People need to sit upright.

Ms. Tillman: Objection. Mischaracterizes the [76] evidence by use of the term "cages."

Judge Henderson: I didn't hear you, counsel.

Ms. Tillman: I'm sorry. Lisa Tillman speaking. Objection to the term "cages." That mischaracterizes the evidence. It's inflammatory and argumentative.

Judge Henderson: Well, I don't know how to characterize it.

Judge Karlton: It is what it is.

Ms. Tillman: I believe the court special monitor has found this to be holding cells, and other arrangements are called "therapeutic modules."

Ms. Whelan: Your Honors, these are also part of their objections.

Judge Henderson: Let's call it that a rose by any other name—

The Witness: These therapeutic modules that are very cage-like are used to—

Ms. Tillman: I'm going to object to the use of the term "therapeutic module." This picture is not of a therapeutic module. It is of a holding cell.

The Witness: These holding cells—

Ms. Tillman: I'm sorry that the expert doesn't recognize the difference.

The Witness: Your Honor, regardless of what they are called, the Coleman class member who is in psychiatric crisis [77] who has been identified as needing to be housed in a mental health crisis bed is forced to sit upright in these cages—excuse me—in these units during the day where there's no toilet. There's no water. There's no health or safety facilities there, and while they are waiting for placement in a mental health crisis bed. And this occurs at the Salinas Valley State Prison.

By Ms. Whelan

Q. Dr. Stewart, you're also a psychiatrist. Were you able to monitor and visit and look into the medication management systems at the prisons during your tours and through your review of documents?

A. Yes.

Q. And can you describe to the court what you found and what your conclusions were?

A. Regarding the medication management system, it is my opinion that the medication management system currently as it exists in the California Department of Corrections and Rehabilitation is overwhelmed. There are just too many people that are prescribed too many medications for the system to adequately address.

At Solano State Prison inmates have to routinely choose between going to morning breakfast versus getting their pills.

In other settings, where there is persistent lockdowns the staff take the medicines to the cells and [78] administer it through the food ports. And they spend literally seconds, as fast as it takes to pop out whatever pills there are from the blister pack, and hand them to the food port is how long the person stays—the staff stays in front of the Coleman class member who is being prescribed a variety of very potent antipsychotic antidepressant and mood stabilizing medications.

The pill lines, people waiting long periods of time and, again, when they get to the front of it they are there for a few seconds to get their medications.

I saw no evidence of—the term that I use is "clinical management."

There's no evidence that the person administering the medication has the time or the opportunity to ask the person about the presence of any untoward side effects; of any problems they have in taking the medications, in general; medication adherence or compliance; as well as doing a quick check on the efficacy of the medicine.

So this gets back to the fact that speaking with the chief psychiatrist at Mule Creek State Prison, doctor Fowler, says that there's no objective outcome measures that look at whether or not anything that the psychiatrists do, any therapeutic interventions— and in this case medications—are having any positive effect for their clients, because there's no feedback loop because of the overwhelming number of people that are supposed to be given medications in these literally seconds [79] a person stands in front of you.

There's no feedback loop to the prescriber. There's no feedback loop from the prescriber to the person given the medication. It's clear to me the system is overwhelmed.

This is further evidenced by my discussions with the DMH staff. Dr. Ghandi, who is in charge of the DMH programs at the Vacaville Psychiatric Program looked at people being admitted to the DMH units there. And it was over 70 percent, I believe. It was a very large number, 70 or 80 percent of the Coleman class members that were being admitted to the DMH units had no evidence or minimal evidence in their bloodstream of any of their prescribed medications, which further evidenced to me that will medication system cannot—

Ms. Tillman: Object to the extent that goes into hearsay, Your Honors.

Judge Henderson: We just can't hear you, counsel. I'm sorry.

Ms. Tillman: Objection, hearsay. He's offering it now for the proof.

Judge Henderson: Overruled.

The Witness: my conversations with Dr. Ghandi, as well as other staff members, were just. Part of my basis of my opinion stating that medication management system is completely overwhelmed.

Judge Karlton: Doctor, how is it—I don't [80] understand how is it that the bloodstream doesn't reflect the taking of the drugs. What do you understand that to mean?

The Witness: The most obvious answer to that, Your Honor, is that, in fact, when these people come—the Coleman class members come in front of the pill distributing staff, that they cannot ensure that they are, in fact, taking it.

The fact that there's no medication evidenced in their bloodstream means that they are not taking the medication because there's not enough time spent by the clinical staff to ensure that, in fact, people are taking the medicine.

And this is further evidenced, Your Honor, by very—a very well-used psychiatric medication. It goes by the brand name of "WELLBUTRIN" it's a very good antidepressant. And it has been taken off the formulary, meaning that the inmates can no longer be prescribed that because it does have a very small risk of abuse.

If you store them up, you take a bunch of them at once, you can sort of get a little bit of a high, kind of like a psycho stimulant.

This medication has been taken off the formulary. And to me, that's just admission on the part of the CDCR that they can't adequately supervise the distribution of medication.

By Ms. Whelan

Q. We only have a couple of minutes left. And I know in your reports you talk about challenges that clinicians and staff [81] members face. And can you talk about how these conditions affect clinicians on a daily basis?

A. What I was struck with—and, again, I had the benefit of being involved in the Gates matter and the Madrid matter back in the '90's. And so I was able to compare my two experiences.

What I found overwhelmingly, again, due to the overwhelming population pressures placed on the system, that clinical staff are placed in these untenable situations where they have—they are forced to make these decisions to put a person in psychiatric crisis in a unit that is still up here on the stand—on the screen.

I mean, that's an untenable position to be placed in as a clinician. I mean, something like this could even jeopardize someone's licensure, to participate in this type of care. And I saw it time and again than clinical staff are forced into making these very, very difficult decisions because of the fact of overcrowding.

Ms. Whelan: Thank you.

The Court: Cross-examination?

Cross-examination

By Ms. Tillman:

Q. Good morning, Dr. Stewart.

A. Good morning.

Q. I understand that you are a board certified psychiatrist, correct?

[82] A. Yes, I am.

Q. You are not an internist, correct?

A. I'm sorry?

Q. You're not an internal medicine specialist?

A. An internal medicine specialist? I'm not an internal medicine specialist. I did a year of internal medicine before I started my psychiatric training, but I'm not an internist.

Q. And that year was over 25 years ago; would that be right?

A. It was actually 26 years ago.

Q. Who's counting?

Your career has been dedicated working as a Board Certified Psychiatrist. Presently you hold an academic teaching position with University of California, correct?

A. Yes.

Q. And you occasionally consult on various litigation matters, correct?

A. I consult on a variety of matters. Some of them include litigation, yes.

Q. You mentioned earlier that you worked on what was known as the *Gates* case, which was one of the first-class action cases brought against the Department of Corrections and Rehabilitation involving just one institution, correct? The California Medical Facility at Vacaville?

A. Yes, it did just involve the California Medical Facility.

Q. And it involved a multiplicity of issues ranging from [83] medical care, mental healthcare to other issues involving different inmates with disabilities under the Americans with disabilities act, correct?

A. Yes, it did.

Judge Karlton: I'm having a little trouble hearing you. I'm trying to read it off the screen because I'm having a little trouble understanding you. I'm not sure if it's correctable.

Ms. Tillman: I'll see if I can get a little closer to the microphone, okay?

The Clerk: Speak into the microphone, counsel.

Ms. Tillman: Better?

The Clerk: Into it.

Ms. Tillman: Okay. Thank you.

By Ms. Tillman:

Q. Now, you mentioned in your report that you've worked on various correctional matters involving the correctional system of Michigan, correct?

A. A juvenile institution in Michigan, yes.

Q. And a correctional system in Georgia, correct?

A. That was the juvenile justice system in the state of Georgia, Yes.

Q. And correctional system in New Mexico, correct?

A. I was defendant's expert in New Mexico.

Q. And obviously none of those systems that you worked on in

* * *

[85] tanks." there were units that were exclusively used for the placement of people we were treating, yes.

Q. And that type of separation of these enhanced outpatient program patients was something that you found appropriate for their care, correct?

A. Yes.

Q. And you're aware, aren't you, that the same separation of enhanced outpatient program patients from the general population occurs within the California Department of Corrections and Rehabilitation, right?

A. Yes, it does.

Q. And, in fact, in retrospect now that you have the opportunity of looking back at the time period when you served as the director of forensic services for the city and county of San Francisco, now some 20 odd years later you found that that system met the constitutional elements laid out by the Coleman court and was, indeed, constitutionally adequate, correct?

A. Yes. We have talked about this before where during the period of time in the late '80's—around '88, '89—I remember, because the Giants were in the World Series that year, and it was the earthquake year, that it was my opinion—again, retrospectively—that the city and county was meeting their constitutional requirements that have subsequently been laid out by the Coleman court.

Q. And that is the only correctional system that you are aware [86] of; isn't that right, that is or was meeting those constitutional mandates?

A. It was the only system that I had personal experience with, yes.

Q. And you would agree that the elements of a constitutionally compliant mental healthcare system involve uniform policies and procedures to provide care, sufficient beds to provide care, sufficient clinical staff, and competent staff to provide care, a suicide prevention program and a recordkeeping system, correct?

A. Well, in addition to those things that you mentioned it also calls to have an adequate system for the identification, the screening and referral of people who require mental healthcare within the system. And also states that people within the system have access to appropriate levels of psychiatric care, including medications. And that they need to have an adequate recordkeeping system, as well as a suicide prevention program.

Q. Now, in terms of adequate screening and identification of the mentally ill inmates, wouldn't you agree that the fact that the Coleman mental health population has increased over the years, even increased at a time when the general population was decreasing, would indicate that, indeed, mental health clinicians are doing their job in screening and identifying those inmates who are needing mental healthcare services?

A. I don't know if you can necessarily make that leap, based on [87] what I personally observed at the DVI reception center where they have over 500 intakes on average a week. And about 25 percent of those inmates, based on my conversations with Dr.

Coppola, the Chief Psychiatrist, acknowledged that they are mentally ill.

That the screenings that I saw were done in non-confidential settings. They were done in group rooms. They had a high possibility of not catching everyone who could seriously be suffering from mentally illness.

Q. But they are catching more than ever, aren't they?

A. Well, I think what that speaks of, again, that shows what I've been trying to say all morning is that the system is so overwhelmed that it's creating more and more mentally ill. That even in this overwhelmed system they are identifying some of them.

Q. When you speak—

Judge Karlton: Excuse me.

Is it your view that it is likely that there is more than 25 percent of the prison population is suffering serious mental illnesses?

The Witness: Your Honor, based on what I saw at the reception center the staff there are absolutely overwhelmed on a daily basis by the number of people who come in to be screened. And then, the screenings that do occur occur in a group setting where there's no confidentiality.

[88] So in looking at the sheer number, as well as the manner in which the screenings are done, one could opine that they are not catching everyone, and you're only getting the most severe.

By Ms. Tillman

Q. You were speaking about the screening that occurs in a reception center, correct?

A. Yes.

Q. And you saw a single reception, correct?

A. Yes.

Q. That was at a dual location institution, correct?

A. Yes, correct.

Q. You haven't toured the other reception centers throughout the 33 institutions of the California Department of Corrections, have you?

A. I have not.

Q. And have you collected any data showing that as a person stays with the California Department of Corrections and Rehabilitation for a longer and longer period of time there's an increased likelihood of that person becoming mentally ill?

A. I don't know exactly what you mean by "data," but during the course of my tour—and now I'm speaking specifically of my tour of the Solano State Prison—where there was in use one of these dorms, triple-bunk dorms where there are just tremendous number of people in there given the space, I interviewed several [89] class members that one—two—two of the class members were suffering from staph infections that they got while living in these unhealthy conditions.

But in addition, that they admitted that they had no history of mental illness prior to being placed in these dorms. And that during the course of their housing in these dorms where there's an absolute lack of privacy, there's an absolute lack of any sort of adequate space, the lights are on all the time, there's this—it sounds like you're on a runway of an airport, how loud it is in there. That these people over time—

this one person in particular is reporting that after awhile they are running these fans because it's so hot there during the summertime that he started hearing voices within the fans.

He started getting delusional. He started getting paranoid just because of the housing setting.

Q. But you would admit, wouldn't you, that you've not actually compared the percentages of inmates with mental illness at reception centers versus the percentage of inmates at main line institutions that have been transferred from reception to a main line institution who have a mental illness, correct?

A. I'm sorry. I lost your question in there.

Q. You would agree, wouldn't you, that you've made no analysis comparing the number or percentage of inmates at a reception center who have mental illness versus the number or percentage of inmates at a main line institution who have mental illness, [90] have you?

A. I have not.

Q. You've talked to a lot of different people during your tours of—what was it—five institutions, correct?

A. Five different institutions, six tours.

Q. And during those tours, what, you spent a day, sometimes a half a day at each institution?

A. Yes.

Q. Some of your opinions were based on talking to inmates, correct?

A. Yes.

Q. And some of these inmates were not people that you would find to be normally trustworthy, would you?

A. I don't know what you mean by that.

Q. Some of the people that you spoke to were staff of the California Department of Corrections, correct?

A. I'm sorry. Were staff at the California Department of Corrections?

Q. Staff, yes.

A. That I didn't believe what they were telling me?

Q. I said:

"Some of the people that you spoke to were staff of the Department of Corrections, correct?"

A. Yes.

Q. But you haven't had the opportunity, have you, to look at [91] ongoing set of measurements or data regarding the actual delivery of mental healthcare services, have you?

A. Well, no. I think I have. I've extensive review of the master's reports of various reports that the master has put out. In addition to—I don't know if he refers to them as "quarterly reports," but suicide report, master's report on overcrowding.

So—and the master in Coleman has done extensive data collection, if you will, around the actual provision of care throughout the system. So I would disagree with that.

Q. But you would defer to the special master's findings of fact concerning various measurements of these different elements of a constitutionally-adequate mental healthcare system?

A. I certainly would take that into consideration.

Q. You understand that the special master has a team of psychiatrists as well as psychologists and attorneys that work to monitor these institutions, correct?

A. Yes.

Q. You would agree that the special master has provided monitoring reports almost every six to nine months since the inception of the monitoring in this case, correct?

A. I couldn't swear to what the frequency is. I know that I think he's up to 19 or 20. So how many that is, spread over the time.

Q. You haven't received all those reports, have you?

[92] A. I have not.

Q. You've received and reviewed, what, the 19th and the 20th monitoring reports?

A. I've certainly looked at the 19th and 20th, yes.

Q. And in those monitoring reports from the 19th to the 20th, did you see any express language finding—

Ms. Tillman: Let me strike that.

By Ms. Tillman:

Q. In the course of your work in reviewing these monitoring reports from the 19th round and the 20th round, isn't it correct that those monitoring reports made no recommendation to the court to do—to undertake any action to reduce the overall population of the Department of Corrections?

A. I'm not that familiar with what the final recommendations were, so I can't swear to that. I don't believe there were, however.

Q. Do you recall the special master's last monitoring report, the 20th round monitoring report, actually found that several institutions were in substantial compliance with the court-approved policies and procedures for providing mental healthcare?

A. I wasn't familiar with that.

Q. You don't recall that at all?

A. I don't recall that.

Q. Any reason to dispute that?

[93] A. Again, I just don't recall it.

Q. You are aware that the defendants have obtained court approval of their uniform policies and procedures for providing care to the mentally ill, aren't you?

Ms. Whelan: Objection, Your Honor.

Just because this is a very overbroad question, could you specify what order you're talking about?

Judge Karlton: I assume she's talking about the Protocols.

By Ms. Tillman:

Q. The revised program guide was approved by this Coleman court in March, 2006.

A. That's my understanding, yes.

Q. And let me just take a break and see if the court would like to take a lunch break at some point?

Judge Henderson: We're thinking of 12:30, counsel.
By Ms. Tillman:

Q. You've admitted that you're not very familiar with the revised program guide, correct?

A. I'm sorry?

Q. You're not very familiar with the revised program guide, correct?

A. I don't know that I ever said that.

Q. I believe you said it at your deposition, actually. Would you like me to refresh your recollection?

* * *

[124] condition dictates, and they haven't been able to do that.

Q. Now, you also mentioned a concern about holding cells. We saw a picture up on the screen a little while ago, and there's also some mention of therapeutic modules. Again, isn't it correct that the Coleman Special Master's team regularly tours these facilities and is aware of those holding cells?

A. They may or may not be.

Q. You've seen mention of the holding cells' usage in the monitoring reports from the Coleman Special Master?

A. Yes, and where I've seen them mentioned, he also mentions that they are unacceptable for acute psychiatric care.

Q. And isn't it correct that there's been no order to remove those holding cells, because when they are used appropriately, then the court approves their use?

A. I can't speak for the court. All I can tell you, from a clinical standpoint, those are horrible settings. Those are inadequate. There's nothing good. You wouldn't put people in there that require psychiatric care, waiting there for several days.

Q. Now, are you aware of what are called the therapeutic modules to enable group therapy to occur amongst inmate patients who pose very high risk of assault towards others or escape attempts?

A. I am aware that the department uses what you refer to as therapeutic modules, what I refer to as cages.

[125] Q. Isn't it correct that Dr. Metzner, who's been on the Coleman special master's team as a court-appointed expert for many years, was personally involved in the specifications used in those therapeutic modules?

A. I am. I'm aware that Dr. Metzner is involved in the Coleman monitoring team. Dr. Metzner and I worked briefly together on the Madrid case, and it's my understanding that it's his opinion that these, quote/unquote, "therapeutic modules" are adequate treatment, are adequate spaces to put mentally ill inmates.

Judge Karlton: I'm sorry. Are or aren't inadequate?

The Witness: It's my understanding, Your Honor, that Dr. Metzner feels that way.

By Ms. Tillman

Q. So when we talked about the housing of inmate patients, there may be differences of opinions amongst the experts on what is appropriate, isn't that right?

A. Now, housing or these various devices that are used to hold people in? Housing is very different than what we're talking about here.

Q. We'll take the latter. When it comes to therapeutic modules and holding cells, you apparently differ with the court-appointed experts, don't you?

A. Well, again, I come in from my perspective of being on the Gates monitoring team when the Coleman—when the original program guide was implemented as far as CCCMS, EOP, et cetera. [126] There was never a use of these therapeutic modules at that point.

In stepping away from them and coming back over ten years later, I feel they're absolutely inadequate and inappropriate for use in acutely mentally ill inmates. Let's make sure we understand that's what we're talking about.

People that are mentally ill—and if the security of the institution is at risk because people are so mentally ill that they have to be put in these modules, as you're calling them, then that speaks to how bad the quality of the mental healthcare is, because if the mental healthcare was being adequately provided to people, they wouldn't be at such a great risk of acting out.

So, in fact, you could look at it as an admission on the fact of the inadequacy of the mental healthcare that, in my opinion, is strictly due, primarily due to the overcrowding.

Q. It's interesting the Coleman special master's team has never indicated that the use of the holding cells or the therapeutic modules—

Judge Karlton: Are you testifying?

Ms. Tillman: Let me strike that.

Judge Karlton: I'm sorry, ma'am?

Ms. Tillman: I'll strike that. Thank you.

By Ms. Tillman

Q. You're familiar with the revised program guides' requirement

* * *

[130] people is a reflection of how bad the system is due to overcrowding that you can't hire people. My understanding is these are very good jobs as far as mental health jobs go, and if you can't fill these jobs, then it really reflects on how chaotic the current situation is.

Q. You would agree there's a national shortage of highly skilled mental health clinicians like psychiatrists, wouldn't you?

A. I understand we certainly are not—there's not enough psychiatrists to meet the current needs nationwide.

Q. And so even with the release of inmates from the Department of Corrections, defendants will still encounter the challenge of recruiting and retaining highly sought-after professional psychiatrists for the care of mentally ill inmates, won't they?

A. It certainly will require that they continue to put forth effort. But when the system is not so overwhelmingly crowded and when the working conditions are better—right now I was at DVI, and seven clinicians had to share one little, small, what used to be a broom closet. I don't care who you are, you are not going to —that's not a very nice working condition to work in.

So, it's more than just the number of clinicians; it's the overall system in which they're working in.

Q. So that would be your explanation for why the Department of Mental Health is more successful at recruiting mental health

* * *

[138] The Witness: Thank you, Your Honors.

Judge Henderson: Okay. You may call your next expert, Dr. Scott.

Ms. Norman: Plaintiffs call Dr.—Mr. Doyle Wayne Scott.

Judge Henderson: Mister. Thank you.

Wayne Scott,

Having been called as a witness by the plaintiffs was first duly sworn and examined as follows:

The Witness: I will.

The Clerk: Please have a seat.

Judge Karlton: Please state your name.

The Clerk: State and spell your full name for the Record.

The Witness: My name is Wayne Scott, W-A-Y-N-E S-C-O-T-T.

Direct examination by Ms. Norman

Ms. Norman: Good morning, Your Honors. Sara Norman from the prison law office for plaintiffs. I'm sorry. Good afternoon.

By Ms. Norman

Q. And good afternoon, Mr. Scott.

A. Good afternoon.

Q. How long did you work for the Texas Department of Criminal Justice?

* * *

[144] appointments—I'm sorry—to get inmates to offsite appointments by staff that are tasked to do that.

We ran into some issues with misclassifying offenders and put them in the wrong spot, which means that they didn't get the proper medical and mental health attention that they needed.

Q. Did overcrowding also impact your management systems?

A. Yes. From the lowest level correctional officer to the system administrator, the facility administrator to the system administrator. It was really a crisis management situation.

Every day something was breaking down at your facility because of the overcrowding and the impact it was having on your infrastructure or your timelines to get things done, and you were always in a crisis mode trying to resolve those issues.

Q. You have been to eight California prisons in the last year or so; is that right?

A. Yes, ma'am.

Q. And you toured the prisons, went to the living units, you talked to staff and prisoners and administrators?

A. Yes, I did.

Q. You've also—well, before we move on, were you surprised by the conditions that you saw in the California prisons?

A. I really was. I have been in a lot of jurisdictions over the last five years, and I haven't seen this level of overcrowding in any of those jurisdictions.

[145] Judge Karlton: I'm sorry. Let me interrupt for a moment.

You have been in a lot of prisons. You've never seen a prison with this kind of overcrowding. Do you perceive that the overcrowding, setting aside whether the overcrowding itself is undesirable, the question ultimately becomes the relationship of overcrowding to the delivery of mental and physical care. Were you able to perceive or do you perceive that there is such a relationship?

The Witness: Yes, I do.

Judge Karlton: Go ahead. I hope you'll get to the point of this trial eventually.

Ms. Norman: All right. Let's get to it directly.

By Ms. Norman

Q. In what ways did you see overcrowding in California impacting medical and mental healthcare provision?

A. Well, I did see a lot of problems with the classification system. I saw lack of staff in all of the areas that I personally visited. In talking to staff and offenders, I know that across the board there was a lot of frustration on both sides. They were, in some cases, angry because they couldn't get in in a timely fashion to see the medical doctor or the psychiatric clinician. Some of them missed their offsite specialty appointments.

Staff is frustrated also because of having to deal

* * *

[152] Q. Based on your expertise from your decades in Texas and your reviews of other correctional systems around the country and your observations and research on California, is it your opinion that

overcrowding is the primary cause of the medical and mental healthcare violations in California prisons?

A. Yes. Everything revolves around overcrowding. The deficiencies in the classification plan, the deficiencies in the unavailability of staff because they are doing other tasks associated with overcrowding problems to do onsite medical appointments or offsite medical appointments, the wear and tear on the infrastructure. I know there have been electrical outages because of the overload that the large number of offenders is causing at institutions. There's also been water problems at a number of the institutions, and I think the Governor's proclamation clearly described a lot of those issues.

So those were just some of the issues, that overcrowding creates problems for medical and mental health delivery.

Q As executive director of the Texas prison system, you oversaw on your watch the state's emergence from court orders over unconstitutional medical and mental healthcare, right?

A. I did.

Q. Could you have done that if the population remained at 200 percent capacity?

A. I'm convinced no. Once we got our population down to the [153] appropriate size for the space and infrastructure that we had at each facility, with some flexibility space for classification purposes and also for maintenance, routine maintenance, some cells were down, once we aligned all those problems, then we began to really make progress in eliminating all of the outstanding issues that we had with the court.

Q. In your opinion, is that preliminary step of population reduction, is that also essential in California in order to get a handle on the medical and mental healthcare violations?

A. Based on my experience in Texas and what I have seen, I would say yes to that.

Q. One last question, Mr. Scott. When was the last time that you testified on behalf of a prisoner or a class of prisoners?

A. I've never testified in their behalf.

Ms. Norman: Thank you.

The Witness: You're welcome.

Judge Henderson: Thank you, counsel. Cross-examination.

Mr. Mello: Do you want me to start?

Judge Henderson: Yes.

Cross-examination by Mr. Mello

By Mr. Mello

Q. Good afternoon, Mr. Scott. Paul Mello for Plata defendants.

Mr. Scott, You do not hold any degrees beyond your bachelor's degree in business administration?

[154] Judge Karlton: I'm sorry. I'm having trouble. Lift that thing up if you can.

Mr. Mello: I probably am, too.

By Mr. Mello

Q. Mr. Scott, you do not have any degrees beyond your bachelor's degree in business administration, do you?

A. No.

Q. You do not have any degrees in the medical field, correct?

A. No, I do not.

Q. You do not have any degrees in the mental health field correct?

A. No, I do not.

Q. You have never been a clinician who provided medical or mental healthcare to patients, correct?

A. That's right, I never have.

Q. Mr. Scott, you don't have any experience analyzing prison staffing or staffing ratios as they relate to medical clinicians or mental health clinicians, do you?

A. No.

Q. Mr. Scott, when you were the executive director of the Texas Department of Criminal Justice, you did not directly manage medical and mental healthcare services, correct?

A. No, I did not.

Q. Okay. When you were the executive director of the Texas Department of Criminal Justice, both medical and mental health [155] services were run by a medical director who was a physician, correct?

A. That's correct. I supervised her administratively, but I did not deal in any clinical decisions at all.

Q. And, in fact, that medical director actually reported to a deputy of yours, correct?

A. That's correct.

Q. Mr. Scott, you were never qualified to be the Medical Director of the Texas system, were you?

A. Could you ask that again?

Q. Sure.

Were you ever qualified in your mind to be the director of the medical system in that position that reported to you? Were you ever qualified to do that?

A. No. It called for a physician.

Q. Okay. I believe you testified or spoke about in one of your depositions or in your report that—your reports that you performed analysis of several states regarding how many correctional officers were needed for medical exports—pardon me—escorts to transfer inmates to both onsite and offsite medical services, correct?

A. That's correct.

Q. Okay. And you did that in Florida?

A. Yes.

Q. And you did that in Oklahoma?

[156] A. Yes.

Q. And you did it in Kentucky?

A. Yes.

Q. Did you also did it in Indiana?

A. Yes.

Q. And New Mexico?

A. Yes.

Q. And Puerto Rico?

A. Yes.

Q. Okay. When you did that type of analysis in Florida in 2006, you visited eight institutions, spending two full days at each institution, correct?

A. That's right.

Q. In this case you've offered opinions regarding the effects of overcrowding on medical and mental healthcare across California's 33 prisons, correct?

A. Yes, I have.

Q. Okay. In forming those opinions, did you visit each one of California's 33 prisons?

A. No, I visited eight.

Q. You visited eight, correct?

A. I did, yes.

Q. And you visited five last year, correct?

A. It was four and four.

Q. Four and four?

[157] A. Yes.

Q. I'm sorry.

So in 2007, which four institutions did you visit?

A. CIM, Avenal, Valley State and San Quentin.

Q. Did you spend two days at each one of those institutions in 2007?

A. No, I did not.

Q. In fact, you spent less than a full day at each of those institutions, correct?

A. I think I spent a full day at CIM, but that was the only one, yes, sir.

Q. Approximately how long did you spend at Valley State?

A. A half a day.

Q. Okay. Did you also spend a half day at Avenal?

A. Avenal was very large. It was a little longer. Five or six hours probably.

Q. And how about at San Quentin?

A. Five or six, seven hours. It's pretty large also.

Q. Okay. Mr. Scott, did you prepare the first draft of either one of your reports in this case?

A. Did I prepare the draft myself? No.

Q. Okay. Who prepared the first draft of your reports?

A. Ms. Norman.

Q. I'm sorry?

A. Ms. Norman.

[158] Q. Plaintiffs' counsel?

A. Yes.

Q. In your first report, your November 2007 report, at page 44, paragraph 79—put it up on the screen. I also have a hard copy if that's easier for you, but I believe it's right in front of you.

(Document Displayed.)

By Mr. Mello

Q. You said in paragraph 79:

> "It is impossible under current conditions to provide adequate medical and mental Healthcare to California's prisoners." Do you see that?

A. Yes, I do.

Q. And you—at the time you issued that statement, that was based upon visits at four institutions, correct?

A. Yes.

Q. Okay. Next we are going to go to paragraph 59 of your report on approximately page 33. In that section of your report you wrote that:

> "An officer alone with several hundred inmates is unlikely, for example, to perform emergency first aid or CPR. It is simply unsafe to do so with no backup when prisoners could easily simulate an emergency as a consequence—[159] as a diversion. This inability to perform basic lifesaving functions could have potentially devastating consequences on the life and health of a prisoner undergoing a medical or mental health emergency."

Do you remember that being in your report?

A. Yes.

Q. Okay. At the time this was written, you were not aware of even a single incident where an inmate in any of California's prisons was denied medical care due to the lack of custodial staff, were you?

A. No. That statement was based upon my experience in Texas when we were undergoing the overcrowding there.

Q. It wasn't based on anything you learned during your tours or investigation in this matter?

A. No. I would say, though, that it's very likely that the same situation could occur as it occurred in Texas more than once.

Q. But you can't tell me one inmate who had such a circumstance, correct?

A. Not from personal knowledge, no.

Q. Okay. In forming your opinions in this case, did you rely on the receiver's analysis of CDCR death reviews for 2006 or 2007? The 2006 report is defendants' exhibit 1107, and we'll put up the front page if possible.

[160] (Document Displayed.)

By Mr. Mello

Q. I don't believe you reviewed this prior to drafting either one of your reports; Is that correct?

A. I did not.

Q. Okay. And let's pull up the 2008—I mean, the 2007 review. I'm sorry. It's 1233, defendants' 1233.

(Document Displayed.)

By Mr. Mello

Q. Did you review this document before arriving at any of your opinions in this case?

A. No.

Q Okay. At the time you wrote your statement in paragraph 59 of your November 2007 report that was just quoted earlier by me, you were not aware of the alleged 18 preventable deaths identified in the 2006 report, were you?

A. No.

Q. And you were not aware if none of those 18 preventable deaths were the result of poor response to emergency or man-down situations, were you?

A. No.

Q. And, in fact, and I believe you've already testified to this, you did not base your statement just quoted on any data about incidents in California's prisons, did you?

A. Well, I saw, obviously saw a lot of the individual cases [161] that were presented in the receiver's reports that I had reviewed prior to giving both depositions. So I'm sure that had some impact on my decision making.

Q. But you're not aware of the fact of those 18 deaths, preventable deaths or allegedly preventable deaths in 2006, the receiver did not report that any of them were the result of poor response to emergency or man-down situations?

A. No, I didn't review that report.

Q. Okay. Do you know the state of medical or mental healthcare delivery at Avenal State Prison as of August 2008?

A. That's a broad question. Can you—that's a broad question. Can you clarify it a little bit?

Q. When was the last time you were at Avenal State Prison?

A. Late October, early November of 2007.

Q. Have you reviewed any documents relating to Avenal State Prison since that time?

A. Only in regards to what has been in the receiver's reports or any expert reports I reviewed.

Q. As you sit here today, can you tell me specifically about the quality of care at Avenal State Prison as of August 2008?

A. The quality of care, no, that was not my charge. I didn't look at quality of care issues.

Q. When I use the term "quality of care," I mean whether medical and mental healthcare rose to constitutional levels. Is that your understanding, too?

[162] A. Again, I'm not exactly sure what you're saying, but I didn't look at quality of care issues.

Q. Okay.

A. I looked at impediments to delivery or access to the care only.

Q. And you don't feel qualified to testify about the quality of medical or mental healthcare, correct?

A. Well, only as a layman who has actually supervised as a warden mental health in a hospital at my institution, and as the executive director of an agency, I had to oversee constitutional levels of care in both of those areas.

Q. Have you been—when was the last time you were at CIM or California Institute of Men?

A. At that same time period.

Q. Do you know the quality of medical or mental healthcare at CIM as of August 2008?

A. No. Again, I didn't look at quality of care issues.

Q. Okay. Do you know the number of custodial staff at Avenal State Prison as of August 2008?

A. August 2008, No, I don't.

Q. Did you know the number of custodial staff as of any time in 2007 at Avenal State Prison?

A. Did I know? Yes, it was in my notes.

Q. Was it reflected in your report?

A. I don't remember if I put it in the report or not.

[163] Q. If I represented to you that I did not believe those numbers were in your report, would you be surprised by that?

A. I don't remember, so I would take your word for it. I do remember taking the notes.

Q. I don't know if I'd do that.

A. I do remember specifically asking the question at each institution and making notations in my handwritten notes that I kept.

Q. Do you know the number of correctional officers at valley state prison for women as of August 2008?

A. No, I don't.

Q. Okay. Do you know the number of medical and mental health staff at Avenal or any of the prisons you visited in 2007 as of August 2008?

A. No, I didn't look at medical or clinical staff at all.

Q. Okay. And, again, I'm guessing I know the answer here, but you do not know the state of medical or mental health delivery at California State Prison San Quentin as of August 2008 either, do you?

A. I think you asked that question differently than you did in the past. You used the word "delivery" that time.

Q. I did use the word "delivery." do you know the status of medical delivery at San Quentin as of August 2008?

A. As of only what I have seen in the receiver's reports.

Q. And you don't know the status of mental healthcare delivery [164] At San Quentin as of August 2008 either, correct?

A. Again, it would be what I read in the receiver's reports.

Q. And I assume you do not know the number of custodial staff at San Quentin as of August 2008, correct?

A. No, I don't.

Q. You toured Folsom prison in June 2008, correct?

A. Yes.

Q. So in 2008, you toured Folsom. Which three other prisons did you tour in 2008?

A. Sacramento, Solano, and the last one escapes me.

Q. The last one does?

A. Folsom, Sacramento, Solano. Oh, DVI.

Q. Okay. When you toured Folsom in June 2008, neither the medical staff nor the warden told you anything about the status of delivery of medical or mental healthcare at Folsom, did they?

A. Not that I recall.

Q. Okay. Do you know the—did you know the number of custodial staff at Folsom prison after June 2008?

A. After June—No, I don't.

Q. How about in June 2008?

A. When I did my tour, I asked the question and took the notes.

Q. And did you—strike that.

However, your report did not indicate the number of correctional staff at Folsom prison, correct?

A. Again, I don't recall.

[165] Q. When you toured Cal State Prison Solano in June 2008, neither the medical staff, nor the warden told you anything about the status of delivery of medical or mental healthcare at Solano, did they?

A. I didn't see the warden.

Q. Did anybody—did the medical or mental health staff tell you the status of delivery of medical or mental healthcare at Solano during your June tour?

A. No.

Q. And, again, did you know the number of correctional staff at Solano in June 2008?

A. I did on the day of the tour.

Q. However, you did not place those numbers in your report, correct?

A. I'll take your word for it. If you say they are not there, they're not there.

Q. Okay. And do you know the number of correctional staff since June 2008 at Solano?

A. No, I don't.

Q. Okay. You toured DVI in June 2008?

A. I did.

Q. And you did not learn of any specific delays in the delivery of medical or mental healthcare when you toured that facility, correct?

A. No, that's not true.

[166] Q. Okay. What were you told, or what did you learn?

A. Okay. By both offenders and staff, it's a reception center, and there were a large body of offenders waiting to get through the reception and diagnostic process. And in talking with both the reception offenders and the non-reception offenders that were permanently assigned there, one, I learned from the reception offenders that they were—the process was dragging out very long, and that they were anxious to be classified and move along to their permanent level of assignment.

And, secondly, from the permanent offenders there, permanently assigned offenders there, they were frustrated because they couldn't get in for their medical appointment because all the processing was taking place and there was not time for them to receive their regular appointments.

Q. Did any of those individuals tell you how long the delays were?

A. They did, and the answers varied from weeks to months.

Q. Okay. Did any of the individuals that you spoke to who spoke of delays in access to medical or mental healthcare tell you that they suffered an adverse medical consequence as a result of those delays?

A. No, but I didn't ask that question.

Q. And nobody offered that to you either?

A. No.

Q. Do you know the number of custodial staff at DVI since you [167] last visited there?

A. No, I do not.

Q. So you don't know it as of the end of August 2008, correct?

A. No.

Q. That's correct?

A. That's correct.

Q. You toured Cal State or Cal—the prison at Sacramento, correct?

A. Yes.

Q. In June 2008?

A. yes.

Q. And neither the medical staff nor the warden told you anything about the status of delivery of medical or mental healthcare at Sac, did they?

A. No.

Q. That's correct?

A. That is correct.

Q. When you toured Sac in June 2008, was it overcrowded, in your opinion?

A. Yes.

Q. When you toured—when you toured Sac in June 2008, you concluded that the correctional treatment center at the prison was in excellent condition, didn't you?

A. Sanitation-wise, yes.

Q. What do you mean by that?

* * *

[170] that. I only looked at impediments to the delivery of care.

Q. So the answer is you are not aware of one inmate who suffered an adverse consequence, correct?

A. I think I answered that I did not.

Q. Okay. You do not even know of one instance where an inmate became ill due to chronic idleness, do you?

A. No.

Q. You do not know of even one instance where an inmate was denied needed medical care due to a reduced availability of programming or recreation space, do you?

[171] A. No.

Q. You do not know of even one instance where an inmate was denied medical care due to chronic idleness, do you?

A. No.

Judge Henderson: Excuse me, Mr. Mello. I just received a note that our reporter's fingers are getting tired. Let's find a convenient place to take a 15-minute recess.

Mr. Mello: Sure. Couple more questions.

By Mr. Mello

Q. On page 3, paragraph 5 of your August 2008 report, you opined that, quote, "it is inhumane to warehouse prisoners two to a cell under such conditions," end quote; do you see that?

A. Yes.

Q. You do not know of even one instance where an inmate became sick due to double celling, do you?

[171] A. No.

Q. You do not know of even one instance where an inmate was denied medical care due to double celling, do you?

A. No. From personal knowledge, no.

Mr. Mello: We can break.

Judge Henderson: Okay. Court is adjourned for 15 minutes.

(Recess taken.)

The Clerk: Please come to order. Court is in session.

Please be seated.

Judge Henderson: Okay. You may resume when you're ready, counsel.

Mr. Mello: Thank you.

By Mr. Mello:

Q. Mr. Scott, I'm going to ask you questions about paragraph seven of your August, 2008 report.

In that report at paragraph seven you opine that Folsom's building five had solid metal doors, door cells making, quote:

> "Direct supervision extremely difficult," end quote and making staff, quote:
>
> "Even less likely to be able to respond appropriately to medical and mental healthcare emergencies," end quote.

* * *

[176] of fear of anonymity or mistrust by custody staff, do you?

A. Not in California. I saw a great deal of this in Texas when we were very overcrowded such as California is now.

Q. When you formed your opinions you did not know the inmate to mental healthcare clinical staff ratio in CDCR's prisons, did you?

A. I did not look at that.

Q. And when you formed your opinions you did not know the staffing levels for physicians in California's prisons, did you?

A. No, I haven't looked at that.

Q. And when you formed your opinions in this case, you did not know the staffing levels for registered nurses at California's prisons, either, correct?

A. No. I mean, I can tell you based on my experience as an executive director that ran an agency almost as large as California I had the responsibility of making sure that constitutional levels of mental health and medical care were given, and I kept—I understand that it takes clinicians and it takes nurses and it takes physicians to do that.

So in that regard I think I can make somewhat of an opinion.

Q. Okay.

Mr. Mello: And I'd move to strike that as non-responsive.

* * *

[180] healthcare delivery, correct?

A. Let me see if I understand. Did you say—It was garbled. Did you say that the lack of custody staff was only one factor?

Q. Yes.

A. Yes, I would agree with that.

Q. And it's not the single most important factor, is it?

A. No, overcrowding is the single most important factor.

Q. More important than doctors?

A. Can't really do anything until you get your overcrowding down. That's my opinion.

Q. And that's based upon your experience in Texas?

A. Yes.

Q. And that's based upon your review of or visits to 8 of the 33 prisons in California?

A. Yes, and my review of the receiver's report, the special master's reports, the other experts' reports.

Q. And your discussions with plaintiffs' counsel?

A. I don't know that they have opined on that to me or asked me to adopt their opinion.

Q. And you testified briefly about your experience getting out from under the court orders in Texas.

A. Yes.

Q. And that involved building new prisons, correct?

A. Yes.

[199] Proceedings; Wednesday, November 19, 2008

The Clerk: Please state your appearances, counsel.

Mr. Specter: Donald Specter, Alison Hardy for the plaintiffs.

Mr. Bien: Michael Bien for the Coleman plaintiffs.

Judge Karlton: You don't need to go through all that. Just people announce when they are speaking.

Ms. Leonard: Natalie Leonard, Carroll, Burdick & Mcdonough.

Judge Henderson: We will assume everyone is here. Why don't we get going?

Judge Reinhardt: Could we do yesterday over today? Now I can hear.

Judge Henderson: you may call your next witness, counsel.

Mr. Specter: Thank you, Your Honor. Plaintiffs call Dr. Jeffrey Beard.

Judge Karlton: You violated the first rule. You didn't say who you were.

Mr. Specter: You are right. I sinned again. Donald Specter for the plaintiffs.

Jeffrey A. Beard, PH.D.

Having been called as a witness by the plaintiffs was first duly sworn and examined as follows:

[200] The Witness: I do.

The Clerk: Spell and state your full name for the record.

The Witness: Jeffrey A Beard. J-E-F-F-R-E-Y, middle initial A., B-E-A-R-D.

Mr. Specter: Thank you.

Your Honors, just a brief note of introduction, Dr. Beard is not a retained witness. We did not file a report for him, therefore, I'm going to go into some more detail about his background and experience than we have been with the rest of the witnesses.

Judge Henderson: Fine. Okay.

Direct examination by Mr. Specter

By Mr. Specter

Q. Dr. Beard, Where are you currently employed?

A. I'm currently secretary of the Pennsylvania Department of Corrections.

Q. Why do we call you doctor?

A. Because I have a PhD. from Penn State University.

Q. In what discipline?

A. Counseling.

Q. And are you a licensed psychologist?

A. I am.

Q. how long have you been the secretary of the Pennsylvania Department of Corrections?

* * *

[202] A. Yes. As the deputy superintendent for treatment at the state correctional institution at rockview, one of my responsibilities was to oversee not only the healthcare department, but also the psychology department, mental healthcare, dental care

and things like that. Then, of course, as warden of two institutions, I was ultimately responsible for the health and mental healthcare in those facilities. Then as a deputy secretary and now as secretary, I'm also ultimately responsible at different levels for those care—for those types of care.

Q. In your current position can you please describe what activities you pursue in terms of healthcare?

A. In my current position?

Q. Yes.

A. Well, we contract for our medical care and for our mental health care, so I'm regularly involved in reviewing the RFP's and responses to RFP's that go out to ensure we are providing comprehensive mental health and medical care to the inmate population.

Q. So do you practice as a psychologist?

A. I don't. I haven't practiced since about 4-1/2 years into my stay with the Pennsylvania Department of Corrections, and I've actually—my license is in an inactive status right now because of that.

Q. Nevertheless, do you consider yourself an expert in any [203] aspect of the delivery of healthcare to prisoners?

A. Well, I certainly consider myself an expert in the various things that are required to make sure that we're delivering constitutionally adequate healthcare to the inmate population. I'm not a physician, so when it gets to individual clinical care of an individual, that's not my area of expertise, certainly. But I do know and have—through my long years of experience do know the various elements that are required to provide proper healthcare and proper mental healthcare to the inmate population.

Q. And could you briefly summarize your understanding of those elements, please?

A. Well, when you are talking about healthcare, first of all, you have people coming into your system. You have to identify the various medical problems and medical needs that those individuals have. You have to have primary care physicians working for you in adequate numbers so they can review not only the incoming people, but on an ongoing basis take care of sick call and things like that.

You have to have specialists on contract so when a individual has a dermatological problem or orthopedic problem, you can refer them to some specialist for care. You have to have contracts with hospitals so that if an individual needs to go out for some kind of operation or whatever, that's available. You need to have tertiary care hospitals for people who need [204] higher levels of care. You have to have a proper medical records system in place so that you can follow the inmate, you can provide continuity of care, and that if they move from one institution to another institution, the people are aware of what they need. You have to have a medication system in place so that those individuals who need medication receive medication and receive it in a timely manner. You have to have policies in place that see that all of this care is provided in an appropriate manner to the inmate population.

Q. Do you have to have any quality assurance programs?

A. Certainly. I did miss that. In our state we do have a very extensive quality assurance program there. That's really a key—it's a key no matter what you do, whether you're providing mental health care or whether you're providing medical care or providing programs, because if you don't have that in place, you are not able to see where you are developing problems, maybe where you are not doing what you should be doing and where you need to make changes.

Q. What's the current population of the Pennsylvania Department of Corrections?

A. We currently have just a little over 48,000 inmates.

Q. How many prisons are those inmates housed in?

A. They're housed in 26 prisons and a boot camp.

Q. Are you housing prisoners over design capacity in Pennsylvania?

[205] A. We don't use the term "design capacity." We use "operable capacity." We look at each one of our facilities and see what those facilities—not only space-wise but job-wise, program-wise, receiver-wise, what they can handle, and we determine an operable capacity. We're currently operating about 5,000 inmates over that operable capacity in our system.

Q. And does that concern you in any way in terms of the operation of your system?

A. It certainly concerns me. I think it's not high enough yet that we can't provide the basic care that we need to provide to the inmates within the institution, and we monitor that very closely. But any time that you're running over capacity, you have more inmates who don't have jobs that are idle, you have more possibilities of having problems within an institution. It increases the level of risk even if you are only somewhat over capacity.

So, you know, my hope and one of the directions I'm taking in my state is try to get us down to a point where we get closer to that operable capacity.

Q. So what have you done to get closer to the operable capacity?

A. Well, one of the things that we did is we recently passed some legislation that has a—really what is termed an earned time provision in it to allow certain nonviolent offenders to get out earlier, and we have another piece of that, a state

* * *

[209] with submarines back in World War II where we didn't have enough beds for people, so two people would share the same bed. That's not something that we do or have ever done in Pennsylvania, despite the fact that I read in one of the expert's reports that we did that. I don't know where that individual got that.

Q. Now, you became the warden of an institution called Camp Hill; is that correct?

A. Yes.

Q. Can you describe the circumstances under which you became the warden of that institution?

A. Well, that was back in 1989 at a time when our system was quite overcrowded. We were at about 150 or 160 percent of our capacity. Most of our institutions were having difficulties operating. Camp Hill was particularly overcrowded, and they had two very serious riots within three days. A lot of people were hurt. A lot of people were injured. And it was some ten days after that riot that I was assigned to take over that facility.

Q. And do you attribute the riots in any way to the overcrowding?

A. Absolutely. There was no question that we had riots, actually, not only at Camp Hill, but at rockview and at Huntington, two of our other prisons, in the same time period. And there's absolutely no question in my mind that having too many inmates in those facilities, making it difficult to manage those facilities safely, led to those riots.

[210] Q. Okay. And did the level of overcrowding that you experienced in Pennsylvania during that time affect the department's ability to provide adequate healthcare to prisoners?

A. You know, when I look back, the answer is yes. You know, when you're there and you're doing something at a particular time, you think you are doing a good job, but we actually had a class action lawsuit put against us in 1990, the Austin suit, where the plaintiffs were saying that we really weren't providing adequate mental health and medical care.

When I look back on what they were requesting and what we finally agreed to do, because we settled that suit, there's no question that the care we provide today is far better than what we were providing back at that time.

Q. Did the state of California ever ask you to help them in relation to its prison system?

A. I was asked to be a member of the expert panel to take a look at designing a road map to programming within the state because I understood that they wanted to get more programs in their system to try to reduce recidivism. So I was part of that panel.

Q. When was that?

A. It was back a couple of years ago.

Q. 2006, end of 2006?

A. That would be about right.

[211] Judge Henderson: Excuse me. Let me go back a minute. I may have missed it, but what was the level of overcrowding at the time of the riots you just referred to; do you recall?

The Witness: We were at 150 to 160 percent of our capacity at that time, Your Honor.

By Mr. Specter

Q. During the course of your participation as a member of what has been referred to as the expert panel, did you—were you provided with information about the California prison system?

A. Yes. We were provided with pretty much anything we asked for, data, information, reports. We also had some presentations by members of their staff, and members of their staff were part of the expert panel.

Q. And the presentations included from the secretary of the department?

A. The Secretary—secretary Tilton did attend the first meeting that we had as an expert panel, yes.

Q. And they provided you information on how overcrowded they were and any information that you needed to perform your task; is that right?

A. Yes, that's correct.

Q. So you understand that California is close to 200 percent of design capacity; is that right?

A. Yes. At the time that we were doing that back in 2006, I [212] think they were over 200 percent, and I think now they're down around 190-some percent of capacity.

Judge Henderson: Let me interrupt again.

Mr. Specter: Sure.

Judge Henderson: You talk in Pennsylvania in terms of operable capacity and we're now talking about design. Are those apples and oranges, or tell us how we can—

The Witness: Well, I think, Your Honor, probably more comparable than they would be today, because back at that time we were still looking at single celling all of our inmates, and we were looking at design capacity. Since then we have built facilities for double celling, and we have gone more to double celling, and that's why we went to this operable capacity thing.

We also spent millions of dollars upgrading the infrastructure at older institutions so that we were capable of putting more inmates than that institution was originally designed for. So that's why it's no longer appropriate for us to talk about design capacity.

But the 150 or 60 percent I mentioned was based on design capacity at that time.

Judge Henderson: Okay.

By Mr. Specter

Q. How big are the prisons in Pennsylvania in terms of the size, of the number of prisoners that are housed there?

[213] A. We like to run our prisons at about 2,000 inmates. We have two larger prisons, the one runs in around 3,200. The other one runs around 3,300.

Those are our largest two prisons. Everything else is 2,000 or less. I should say 2,500 or less.

We found that as prisons get much higher than 3,000, 3,500, they become very, very difficult for one management team to operate.

We did have a prison, Graterford, that was severely overcrowded back at the time I talked about in the late '80's and early '90's. That prison, which was originally designed for 2,000 inmates was running close to 4,100 inmates. It was actually over a hundred—two hundred percent of capacity. That was our worst prison, our most difficult prison. High rates of assaults and incidents in that prison, very difficult to manage.

We've brought that down to about 3,200. Now we are able to manage that prison. But that's sort of like hitting the upper limits of where I would want to run a prison about, you know, 3,000 to 3,500. I wouldn't want to go over that.

Q. So during the course of your participation in the expert panel, you became aware of the size of the California prisons; is that correct?

A. Yes, I did.

Q. And what's your understanding of how large they are?

A. Well, my understanding is some of the prisons run upwards of [214] 7,000 or more inmates.

Q. What's your opinion about an ability to manage an institution which is that overcrowded and that large?

A. My opinion is it is impossible to really do a good job with prisons that large. And that comes from experience of running a prison, the Camp Hill Prison. Before I left there, got up to between—I think we got up to about 3,300 inmates, and that was starting to become difficult at that time to manage that prison. And so I would say I wouldn't want to have to run a prison that was 7,000 inmates.

Judge Karlton: You just said it's impossible to run a prison and do a good job. I'm not sure I know what a good job is in terms of prison. Would you give me an idea, if you can—

The Witness: Sure.

Judge Karlton:— Of what kinds of things you can't Do?

The Witness: Well, one of the big things is—the key, in my opinion, to running prisons is the warden and his team within the prison. And the key to them doing a good job is going out and getting around the institution, talking to the inmates, talking to the staff, taking care of the little problems that exist within prisons, seeing that problems don't become big problems. And the bigger the prison gets, the more difficult it is for that management team to really successfully go out there and take care of those smaller [215] problems and prevent them from getting bigger.

I've done a lot of work studying prison disturbances and riots around the country, looked at some of the things within my own state, and what you find is when you have problems like that, it's one of two things. Either the prisons are so large that the team can't handle that prison, or you have a poor management team.

So you can have a smaller prison, 2,000 inmates, and if you have a poor warden and poor deputies that never get out, never talk to anybody, you can have problems within that prison. So, from my experience, that's the biggest thing of helping you manage it.

There's a lot of other things about whether you have the capability within the prison. You know, if you take a prison that's built for 4,000 inmates and you put 7,000 inmates in there, that is even a complicating problem then. Not only is it so huge that your management team can't do a good job, but all your services start suffering within that prison. You know, your ability to provide, say, proper sanitation, you know, because your showers, they're overused, every day people are going in the showers and out. You don't have time to clean the showers appropriately because they're in use all the time. Or the laundry services, you are not able to clean the clothes and get the clothes back to the inmates. You know, all of these things start suffering when you get so overcrowded and so big [216] and there's all this day-to-day activity that goes on within a prison.

You know, I think people sometimes don't understand the complexity of running these prisons. This is like running a city. I mean, we have to provide water. We have to provide sewage. We have to provide jobs to people. We have to provide, you know, the laundry services. We have to provide food.

When you overcrowd prisons, things get used more, things break down a lot more than they would that you are constantly running out there fixing things. Your infrastructure suffers. All of these things occur as you put more and more inmates in a facility that was designed for less inmates.

Judge Karlton: Particularly in terms of what this lawsuit is about, is it your view that if the institution runs more than 3,200 people, plus or minus, I understand, there is effects upon the provision of medical and mental health care, and, if so, how?

The Witness: I guess what I would say with that is it is possible to have larger prisons and to provide proper medical and mental health care in those prisons, but that's assuming that those prisons were designed for the number of inmates that you have in there. That assumes that you have enough space in those prisons to—you know, to provide whatever the care needs to be done, to interview the inmates, to see the inmates. That makes those kinds of assumptions.

[217] And it also assumes that the large size of the prison has not seriously affected your ability to run that prison safely, which can happen. Again, as that management team has more difficulty managing these larger numbers of people, then your prison could become more unsafe. There's more idleness in the prison and things—you know, it could make it then difficult—for instance, if you rely a lot on lockdowns to control your prison, how are people getting to their mental healthcare? How are they getting to their medical care? How are they getting their medication appropriately? Those kinds of things do get impacted.

So I guess, to answer your question, it's possible to do it, but it becomes that much more difficult even if you have the resources and space because of the other things that start occurring that start interfering with the ability to provide this kind of care.

By Mr. Specter

Q. To elaborate on the judge's question for a bit, you're aware that California's prisons, like you said, are close to 200 percent—between 190 to 200 percent of capacity, and with that level of overcrowding, is it possible to provide adequate healthcare services to prisoners?

A. Well, from everything that I have seen, the reports that I've looked at and reviewed from the various experts and other people, I don't see how California could, as it currently sits [218] with the number of inmates they have, deliver proper mental health or medical care, because their prisons are unsafe.

And when I talk about unsafe, you look at the number of incidents that they have. You look at their assault rates within the prison. The assault rates are going up, at least up through 2006. That's the only reports I was able to see off their website. Their incident rates are going up.

And then I sort of compared it to our assault rates. It's like 2-1/2 times, if you bring it down comparisonwise size of the institution. Their homicide rate is extremely high. You look between 2000 and 2006, and the average is 11.34 homicides within their system. If you applied that to my system, we would have three a year. During that period of time, we've had three over that period of time, not three a year. Suicide rates, from what I've read and from the numbers of that I've seen, they're just about twice what the national average is.

All of those things show me that you have a system that isn't safe. They rely largely on lockdowns to control their system, and they have to do that. I mean, you can't have people running around hurting people. But, you know, I think in 2006, they had 449 lockdowns, which averaged 12 days a lockdown. And they had 20 or so of those lockdowns that were over 60 days. Those things impact upon your ability to properly deliver any service within an institution, including mental health and medical services.

[219] Q. and you mentioned a lot of factors that go into the delivery of care and the operation of the prisons. In terms of the most important, which one is most important in your mind?

A. Most important?

Q. In terms of inhibiting the ability of—

A. I think from everything that I've seen and all of the reports and information that I've seen, I think the biggest inhibiting factor right now in California being able to deliver appropriate mental health and medical care is the severe overcrowding of their system.

Q. And do you believe that they are going to be able —based on your experience in Pennsylvania and the information you've reviewed, do you believe they'll be able to provide adequate care without reducing the population to a manageable level?

A. The only way that I could see that that could occur is if we're willing—or if they're willing to wait for many years, spend huge amounts of money. And I'm not even sure that that would get them there, because, you know, over the last 20 years they've spent billions of dollars on construction and building, and they haven't really been able to dig their way out of the hole.

So I think it would be very difficult to just, you know, say, rely on construction alone to deal with this problem. I think they have to find some way to fairly substantially reduce the inmate population.

[220] Q. And in terms of your experience of trying to build your way out of the problem, can you explain

why you—why you don't think that is a timely response to the issues?

A Well, the reason I don't think it's a timely response is when I look at what's happened in my state, and even some other states around the country, people aren't really willing to put the kinds of money into that that needs to be put in. So we'll have approved projects to build a new prison or to build five new prisons, and it's very slow coming because even though the project is approved, somebody has to release the money for design and somebody has to release the money for construction.

So in my experience, you know, states want to spend as little as they can on the prison systems because there's so many other competing things out there. I mean, you know, you have healthcare and education, the elderly and all these other important things to spend money on. So they tend to only spend what they absolutely have to, and that's why I think they're never able to build their way out, because they never really sit down and say, okay, we got to build 20 new prisons, or whatever it is.

Q. What about issues of siting in the community?

A. You know, I mean, I don't know if by that you mean the AB 900.

Q. No. I mean the ability of communities to accept prisons in their neighborhoods.

[221] A. Okay. Well, there's no question that that's a problem. We had that problem in Pennsylvania. You have that problem around the country.

I had—excellent example. We had an old prison, over a hundred years old. We wanted to close it. We wanted to build a new prison near it. It was in the

Pittsburgh area. We couldn't find a site nearby. We kept getting run out of town; there's a school too close, or whatever. We ended up having to build that in some more rural area, far removed from where we wanted to build it.

And I think you are going to find the same thing here, particularly, you know, if you want to build a lot of reentry facilities. You should build those reentry facilities near your major metropolitan areas where most of your inmates come from. I think it's going to be very, very difficult to site those facilities close to those areas.

Q. Couldn't the problem—could the problem of the lack of healthcare be caused by the culture of the prison system in terms of the custodial interference with the delivery of care rather than overcrowding?

A. Well, from what I can see, you know, the culture is a problem. There is no question about that. But you got to look back where did this culture come from. And at least from what I've read, California back in the early 1970's was one of the most progressive systems in this nation, and they went from [222] being one of the most progressive systems to being one of the most overcrowded systems in this nation, and they did that because of all the laws, and the drug laws, and all the things, the mandatories, and the two strikes, and three strikes, and everything else that drives that population.

Now, if you fix the crowding problem, that doesn't fix all the problem. You do have to deal with the culture, but you have to realize that the culture grew out of the overcrowding.

If I'm running an institution, if I'm a warden of an institution, my first job is to see that that institution runs safely for my staff and for my inmates, and if it's not running safely, I've got to take the steps that I've got to take.

And from what I can see, California, they have inmates coming in, so they have to have bed space. They have to find a place to put people. They are having a difficult time controlling their prisons, so they have to take a strong custodial approach to it. They have to rely on the lockdowns. They have to rely on guns, gas, those kinds of things, to control the prisons so they're safe for the staff and for their inmates.

If you try to change that culture, you can't. You can't change the culture until you reduce the population and can make the institution safe. But then you do have to deal with the culture and try to change that as well.

* * *

[230] By Mr. Specter

Q. Dr. Beard, You have been a corrections professional for 36 years. Have you ever testified in a case—in a plaintiff's case?

A. On what?

Q. For the plaintiffs.

A. No.

Q. And you're here as a non-retained expert. That means you are not being paid for your testimony, correct?

A. That's correct.

Q. Could you explain to the court why you are—you took the time out from running your system to come to California to testify today?

A. Well, it's sort of—I guess its a complex answer. Maybe it's not a complex answer.

I have given 36 years to—in trying to see that we run a safe system in Pennsylvania, safe for inmates, safe for staff, and that we provide the proper care, whatever that care may be, whether it's medical, mental health, whatever the care is, to the inmate population.

And when I came out here to California, I met many very good people that worked for the California Department of Corrections, people who want to do the right thing, people who want to move ahead. And I began looking at all these reports over the last 20 years, the Little Hoover Commission, the [231] independent review panel reports, and I see that California has this problem that has just been going on and on and on for years and years and years, and nobody seems to be willing to step up to the plate and fix the problem. And as a result of that, they have hugely overcrowding prisons. They have—they're unable to provide proper care in some cases, mental health care and medical care within those prisons.

And, more importantly, to me, as a former warden is the prisons aren't safe. They aren't safe for the staff and the inmates, and they have to rely on all these different unusual kind of things to control those prisons.

I guess if there's anything that I can do to help see that California moves in a direction that will allow the people that work within the California Department of Corrections to start running a good, safe system and providing the proper care they should be providing to those people that are put into our charge and to be enabled to do the programs for the inmates so when those inmates are released, the public safety isn't adversely affected. I suppose if I can do anything to help in that, that's why I'm here today.

Q. Thank you. Couple more questions.

You mentioned you've reviewed various reports from Dr. Shansky, the Special Master, the Receiver, Ms. Woodford, Mr. Scott and the like. Did you—are those type of reports that you would generally receive as secretary?

[232] A. Yes. As secretary of corrections in a relatively large state, you can't be everywhere all the time, and so you have to rely on data that you get from the institutions. You have to rely on reports that you get from your superintendents or, in my case, I also have my regional deputies that go out with teams on a regular basis to review what's going on, to tell me what's going on in my prisons, and I visit them myself as well, but I can't be there all the time.

So I rely largely on those reports, and what I read in these expert reports that you mention, that's the kind of information that, if I got those kinds of things, I would be very, very concerned about.

I know Wayne Scott. I know Jeanne Woodford. These people are consummate professionals. They have been in the business for over 30 years. The kinds of stuff they write in their reports are the very kinds of things I could see me writing if I was walking through the same institutions and seeing the same things.

Q. If those reports referred—instead of referring to the Department of Corrections in California, they referred to the Pennsylvania Department of Corrections, what would be your reaction?

A. My reaction would be that I would not be sitting here today; I would be back in Pennsylvania fixing whatever problems I needed to fix.

* * * *

[234] A. I didn't know it at that time, no.

Q. Do you know it now?

A. The physician-to-inmate ratio?

Q. Yes.

A. Our primary care physicians and Pa's is about 3.14 per thousand.

Q. Do you know what the rate is for mental health clinicians?

A. For psychiatrists, 1.45 per thousand.

Q. Psychiatrists?

A. Pardon?

Q. You said for psychologists?

A. Psychiatrists.

Q. I'm sorry.

A. We have far more psychologists, and I don't have the ratio of the psychologists, but most of our institutions have six, seven. Depends on the size or more psychologists. Psychiatrists is 1.45 per thousand.

Q. You've never evaluated the delivery of medical and mental health care in California's prisons, correct?

A. I have not personally visited any of the prisons to evaluate that care. I've only reviewed the reports that we mentioned earlier.

Q. Including trial affidavits of plaintiffs' experts in this case, correct?

A. Pardon?

[235] Q. Including the trial affidavits of plaintiffs' experts in this case, correct? When you say "the reports of the experts," you are referring to plaintiffs' experts, correct?

A. Yes. I have—you mean I didn't review the defendants' experts?

Q. I'm just asking if you reviewed plaintiffs' expert reports, correct?

A. And defendants' experts reports.

Q. And during your testimony, you indicated those were the types of things you would review if you were—those are the types of items that you review in your position in Pennsylvania, correct?

A. That's one of the kinds of things that I would be reviewing. Inputs from my doctor, we have doctors that work for me that oversee the healthcare. I have a psychiatrist that works for me. They provide me reports. So they may not be exactly like these reports, but they're similar. They would provide me a report if we have a death somewhere, whether that death was an appropriate death or not, that kind of thing.

Q. You review experts' reports, correct?

A. Yes.

Q. Do you regularly review litigation reports from experts in a case?

A. No.

Q. And it's true that you've never evaluated whether [236] deficiencies exist in the medical and mental health care delivery systems in California as well, right?

A. You have to rephrase what you're asking there.

Q. Sure. You have never evaluated what, if any, deficiencies exist in the medical and mental health care systems in California prisons—

A. No, I have not personally gone to the prisons and done that. I've only reviewed the reports we talked about.

Q. And in the last two years you've visited one prison, correct?

A. That's correct.

Q. Which prisons was that?

A. That was Old Folsom.

Q. When was that?

A. A little over a year ago.

Q. During your testimony, your direct testimony with Mr. Specter, you mentioned the problems that could possibly exist at reception centers; do you remember that testimony?

A. Yes.

Q. And you discuss the fact that if reception centers are overcrowded, that screenings might be missed, correct?

A. Yes.

Q. Are you aware of any inmate in a California prison who suffered an adverse medical or mental health consequence as a result of a missed screening?

[237] A. No.

Q. When you were deposed by me in this case, you could not remember why you had toured Folsom prison, but it was not in connection with evaluating the status of the delivery of medical or mental health care, correct?

A. I did not tour that prison to review the mental health or medical care. That's correct. It was done, I believe, more for the expert panel looking at programs and stuff.

Q. As a high ranking prison administrator, you do not support the use of anecdotal evidence to evaluate a prison or prison system, do you?

A. I certainly do not support anecdotal evidence, no.

Q. You agree that a single event at an institution does not necessarily apply across the entire system, correct?

A. I would agree if it's only a single event, that that should not apply across the system.

Q. And you testified, I believe, that you served on the expert panel, right?

A. Yes.

Q. Okay. And that expert panel looked at the effects of overcrowding on programming, not medical and mental health care, correct?

A. Yes.

Q. You use the term "operable"—

A. Excuse me.

* * *

[240] California's prison system, have you?

A. No. As I testified in a deposition, in order to do that, I would have to go out and visit every facility. Certainly something I'm capable of doing, but I would probably have to retire from my current job to have the time to do that.

Q. Right. So you have no idea what California's operable capacity is?

A. I have no idea what the operable capacity is, but as I said in the deposition, I did review the independent review panel's report of 2004 where a group of experienced wardens said that about 145 percent would be the maximum that the system should go for. And having met many of the staff out here I would think that a group of experienced wardens in California would have a pretty good handle on what the system could handle.

I also saw that the strike team had recommended a capacity of 130 percent. So that would lead me to conclude, if I went out and went through all of the facilities, I would come out somewhere in that 130 to 145 percent of capacity as an operable capacity for the system.

Q. But you have no idea unless you actually did it yourself?

A. That's correct, unless I did it myself.

Judge Karlton: Well, he said you have no idea.

The Witness: That's true. I'm sorry, Your Honor. I do have some idea based on what my comments that I just made to you.

[241] By Mr. Mello

Q. You believe that constitutionally adequate medical and mental health care can be provided in overcrowded conditions, correct?

A. I believe that it can be provided up to certain limitations of overcrowding, yes.

Q. And you believe that increased numbers of qualified and competent nurses, physician's assistants, doctors, psychologists, psychiatrists would improve the quality of medical and mental health care in California's prisons, correct?

A. It may. It depends whether you have all of the other infrastructure to support the staff.

Q. And that infrastructure would include correctional officers?

A. Well, the infrastructure would include correctional officers, but it would also include space to do exams, places where there's privacy so it can be done privately, you know, places that are, you know, sanitary and clean. And also the ability to provide the proper level of care once you determine what that is.

And, again, that requires a space. That requires someplace to put people. And at least from what I've seen in the reports, that seems to be a huge problem out here.

And then also, as I've mentioned, you can't be having all these lockdowns all the time, because then that is going to interfere with the ability to provide the care as well, and that [242] gets back to the safety of the system.

Q. And I believe—

Judge Henderson: Excuse me, Mr. Mello. I find the question a bit vague. Increased medical, nursing, doctors, increased from what? From when the suit was filed? From where we are right now? What do we increase all of that from to make it better?

By Mr. Mello

Q. Secretary Beard, do you have any understanding of the increased number of correctional officers since the appointment of a receiver in Plata in October 2005 through the end of August 2008; do you know what that number is?

A. I don't know what the increase is, but I know that they do have more corrections officers today, and so that is one problem area that should be of somewhat less concern.

Q. Okay. If the number increased by 2,200, do you believe that would help improve access to medical and mental health care?

A. Well, as you said, I haven't gone out and personally looked at it, so I wouldn't want to make that kind of—I wouldn't want to answer that question.

Q. Understood.

So you couldn't, based upon your experience and the reports you've reviewed, evaluate whether care would improve if the number of correctional officers increased by 2,200 correctional officers since October of 2005, correct?

[243] A. As I said, that was only one of the things I read about in the reports.

Judge Karlton: Dr. Beard, whatever the level of improvement, from your own experience, providing greater numbers of correctional officers, particularly if you have been short them, has got to have some improvement. The question is whether it makes any long term difference, which is a different question Mr. Mello is asking you about. But even one more is some incremental benefit, would you not agree?

The Witness: I would agree with that, Your Honor.

By Mr. Mello

Q. And you would agree that the hiring of 1,400 physicians and nurses since July of 2007 would have some incremental value to the delivery of medical and mental health care, correct?

A. Yes.

Q. And you testified that you believe Pennsylvania is currently providing constitutionally adequate medical and mental health care to its inmate patients, correct?

A. Yes.

Q. Do you know the average age of the offenders in Pennsylvania's Department of Corrections is 37?

A. Yes.

Q. Mr. Specter asked you about it. It sounds to me like maybe since your deposition, you reviewed the department of justice report?

* * *

[249] report?

A. Yes.

Q. You also reviewed the Deukmejian report, the Little Hoover Commission Report, the governor's emergency proclamation?

A. I did.

Q. You were part of the expert panel in 2006?

A. I was.

Q. And who created the expert panel?

A. California Department of Corrections, as far as I understand.

Q. As I understand it, you worked closely with a lot of members of that current—or not the current one, but the California Department of Corrections staff at that time, correct?

A. I did.

Q. Do you stay in communication now with the California Department of Corrections staff?

A. I've talked to the current secretary.

Q. From your experience in working with the individuals here in California that are responsible for the management of our prisons and the delivery of the healthcare in the prisons, I think you told us in your testimony earlier that good people want to move ahead trying to fix the problems; is that correct?

A. That's correct. That's my assessment of the people that I talked to, yes.

Q. They study the problem. They're doing what they can to fix [250] the problem. And you've actually seen over the—at least the last 18 months to two years steady improvements in the system, correct?

A. From reading the reports, there does seem to be some improvements over the last months, yes.

Q. In Pennsylvania the Department of Corrections is responsible not only for the conditions in the 27 prisons, but also for the county jail system, correct?

A. No, that's not correct. We—if you would like me to explain? Under the law there's a thing called Title 37, and there is—we go in and inspect those prisons, but we are not responsible for the operation of the—I mean, the county jails. We inspect them, but we're not responsible for their operation.

Q. But the Department of Corrections is responsible to ensure that the jails meet minimum standards, correct?

A. We do do reports to see that they meet certain standards, yes.

Q. And you found that in maintaining or in evaluating the conditions of the jails, that some do a very good job and some do a very poor job, correct?

A. That's correct.

Q. Of the institutions or the jails that you found did a poor job, you said that—or do you recall saying that the poor job or the bad conditions usually stem from things such as [251] overcrowding, lack of maintenance, understaffing, things of that sort, lack of resources?

A. I'm not sure what document you are talking about there, but from my review of the various reports that are done by my staff, overcrowding is a significant issue in some of the county jails that create the problem. Infrastructure problems, sanitation problems, those things are problems that I do see in the reports that I get from the county jails in Pennsylvania that are not doing what they should be doing.

Q. And it is generally from a lack of resources, correct?

A. Generally, it is a lack of resources, yes.

Q. And, generally, it's not for want of the people in the positions to want to do a good job and provide—

A. I would say in most cases that's correct. Every once in a while you run into somebody that really doesn't know what they're doing or isn't doing the proper thing, but, generally, yes, I think generally people want to do the right thing, and if they had the resources, they would.

Q. Generally speaking, that's what you've seen here in California—

A. From the people that I've talked to, yes.

Q. And the leadership, correct?

A. Yes.

Q. Now, the Pennsylvania correctional system had an overhaul that was instigated in part from riots that took place and from [252] a lawsuit that was filed, Austin Versus Department of Corrections?

A. Yes, I mentioned that earlier.

Q. And that led to a lot of reform measures being passed, correct?

A. Certainly did.

Q. And that lawsuit dealt with overcrowding and the lack of the provision of adequate medical and mental healthcare in the Pennsylvania prisons, correct?

A. What was the first part of your thing?

Q. That lawsuit dealt with the lack—

A. It dealt with not having enough resources. I would have to go back and read exactly what the lawsuit said. That's a long time ago. So, you know, if you are reading something from that document—from that lawsuit, I would assume that's accurate, because we were overcrowded at the time, and, you know, we weren't providing the care that we should have been providing.

Q. Medical and mental health care?

A. Yes.

Q. And that case was ultimately settled?

A. Yes.

Q. And in the settlement, the terms of the settlement to resolve the issues of the lack of adequate mental and medical care in Pennsylvania, you addressed—or the settlement addressed approximately five different areas, which I think you [253] alluded to earlier from the minimum number of medical and mental health, including dentists, to policies and procedures, sufficient equipment at facilities, quality assurance programs and monitoring, correct?

A. You are reading from that report. I haven't read that Austin suit for 20-some years. I will just have to say if that's—if you are reading from the report, then maybe that's accurate. I can't say that's accurate without seeing it.

Q. If the settlement covered particular—specific five areas that required improvements in the provision of medical and mental healthcare—

A. It provided for various improvements in mental health and medical care. How many exactly it was and what all those things were, I can't—I can't directly recollect without reviewing the document.

Q. In any event, it led to Pennsylvania, in your opinion, achieving constitutional healthcare and mental health care—

A. It had never been proven that we were unconstitutional at the time, but it certainly improved both the medical and mental healthcare in Pennsylvania.

Q. That was all done without a prisoner release order, correct?

A. Pardon?

Q. All done without a prisoner release order?

A. That was done without a prisoner release order, that's correct.

[254] Q. Mr. Mello touched on the death rates in Pennsylvania. Judge Karlton: sir, can I interrupt for just a moment. That's not an unimportant point.

You indicated that—I think you indicated—if I am misstating, feel free to say I got that wrong—that at least part of the problem that Pennsylvania faced when the suit was filed was overcrowding; is that right?

The Witness: That's correct.

Judge Karlton: But you achieved somehow or other a satisfactory mental and medical health without a prisoner release order. Did you do anything about reducing the prison population without a prisoner release order?

The Witness: No. No. We didn't reduce the prison population at that time. In addition to some of the changes that we made in the mental health and medical care, we also went on an aggressive construction program and added a lot of cells to the system.

And we weren't really in—as I recollect, in the position where we didn't have space to do things. It was more that we didn't have enough staff to do things, that the staffing ratios were not seemed to be appropriate. And so the—whatever changes we had to make, equipment, personnel, and stuff, we were able to make it within our existing system to meet the needs of the settlement.

Judge Karlton: Assuming that California's prison [255] system is not in that desirable of shape, do you believe that—do you believe that a constitutionally sufficient medical and mental health system can be achieved through additional building, understanding that would take time? But setting aside the time question, would you agree that that could occur?

The Witness: Theoretically, yes, sir. Yes, Your Honor.

Judge Karlton: But you don't believe it practically? Theoretically, yes; practically, no. Why?

The Witness: Well, I don't believe it practically because of the time that it takes and the costs that it takes, the huge costs that it takes to do things like this. And at least from my experience, states just haven't been willing to move ahead with that kind of thing and to do that. So—and construction, if you start building today, at least in my state, I probably can't get a prison in three years. It's probably going to be closer to four years to get a prison up and running. And then if you need a whole bunch of prisons—you know, for instance, one of the problems or concerns I have about AB 900 is the in-fill backs, because all you're doing is building another place for these people to be. It's still an overcrowded prison.

So, you know, you'd have to go out and build a whole bunch of prisons to really do this, and that's going to take you years, because you are going to be three or four before you get the first prisons, and you can't build, like, you know, 30 [256] prisons all at once. So you'd be, like, seven, eight years out, nine years out before you get to the place where you have the proper thing.

That's why I think the construction, in my mind, while certainly it should be a part of any plan and should be part of a plan, if you try to rely on that alone, you are probably never going to get there, because they haven't been able to get there over the last 20 years.

Judge Karlton: Sorry to have interrupted, counsel. Mr. Mitchell: thank you.

By Mr. Mitchell

Q. regarding the death rates that you and Mr. Mello spoke about, would you agree that the majority of deaths result from conditions present at the time of incarceration in a prison system?

A. Would I agree that the majority of deaths result from the conditions in the prison system?

Q. No. Conditions that are present in the individual inmate at the time of incarceration.

A. Where are we talking about?

Q. They come into the prison with their diseases.

A. Well, many inmates do come in—inmates are not as a rule a healthy part of our population. They have bad lifestyles. They get involved in a lot of things they shouldn't get involved in, which does drive some of the healthcare issues and problems that

* * *

[259] Mr. Mitchell: Thank you, Dr. Beard.

Judge Henderson: Counsel, redirect?

Redirect Examination by Mr. Specter

By Mr. Specter

Q. Mr. Mitchell asked you questions about the—about whether the staff in California want to do the right thing and provide the care and custody that their prisoners are constitutionally entitled to in prisons; do you recall that discussion?

A. Yes.

Q. Do you believe under the current overcrowded conditions they can do the right thing?

A. No.

Mr. Specter: No further questions.

Judge Henderson: Okay. That looks like—

Judge Karlton: Let's excuse the witness first.

Judge Henderson: That's what I was going to say. It looks like we're finished with the testimony. Thank you very much for appearing, Mr. Beard. We will now take a 15-minute recess.

(Recess taken.)

Judge Henderson: Okay. You may call your next witness when you are ready, counsel.

Mr. Specter: Thank you, Your Honor. Plaintiffs call Joseph Lehman.

Judge Henderson: Step forward and be sworn in, sir.

[260] Joseph D. Lehman,

Having been called as a witness by the plaintiffs was first duly sworn and examined as follows:

The Witness: I do.

The Clerk: Spell and state your full name for the Record.

The Witness: Joseph D. Lehman, L-E-H-M-A-N.

Direct Examination by Mr. Specter

By Mr. Specter

Q. Good morning, Mr. Lehman.

A. Good morning.

Q. Mr. Lehman, what's your current occupation?

A. I am the administrator of a parish, a church, in Lakewood, Washington.

Q. Are you in any sort of training program?

A. Yes, I am, in the Deacon Formation Training program, which is an ordained minister's program.

Q. Before that, you worked in corrections, did you not?

A. Yes, I did.

Q. And for how many years?

A. Approximately 35 years.

Q. And during that time, were you in charge of any states' prisons systems?

A. Yes, I was.

Q. Which ones?

[261] A. Pennsylvania, and Maine, and then the state of Washington.

Q. And which state did you spend the majority of your time in corrections?

A. In the state of Washington.

Q. How many years did you work there?

A. About 29 years.

Q. And could you briefly describe what positions you held, just briefly, please?

A. I worked in all parts of the corrections department, including the community side, the prison side, work release, and in management of the system.

Q. And during your time in Washington, were you responsible for the operation and/or management of any of the prisons?

A. Yes, I was.

Q. How so?

A. I was, in fact, what we refer to as a Command Manager of a complex of three prisons in Monroe, Washington, and subsequently I was the Director of Division of Prisons.

Q. And could you describe the chronology of—first, you were in Washington, then what state did you go to in what capacity?

A. Of course, first I was in Washington until about 1990. I went to Pennsylvania to head up the Pennsylvania Department of Corrections. Subsequently, to the state of Maine to head up their department. And, ultimately, back to Washington to head up the Department of Corrections in Washington State.

[262] Q. I see. When you became the Secretary of Corrections in Pennsylvania, did you reorganize that department in any way that affects the delivery of healthcare?

A. Yes, I did. When I came into the Department of Corrections, there was not a centralized authority. There was not a centralized authority in relation to healthcare, so I created a Director of Healthcare Services.

Q. And did you do something similar in Washington state?

A. Yes, I did. The same set of circumstances. Healthcare existed within the prison system, but there was no coordination of that healthcare, no means of ensuring continuity, so I created a director of healthcare services in the state of Washington.

Q. Could you maybe—I'm having trouble hearing you, and it's not you; it's the acoustics in the room. So maybe you could just stay away from the mic just a little bit.

When you created those divisions, did you still maintain any responsibility for healthcare?

A. I was certainly responsible for the promulgation of the policies and procedures, ultimately for the policies and procedures of the healthcare program, as well as for the oversight of the director of healthcare services.

Ms. Johnson: Your Honors, excuse me. I couldn't understand any of that answer.

Judge Karlton: I don't know what we can do. You

* * *

[267] The Witness: I do not know, Your Honor.

By Mr. Specter

Q. In your opinion, could you have provided—well, you eventually resolved the lawsuit and were able to provide what you believe to be constitutionally adequate healthcare; is that right?

A. That's correct.

Q. And could you have provided that adequate care without reducing the prison population?

A. Did I provide the care without—

Q. Could you have done that without—

A. No.

Q. Okay. Now, you're familiar with the term "hot bunking"?

A. Yes, I am.

Q. It's been described before by Mr.—Dr. Beard, so I won't bother asking you what it means again. But have you ever heard of it being done in prisons?

A. No, I have not.

Q. And it was never done in any of the systems, including Pennsylvania?

A. It has never been done in any system that I ran or am familiar with.

Q. Okay. The state of California, did they ask you to participate in what is commonly referred to as the expert panel?

A. Yes, I was asked to participate in that endeavor.

[268] Q. And you were asked by the State of California, correct?

A. That's correct.

Q. And that panel was designed to provide recommendations to the state for improving programming within the Department of Corrections and Rehabilitation; is that correct?

A. That's specifically rehabilitative programming.

Q. Right. When was that?

A. It was—the panel was pulled together in December of 2006. It really actually operated in 2007.

Q. Okay. After that panel completed its work, did the state ask you again to perform any other service?

A. I was asked to participate along with a couple other individuals, on what they referred to as a strike team, governor's strike team, to assist in the implementation of the recommendations.

Q. During—what was the first recommendation of the expert panel?

A. Reduce overcrowding.

Q. Okay. And was that because the panel believed that without a reduction in overcrowding, it would be difficult, if not impossible, to provide the programming the panel also recommended?

A. That was quite evident. It was a prerequisite to doing anything else.

Q. And the same logic applies to providing many healthcare [269] services, does it not?

A. That is correct.

Q. And in the course of this work on rehabilitative programming, you became aware of the overcrowding in California's prisons; is that right?

A. Yes, I did.

Q. Okay. And you toured some of the prisons in connection with that work?

A. In connection with the expert panel and the strike team, yes.

Q. Okay. What was your impression from the tours as it relates to overcrowding?

A. It was immediately evident, given not only the testimony of the staff that were present, but the fact that we were observing otherwise program space, such as education space, filled with inmates in terms of dormitories, as well as recreations, gyms filled with beds and bunk beds.

Q. And did you talk to any staff during your tours?

A. Yes, we had conversations with the staff, external custody staff, within the cell blocks.

Q. And did they tell you anything that relates to overcrowding?

A. They indicated that it was a very difficult situation to be in. They certainly recognized, as we did, the overcrowding and triple bunking and indicated it was a difficult—it was difficult to operate in those circumstances.

[270] Q. Okay. And in your experience—you know that California's about 195, 196 percent of design capacity, correct?

A. Yes, I do.

Q. In your experience, have you ever known of a correctional system that was this high?

A. Never.

Q. Okay. In your experience, how does overcrowding affect the delivery of healthcare?

A. Well, initially, overcrowding in and of itself contributes to the difficulties of healthcare delivery by virtue of the fact that it increases the incidence of illnesses, infectious disease. It increases the amount of tension, the level of violence, certainly requiring responses, both in terms of custodial and medical.

It is a situation where the demand significantly outstretches the ability to respond to the healthcare needs, both in terms of timing and actual service.

Q. And you're aware that the courts in the two cases that we're present—of this present proceeding have either declared or there's been a stipulation to the fact that they're unconstitutional; is that correct?

A. Yes, I am.

Q. The delivery of care is not adequate, correct?

A. Yes.

Q. Based on the information you received about California's [271] Prison system, what's your opinion about whether overcrowding is the primary cause of the unconstitutional healthcare?

A. I think that is the primary cause of the inability to provide the services. It's overwhelming the system both in terms of sheer numbers, in terms of the space available, in terms of providing healthcare.

My understanding, for example, is you could have an institution at 200 percent capacity, but the healthcare—the physical space provided is based on the hundred percent population as opposed to 200 percent. So it's simply not able to provide the services that is required.

Q. Okay. You are aware that the receiver—judge Henderson appointed a receiver to improve the medical care system and then actually to run the medical care system in California?

A. Yes, I am.

Q. What do you say to the argument that the court should not reduce the population because there's this receiver who's got authority to make improvements?

A. I think you have to address the overcrowding. It is so overwhelming, it's overwhelming in the sense of not—of not being able to meet the immediate demands, but it's overwhelming, exasperating the problem in the first place. You cannot Provide—in my opinion, you cannot provide adequate healthcare and mental healthcare under the current situation of crowding within the state of California.

[272] Q Is that true even though the receiver has been able to hire additional both custodial and clinical staff?

A. I understand that, but the problem still exists because where's this space that you are going to provide those services in? I mean, where are the providers going to work and how—and, by the way, the actual reports indicate they are not able to provide the services.

Q. so would that—would it be fair to say that unless you have what we've referred to as the infrastructure to allow the care to be provided, just hiring staff itself isn't going to work?

A. It's not going to—it's not going to, given the overcrowding.

Q. Now, when you were the secretary of the Department of Corrections in Pennsylvania, the population in the prisons was—it was overcrowded, right?

A. Absolutely.

Q. Did you inform the governor of your state, of that state, of that problem?

A. Yes, I did.

Q. And what was his response?

A. His response was, well, we have to, in fact, engage in activities to, in fact, reduce that population.

Q. Now, if you were the secretary of corrections for the department of California, what would be the first thing you'd [273] say to the governor?

A. I'd say to the governor, you are not going to provide adequate services to this population without reducing the population.

Q. Okay. Now, two last questions for you.

In your—is it 35 years of experience?

A. Yes.

Q. —thirty-five years of experience, how many times have you testified on behalf of prisoners?

A. This is the first.

Q. And why are you doing this today?

A. I think the situation in California is so egregious—I mean, I've worked in systems where there was overcrowding, a level of overcrowding. Washington state system was 150 percent when I took over as secretary. It was 107 when I left. The Pennsylvania system was, in fact, over 150 percent overcrowded. It was down to operating capacity when I left. You have to deal with the overcrowding.

Q. It's as simple as that?

A. Yes.

Mr. Specter: Thank you. No further questions.

Judge Henderson: thank you, counsel.

Does CCPOA counsel have any questions of this Witness?

Ms. Leonard: No further questions, Your Honor.

* * *

[277] Q. Okay. Well, if I could refresh your recollection, when I asked you the same question at your deposition you said you didn't recall having read those types of articles.

A. Well, the articles I did. I'm sorry.

Q. So you served on the California Department of Corrections and Rehabilitation expert panel on adult offender and recidivism reduction program, correct?

A. Yes, I did.

Q. And that title kind of speaks for itself, doesn't it?

A. I think so.

Q. So that expert panel did not address healthcare issues in California's prisons, did it?

A No, it did not.

Q In your report—

Judge Karlton: Dr.—I'm sorry. Mr. Lehman, do you have to be a doctor to figure out that you got to have the space to treat people in order to treat them effectively?

The witness: no, you do not. In fact, it would be the secretary's responsibility to assure there were sufficient space and access to those services.

By Ms. Johnson

Q. In your report that you prepared for this case in August of 2008, you did not review—in preparing that report, you did not review any of the Plata receiver's reports, correct?

A. No, I did not, at that time.

[278] Q. In preparing your report, you did not review any of the Coleman special master's reports, correct?

A. No, I did not.

Q. In preparing your report, you did not know what the space needs were for medical or mental healthcare in California's prisons, did you?

A. Specifically, no.

Q. You did not tour a single one of California's 33 prisons for the purposes of preparing your opinion regarding the impact of overcrowding on medical or mental healthcare, did you?

A. Not for those purposes, no.

Q. When you prepared your report, you did not have knowledge of the status of medical care delivery in California's prisons as of August 2008, did you?

A. I'm sorry. Repeat the question.

Q. When you prepared your report, you did not have knowledge of the status of medical care delivery in California's prisons as of August 2008, did you?

Mr. Specter: object as vague.

Judge Henderson: vague? Vagueness?

Mr. Specter: vague.

Judge Henderson: let me ask the witness. Do you understand the question?

The Witness: Repeat the question.

[279] By Ms. Johnson

Q. When you prepared your report—

A. Yes.

Q. —you did not have knowledge of the status of medical care delivery in California's prisons as of August 2008, did you?

A. No, I didn't. Only about the overcrowding itself.

Q. When you prepared your report, you did not have knowledge of the status of mental health delivery in California's prisons as of August 2008, did you?

A. No.

Q. You did not prepare the first draft of your report in this case, did you?

A. I had conversations with Mr. Specter. We did talk about the overcrowding. We talked about the impact of the overcrowding in the system, particularly in terms of its classification, the appropriate housing of inmates. On that basis the report was drafted.

Q. Did you write the first draft of your report, Mr. Lehman?

A. No. I asked Mr. Specter to do that based on our conversations.

Q. So it's your testimony that plaintiff counsel, Mr. Specter, wrote the first draft of your report?

A. Based—once again, based on our conversation.

Q. On page 3 of your report—if we could have that up?

(Document displayed.)

* * *

[285] [Judge Karlton: I keep forgetting those guys are there.

By Ms. Johnson

Q. "Severe overcrowding like that Affecting California prisons results in a lack of treatment and office space and decreased Access to healthcare services."

When you prepared your report in this case, you did not know of even one specific instance in the preceding year where a prisoner was denied access to healthcare services due to severe overcrowding, did you?

A. I did not know of a specific case.

Q. On page 4 of your report, again at paragraph 10, you wrote: "overcrowding reduces the opportunity for prisoners to program which causes obvious Idleness."

You are not aware of any instances where prisoner idleness resulted in the denial of needed mental healthcare or medical healthcare, are you?

A. Specific cases again, no.

Q. At times when you were secretary of the Washington State Department of Corrections, the prison population exceeded the system's design capacity, correct?

A. That's correct.

Q. At times when you were secretary of the Washington State [286] Department of Corrections, the prison population exceeded the prison system's operational capacity, correct?

A. That's correct.

Q. It is your opinion that the Washington State Department of Corrections was still providing adequate medical and mental healthcare at the times the prisons were above even operational capacity when you were secretary, correct?

A. That's correct.

Q. So, in your experience, it is possible for a prison system that is above operational capacity to provide adequate medical and mental healthcare, correct?

A. Depending on the level of crowding, there is a significant difference of the level of crowding in the state of California and any other jurisdiction that I have been involved in.

Judge Karlton: but the question is—let's start from the beginning. It is possible at some level of overcrowding to nonetheless provide adequate care?

The Witness: At some level, yes.

Judge Karlton: But your opinion is that California's overcrowding, I take it that—feel free to tell me I got it wrong. I take it that your opinion is that California's system is so overcrowded that that is not possible?

The witness: That is my opinion. It is—I don't know of another state, Your Honor, that has experienced anything close to this level of overcrowding. It is just—it just [287] doesn't exist.

By Ms. Johnson

Q. When you were in Pennsylvania and you had that lawsuit that was brought after the riots—you and Mr. Specter spoke about on direct, you recall that?

A. Yes, I do.

Q. One of the solutions was shipping 800 of the prisoners to federal bureau of prisons?

A. That's correct.

Q. And another solution was building five more prisons in three years?

A. There were five prisons built in five years, but there was additional other things. We went to the legislature. We created new sentencing laws. It was a state similar to California. The sentencing grid in Pennsylvania at the time, Your Honor, initially was —only allowed for sentence of total confinement. We modified the grid and allowed more intermediate sanctions and non-total confinement centers.

Q. One of the solutions was to build more prisons, correct?

A. That's right.

Q. Mr. Lehman, just to clarify, you were paid by plaintiffs to testify in this case, were you not?

A. Yes.

Judge Henderson: Counsel?

[288] Cross-examination by Mr. Kaufhold

Mr. Kaufhold: Steve Kaufhold for the Legislative Intervenors.

By Mr. Kaufhold

Q. Mr. Lehman, I want to ask just real quickly about the resolution of the Austin case that you testified about earlier. Were you still the secretary when that case was resolved?

A. Yes, I was.

Q. And as part of the resolution of that case, or at the time of the resolution, did you believe that the Pennsylvania system was overcrowded?

A. Yes, I did.

Q. And when you—

A. At the time of the resolution or the time of the— in either case, yes.

Q. And when the case was resolved, the resolution did not involve a prisoner release order; is that correct?

A. That's correct.

Mr. Kaufhold: No further questions.

Judge Henderson: Redirect?

Mr. Specter: I couldn't hear his last answer. Could you read that to me, please?

Judge Karlton: The last answers was "yes."

Mr. Specter: I'm sorry.

Judge Karlton: "When the case was resolved, the [289] resolution did not involve a prisoner release order; is that correct?

"Answer yes."

Mr. Specter: Thank you.

Redirect Examination by Mr. Specter

By Mr. Specter

Q. Was the prison population—was the crowding lower than it was when the case was filed?

A. I'm sorry, counsel?

Q. I'll start—I'll back up a little bit.

Speaking of the Austin case?

A. Okay.

Q When it was filed, you were at about 150 percent of overcrowding, right?

A. That's correct.

Q. What was the percent of overcrowding when it was resolved? Was it lower or higher or what?

A. Actually, it was resolved within several months, and it was resolved on specific commitments we made in terms of building and reducing the crowding.

Q. Okay. And when the level of medical care met the requirements of the settlement—first, you had a settlement which required you to improve the medical care system; is that right?

A. That's correct.

* * *

[293] Judge Karlton: It's all in evidence, and she's just repeating it. And it's her time, if she thinks that is a useful thing to do, to spend it on.

Ms. Kahn: Shortening the time, Your Honors.

He's been qualified as an expert in numerous federal cases on prison conditions, including in the Coleman trial.

We now offer Dr. Haney as an expert on the psychology of imprisonment and impact of prison conditions, including overcrowding of prisoners in the prison systems.

Judge Henderson: court will find he is so qualified. Thereupon—

Dr. Craig William Haney

Was called as a witness on behalf of the plaintiffs, and after having been first duly sworn, was examined and testified as follows:

Direct examination

By Ms. Kahn:

Q. Dr. Haney, I would like you to briefly explain what is overcrowding in prisons and in what ways does overcrowding in prisons effect the functioning of a prison system?

A. Overcrowding in a prison system can be defined as a prison or prison system holding more people than it has the resources to humanly and safely accommodate.

So it means what it means in most other contexts: having too many people in a particular environment. But in a

* * *

[296] system at the time the prisoners are there. And then, there's this other dimension that I alluded to a moment ago, which is when prisoners are released from prison, if they are released with unmet needs or problems that have not been resolved or issues that have not been addressed while they are incarcerated, they are at risk of coming back into the system oftentimes with those problems the same or having exacerbated after they are released.

So, again, the period of time that the system is overcrowded matters, because the longer the overcrowding occurs, the longer the system operates, and the greater the number of unmet needs that aggregate over time, the worse the situation gets.

And as I said, as a result overcrowded, particularly severely overcrowded systems, tend to begat even more overcrowding, because they are not solving problems that over time either have to be solved or result in people coming back into the prison system at higher rates.

Q. In what ways is California's prison system overcrowded? A. It's overcrowded in virtually every conceivable way one would measure overcrowding. It's overcrowded in the sense of having far too few spaces for people to be housed. And in a

Certain sense, that's the most basic and focused definition of overcrowding. So as I'm sure the court knows, this system has been operating at roughly 190 percent of capacity.

[297] 190 percent of capacity comparatively speaking is almost an unheard of number, an unheard of amount of overcrowding operating at a level beyond physical or design capacity of the system.

The physical or design capacity takes into account not only the number of spaces that are available for people to live in, but design capacity also is calculated on the basis of programming in other necessary space within the system.

So a system that is operating at 190 percent of capacity has not only approximately half the spaces available for people to be housed in, but it also has approximately half of the spaces that are available to provide programming and other kinds of support within the system.

California is—so the depth of the problem or the magnitude of the overcrowding is almost unheard of. And I say that, when I say "almost unheard of," I mean even historically almost unheard of.

In a period of time in the last 30 years when lots of prison systems have been very overcrowded, a level of overcrowding of 190 percent is remarkable. It's not unprecedented, but it's remarkable.

California's overcrowded in another sense. And that is in the sense that the overcrowding is widespread. It is not restricted to just a few institutions. It's occurred throughout the system.

[298] So you're looking at individual prisons that are operating at 180, 190 or even over 200 percent of capacity. And that's essentially across the board in the system. It's overcrowded in a comparative sense.

I know of no other large prison system in the United States that is as remotely overcrowded as California is.

As best I've been able to determine, the only state that is as—that is even close to California in terms of extent of overcrowding is the state of Alabama, a very, very small system compared to California's.

And it's overcrowded in the final sense in that it is —it has been overcrowded for a long period of time. It began to be overcrowded 10 or so years ago. It has continued to operate. It began to be overcrowded even longer than that ago, but it began to be severely overcrowded 10 or so years ago and has continued to operate for the last five or six years at a level of overcrowding that, as I said, is roughly 190 percent of capacity.

And on all of those measures that is an extraordinary level of overcrowding.

Q. Dr. Haney, What is your opinion of whether overcrowding in the California prisons is the primary cause of the Çonstitutional violations in medical and mental healthcare?

A. Well, my opinion is for all of the reasons that I just stated that the level of overcrowding is unprecedented in that [299] There is no question that it is the primary cause of the unconstitutional provision of mental healthcare in the system.

Q. In forming your opinion, is it correct that you relied on key documents in the case produced by the defendants and special master and receiver, and you toured eight California prisons?

A. Yes, that's correct.

Q. During your tours did you speak with prison staff and interview prisoners during the eight prison site inspections?

A. Yes. Every one of the inspections there was a briefing, and then there were officials from the prison who accompanied us throughout the tour.

Q. Do you rely on these type of interviews with prison staff and prisoners in the course of your work as an expert?

A. I do all the time.

Q. Do others in your field rely on these type of interviews with staff and prisoners?

A. Yes, of course.

Q. Okay. Did you also on your tours of CDCR staff persons on the last four prison site inspections take photos that you directed to have taken?

A. Yes, we didn't have a camera in the first four, but we did on the second four. And we had photographs that were taken.

Q. Okay. I'd like to turn to the prison site inspections that you undertook in the case which formed the basis of your opinion, and ask you what you saw during the site inspections [300] that led you to include that overcrowding was the primary cause?

A. I saw a system as reflected in each one of these inspections that was overwhelmed with the sheer number of people who were confined there. These were systems that were choked with too many prisoners, not enough space, insufficient amount of staff.

In almost every direction that I turned I saw evidence and examples of this, of a system operating at roughly 200 percent of its capacity and straining under the weight of that capacity.

Unable to deliver services, unable to address the needs of the people who were in the system. I saw and heard from individual prisoners and numerous staff members about all of the overcrowding-related problems that they were confronting on a daily basis, whether it ranged from the kind of housing that prisoners were forced to live in in the California system, housing in some instances unlike housing I've seen anywhere else in any other prison system. And I've been looking at prisons for a long time.

I saw—

Q. And what type of housing were you talking about?

A. I'm talking about prisoners living in converted or makeshift dormitories. Prisoners stretched out in double and triple bunks as far as the eye can see. I'm talking about a very bizarre housing unit in California institution for men in the Colusa unit where there's a dormitory has been created inside the [301] housing unit in the dayroom of the housing unit and a chain link fence has been placed around the dormitory inside that housing unit.

There were dormitories in many of the regular housing units in the prisons that had been conveyed from dayroom spaces. As you probably know, most prison housing units have areas, dayroom areas where prisoners can congregate during the day when they are not in other activities and they are not in their cells.

In virtually every prison I toured and inspected many of these dayrooms had been converted into dormitories. So there were double and triple bunks now placed 20 or so on the side of each one of the—

Q. What other areas, Dr. Haney—excuse me—did you see where overcrowding had impacted the delivery of care during your tours?

A. What other kinds of areas?

Q. Besides housing?

Ms. Tillman: if I might just ask Ms. Kahn to get a little closer to the microphone. Her voice is not carrying—judge Henderson: do that, please.

Let us know if it works.

By Ms. Kahn:

Q. Housing was the first area?

A. Housing was very much connected to programming. So it's not [302] just how people were living, what they are doing in their cells, how they are being confined in their cells and what kind of cells or dormitories they are in, but overcrowding has a direct impact on programming.

The levels of idleness in the California Department of Corrections are severe and widespread. It is the case that roughly fifty percent of the prisoners who exit the California Department of Corrections at any given time have not participated in a single program, not an educational program, not a vocational training program, and not a work program.

So they have been idle during their entire period of time in the Department of Corrections. And that was obvious in the various housing units that I've toured.

So programming is impacted.

Judge Karlton: this is not a case in which the plaintiffs have charged that by virtue of overcrowding there is a general unconstitutional condition. It specifically relates to whether overcrowding is the primary cause of the failure to deliver constitutionally-adequate mental and physical health.

I don't want to cut you off, but I do want to get to what this case is about.

Ms. Kahn: Exactly.

Judge Karlton: would you discuss that with us, sir?

The Witness: Those things are related. The environment in which people live is related to their mental [303] health. The kinds of adverse living conditions that I saw are the kinds that have been associated with adverse mental health consequences in a number of different settings.

Idleness is also something which also undermines people's mental health. So we're talking about a system which is capable of either generating or exacerbating adverse mental health conditions as a result of the general conditions of confinement. But there were many other more specific issues that I confronted and observed as I went through these institutions that speak directly to Your Honor's point.

The access to appropriate levels of care was directly impacted by the level of overcrowding. And there were examples of this in numerous different contexts.

The ability of the system to move people who were in crisis, sometimes suicidal or decompensating prisoners in the mental health crisis beds. These are crisis beds covered by title 22.

There's a certain specified kind of bed, kind of bed a person who is in need of a mental health crisis bed are to be placed in.

There are time lines for placement of people in these beds. Everywhere I went in the system I saw alternative housing or waiting areas where prisoners who were waiting to get into these mental health crisis beds were being housed. Not for hours, but days at a time.

[304] In some instances in terms of the more short-term confinement, they were being housed in cages that exist in the different parts of the prison.

Sometimes in hallways, sometimes on the dayroom floor of a particular unit, they were housed in waiting rooms. They were housed in outpatient housing unit, unlicensed facilities or clinics within the prison system itself, backed up in the system awaiting an opportunity to get into a mental health crisis bed of the sort that they needed.

Judge Karlton: Let me interrupt, again, sir. In your view, is the delay which you are describing and the kind of housing units that were being occupied by people who were backed up, if you will, contributing to the mental health problems of the population; or they were just sick beforehand, and they couldn't get treatment, or both?

The Witness: I would say both, Your Honor. I believe that these were people who were, by definition, sick, but they were getting sicker as a result of their inability to get the appropriate level of care.

In some instances there were examples of people who started out relatively well who either had no mental health background or who were at a lower level of mental healthcare need. And I interviewed and saw in their records examples of them not getting the appropriate level of care, and then working their way towards more and more extreme needs, a higher level of

* * * *

[316] 5,000 people who need the mental healthcare provided in the EOP program is a measure of index of unmet need.

And that gap, that gap which I've described as unmet need, has been increasing over time, not decreasing. And that, too, speaks to the issue of overcrowding in my opinion.

Q. And how did overcrowding impact those 4,000 that could be housed in EOP programs?

A. Well, the overcrowding has impacted those people, even the people who are fortunate enough to be in the EOP program, in a number of different ways.

I talked earlier about treatment space. Many of the EOP programs are severely compromised in terms of the amount of available treatment space that they have. So even though there are EOP programs, they don't have a sufficient amount of space in which to engage in therapeutic or treatment activities.

They are impacted by staff shortages, as well. Staff shortages that are reflected not only in the actual vacancies, but also on the basis of the special master's workload study, vacancies or staff shortages which are even greater than those reflected in the actual Department of Corrections vacancies.

They're impacted, in addition, by another overcrowding-related issue that plagues the California systems: lockdowns. Lockdowns are used in the California Department of Corrections, i believe, in large part because of the profound level of overcrowding at a level that is unheard of in [317] corrections departments across the United States with which I'm familiar.

Lockdowns mean that prisoners, including EOP prisoners, if they are in a unit that is locked down, are essentially without programs during the periods of time that the lockdown is in place.

There are housing units in the California Department of Corrections that are locked down more often than they are unlocked.

There is a notorious facility in the Salinas Valley State Prison which is locked down almost all the time. And where obviously prisoners, some of whom are on the mental health caseload, are not receiving any treatment, therapy or otherwise, in the course of the lockdown.

Q. Thank you, Dr. Haney.

So can you quickly sum up why you concluded overcrowding is the primary cause?

A. I don't believe in a system this overcrowded at this magnitude of overcrowding with overcrowding as widespread as it has been in California for as long a period that it has been that there's any other plausible or credible explanation for the failure of the system to provide constitutionally-adequate mental healthcare.

The court's been monitoring this issue for many, many years. There have been many, many court orders, and there have [318] been many activities that have been engaged in in trying to bring this system's mental healthcare delivery into constitutional compliance.

In the face of all of those efforts there has been this overwhelming overcrowding problem of such a degree, magnitude and duration that it has incapacitated the system's ability to deliver constitutionally-adequate care. And I saw numerous examples of it when I toured, and numerous examples of it reflected in the documents I reviewed.

Q. Thank you.

Judge Henderson: I have a question that goes back, Dr. Haney. In the Salinas prison which you described as being under lockdown almost all the time, are you able to determine is this because of the level of overcrowding there is more severe, or do they have a warden who holds the lockdown trigger faster, or do you know?

The Witness: As best I can tell Your Honor is that particular housing, it's a large housing unit, about a thousand prisoners. We're not talking about a small unit in this prison. It's a facility that is locked down, and it's a facility that is beset with a lot of conflicts. And overcrowded systems tend to respond to conflicts with lockdowns. And that's what has been happening in California, and that's what is happening in that particular prison.

And what it results in is a large number of [319] prisoners, many of whom have mental healthcare problems, being locked in their cells around the clock for weeks and months on end.

Judge Henderson: Thank you.

CCPOA counsel have any?

Ms. Leonard: No further questions, Your Honor. Judge Henderson: okay.

Cross-examination.

Cross-examination

By Ms. Tillman:

Q. Good afternoon. This is Lisa Tillman on behalf of the Coleman defendants.

Good afternoon, Dr. Haney.

A. Good afternoon.

Q. Dr. Haney, I understand that you've testified in various courts, including federal courts, a number of times in a number of different cases; is that correct?

A. Yes.

Q. And you've even testified as an expert at the underlying trial of the Coleman case, correct?

A. Yes, I did.

Q. You've testified on correctional issues in the Ruiz case in Texas, a class action case in Texas, correct?

A. Yes. Yes.

Q. In the gates case involving the California medical facility,

* * *

[346] Ms. Kahn: objection.

Ms. Tillman, can you read the rest of this quote.

Ms. Tillman: this goes on for over a paragraph, Your Honors. I'm happy to allow Ms. Kahn to engage in redirect, if she needs to.

Judge Henderson: let's do it that way. That's fine. By Ms. Tillman:

Q. Isn't it correct that you've concluded that the reduction of the overall California Department of Corrections rehabilitation population is only the first step towards a constitutionally-compliant mental healthcare system?

A. Yes, it's a necessary but not sufficient condition. If that's all you did and you stopped there, then than wouldn't do it. But I don't believe you can do it without doing that, because it is the primary cause of the problems that I've been describing.

Q. And I believe at your deposition at page 118, at line eight through 20, you said it very well.

Let's see if we can get a better resolution on that. You said:

> "It's one step, yes, absolutely, an extremely important step in my opinion. I think a necessary, but not sufficient condition." You were asked:
>
> "But even after implementing that condition other [347] steps must be taken by defendants to reach constitutional compliance, right?
>
> "Answer: yes. And we've been talking about staffing. We've been talking about programming space. We've been talking about all these other things that are part of a constitutional system," Correct?

A. It's what I said in the deposition. It's what I've said here.

Ms. Tillman: Thank you. Nothing further.

Judge Henderson: okay, counsel.

Ms. Kahn: Okay.

Judge Henderson: any Intervenors wish to cross-examine this witness?

Ms. Johnson: Anne Johnson for the Plata defendants.

Similar to the motion to strike we made yesterday with respect to Dr. Stewart's testimony, the Plata defendants move to strike Dr. Haney's bare conclusions regarding medical care and the primary cause of the alleged constitutional violations in the Plata case as lacking any factual basis or explanation.

We would note that Dr. Haney is not a physician. And all of his testimony relates to the Coleman members and the mental health issues, not medical care.

The court: similar to the ruling yesterday, motion's

* * *

[353] the plans is wide and widening.

Q. Ms. Tillman also was asking you questions about ADSEG and single celling. And I'd like you to address how overcrowding affects prisoners who are housed in ADSEG on single cell status.

A. Well, overcrowding affects them in a number of significant ways. It over—it affects them, first of all, in terms of an issue that I've been talking about repeatedly, which is access to treatment space.

Whether a prisoner is single or double-celled in the administrative segregation, their access to treatment space is severely limited by the overcrowding that plagues the system.

The treatment spaces are as I've described them. The court has seen pictures of the cages which are used. What are not depicted in those photographs are the location of those cages in some of the administrative segregation units that I toured.

Many of them out on the dayroom floor of the administrative segregation units, so that if a prisoner is engaged in allegedly therapeutic activity, that's witnessed by all the other prisoners in administrative segregation.

Group therapy sometimes takes place in a tiny area where it's almost impossible for the cages to fit in the area.

In many instances, prisoners, even single-celled administrative segregation prisoners are affected by overcrowding because of the shortage of clinical staff to [354] provide them with the treatment opportunities that they are entitled to.

They are impacted by overcrowding because of the shortage of escorts. An administrative segregation prisoner has to be escorted by a correctional officer whenever they leave the administrative segregation unit to get access to therapy or to get access to anything outside of the administrative segregation unit.

In addition, they are impacted by overcrowding because of the difficulties of the administrative segregation units in providing the constitutionally-mandated access to exercise.

Q. How is exercise provided to prisoners housed in ADSEG?

A. Well, they have to be individually escorted to the exercise area. Many of them, they typically exercise by themselves. And there are inadequate number of those exercise facilities available.

And there's sometimes called "small management yards." the court has ordered those small management yards to be constructed so that prisoners who are in administrative segregation can get this access.

It's not being provided now. And, in part, it's not being provided because there's a resource shortage, an, I believe, overcrowding-related resource shortage.

In some instances administrative segregation units [355] themselves, even though they are already locked down units are locked down even further.

I toured an administrative segregation unit in the California correctional institution in TEHACHAPI where there had been a violent incident that had occurred in the beginning of April of this past year.

I toured that unit at the end of July. The prisoners in that unit had been locked down and had not gotten outdoor exercise because that unit had been locked down. That administrative segregation unit had been locked down from the beginning of April until the end of July. So not only were they not getting 10 hours a week of outdoor exercise, they were getting no hours a week of outside exercise.

Lockdown is a direct result of a system being overcrowded and overwhelmed and having too many people and not having a way to manage conflicts in any other way. And it can impact even administrative segregation units.

Q. Thank you.

No more questions.

Judge Henderson: Okay. Thank you, counsel. Okay. We're going to take a 15-minute recess.

Ms. Tillman: Your Honor, can I just ask one or two More questions?

The Court: Certainly. Sorry, Ms. Tillman.

Ms. Tillman: I'll try to keep it short.

[356] Judge Henderson: it's your cross-examination.

Recross-examination

By Ms. Tillman:

Q. Dr. Haney, you've mentioned concern about the use of therapeutic modules for providing group therapy for the most violent of the patients on the mental health caseload, haven't you?

A. Patients who are in administrative segregation typically receive therapeutic programming in the cages that we've been talking about.

Q. Have you ever had a conversation with court-appointed expert Dr. Metzner about those therapeutic modules and their design?

A. I know Dr. Metzner. I don't know that we've ever talked about the particular therapeutic modules that I've described in the report and that the court has pictures of.

Q. Were you aware that Dr. Metzner provided the specifications for design of those therapeutic modules?

A. Ms. Tillman, I'm fairly certain Dr. Metzner did not provide the specifications for the therapeutic modules that I saw in the administrative segregation units that I toured, some of which the court does have photographs of.

We're talking about old cages that have not been recently created that Dr. Metzner cannot possibly have had any input into because they have been around in this system for a long time.

[357] Q. So you would approve, then, the use of therapeutic modules that have been built recently, say in the past year, pursuant to the specifications provided by Dr. Metzner then, wouldn't you? A. No, I didn't say that. And let me try to address this. I think I understand the context of this, and if I don't I hope you'll correct me.

Q. I think you've answered the question, actually.

Ms. Kahn: Objection? Can the witness answer the Question?

The Witness: I know that Dr. Metzner has had some input sometime ago in the creation of therapeutic modules or cages that were originally intended for use in a therapeutic environment, psychiatric services as a matter of fact.

When the issue was how to provide care in a therapeutic context like a PSU for prisoners who also had serious or significant security concerns or issues. It's a hard problem. It's a difficult issue to address.

Q. You don't want your staff to get assaulted. That's really what the issue is. You don't want the inmate patient to assault another inmate in that therapeutic group?

A. Yes. And, yet, there's a need for the inmate patient to have a therapeutic contact in an environment where there are other people present.

Now, this is an issue about which reasonable people and reasonable experts can disagree whether it can or should be [358] done in cages or not.

Dr. Metzner's contribution was to say if it's going to be done in these cages, the cages should be in a therapeutic context, should be of a particular kind. They should have a particular design.

If that's the way the department has decided to approach this, then this is what these exercise or these therapy cages ought to look like.

Those are not the cages. Those are not the cages that I saw in the units that were being used in administrative segregation units, in all of the prisons that I looked at that had ADSEG units. Those are not the kinds of cages we're talking about.

And I doubt very seriously—and, of course, Dr. Metzner can speak for himself—that he would approve of the kinds of cages that I saw in the administrative segregation units that I toured and about which I wrote in my report.

Q. Now, you wouldn't disagree, would you, that the use of therapeutic modules has been accepted as part of the court-approved revised program guide of 2006?

A. I think it's—I think it's contemplated in lieu of alternative approaches. But, again, we're talking—you're talking about this as an abstraction.

I'm talking about the reality of what those cages look like and where they are located, and what they are used [359] for.

Those are the issues about which I was concerned and about which I expressed myself in my report.

Q. And you don't dispute that in the 20th round monitoring report Special Master Lopes found that several California Department of Correction rehabilitation institutions were substantially compliant with the revised program guide and with court-ordered standards.

A. Special Master Lopes found a number of things. Ironically, one of the things that he was most concerned about and, in fact, one of the recommendations he made had to do with the use of these cages, had to do with the use of these cages as alternative placements in lieu of putting people in mental health crisis beds.

It's the third recommendation. He's concerned enough about it to recommend that the actual use of these things be very carefully documented.

Q. I'm just referencing, actually, page six of the 20th round monitoring report in the first introductory statement where it says:

> "Overall, the monitor's review found that several California Department of Corrections and Rehabilitation institutions were substantially compliant with program guide and court-ordered standards," correct?

* * *

[362] The Witness: May I be released?

Judge Henderson: Oh, I'm sorry. Yes, you may be Released.

(Thereupon, a recess was taken.)

The Clerk: Please be seated.

Judge Henderson: okay. You may call your next witness, counsel.

Mr. Specter: okay, Your Honors. Plaintiffs call Jeanne Woodford.

(Thereupon, the witness was sworn.)

The clerk: state and spell your full name for the Record.

The witness: my name is Jeanne Woodford, J-E-A-N-N-E W-O-O-D-F-O-R-D

Thereupon—

Jeanne Woodford

Was called as a witness on behalf of the plaintiffs, and after having first duly sworn, was examined and testified as follows:

Direct examination

By Mr. Specter:

Q. Ms. Woodford, you were—you know these cases are both the Coleman and Plata cases, correct?

A. Yes, I'm aware of both cases.

Q. Part of the reason you're aware of both cases is that you were a defendant at one time; is that true?

[363] A. Yes, I was a defendant in both cases.

Q. And that's because you worked for the California Department of Corrections; is that right?

A. That is correct.

Q. For how long did you work for them?

A. I worked for the Department of Corrections for a little over 27 years.

Q. And is it true that you have—you worked your way up from a correctional counselor position at San Quentin to the Acting Secretary of the entire Department of Corrections?

A. I actually worked my way up from a correctional officer position at San Quentin into becoming the Acting Secretary of the California Department of Corrections and Rehabilitation.

Q. And so during—could you give us a little brief summary of that journey in terms of the positions you've held?

A. I started at San Quentin in June of 1978, two weeks after graduating from Sonoma state university with a degree in criminal justice.

I was a correctional officer for about five years. Then, I was a Correctional Counselor I, Correctional Counselor II, a Correctional Counselor III, a Program Administrator, a Correctional Captain, an Associate Warden, and then a Chief Deputy Warden until being appointed by Governor Davis in 1999 as a Warden at San Quentin.

I was the Warden at San Quentin until 2004 when [364] Governor Schwarzenegger appointed me Chief director California Department of Corrections. And then, about a year-and-a-half later in July of 2006, J was appointed as the undersecretary of the California Department of Corrections.

And during my time as the Undersecretary, the secretary stepped down, so I was the Acting Secretary for a short time.

Q. Great. And you left the Undersecretary's position in July of 2007 or six? Seven?

A. I think it was 2007. I'd have to look at my resume, but I believe it was July, 2007.

Q. And—

A. Actually, it was July, 2006. I'm sorry.

Q. Okay. So you were working at San Quentin in the early 1980's, were now not?

A. Yes, I was.

Q. And at that time you were not in a management position. You were working in the cellblocks; is that right?

A. That's correct.

Q. And you were familiar with a case called Toussaint?

A. I was very familiar with a case called Toussaint.

Q. And that was a case that arose out of a judgment of this court, the district court of California in the northern district?

A. That's correct.

[365] Q. Right. And in that case—well, during that time period did you see the population rise during your time at San Quentin in the early '80's?

A. Yes, I did. Actually, when I started at San Quentin there were cellblocks that were completely closed. And then, later we began to experience large number of inmates coming into the system as a result of a change in the sentencing laws in California.

Q. I see. And can you explain to the court what effects you saw from that increase in the population at San Quentin?

A. Well, when I first started at the prison it really reminded you of a college campus. You saw inmates traveling to school and going to their work assignments, carrying books.

There were very active programs going on involving inmates. Most of the inmates were single-celled. There was no idleness at all.

Within a very short amount of time, the determinate sentencing act began to send prisoners within the prison system.

So within a couple of years of me starting there, we started to receive more and more inmates into the system. And these were younger inmates who were serving sentences of 25 to life as a result of the change in the sentencing law.

So we were getting more and more people who were serving longer and longer sentences. And because the purpose of

* * *

[366] Q. Now, later on after the Coleman and Plata cases were filed, and then judgments were entered, did you become familiar with those as part of your responsibilities as warden at San Quentin?

A. Yes, I became familiar with both Plata and Coleman as the warden at San Quentin.

Q. And can you explain to the court what difficulties, if any, there were you had at San Quentin in complying with those decrees and what the cause of those difficulties were?

A. Well, it was virtually impossible to comply with both of the decrees, and the difficulty was primarily because of the overcrowding at San Quentin.

And to describe it, I think you have to understand the three missions that San Quentin has. One being the reception center where at times we were receiving anywhere between 100 and 200 inmates a day.

So with that kind of intake into our—into San Quentin and with the kind of overcrowding you spent your day managing where to house people.

Medical staff due to vacancies and just the sheer numbers and lack of space were unable to keep up with physicals or providing any kind of chronic care follow-up at the reception center population.

Inmates in the reception center who were diagnosed as mentally ill, either as EOP's or triple CMS weren't receiving really any treatment beyond identifying that they were triple

* * *

[376] many, many, many meetings with the variety of people trying to bring some solutions to the Department of Corrections.

Q. And so, given all that effort both on a institution management institution level and on the headquarters level as a high level manager, given all that experience and your experience with the Department of Corrections, what do you think was the primary cause of the inability to provide healthcare to prisoners?

A. I absolutely believe the primary cause is overcrowding, because we would come up with wonderful ideas and have great planning, but overcrowding interfered with our ability to implement any of those ideas, to bring resolution to any of the problems that we're facing in both of those lawsuits.

And the overcrowding was every day, more and more inmates coming into the system.

Q. And when you're at the headquarters did you express that conviction to any of your superiors?

A. Yes.

Q. And who would you talk to about that?

A. Well, I would talk to—well, as the Director I would talk to the undersecretary and secretary about that. Then, when I was the undersecretary and acting secretary I talked to the governor's staff about the overcrowded conditions and that we needed to address overcrowding in order for us to be successful at any of the efforts we were trying to do, including providing [377] medical care, mental healthcare and rehabilitative services to inmates.

Judge Henderson: can I interrupt you?

Mr. Specter: sure.

Judge Henderson: I want to make sure I have this timeline. You talked almost longingly about the good old days at San Quentin when there was not overcrowding. That's my characterization.

And you now are talking about the overcrowding. Would it be fair to say that in those days of yor, I don't know if there were medical inadequacies, but would you, if you were asked then "are they solvable" because there's not overcrowding, would it have been your view looking back that they are solvable and that because of the overcrowding they are no longer solvable?

Is that a fair summation?

The Witness: Yes, Your Honor. That's a very fair summation.

Judge Reinhardt: you got up to when you were undersecretary. When you were acting secretary to whom did you talk? Who were your superiors then?

The Witness: Well, I worked for the governor, but I did not get to have a conversation with the governor until my last day when I stepped down as secretary.

So I was talking to his chief of staff and the cabinet secretary and his legal

* * *

[380] Q. And I'm going to refer you to the picture that's on screen that's Plaintiff's Exhibit 345. Could you describe what you see there, please?

A. I see a picture of what looks like a gymnasium with triple bunks. Looks like it's severely overcrowded.

Looks like there's barely room between the bunks. And it also looks like it's crowded to the point inmates are expected to be on their bunks.

Q. And from a corrections administrator's perspective do you see any problems with that housing arrangement?

A. I absolutely see many problems, and I've seen scenes like this all over the department as the director and undersecretary of the Department of Corrections, and in my own experience as the warden at San Quentin, overcrowding inmates into the gymnasium there.

It's very difficult to have of good lines of sight of the inmates. It's very difficult to know who the inmates are in these crowded situations.

I think it's really hard on the inmates when there isn't room for them to move around at all, and they spend the majority of their day on or near their bunks. You end up with violence breaking out in these situations.

I've personally experienced more than one riot at San Quentin, and I know that occurs around the Department of Corrections. And, you know, staff, many staff don't feel even [381] comfortable walking around units like this because they are so overcrowded, and so it's very hard on inmates who are more vulnerable.

And it's really difficult to know often if there's medical issues and particularly mental health issues when you're this crowded and you're not having that constant conversation and contact with the inmates as a staff person.

Q. And when you took a tour in August of 2008, did you see units where or had you heard about incidents where there weren't enough staff on the unit?

A. Yes, I heard that when I was at Lancaster.

By the way, when we walked in the—when I walked in the gym at Lancaster—I don't know if it was this gym, but a gym like this—there was only one officer there. And she told me that there was a second officer assigned there, but he was out escorting inmates.

So this clearly was a situation where there wasn't enough staff in the unit to even attempt to walk around in a building this crowded.

But in another case, we were in an EOP unit, and I believe it was an EOP unit at Lancaster. And the staff told us that the day before they were so short of staff that there was no staff on the floor.

And that the one staff member that was assigned to the unit had to go up to the control booth and monitor the [382] inmates from the control booth.

And during that time, an inmate had a medical emergency, injured his foot in his cell. And the inmate had to get the attention of the staff in the control booth. And without anyone talking to him on the floor, they opened the door. The inmate told the staff that he'd injured himself, and the staff said:

"Are you able to get over to the CTC on your own?"

And he said: "I think so."

And they let him out of the unit without anybody doing a physical check of the inmate.

Q. And while you were in the department, was there an incident at the California Rehabilitation Center involving inmate death in a gym that was noteworthy?

A. Yes. While I was—I believe I was the director. I may have been the undersecretary. But I think I was the director. There was a death in a crowded gym at CRC that went on. It was a homicide of an inmate, and it went unnoticed by staff for several hours.

An investigation was actually opened up of that case, and I'm sorry I don't know the outcome of the investigation. But clearly it's very difficult to observe inmates appropriately in overcrowded situations like this.

[383] And you can have medical emergencies that go unnoticed by staff and can end up in death, as the case was at CRC.

Q. So did the tours—what effect, if any, did the tours have on your thoughts about overcrowding affecting the ability of the department to provide adequate healthcare?

A. I'm still convinced that overcrowding is a primary issue that inhibits the department from being successful at providing both healthcare or mental healthcare for inmates that are in the Department of Corrections and Rehabilitation.

Q. In his deposition, Matt Cate testified that overcrowding makes all the operations of a prison more difficult, he said, including medical and mental healthcare. Do you agree with that statement?

A. I absolutely agree with secretary Cate. Running a prison is a coordinated effort. In addition to providing mental healthcare and medical care inmates have to be taken to the dining hall to be fed. They need to have the appropriate amount of exercise.

They need to be involved in programs. And all of that has to be done within a short amount of time because most prisons run their operations during daylight hours, especially the higher security ones.

The more overcrowded you are, the more difficult it is to meet the basic, basic needs of inmates.

And it even gets to be impossible to get to them [384] their mental health treatment and healthcare exams when you're trying to do just basic operations in an overcrowded setting.

Q. In terms of inmate well-being, prisoner wellbeing and the safety of prisoners, how should a prison system really be functioning?

A. Well, I think it's the responsibility of prison administrators to design a system that allows inmates to have an appropriate living environment, a system that provides prevention of medical problems, and that doesn't have a situation where inmates decompensate mentally.

We need to treat people humanely. You know, I think the most glaring example is the reception centers where such a large percent of our population is. About 25 percent of the inmate population is in reception centers, and in those reception centers when you have people housed in bunks like this (indicating).

We are paroling a large number of inmates every week. San Quentin over 200 a week are paroled out of a situation like this (indicating).

I think just any correctional administrator would say that this is absolutely inappropriate to house human beings in this kind of situation and return them back to our society where mentally they are no better off, and probably in worse shape and in situations like this where we have done nothing to assist with their medical treatment in a way that would be considered [385] appropriate.

Q. And is it—just two more questions.

Is it your opinion that without a reduction in overcrowding that the Department of Corrections will be unable to provide adequate medical and mental healthcare?

A. It's absolutely my opinion. And without addressing the issue of overcrowding, the Department of Corrections will never be able to provide appropriate medical or mental healthcare and sustain—sustain any kind of quality constitutionally-adequate medical or mental healthcare. Medical or mental healthcare.

Q. And two more questions, Ms. Woodford.

First, how much are you getting paid to be here today?

A. I'm not being paid to be here today.

Q. So you did all these tours and review of the documents for free, basically? And why did you do that?

A. I did it for free because I truly believe that we can do better than we are in California. I think it's unbelievable that in this state that we have the kind of overcrowded conditions that we have; that we do little or nothing to prepare people for the return to society in spite of the fact that we parole 10,000 people a month from our prison system.

And I absolutely believe that we make people worse, and that we are not meeting public safety by the way we treat people.

[386] And that I believe overcrowding is prohibiting us from providing quality medical care and mental healthcare to inmates in our system.

And for California to be in the shape that it's in is just unbelievable. I mean, we just recently passed an initiative that gives chickens appropriate living space, and yet we have prisons that look like this (indicating).

Mr. Specter: No further questions, Your Honor.

Judge Henderson: Does CCPOA have any questions?

Ms. Leonard: No further questions of this witness, Your Honor.

The Court: All right.

Cross-examination?

Mr. Mello: Good afternoon. Paul Mello for Defendants.

Cross-examination

By Mr. Mello:

Q. Good afternoon, Ms. Woodford.

A. Hi.

Q. When was the last time you worked in San Quentin Prison?

A. It's been about three years. Well, I left there in February of 2004.

Q. Okay.

A. So it's been four years.

Q. Four years. Almost five?

* * * *

[388] Death at CRC. What year was that?

A. It was either 2005 or 2006. I'm not sure about the year.

Q. And I want to now ask you questions about your November, 2007 report. Now, I'm going to ask you to go to page two, paragraph six of that report.

And in your report you opined that overcrowding is the primary cause of the constitutional violations in the *Plata* and *Coleman* cases, correct?

And I believe I've also got it on the screen to your Right.

A. Yes.

Q. Okay. In forming the opinions expressed in your November, 2007 report you did not read any of the *Plata* receiver's reports or plan of action, correct?

A. I'm sorry. I didn't hear the first part of your question.

Q. Sure. In forming your opinions expressed in your November, 2007 report, you did not read any of the receiver's reports or his plan of action, right?

A. That's correct.

Q. Okay. In forming your opinions in your November, 2007 report, you had not visited any CDCR prisons since the middle of 2006, correct?

A. No, but I did read the service plan of action and reports for my supplemental, and I did visit prisons for my supplemental report.

[389] Q. And I was asking you specifically about your November, 2007 report.

And my question is: at the time that you were forming the opinions expressed in your November, 2007 report you had not visited a single CDCR institution since at least the middle of 2006. That's true, right?

A. That is true.

Q. In forming the opinions expressed in your number of 2007 report, you did not know whether there had been any improvements in the delivery of medical care or mental healthcare since you left CDCR, right?

A. That's correct.

Q. In forming the opinions expressed in your November, 2007 report, you did not know if there were more or fewer correctional officers since you left the department in 2006, correct?

A. No, I think I had—as I recall, I did know that the department was still down many correctional officers at that time.

Q. I'm sorry?

A. I believe that I knew the department was still down many correctional officers at that time.

Q. But did you know whether or not there were more officers or less officers than when you left the department?

A. No, I did not know that.

[390] Q. And in forming the opinions expressed in your November, 2007 report, you did not know whether there were more clinicians providing medical or mental healthcare since you left the department in 2006, correct?

A. I believe that's correct.

Q. Before signing your November 7, 2000—2000—

Mr. Mello: Strike that.

By Mr. Mello:

Q. Before signing your November, 2007 report, you did not review any documents that listed the amount of clinical space in California's prisons, did you?

A. Not that I recall.

Q. Okay. In forming the opinions expressed in your November, 2007 report, you did not know the status of the delivery of medical and mental healthcare at each of the 33 prisons, correct?

A. I did not know the current status at the time that I signed it, but I will say that I had not been gone from the department very long at that point, either.

Q. Right. I mean, the evidence will show that you were gone between sometime in 2006 and sometime in 2007. That's undisputed, right?

A. Yes, that's correct.

Q. The first draft of your November, 2007 report was prepared and made available to you on an internet site by Plaintiffs' [391] Counsel, correct?

A. That's correct.

Q. You did not handwrite your report, correct?

A. No, I assisted in preparing the report, but I did not handwrite it, that's correct.

Q. The first time you saw your report was when you viewed it on an internet site, correct?

A. The first time I saw it typed is when I reviewed it on the internet site, that's correct.

Q. Did you ever see it in some other form than typed prior to looking at it on the internet site provided you to by Plaintiffs' counsel?

A. No, I did not see it in written form. I had discussions, obviously, with the Prison Law Office in preparing the report.

Q. On page four of your November, 2007 report at paragraph 11, you wrote that:

> "CDCR lacks a sufficient number of personnel who have the necessary skill and training to manage such a large complex organization," end quote.

A. Yes.

Q. When preparing your report, the November, 2007 report, you did not know the existing physician-to-inmate ratio at CDCR, did you?

A. Did you say "physician-to-inmate ratio"?

Q. Yes, I did.

[392] A. No, I did not.

Q. Did you know the clinician-to-inmate ratio with respect to mental healthcare at that time?

A. No, I did not.

Q. When preparing your November, 2007 report you did not know the existing vacancy rate at any of the institutions, all 33 of them, with respect to physicians, nurse practitioners, physicians' assistants, RN's, LVN's psychiatrists or psychologists, did you?

A. I did not know specific numbers, but I did know that there was still a problem in filling positions.

Q. Did you note that problem, even a range, anywhere in your November, 2007 report?

A. Not that I recall.

Q. On page five of your report at paragraph 13, you wrote that:

> "crowding causes delays in moving reception Center prisoners to other prisons for treatment."

When you prepared your report you did not know whether crowding had caused delays in moving of reception center prisoners to other prisons for treatment since you left the department, correct?

A. I did not know specific examples, but I believe I knew that it was still a problem moving inmates out of reception centers just because I keep in contact with people who work in the department.

* * * *

[394] By Mr. Mello:

Q. On page seven, paragraph 19 of your November, 2007 report, you wrote that officers who are—pardon?

Judge Reinhardt: May I ask you one question?

Mr. Mello: Sure.

Judge Reinhardt: About the problem with the dates, you're not questioning the accuracy of the witness's statements as of the year earlier. You're asking whether she knew of any changes between the time she left when she knew all these things, and one year later.

Mr. Mello: Well, I don't believe that Plaintiffs have established that she knew all those things with any specificity in 2006 when she left the department.

Judge Reinhardt: Well, your only question here about whether she knew anything a year later—

Mr. Mello: Correct. I am questioning when she—

Judge Reinhardt: Can I ask you a question?

Mr. Mello: I'm sorry. Yes.

Judge Reinhardt: What date do you think is relevant for our job in phase I to determine what the primary cause of the health and mental health violations was when the two findings were made?

Mr. Mello: I believe this court—and I haven't spoken with my co-counsel. But I believe this court established a cutoff that the relevant date was the end of August, 2008.

[395] Judge Reinhardt: No. No, for evidence. But as to the phase I issue, what was the primary cause or is the primary cause of the violations that were found in *Plata* and *Coleman*?

What do you think the court needs to establish what the primary cause is as of 2008 as of date the findings were made? What is your position with respect—

Mr. Mello: I believe that the PLRA is written in the present tense with respect to this issue. And I believe that current conditions are what are relevant.

I believe this court has told us that we cannot argue about whether we are currently in constitutional compliance. But I believe that the current conditions, the statute is written in the present tense, I believe. And I believe that current conditions are those items that are relevant to this judges' determination of whether or not Plaintiffs can show by clear and convincing evidence that overcrowding is the primary cause of the alleged deficiencies right now in CDCR's medical and mental healthcare systems.

And I believe that the current status is probably the most important thing, as opposed to something that she recalls when she was a warden back at San Quentin years ago.

I believe that's important. I believe that the evidence already to date has shown that there have been increases in many, many things, both in mental health and in medical care.

[396] And I believe those go to the fact that while we can't put on evidence that current constitutional compliance is met, that that overcrowding is not the primary barrier.

Judge Reinhardt: Well, she's saying, I gather, that the constitutional violation had to exist for Phase I purposes; that what is relevant is whether there's a constitutional violation today, not whether there was when the findings were made by the court. That's really irrelevant. It's only whether there's a constitutional violation today.

Mr. Mello: I don't believe it's irrelevant, but I do believe what is relevant is the current conditions in the system.

And I believe the evidence has shown and will continue to show that that current evidence doesn't show that overcrowding is the primary barrier to the unconstitutional delivery of medical and mental healthcare.

Judge Reinhardt: Okay. Thank you.

Mr. Mello: I've completely forgotten where I am. I usually—

Judge Reinhardt: you were in about 2006 or—

Mr. Mello: I'm pretty sure I was in 2008.

Judge Reinhardt: That's the supplemental report. Mr. Mello: oh, you are right. I was in 2007. Thank you, Your Honor.

* * * *

[405] A. Okay. I see that.

Q. Okay. And I asked you:

> "would you agree that the provision of housing is different from the provision of medical and mental healthcare?"

A. Again, I want to be sure that we're talking about the same thing. So could you explain what you mean by that?

Judge Reinhardt: I don't understand the question myself.

Mr. Mello: Okay.

Judge Reinhardt: Obviously, providing housing is different from providing medical care.

Mr. Mello: Okay.

Judge Reinhardt: But where does that lead us?

Mr. Mello: Understood. And I'll withdraw the question. How's that?

Judge Reinhardt: Okay.

By Mr. Mello:

Q. In your opinion, if the adult population in California's institutions was decreased by 40,000 inmates tomorrow and nothing else was done, the CDCR would not be able to provide constitutionally-adequate medical or mental healthcare to its inmates, would it?

A. If the population were reduced and nothing else was done, meaning that we didn't hire the appropriate medical staff and [406] provide appropriate medical facilities and all that, then I would agree you still would not meet a constitutional level of care.

Q. And in your opinion, even if CDCR released up to 40,000 of the most physically sick and most acutely mentally ill inmates over a period of time at the end of that period CDCR would not have a constitutionally-adequate medical and mental health-care system unless it also addressed other problems, such as access to care—healthcare records, information technology, continuity of care, just to name a few, correct?

A. Medication management and many other provisions of healthcare, yes.

Q. Correct?

A. Correct.

Mr. Mello: Nothing further.

Thank you.

The Witness: Thank you.

Judge Henderson: Any other Defendants or Intervenors?

Ms. Wang: The Defendant Intervenors have no further questions, Your Honor.

Judge Henderson: Thank you, counsel.

Redirect?

TRANSCRIPT OF PROCEEDINGS

San Francisco, California
Thursday, November 20, 2008

* * * *

[420] PROCEEDINGS

November 20, 2008 9:15 o'clock a.m.

The Clerk: Please be seated.

Judge Henderson: Okay. Good morning, counsel. You May call your first witness when you're ready.

Ms. Hardy: Good morning, Your Honors. Alison Hardy for the Plaintiffs. And Plaintiffs call Dr. Ronald M. Shansky.

The Clerk: Please raise your right hand.

(Thereupon, the Witness was sworn.)

The Clerk: Please state and spell your full name for the record.

The Witness: My name is Ronald Mark Shansky, S-H-A-N, as in Nancy, S-K-Y.

Thereupon—

Dr. Ronald Mark Shansky was called as a witness on behalf of the Plaintiffs, and after having been first duly sworn, was examined and testified as follows:

Direct examination

By Ms. Hardy:

Q. Good morning, Dr. Shansky.

A. Good morning.

Q. You're a board certified physician in internal medicine and in quality assurance; isn't that right?

[421] A. That's correct.

Q. And you've been a physician for over 30 years?

A. Yes.

Q. And the focus of your practice over the course of three decades has been on correctional medicine; isn't that right?

A. That's correct.

Q. And you started your career as a physician right out of residency at the federal jail in Chicago?

A. Yes. That was my first correctional healthcare work.

Q. And then—and how long did you do that job?

A. Seven years.

Q. And then, in 1982, you became the medical Director of the Illinois State Prison System; is that right?

A. That's correct.

Q. And you did that job for how long?

A. For 11 years.

Q. And then, so you left in '93, but you returned in '98. Why was that?

A. There was a new director of corrections, and he called me and asked me if I would serve. And I said I was finishing out my receivership, and so I could only fill that capacity on a part-time basis. But he said that was good enough, and so I came back for a year on a part-time basis.

Q. And since you left the Department of Corrections in Illinois you've been a correctional healthcare consultant; is that right?

[422] A. That's correct.

Q. And over the course of your entire career, you've consulted with more than two dozens correctional agencies on healthcare issues; is that right?

A. More than how many?

Q. Two dozen?

A. Approximately.

Q. Okay. And that's been both domestically and internationally; is that right?

A. A few internationally.

Q. And in the course of your career you have been to well over a hundred prisons to specifically—specifically for the purpose of reviewing healthcare in those facilities; is that right?

A. Both prisons and jails.

Q. Additionally, courts have appointed you in different cases in various capacities; is that right?

A. That's correct.

Q. And in what capacities have you served?

A. Well, I've been appointed as a special master, as a court-appointed expert, as a special monitor, as a receiver in the case of the D.C., Washington D.C. jail.

Q. And you've also edited a book on correctional medicine; is that right?

A. I was one of the associate editors of the two editions of [423] *Clinical Practice of Correctional Medicine*.

Q. And you consider yourself an expert on correctional healthcare, don't you?

A. Yes.

Q. You're aware that the *Plata* court has found the medical care in the CDR violates the constitution; is that right?

A. Yes.

Q. And in your opinion, what is the cause for the constitutionally inadequate medical care?

A. From my tours and my review of the documents, I would say overcrowding is the primary cause of the ongoing inability to meet constitutional levels of care.

Q. Doctor, how certain are you of that opinion?

A. I'm confident in it.

Q. Okay. You toured nine prisons, CDCR prisons in the last 13 months; is that right?

A. That's correct.

Q. And did your observations on these tours provide a basis for your opinion?

A. Yes.

Q: And what did you observe on these tours?

A. Well, there were a variety of problems related to inadequate physical environment, impacting on process of care, beginning with the reception process and ability to perform a comprehensive exam on intake.

[424] There were problems with access to care in terms of lack of officers, especially during lockdown periods, and therefore scheduled visits didn't occur anywhere near the rate that they did usually.

There were problems with medical records, documents not being filed; documents being very difficult to locate; the medical records quite disorganized, which inhibits doctors to have a sound foundation of the facts with a given patient.

There were a variety of those kinds of things we identified.

Q. And when you toured prisons, you reviewed healthcare—or, sorry, I mean health records specifically, a sample of them, didn't you?

A. Yes. We reviewed records at each of the facilities.

Q. And what did you find in those records, specifically?

A. Well, I was looking at the—I was focusing on these reviews on the ability of the program to provide necessary follow-up and continuity for individuals whose problems were serious enough to cause them to be sent offsite, either on a scheduled basis for a consultation or a CT exam or an MRI, or on an unscheduled basis, that is, on the basis of an emergency problem.

And what we found was in a significant portion of the cases we reviewed, there was an absence of documents from the offsite provider. So even though the patient went offsite, the [425] Consultation report wasn't there. The CT report wasn't there. The MRI report wasn't there.

And there were other instances when reports had been filed, but no one had actually seen them, initialed them and acted on them.

There were also instances in which when the reports were there, there was no follow-up when the patient returned to—sorry.

Judge Karlton: Not your fault. Nobody knows why that happens.

The Witness: Okay. There were many instances in which the follow-up aspect of care was not provided. And that was in a significant portion of the records at virtually all the facilities we went to.

In fact, the policies of the CDCR require, are designed to facilitate continuity, and yet the programs were not yet able to not only comply with the policies, but ensure the continuity of care that is required for adequate services.

By Ms. Hardy:

Q. And given that lack of continuity, is there a risk of harm to the patient?

A. Absolutely. There's unquestionably a risk.

Q. On your prison tours you spoke with prison clinicians and with prison administrators, correct?

A. Yes

[426] Q. And did they tell you how overcrowding was impacting their operations?

A. Yes, they described their inability to ensure that patients were seen timely, both for services provided on-site and for scheduling and obtaining services offsite.

Q. And did they describe how the impact of the available clinical space affected their ability to deliver care?

A. Yes, there were at least a few, if not more, that indicated that one of the major inhibiting factors as they have added additional staff was their inability to maximally utilize the staff because of the inadequate space arrangements.

Q. Were the findings that you made on these prison tours consistent with other documents you reviewed in this case?

A. Yes, particularly documents that were produced by the Receiver's office. It's really consistent with the governor's statement and consistent with the recent death review document.

Q. So you reviewed the receiver's 2007 prisoner death report; is that right?

A. Yes.

Q. And in that report, that death review committee divides the deaths in preventable, possibly preventable and nonpreventable deaths, correct?

A. Correct.

Q. And you're familiar with those terms, right?

A. Yes.

[427] Q. In your experience as a physician have you done death reviews?

A. Yes.

Q. And is it your experience that physicians are reluctant or liberal in attributing preventability to a patient death?

A. In my experience—and I have done death reviews. Not only did I do all of them in the Illinois system from 1982 to 1993, but also in my travels around the country I have participated in death reviews with colleagues from different systems.

And I do think the attribution of "preventable" is something that doctors are reluctant to do frequently, because I believe it, in their mind, may connote a clinician responsibility for the death. And so there is unquestionably a reluctance to do that.

And, therefore, I think that's what made people more comfortable with the category of "possibly preventable."

Q. Does your review of the report affect or impact your opinion that crowding is the primary cause of the constitutional violations in the CDCR?

A. My review of the report buttresses my view of that. It is particularly buttressed by when you look at the types of lapses in care which were extreme departures from the standard of care, there are several that clearly are a consequence of overcrowding.

Things like delay in access, failure to adequately [428] pursue abnormal test results, failure of provider-to-provider communication, medication delivery problems, medication prescribing errors. There's a series of items which clearly can result from overcrowding.

Q. For the 395 cases that are reviewed in that death review report, there were 292 extreme departures from the community standard of care identified; is that correct?

A. That's correct.

Q. Were you surprised to see this number of lapses in a sample of this size?

A. Well, the fact that the lapses occurred in almost 60 percent of the cases, yes, because when I reviewed—and my policy that I promulgated I had to review every death in the Illinois system. And where there was an extreme lapse I would make it clear to the director of corrections.

We would see five, maybe ten percent of the deaths in which there was an extreme departure from the standard of care.

Judge Karlton: What was the percentage for California that you were looking at?

The Witness: About a little less than 60 percent of the total cases, including preventable and nonpreventable.

By Ms. Hardy:

Q. Did you look at the rate of deaths that were preventable or possibly preventable from the 110 deaths that were cosidered natural and unexpected?

[429] A. Yes.

Q. And what did you conclude from that?

A. If you do the math, out of 110 there were 44 that were possibly preventable or preventable. So you're looking at a 40 percent rate of the natural, unexpected deaths that were either possibly preventable or preventable. And that's extremely high.

Judge Reinhardt: Over what period of time?

The Witness: This is the calendar year, I believe, 2007.

By Ms. Hardy:

Q. And then, you also looked at the deaths for the 328 deaths that occurred because of illness, both expected and unexpected. And what proportion of those were cosidered preventable or possibly preventable?

A. About 20 percent, as I recall.

Q. And compared to other settings that you've worked in, do you believe that those rates are high?

A. Yes.

Q. And compared both to the Illinois setting are there other settings that—

A. Well, states, for obvious reasons, don't necessarily publish this type of data. But, in my experience of reviewing records with systems over the course of the last few decades, that rate seems to be quite high.

[430] Judge Karlton: May I inquire? You indicated that states ordinarily don't publish this kind of data. Is there any state at all that you are aware of that attempts to distinguish between preventable and unpreventable.

The Witness: I believe many systems do that, but they do not publish it. Concerns about litigation.

Judge Karlton: I see.

By Ms. Hardy:

Q. Based on the number of lapses that you saw in this cohort of 395 deaths in which there were 292 extreme departures from the community standard of care, do you believe that the extreme departures are limited and occurring only in the cases of patients who die?

A. Oh, no, absolutely not. When you look at these—at this report you can see that extreme lapses can occur even in a death case, but it doesn't necessarily contribute to the death.

On the other hand, extreme lapses can contribute to delays in diagnosis and treatment, can contribute to avoidable emergency room trips, can contribute to avoidable hospitalizations.

So, I don't think there's any question from reviewing this data you would have to believe that these lapses are pretty widespread at this point.

Q. And you believe that the lapses that were identified appear to be systemic or individual care lapses?

[431] A. Well, lapses can be a mixture of both. But clearly several of these point to systemic issues related to crowding unquestionably.

Q. You're aware that the receiver has hired quite a few nurses and also hired physicians; is that right?

A. Yes.

Q. Does this change your opinion that crowding is causing the constitutional medical problems?

A. No. Again, it buttresses it. At the beginning of—well, somewhere in the midst of the *Plata* case, I had a discussion with Judge Henderson about his concerns about the quality of physicians and his desire and intent to do something about that issue since that was an issue that one might characterize in a certain sense as "low-hanging fruit."

You could intervene on that with the tools of the court. And as a result, impact things like death rates and severe negative outcomes. Ultimately, then, things changed. It became a full receivership.

But there's no question that, a: the quality of clinical providers was clearly known to Judge Henderson whenever that was, two or three years ago, and a major concern.

And it's clear, again, from the receiver's documents that they believe the major contributing factor to the decrease in death rate is related to the increase in quality and quantity of clinical staff.

[432] Q. Why not then let the receiver just go ahead and fix the problem?

A. Well, in my view—and I draw—I guess there's no way of avoiding it—from my experience when I was appointed the receiver at the D.C. jail.

I was the first receiver of a correctional healthcare program, and I had obviously a steep learning curve.

I didn't appreciate that at the D.C. jail at the time I was appointed receiver the jail was already under a population cap, and the population had been substantially reduced—I think it was two or three years—before my appointment.

And when I came on as the receiver, I, therefore, had the advantage of being able to put together a brand new system, in a sense, into an environment that was not suffering the stresses of overcrowding.

And I didn't appreciate it then because the only thing I knew was that situation which I had been appointed to.

But it's clear to me now that that gave me a tremendous advantage over what the receiver is trying to do here in California.

Q. And that advantage was?

A. Well, that advantage is when you're trying to create a new system in the midst of overcrowding, which stresses every aspect, environmental resources, infrastructure systems, medical records, tracking, scheduling, quality and quantity of staff, [433] the environment in which those staff are going to be attempted to be retained once they are hired, that dramatically reduces your ability to bring a system into compliance.

And what it does is it—if the system can be brought into compliance under the conditions of overcrowding, at a minimum that is going to delay the time frame that that's achievable for a lengthy period of time, which just extends the period of avoidable suffering, hospitalizations and death.

Q. Thank you, Dr. Shansky.

Judge Henderson: Thank you.

CCPOA wish to question this witness?

Mr. Leonard: No further questions.

Judge Henderson: Okay.

Cross-examination.

Cross-examination

By Mr. Mello:

Q. Good morning, Dr. Shansky.

A. Good morning, Mr. Mello.

Q. In your opinion is the California prison system overpopulated today?

A. Yes.

Q. And population and percentage of over design capacity vary between prisons in the system, correct?

A. That's correct.

Q. And, in fact, some segments or units in prisons are less

* * * *

[438] accessible from the prisoners' bathroom and shower area.

Do you remember?

A. Yes, if I could have a second I'll find my—

Q. Sure.

We've put it on your screen for you to your right, too, doctor. So either way.

A. All right. Give me a second here.

Okay. Now, what page?

Q. Page six, paragraph 16.

A. Page six.

And paragraph 16, you said?

Q. Yes.

A. Okay.

Q. And you're talking about that exam room.

A. Yes.

Q. That it was only accessible from the bathroom. Do you remember that?

A. Yes. Yes.

Q. In and of itself, the location of that exam room was not the cause of constitutionally-inadequate healthcare in your opinion, was it?

A. You mean, throughout the system?

You're talking about—

Q. I'll ask it again. I'll ask the question again.

A. Okay.

[439] Q. In and of itself, the location of the exam room was not a cause of constitutionally-adequate (sic) medical care in your opinion at that facility?

Judge Karlton: That facility.

The Witness: Constitutionally inadequate, you're saying.

By Mr. Mello:

Q. Right.

A. No. Taken in isolation, that, in itself, wouldn't necessarily always correlate with unconstitutional care.

Q. And, in fact, it's your opinion that Constitutionally-adequate medical care could be provided in that unusual setting if Plaintiffs were seen timely and with appropriate assessment and followthrough, correct?

A. Correct.

Q. And in your opinion in even very odd settings constitutionally-adequate medical care can be delivered if patients are seen with timely and appropriate assessment and follow through, correct?

A. Yes.

Q. It's fair to say based upon your tours at the various prisons that the level of medical care being provided in CDCR's prisons varies from unit to unit within different prisons in California's system, correct?

A. Yes.

[440] Q. In preparing your first report in November, 2007—and let me just stop. Are you having a hard time hearing me?

A. Sometimes. The acoustics are not great.

Mr. Specter: We are having a hard time.

Mr. Mello: I don't care about you guys.

The Witness: Go ahead.

By Mr. Mello:

Q. Okay. Sorry, doctor. If I could just wall off— Okay.

In preparing your November, 2007 report, you reviewed letters prepared by Plaintiffs' counsel following tours that they had done of various institutions, correct?

A. That's correct.

Q. And you also reviewed those post-tour letters in preparing your September, 2008 report, correct?

A. Yes.

Q. In your—on page 15 of your September, 2008 report, you discuss mule creek state prison.

A. Yes.

Q. Okay. And in preparing that report, you looked at CDCR's weekly population report for August 20, 2008, correct?

A. I honestly don't remember. It may have been.

Q. I think it might refresh your recollection if you look at that page.

Let me just back up and try to speed it up here. Did you understand that mule creek state prison was over 215 percent [441] of design bed capacity?

A. Yes.

Q. Okay. So in your opinion, mule creek was severely overcrowded?

A. Yes.

Q. Are you aware that Plaintiffs' counsel, Mr. Fama, prepared a post-tour report following his tour of mule creek state prison on March 4th and 5th of 2008?

A. Yes.

Q. Okay. And we spoke about that at your deposition on that Saturday in Chicago, right?

A. Yes. Yes.

Q. And that's Defendants' exhibit 1084, page two. And I'll pull it up, and it will be on the screen there.

A. Do you have a—

Q. It will be on the screen, and he'll blow it up for you. Okay?

And in that report, it reads that:

> "Mule Creek State Prison's compliance with key access to care time frame requirements, including for registered nurse triage and pcp appointments, including chronic care as well as for specialty care is generally very good at present time."

Do you see that?

A. Yes.

[442] Q. And it goes on to say:

> "certain exceptions are mentioned below. This is due to, among other things, diligent efforts by staff, including the schedulers, a relatively large number of PCP's allowing at times for the sche-

duling of double PCP lines in clinics and the low vacancy rate among RN's," correct?

A. Yes.

Q. In your opinion from this summary it appears that access to needed medical care can be provided in even severely overcrowded conditions, correct?

A. According to that. When I do my reviews, I generally use a combination of exactly that type of scheduling information with a selected record sample, which is the verification methodology.

Q. Okay.

A. And I don't know if Mr. Fama used the record methodology.

Q. Okay. Do you have any reason to believe he did or did not?

A. I have no idea.

Q. Okay.

Since the *Plata* receiver was appointed in April, 2006, in your opinion there have been numerous improvements in the delivery of medical care in the prisons, correct?

A. That's my understanding, yes.

Q. And there have been improvements in the delivery of medical care in California prisons at the time you signed your November, [443] 2007 report, correct?

A. Yes.

Q. The post-tour letters prepared by Plaintiffs' counsel which you reviewed in connection with preparing your November, 2007 report, documented some of those improvements, correct?

A. Yes.

Q. And in their post-tour letters Plaintiffs documented responsiveness to appeals, timeliness of appointments?

A. Where are you referring to now?

Q. I can take you to your deposition, if you want.

Let me ask you a question.

A. Okay. It would be helpful, because I'm not sure—

Q. Okay. Let me ask the question, and then you can tell me if you need your recollection refreshed.

A. Okay.

Q. In their post-tour letters that you reviewed in preparation of your reports in this case, Plaintiffs' counsel documented numerous improvements in responsiveness and appeals, timeliness of appointments and filling of clinical positions, correct?

Do you remember testifying to that?

A. I May have. I would really prefer seeing the deposition.

Q. Okay. Sure.

Mr. Mello: Let's pull up day one of his deposition.

The Witness: Now, which deposition was this?

[444] By Mr. Mello:

Q. Last December.

A. Well, the first?

Q. Yes.

A. The first deposition, Okay.

Q. Page 70, line 25 through 71, line nine, please.

Ms. Hardy: Which deposition?

Mr. Mello: December.

The Witness: Okay. I see line nine.

By Mr. Mello:

Q. Okay. Do you want to look at those lines that I just mentioned to see if it refreshes your recollection?

A. Lines nine through?

Q. I'm sorry. I think I said lines—

Judge Reinhardt: three through nine.

By Mr. Mello:

Q. Page 70. 70, line 25.

A. 25, Okay.

Q. Through page 71, line nine.

A. Okay.

Judge Karlton: That's not what you've got up.

Mr. Mello: Pardon me?

Judge Karlton: I say currently that's not what you've got up.

Or is it? Maybe it is.

[445] The Witness: 25 begins with:

> "do you recall as you sit here today any of the improvements that were identified in any of those post-tour letters?"

Judge Karlton: Oh, I see.

By Mr. Mello:

Q. Right. And then, what did you answer?

A. Yes, I—what I stated was:

> "there were—and I can't remember by facility—but there were improvements with regard to responsiveness in appeals. There were improvements with regard to timeliness of appointments in some instances. There were improvements in some instances with regard to staffing, you know, filling positions, those kinds of things."

Q. And you believe that to be accurate?

A. Yes.

Q. Okay. And true, to the extent they are different. Now, that' my—i'll withdraw that question.

A. Okay.

Q. In November, 2007 you said at the time you signed that report you were aware that the number of board-certified, board-eligible physicians had increased, correct?

A. Yes.

Q. In your opinion, improved credentials of physicians [446] generally means improved competence, correct?

A. Correct.

Q. Other improvements that you have observed include an improvement in nurse staffing filled positions, correct?

A. Correct.

Q. You are aware—because you were asked about it at your deposition, I believe—but you are aware that the receiver has reported that the goal of filling 90 percent of registered nurse positions has been achieved at 22 institutions, correct?

A. I know they are very close. I forget what the total was, but that sounds about right.

Q. And does it also sound about right that systemwide he was within 2 percent of his stated goal of filling 90 percent of nursing positions?

A. Excuse me. Is that in one of the recent staffing reports they produced?

Q. Yes.

My question is: do you believe that to be true or Not?

A. If it's in the their report, I believe it to be true.

Judge Karlton: The question is whether you yourself believe it. And you don't know; is that right?

The Witness: correct.

By Mr. Mello:

Q right you are aware that the receiver has—

[447] Mr. Mello: Strike that.

By Mr. Mello:

Q. The receiver, you believe, has at least closely reached 90 percent filled registered nursing rates at approximately 22 institutions, correct? Somewhere in that neighborhood?

A. I'm not sure, but if it's in the report I certainly believe it.

Q. Let me ask it this way: are you aware that the receiver has hired more than 1400 doctors and nurses since July, 2007?

A. I believe I saw that in some document that they produced.

Q. And you agreed that that was true in your deposition in Chicago, correct?

A. Yes.

Q. And there's a nationwide shortage of registered nurses, correct?

A. Yes.

Q. And it's severe, correct?

A. I'm sorry?

Q. It's a severe shortage of registered nurses, correct?

A. Yes.

Q. Therefore, the hiring of that many registered nurses and doctors since July, 2007 is quite impressive, isn't it?

A. Yes, it is.

Q. In your opinion, the hiring of more than 1400 doctors and nurses since July, 2007 will improve the delivery of medical [448] care to California's inmate patients, correct?

A. It will, with the caveat that was introduced, I believe, in the death summary that there's concern about the potential for people not to be retained if the environment and infrastructure are not dealt with expeditiously.

Q. And you spoke about that very issue in one or both of your reports, correct?

A. That's correct.

Q. And we will get to that portion of your report later—

A. Okay.

Q. —in cross, okay?

A. Okay.

Q. I promise.

You have spoken with the chief medical officer, doctor—at Folsom Prison—Dr. Kagan as recently as August, 2008, correct?

A. I saw her in October at the national commission conference. We talked then.

Q. And you also spoke to her in August, correct?

A. I think so.

Q. Okay. And you, as i, respect her as a physician and person right?

A. Yes.

Q. You believe her to be a competent, qualified physician, correct?

* * * *

[450] Q. You're aware that the receiver—and I believe you testified to it on direct—has implemented a formal death review process.

A. Yes.

Q. And in your opinion a legitimate death review process will improve the quality of care that CDCR delivers to inmate patients, correct?

A. As long as it's used in that way. And it appears from the death summary that that's what they intend to do.

Q. An effective and utilized death review process improves quality of care, correct?

A. Yes, it can.

Q. And it's your testimony that you've reviewed the receiver's most recent analysis of 2007 deaths, correct?

A. Correct.

Q. And you also testified earlier in your deposition that you reviewed the 2006—the analysis of 2006 death reviews, correct?

A. Yes.

Q. And in that report, the 2006 report, which is Defendants' exhibit 1107, the receiver reported that there were six asthma deaths that are were preventable in 2006, correct?

A. Correct.

Q. Do you understand in reviewing the 2007 death review report that there were zero preventable deaths due to asthma-related [451] issues in 2007?

A. Correct.

Q. You've spoken about "possibly preventable" and "preventable," and those are defined in the 2007 death report, correct?

A. Correct.

Q. The 2007 death report defines "possibly preventable" as a death that in the judgment of the reviewer better medical management or a better system of care May have prevented the patient's death, correct?

A. Right.

Q. It uses the word "May have." does that mean it's more or less likely than not that better care would have prevented the death, or can you tell?

A. I have not talked with any of the people who participated in the death review process, so I really can't answer that.

Q. It uses the term "preventable," and it defines "preventable" in that report, as well. It defines a preventable death or the definition of "preventable" is:

> "in the judgment of the reviewer better medical management or a better system of care would likely have prevented the patient's death," correct?

A. Yes, that's correct.

Q. So that means it's more likely than not that better care would have prevented the patient's death, correct?

[452] A. Correct.

Q. And that's versus May have prevented the patient's death, which is defined as "possibly preventable," correct?

A. Correct.

Q. So you don't know whether or not of those possibly preventable deaths identified in the receiver's report that any of them would have occurred, correct? Would not have occurred with better care, correct?

A. Can you redo that question?

Q. Sure. You believe that—you understand that the term "preventable" and "possibly preventable' are being used differently in the report, correct?

A. Yes.

Q. And "preventable" uses the term "would likely," correct?

A. Yes.

Q. Does that mean to you or do you understand that to mean that the death would have more likely than not occurred with better care and, therefore, it's deemed preventable?

A. The death more likely would not have occurred.

Q. With better care.

A. Correct.

Q. And that would be a preventable death?

A. Correct.

Q. Can you say the same thing with respect to the definition of "possibly preventable"?

[453] A. No, I think the conclusion suggests less clarity with regard to the predictability of the death.

Q. In fact, it suggests that it's less likely than not that the death could have been prevented, correct?

A. So—

Ms. Hardy: Objection, Your Honor.

The Witness: —I'm a little confused by the question, again.

Ms. Hardy: Objection, Your Honor. Dr. Shansky has stated that he has not spoken to the people who have written this report about their criteria, and he's answered that question.

Mr. Mello: I have two responses to that, if I May. Judge Henderson: well, let me just—answer the question as it's posed to you.

The Witness: can you read it back to me?

By Mr. Mello:

Q. Sure.

The "possibly preventable" definition says that better care May have prevented the patient's death, correct?

A. Correct.

Q. And "May have" suggests that it's not more likely than not that better care would have prevented the death, but less likely than not that better care would have prevented the death, correct?

[454] Judge Karlton: Are you asking this as a question of English or a question of—

Mr. Mello: I'm asking him his understanding based upon his experience whose done—and he's got an understanding of the term "possibly preventable."

The Witness: I don't think I would say "less likely." I would interpret it as fifty-fifty.

By Mr. Mello:

Q. Okay. But, again, you haven't had the opportunity to speak to the receiver?

A. Correct.

Q. Or Dr. Imai who authored the report, correct?

A. Correct.

Q. And he will not be testifying at this trial, correct?

A. I don't know.

Q. You are aware that in the receiver's ninth quarterly report, the receiver stated that:

"prisoner—the prisoner death rate in California's prisons has trended downward in the last 10 quarters starting in January 1, 2006," correct?

A. That's in the death review summary, the more recent death review summary. Is that what you're—

Q. I believe it's in the ninth quarterly report, as well.

A. Okay.

Q. Do you believe that to be true?

[455] A. I'm sorry?

Q. Do you believe that the death rate has trended down in the last 10 quarters starting in January 1, 2006?

A. Yes.

Q. Okay. And you agree with the receiver that the downward trend in mortality rates is related, in part, to an influx of new physicians and nurses, correct?

A. Correct.

Q. And in your opinion, the downward trend is very encouraging with respect to whether and when constitutionally-adequate medical care can be provided system-wide, correct?

A. Correct.

Q. In your opinion, while not the only factor, mortality rate is an important factor related to a constitutional system of prison medical care, correct?

A. It's a significant factor, yes.

Q. And are you aware that in a report done by the Department of Justice that California ranked in the top 15 with respect to death rates nationwide systemwide?

A. Yes, I've heard that.

Q. And are you aware that Pennsylvania ranked in the bottom five?

A. I don't recall looking at Pennsylvania, but I did see the document. It's—the one I saw was several years old.

Q. It was from analysis from even before the receiver, correct?

[456] A. Correct.

Q. And it showed that California was well below national averages, correct?

A. Yes.

Q. And it showed that California was well below regional averages, correct?

A. I believe so, yes.

Q. And that was, again, prior to the appointment of the *Plata* receiver?

A. Yes.

Q. In your opinion—and I believe you testified to this—it is possible that some units in California's prisons are currently providing constitutional levels of care to inmate patients, correct?

A. That's possible.

Q. In your November 7—November, 2007 report, at pages four and five, paragraph 12—and I don't quote it, so I summarize it. But we will pull it up for you.

You note that the reception center screening at CIM is too small, and each room is separated only by a thin white fabric folding screen.

Do you remember that?

A. Yes.

Q. Take your time getting there. Do you remember that?

A. Yes, I do.

[457] Q. Okay. In your opinion, that particular space issue could be addressed by providing a more appropriately-designed screening area, correct?

A. Yes.

Q. And it wouldn't necessarily require the reduction in the prison population, correct?

A. With regard to the use of that space and having two people simultaneously?

Q. Yes.

A. Yes, you could address that by changing the spatial arrangements.

Q. Without the release of prisoners, correct?

A. Yes, that's correct.

Q. On page five of your report in November—paragraph 13—in November, 2007, you state that Kern Valley State Prison is emblematic of inadequate clinical space.

Do you remember saying that?

A. What paragraph?

Q. Paragraph 13. I believe it's page five.

It's also on the screen, doctor.

A. Yes, I see it.

Q. In your opinion, new construction or module spaces could assist in alleviating that problem, correct?

A. Yes, the space issue could be addressed by new spatial configurations.

[458] Q. In fact, alternatives for creating additional healthcare space could include the rental of trailers, use of modulars, or prefabricated buildings, or simply fixing current space, correct?

A. I don't know about fixing the current space, but the other options are certainly possibilities.

Q. Okay.

In your opinion, the management and maintenance of medical records has been a problem at CDCR, correct?

A. Yes.

Q. And it's your understanding that many prisons' medical departments now operate at least two shifts, correct?

A. Yes.

Q. Okay. And that's a major improvement in your opinion, correct?

A. Yes, that would allow them to utilize more staff in order to get the job done.

Q. And in your opinion, medical records can be improved with more shifts, correct?

A. Yes.

Q. And in your opinion medical records could be improved with more medical record staff, correct?

A. Correct.

Q. You visited Pleasant Valley State Prison in August of 2007, correct?

[459] Pardon me, 2008.

A. 2008, I believe, right.

Q. Tried to trick you. No, I'm sorry.

So you visited that prison in August of 2008, and you noted that several inmates failed to receive follow-up with a primary care physician, correct?

A. That's correct.

Q. In your opinion, one potential fix for that problem would be increasing staffing, correct?

A. Well, staffing alone is not going to fix that. You have to put in the systems to ensure that the scheduling takes place; that their documents from the offsite encounters are available and reviewed so it's a multifactorial problem that has to be addressed in order to fix it.

Q. But one component of that multifactorial problem is physician staffing, correct?

A. Yes.

Q. And in your opinion, those other factors that you mention would contribute to the fix of that particular problem, correct?

A. Yes.

Q. As would additional clinical space at pleasant valley state prison?

A. Yes.

Q. In your opinion, you expect that the receiver will use additional hirings, temporary space, permanent space, electronic [460] medical records and increased staff to deal with paper records to address increased population, correct?

A. Yes, the receiver can use all of those tools.

Q. In your opinion, the adjustment of the medical classification system is also a possible solution to the staffing issues at some of the remote prisons, correct?

A. Yes, if you're talking about, in essence, kind of triaging patients with more clinical issues to facilities that have more intense medical resources.

Q. And another potential fix or partial fix to problems at remote prisons would be increased use of telemedicine, correct?

A. Yes.

Q. You are aware that in the findings of fact and conclusions of law appointing the receiver in this case the *Plata* court stated that, quote:

> "the provision of adequate medical care in this situation presents a classic example of a polycentric problem," end quote.

You're aware of that, right?

A. I believe so. That was awhile ago.

Q. And do you agree that it's a polycentric problem?

A. I think it was at that time, yes.

Q. You believe it is today?

A. Well, at this point in time, I think conditions have changed. They have changed with the advent of the receiver. And [461] the changes—and, again, this comes partly from my experience—the receiver—the receiver has a set of tools to, in essence, create a new system.

The receiver does not have a tool that directly addresses crowding. Instead, what the receiver is left to do is do—use a bunch of tools in a variety of ways because of the stresses put on the system by overcrowding. And as a result, the longevity of the receivership will unquestionably—I can say this with a hundred percent certainty—the longevity of the receivership will be extended if crowding isn't addressed and addressed directly and significantly.

And the end result is that the receiver's ability to fix things will be substantially delayed and, therefore, what will occur as a consequence is unnecessary, avoidable suffering, hospitalizations and potentially deaths. And that's the impact of crowding on the receiver's ability to solve things using his tools.

Q. So, in summary, it will take the receiver longer if crowding isn't addressed, in your opinion?

A. Substantially longer.

Q. In fact, I believe at the time of your deposition you couldn't tell us how much shorter it would be with population reduction measures, correct?

A. It depends on the degree of population reduction. But I could—I was thinking about this prior to my testimony. And [462] given the receiver's abilities to use those tools as demonstrated thus far, if the population were reduced to—I don't know—let's say a hundred thousand total—and I've been thinking about this—I believe that the majority of prisons would be constitutional within three years.

Q. So even with a reduction in population of 56,000 inmates it would take three years, in your opinion, to have 17 of the institutions in constitutional compliance?

A. Well, it's possible the receiver could, in some instances, go more rapidly in achieving those goals. But given my understanding of the plans with regards to I.T. and some of the other issues, I think that's completely reasonable.

And maybe it would be two-thirds or three-quarters would be constitutional within three years.

There's no question that with regard to hiring, for instance, there's been a significant improvement.

Q. And those items in his toolbox that are separate and apart from overcrowding, those are some of the interrelated components to the delivery of a constitutional—the delivery of constitutionally-adequate medical care?

A. Yes.

Q. And was the system overcrowded in 2005?

A. Was the system overcrowded? I don't have the numbers.

Q. Do you know if it was overcrowded when your deposition was taken in December of 2007?

[463] A. Yes.

Q. Was it overcrowded when I took your deposition in December of 2007, and you told me that the delivery of medical care in California's prisons was a polycentric problem?

A. That's in which deposition?

Q. In your December deposition. Do you remember—

A. December '07?

Q. Correct.

A. Okay. Let help just quickly.

Q. And why don't we just pull it up? Page 88, lines 20 through 24.

A. This was at the time of the—this is prior to the receiver.

Q. Okay.

A. Yes.

Q. So you agree?

A. Yes.

Q. Okay.

A. At that time.

Judge Reinhardt: Can I ask you a question on that?

The Witness: Yes.

Judge Reinhardt: What does the term "polycentric problem" mean?

The Witness: Well, from the way I interpret it, it connotes a problem that has multiple sources that are [464] simultaneously impacting it.

Judge Reinhardt: Is it possible to have a polycentric problem with a primary cause?

The Witness: I think so. I think so.

By Mr. Mello:

Q. Just to follow up on that point, the delivery of medical care in California's prisons involves multiple interrelated components, correct?

A. Correct.

Q. And you've discussed some of those interrelated components already. You've discussed adequate number of adequately trained and credentialed physicians, correct?

A. Correct.

Q. Appropriate number of assistants and staff and nurses and records folks, correct?

A. Correct.

Q. An adequate environment within which to work, correct?

A. Correct.

Q. And a system for documenting healthcare interactions, correct?

A. Correct.

Q. Just to name a few?

A. Yes.

Q. These components of a constitutionally-adequate medical care system also include and must include a system to track and [465] ensure continuity with regard to all elements of professionally-created plans, correct?

A. Correct.

Q. A system that allows for the movement of patients to improve—to appropriate levels of care based upon need and complexity of medical problems, correct?

A. Correct.

Q. The ability to ensure timely access to specialty care?

A. Yes.

Q. The ability to ensure access to medical care regardless of custody level?

A. Yes.

Q. Sufficient community resources to provide off-site services?

A. Yes.

Q. And in your opinion it's difficult to rank those interrelated components in terms of importance because they are interrelated, correct?

A. Correct.

Q. In fact, with respect to those components, you are reluctant to rank one of them first, correct?

A. Correct.

Q. In your opinion, one of the most important things in terms of remedying CDCR's failed or formerly failed medical care delivery system is the culture, correct?

A. The culture is important.

[466] Q. And culture helps ensure timely and appropriate access to medical care, correct?

A. Culture is crucial, in my view, because appropriate culture connotes a healthcare staff team that is invested in their patient outcomes.

That's the critical aspect of culture.

Q. How many institutions have you visited in the last year-and-a-half?

A. Nine.

Q. Nine.

And did you see that culture that you just described when you met with medical and custody staff at those institutions?

A. I would—it would be presumptuous of me with my quick one day in-and-out describe the culture. I was impressed at a variety of places with the individuals that I did get a chance to speak with, in that there did seem to be an increased level of concern about patient outcomes.

Q. And didn't many of those individuals report you to that the culture that you described earlier had improved at their institutions?

A. We didn't really discuss the culture much. For instance, when I was working with—when I was reviewing medical records, one of the things I always do is have a staff clinician review the records with me so that I am not concluding that something [467] wasn't there or didn't happen on the basis of my own observations, but rather it's a shared conclusion, shared which a person who works in the institution and knows where to look in the extra places, *et cetera, et cetera.*

When we were doing that and we would find things that should have occurred, but didn't occur, or things that didn't occur timely, my sense was that the individuals I talked to generally were extremely concerned about it and extremely bothered by the fact that there was this risk to their patients.

Q. So they care about their patients?

A. Yes.

Q. And they wanted the best for their inmate-patients?

A. Yes.

Q. There's a direct correlation between the quality and stability of leadership and the quality of care, isn't there?

A. Yes, there is.

Q. Okay.

In your opinion, a factor that could result in the insufficient delivery of specialty care to CDCR inmates is inadequate clinical patient communication with regard to current and future plans, correct?

A. Yes.

Q. In your opinion, simply reducing the number of the prison population by itself will not cure the deficiencies with respect to specialty medical care at CDCR, will it?

[468] A. Well, if—let me respond in the way I understand it. If some of the absence of follow-up visits and communication between patient and clinician after an offsite service was provided for a serious medical problem, if the reasons for the visits not occurring were because of a demand to resource mismatch, then crowding and reducing the population will bring the demand-to-resource relationship more into line and the probability of those visits and the communication occurring will be greatly enhanced.

Q. Do you know specifically whether any of those circumstances that you just described, or possibilities, were the result of overcrowding?

A. I know that clinicians told me that patients were not seen and followed up timely because of lack of available space, slots for physicians to see them timely. And that was partly related to custody issues, partly related to the physical space issues, only one exam room in a clinic area. But it was their perception that crowding was the major factor that impacted it.

Q. And, again, those issues could be addressed by increasing space and increasing staffing, correct?

A. Potentially.

Q. In your opinion, an effective computer network is essential to providing medical care access to clinical information, correct?

A. Yes, in this day and age it really is critical.

* * * *

[477] newly-hired clinicians at CDCR, had you?

A. No, not at that time.

Q. And when you wrote that you were not aware of any surveys done by CDCR or the receiver regarding newly-hired clinicians, were you?

A. Not at that time.

Q. And that opinion was not based—pardon me.

And that opinion was not based of any studies of newly-hired clinicians in any other systems, was it?

A. No.

Q. And that opinion was based solely on antidotal information you received from individual physicians in other states who quit their jobs, correct?

A. Well, based on my experience, not just antidotal information.

I have dealt with that myself in hiring people.

Q. But it was not based up any studies or surveys or reports in California, correct?

A. Correct.

Q. Dr. Shansky, you have experience working with or evaluating badly overcrowded systems, including Illinois in the '80's, correct?

A. Correct.

Q. In fact, as you testified on the direct, you were the medical director of Illinois system for a period of years.

[478] A. Yes.

Q. And Illinois system eventually—or was in constitutional compliance, correct?

A. Illinois system was what?

Q. Let me back up.

A. Okay.

Q. At the time it was overcrowded, was the Illinois system in constitutional compliance?

A. I was fortunate. At the time that I became medical director, the system was not badly overcrowded. There were two existing lawsuits. One was *Lightfoot versus Walker*, involving *Menard*, the other was *Cook versus Roe*, involving *Stateville*.

But those cases were not about crowding. It was about—they were about an inadequate healthcare system. And those were resolved within a year or two, after I came onboard. But we didn't have a crowding case.

Q. You did not have a crowding case, but I believe you testified that you had crowding?

A. Later on in my tenure, yes.

Q. And were you able to address the medical deficiencies in your systems without a prisoner release order in Illinois?

A. Yes.

Judge Henderson: Can you clarify whether "crowding" is the same as "overcrowding"?

Mr. Mello: sure.

[479] By Mr. Mello:

Q. You had overcrowding in Illinois, correct?

A. Nowhere near to the extent that it is here. I think some places May have gotten as high as about 140 percent of occupancy.

Q. And when you say "140 percent of occupancy," is that operable capacity, design capacity, some other capacity?

A. I think it's design capacity.

Q. Have you heard the term "operable capacity"?

A. I'm not sure what that means, though.

Q. And but Illinois was overcrowded, correct?

A. Yes.

Q. And it solved its medical care deficiencies while overcrowded without the use of a prisoner release order, correct?

A. Correct.

Q. Dr. Shansky, you worked as a consultant for CDCR in a series of two-year contracts through June of 2006, correct?

Let me just back it up, and make it less complicated. You worked as a consultant to the CDCR for some period of time, correct?

A. Yes.

Q. And you worked on this very *Plata* case for CDCR, correct?

A. Yes.

Q. And you stopped working for CDCR on *Plata* in June of 2006,

* * * *

[483] something that could be addressed effectively relatively quickly.

Q. And I believe you've testified generally about population reduction numbers to 100,000. That's a number you used?

A. I gave that as a hypothetical.

Q. As a hypothetical example.

Isn't it true, in fact, that you hesitate today to come up with a figure to which the prison population needs to be reduced to achieve constitutional levels of care, because in your opinion that would require doing a study that requires data from the *Plata* receiver?

A. Yes, that's correct.

Q. And in your opinion, if the only improvement that was made in the next two years is the decrease of the population in California's prisons by 40,000 inmates, and everything else remained the status quo, CDCR would still not have a system-wide constitutionally-adequate medical care system, correct?

A. Yes, I believe that.

Q. And you, Dr. Shansky, do not have an opinion as to whether or not population is the primary cause of the unconstitutional delivery at each of the institutions covered by the *Plata* stipulation, do you?

A. I have. My opinion is that the primary cause of the system's unconstitutionality, ongoing unconstitutionality is overcrowding.

[484] Mr. Mello: I think I only have one more question. I'd like to pull up page 151 of his first deposition, lines five through 10.

The Witness: 151?

By Mr. Mello:

Q. It's also on the screen, Dr. Shansky.

A. Yes, I'm looking at it in the document.

Q. And Dr. Shansky, I'm just going to read that into the record.

The question was:

> "Dr. Shansky, do you have an opinion as to whether or not population is the primary cause of the unconstitutional delivery of healthcare in each one of the 32 institutions?
>
> "Answer: I don't have an opinion on that because I have no data."
>
> Do you see that?

A. Yes. The critical phrase there is:

> "in each one of the institutions."
>
> I couldn't speak to each one of the institutions.

Q. So your testimony is that you can't tell this court whether or not overcrowding is the primary cause of the unconstitutional delivery of healthcare at the 32 prisons that were still subject to the *Plata* stipulation in December, 2007?

Judge Karlton: That's different question. Different [485] question.

This question says:

"in the 32."

The other question says:

"in each of the 32."

By Mr. Mello:

Q. Okay. Can you tell me whether it's the primary cause at each institution in the system?

You said before you couldn't. Can you tell me today?

A. At each individual prison, I can't comment on each individual prison. I can tell you for the entire system there's no question in my mind that it's the primary cause of ongoing unconstitutionality, and it's overcrowding.

Q. Despite the fact that you can't tell me whether it's the primary cause at any of the prisons that you didn't visit?

Ms. Hardy: Objection, argumentative.

Objection, argumentative.

Judge Henderson: Answer it, Dr. Shansky.

The Witness: Could you repeat the question?

Judge Henderson: In spite of the fact that you said here that you don't have an opinion on whether it's unconstitutional in each one of the 32 institutions.

By Mr. Mello:

Q. So the question is: Can you tell me—it's a new question. Can you tell me which one of the 33 California [486] institutions at which overcrowding is the primary cause of the unconstitutional delivery of healthcare in light of your previous testimony?

A. At which of the 32 do I believe based on my experiences that it is the primary cause. I can tell you from, A: my review of nine facilities, it's clearly the primary cause at those nine.

And in reading the receiver's documents about the system, in general, including the death review summary, the conclusion is, to me, not even in doubt that for the entire system this is the primary cause of ongoing unconstitutionality. And this is the major reason that the receiver will take longer to fix the system than were the population reduced.

Q. And back to that death review, you've reviewed the 2007 death review, correct?

A. Yes.

Q. And that death review provides there were three preventable deaths in 2007, correct?

A. Yes.

Q. Three out of 395 that were reviewed, correct?

A. Yes.

Q. That's well below 1 percent, correct?

A. Yes.

Q. Is that number surprising to you?

A. No, that number is not surprising. But when you add the preventable with the possibly are preventable that number is [487] surprising.

Q. And it's your testimony that "possibly preventable" means it's fifty-fifty that better care would have possibly prevented the death?

A. Mitigated the outcome, yes.

Q. One second.

Mr. Mello: That's it. Thank you, Dr. Shansky.

The Witness: Thank you.

Judge Henderson: We're going to take a 15-minute recess at this point.

The Clerk: Court's adjourned.

(Thereupon, a recess was taken.)

Judge Henderson: Okay. Your cross-examination.

Cross-examination by Mr. Kaufhold

Mr. Kaufhold: Thank you, Your Honor. Steve Kaufhold for the Legislative Intervenors.

By Mr. Kaufhold

Q. Good morning, Dr. Shansky.

A. Good morning.

Q. Turn to the first page of your second expert report from September of this year. On the first page, there's a heading that sets forth the basis for your expert opinions.

In paragraph five there you write:

> "I have been asked to render my opinion with respect to whether overcrowding in the [488] California Department of Corrections and Rehabili-

tation CDCR is the primary cause of the current unconstitutional conditions experienced by members of the *Coleman* and *Plata* classes." do you see where I'm referring to?

A. Yes.

Q. My question is this: When you refer to the current unconstitutional conditions, was that something that was part of your research and analysis and opinion, or is that a fact that you took as a given in your analysis?

Ms. Hardy: Objection, Your Honor. Relevance.

Judge Karlton: Overruled. Oh, excuse me.

Judge Henderson: It's been said better than I could.

The Witness: I took it as a given, but it also was confirmed by my reviews of the prisons I went to.

By Mr. Kaufhold

Q. So is it your testimony that you have an expert opinion on the legal issue of the current constitutionality of the California prisons?

A. Ask the question again.

Q. Sure. My question is: is it your testimony that you have formed and have today an expert opinion regarding the current constitutionality of the California prisons?

A. No. As I said, that was a given, but my reviews were consistent with that given.

[489] Q. just to make completely clear. So that is not part of the formal opinion that you are offering to the court today; is that correct?

A. "That" being?

Q. "That" being the ultimate expert opinion that there is current unconstitutionality in the California prisons. That is not part of your expert opinion; is that correct?

A. That's correct.

Q. Turning to the final page of the same report, that's page 36 of your September 9, second supplemental declaration, or expert report, I'm sorry. You state:

> "based on all that I have set forth above in my previous reports, I continue to believe that overcrowding is the primary cause of the current state of medical crisis in the CDCR."

Do you see where I'm referring to?

A. Yes.

Q. And in the conclusions portions of your opinion, there's no reference to current unconstitutional conditions; is that correct?

A. In this paragraph?

Q. Correct.

A. I don't refer to that, correct.

Q. Referring to your earlier testimony when you had your conversation with Mr. Mello, you discussed the hypothetical [490] figure of a hundred thousand inmates in the system; do you recall that?

A. Yes.

Q. And you have not, however, done any systematic analysis of what an appropriate number of inmates for the California CDCR would be, have you?

A. No, because I didn't say that was the appropriate number. My testimony was if such a number were reached, hypothetically, then the receiver would be able to achieve a constitutional level of care in a majority of the prisons within three years.

Q. Right. And, in fact, in your sworn testimony to Mr. Mello, you stated you had, quote, "no clue," end quote, what an appropriate target number is; is that correct?

A. That's correct.

Q. Now, on September 28th of this year, 2008, you filed a third supplemental expert report; do you remember that?

A. Yes.

Q. Whose idea was it that you file a third supplemental report; was that your idea or Plaintiffs' counsel?

A. I discussed it with Plaintiffs' counsel.

Q. Whose idea—who was it that raised that possibility; was it you or Plaintiffs' counsel?

A. Plaintiffs' counsel.

Q. What was the purpose for that?

A. I think it was responding to the receiver's report.

[491] Q. Turning to the second page of that report, of your second report, which was submitted to the court and dated

September 28th, 2008, you state:

> "discussing this development the receiver emphasizes that, quote, 'a constitutionally adequate

> and sustainable prison medical system will not be established until the turnaround plan of action is fully implemented,'" end quote.

And then you write:

> "I agree. And the inadequate system will continue to exist for longer than otherwise—longer than it otherwise would unless there's a significant reduction in the population."

Do you see where I'm referring to?

A. Yes.

Q. And do you agree with that statement today?

A. Yes, yes.

Q. Do you believe the full implementation of the turnaround plan will ensure a constitutional level of healthcare and mental health care in California?

A. Along with the other additional changes they're making.

Q. So you believe additional changes are needed beyond those set forth in the turnaround plan?

A. No. The turnaround plan lists a variety of things, both [492] environmental and staffing and I.T. all of those things together will eventually be able to address most of the problems, unless, of course, the population wildly increases again.

Q. Right. And it is not part of the turnaround plan—there's no request or plan for a prisoner release order of any sort; is there?

A. Not that I'm aware of.

Judge Karlton: Sir, the plan requires the legislature to provide large sums of money that they have not yet done and May not do. Is your question—it appears to me, but I may be wrong—that your question is talking about a hypothetical that as of now is not likely to occur.

Mr. Kaufhold: I can't respond to the likelihood, Your Honor, but it's absolutely a hypothetical in the sense my question to the witness was that, if you assume that everything in the turnaround plan is fully implemented, fully funded, fully implemented, then would that be the result.

Judge Karlton: Okay.

By Mr. Kaufhold

Q. Now, in terms of the timeframe of possibly achieving that, Dr. Shansky, I think you've testified previously that it wasn't foreseeable when that could be achieved absent a prisoner release order or a population cap of some sort; is that correct?

A. That's correct.

* * * *

[497] A Yes, I did see patients housed in those arrangements with complex medical problems.

Judge Karlton: did you actually visit mule state?
The Witness: no, not on this tour.

By Ms. Hardy

Q. Dr. Shansky, Mr. Mello asked questions about the items that you referred to as items in the receiver's toolbox that include staffing, the pharmacy system. Will those improvements accomplish and create—use of those tools create a constitutional medical system if the receiver uses them?

A. You have to—you are talking about an entire system of the Department of Corrections, and you would have to be able to integrate the implementation of all those changes, and currently you would be forced to do that in the face of dramatic overcrowding, which compromises your ability to successfully implement them. Whereas, in the face of a system that is not heavily overcrowded, your ability to use those tools and successfully create an adequate delivery system is greatly enhanced, and the timeframe to doing it is dramatically shortened.

Q. Mr. Mello pointed out that at certain prisons, and you agree, that if they raise the staffing levels, then that would improve care. Would that resolve the constitutional problems, by raising staffing levels?

A. No. You have to address all of these things systemwide and [498] within given facilities in order to achieve constitutional levels.

Q. In fact, the receiver has said that the system has only half the necessary space for the needed clinicians for the current population; is that right?

A. That's correct.

Q. Mr. Mello asked you whether, if prisoners are housed in non-traditional beds, they necessarily receive unconstitutional medical care.

A. Yes, he asked me that.

Q. Increasing staffing levels and clinic space will not cure the problem of non-traditional beds if those non-traditional beds are breeding grounds for disease; is that right?

Mr. Mello: Objection, Your Honor. Paul Mello again. That's an incomplete hypothetical.

Judge Henderson: Rephrase it, counsel.

By Ms. Hardy

Q. You testified that non-traditional beds in and of themselves do not mean that prisoners are receiving unconstitutional medical care, correct?

A. Correct.

Q. However, non-traditional beds do pose problems for the medical care delivery system, don't they?

A. There's ample data that shows that kind of congregated housing increases problems in a variety of ways, including the [499] risk of communicable disease, especially infections, skin infections certainly, as well as increases stress among the population that can result in various kinds of acting out, violence, et cetera.

Q. When there is acting out, how does that impact the delivery of care?

A. Then you get injuries, and it just increases the demand on a system that is already inadequate to meet the existing demand.

Q. You testified that when you do file reviews of medical files at prisons, you sit with the—with a physician from that institution as you go through the files; is that correct?

A. That's correct.

Q. And when you did the latest round of file reviews, I believe it was in August, generally you had the chief physician with you; isn't that right?

A. That's correct.

Q. And you testified that you found when you went through these files, that the physicians you talked to were concerned about their patient care and the apparent lapses; is that correct?

A. That's correct.

Q. Were the physicians surprised at the lapses?

A. No. That was, unfortunately, the pattern throughout. They were aware that the system that they were responsible for was still not adequately responding to the clinical needs.

Q. Doctor, you have been to a number of—many states, and you [500] have reviewed scores of prisons, and you have been through many prison systems. In order to determine whether or not overcrowding is the cause of unconstitutional medical care in a system, do you have to go to every prison facility?

A. No, generally not. We can go to a subset, but in this particular situation, we have evidence beyond just the personal tours. And particularly from the receiver's office there are remarkably well-documented reports that describe the ongoing deficiencies, and the resource-to-demand mismatch that is endemic throughout the system.

Q. Mr. Mello asked you about filled clinical positions, and you agreed that the receiver has achieved 90 percent of—90 percent fill rate for certain clinical positions, correct?

A. Yes.

Q. Do you know whether those are all the positions that the receiver needs in the system?

A. I do not know.

Q. And have you seen a staffing study or workload study done by the receiver to determine whether or not those positions will be sufficient for the system?

A. I don't recall seeing such a study.

Q. Do you recall talking to physicians on your tours who indicated that they had opinions about the level of staffing?

A. Yes. Some of the CMO's indicated that their view was that even if all the budgeted positions were filled, they would still [501] not have adequate clinical resources to meet the clinical demands.

Q. And then the obverse was you spoke to other clinicians who told you that, even if all the positions were filled, would they have had a place to put them?

A. I was also told by some of the CMO's that they wouldn't have space if all the budgeted positions were filled.

Q. You listed a number of interrelated factors that make up a medical care system, and that includes medical staff, medications delivery system, tracking, access to specialty care, offsite care, and you said that all of those elements are important; isn't that correct?

A. Yes.

Q. And there are deficiencies in these areas in CDCR; is that correct?

A. Yes.

Q. And what is the relationship of overcrowding to those deficiencies?

A. Well, overcrowding exacerbates demand, and when a system is not designed to meet basic needs and then you increase the demand on it, the inadequacies come to the fore much more frequently.

Ms. Hardy: Thank you, Dr. Shansky.

Judge Henderson: Thank you, counsel.

Mr. Mello: I have nothing further.

TRANSCRIPT OF PROCEEDINGS

San Francisco, California
Friday, November 21, 2008

* * * *

[724] still some clarification which may avoid the need for a witness.

Judge Karlton: Why don't we take our break?

Mr. Bien: If you could indulge us to have that witness later in the trial if we can't work it out.

Judge Henderson: Okay. That's fine.

Mr. Bien: Thank you.

Judge Henderson: Then we are going to get to defendants' case, but let's take a recess, 15 minutes for that transition.

Judge Karlton: There was something the Plaintiffs wanted to put on.

Judge Henderson: Plaintiffs have rested, right?

Mr. Bien: Your Honor, I think as long as if there's any problem on the foundation for these charts, we can do it later in the trial?

Judge Karlton: Okay.

Judge Henderson: Okay.

Okay. Let's proceed. The preliminary statement that the Court remains of the opinion that the witnesses listed for today are more properly phase two, but we're not going to tell you you cannot put them on today.

Mr. Lewis: Good morning, Your Honors. Kyle Lewis for the defense. The state defendants now call Todd Jerue.

TODD JERUE

[725] Having been called as a witness by
the defendants was first duly sworn and
examined as follows.

The Witness: Yes.

The Clerk: State and spell your full name for the Record.

The Witness: My name is Todd Jerue. Spelling is T-O-D-D-J-E-R-U-E.

Mr. Lewis: Your Honors, Defendants have submitted a trial affidavit for Mr. Jerue. Specifically, it's identified as exhibit 1008. We ask the Court to take it under submission at this time.

Judge Henderson: We will do that.

Direct Examination by Mr. Lewis

By Mr. Lewis

Q. Good morning, Mr. Jerue.

A. Good morning.

Q. What is your current job title?

A. Program budget manager for the Department of Finance for the State of California.

Q. How long have you worked for the State of California?

A. Twelve years in February.

Q. Could you please provide the Court with a brief description of your employment with California?

A. Sure. I began in February of 1997 as an analyst for the Department of Finance. I worked in that capacity for about [726] 3-1/2 years on various budgeting assignments. In the summer of 2000, I was promoted to supervisor, which is called a principal program budget analyst. That was on a general government assignment.

About eight months later I rotated to a new assignment, which was department of justice judiciary assignment. In 2002 I rotated to the Department of Corrections assignment. In October of 2004 I was promoted to Assistant Program Budget Manager over half of our unit that handles public safety programs, corrections, judiciary department of justice. In June of 2006, promoted to my current position.

Q. And as program budget manager for the Department of Finance, what are your responsibilities?

A. I manage a unit of 22 people. Our responsibility is that we review and oversee the support and operating budgets for about 50 state departments.

Q. And when you say the preparation and submission of the support budgets, what exactly does that mean?

A. Well, the main function of that is starting with the current budget act as a starting point, the main role we do is that we review and analyze budget change proposals submitted by those departments.

Q. And you mention that you oversee the preparation of those budgets for about 50 state agencies and departments. Is one of them the California Department of Corrections and [727] Rehabilitations?

A. Yes, it is.

Judge Karlton: Before you go on, I'm confused. The budget, do you, for example, do the budget, or do you review the budget that comes up from the agency?

The Witness: we review the agency's proposals for new spending, and then we physically public a book—

or now on the internet—that actually has all of those departments in one place.

Judge Karlton: I'm afraid I haven't asked the question appropriately.

Do you put the budget together for an agency, or do they send you a proposed budget?

The Witness: They send us a proposal budget.

Judge Karlton: Okay.

Judge Reinhardt: Do you then change it? You review it? You cut it? You give them more money than they ask for?

The Witness: We have given them more than they've asked for before, but, for the most part, we budget on the margin. So we have a base budget. Most of our changes are when they request new money, but in order to balance the budget, there are times we have to make budget reductions, also.

Judge Karlton: My fault, not yours. The end of the year or whenever the legislature gets around to it, you get,

* * * *

[734] And mental. It did not include dental.

Judge Karlton: All right.

By Mr. Lewis

Q. Mr. Jerue, in brief, what did your analysis show regarding the amount of budget expenditures for CDCR healthcare services?

A. In general or for specific years?

Q. Just in terms of raw numbers.

A. In terms of raw numbers? Can I refer to my affidavit?

Q. Please.

A. If you go back to the other chart, I can show you on the first chart—it shows in '94/95 fiscal year the department spent $344 million for these services.

Then moving forward approximately ten years, can you tell what the number—what the amount of expenditures in 2005/2006 was?

A. Yes. It grew to 1.252 billion.

Q. What was the amount for 2006, 2007?

A. 1.365 billion.

Q. What was the amount for 2007, 2008?

A. 2.249 billion.

Q. So, over a period of years, how much has the amount of funding grown for CDCR's healthcare services?

A. From where we started '94/95 through the most recent actual data from '7/'8, it grew from 344 million to 2.249 Billion which is an increase of 554 percent.

[735] Q Thank you.

Now, did you and your staff also analyze the trend of the California state inmate population at that time between 1995 and 2006?

A. Yes, we did.

Q. And based on your analysis how much did the CDCR population grow between 1995 and 1996 (sic)?

A. The population for the years '94/'95 through '7/'8 grew approximately 30 percent. I have the actual numbers if I can refer to my affidavit.

Q. I think the Court has that. It's all right. Thank you, though.

So between 1995 and present, how much did the CDCR annual budget expenditures for healthcare grow?

A. Five hundred fifty-four percent.

Q. During that same period, how much did the population grow?

A. Approximately 30 percent.

Q. Did you and your staff also perform an analysis of the cost per inmate expended by CDCR on its healthcare needs for the population over the course of years?

A. Yes, we did.

The Clerk: Five minutes, counsel.

Mr. Lewis: Thank you.

By Mr. Lewis

Q. What did your analysis show?

[736] A Our analysis showed that in '94/95, the per-inmate cost was $2,714 growing to $13,778 in '07/'08, which is an increase of 408 percent.

Q. And so looking at the chart from the year 2006 to 2008, what was the percentage of growth in just those two years?

A. That was approximately 80 percent.

Q. And looking ahead, what is the total anticipated expenditure for CDCR healthcare services, to include mental and medical health, for fiscal year 2008/2009?

A. Currently, 2.193 billion.

Q. I notice there's a slight decrease in the FY, fiscal year, 2008/'9 versus the previous year 2007/'8. Can you explain that?

A. Yes, I can. For the prior two fiscal years, the budget act contained an unallocated pot that was then used for the receiver within any given year within that current year for remediation efforts. In the '7/'8 fiscal year, that was $125 million. That was not included in the '8/'9 budget act.

Q. Based on your analysis of the figures for budget expenditures, what have you learned about the amount of funding appropriated to CDCR between 1994 and 2008?

A. What I have learned is that the expenditures have grown over 550 percent with an accompanying increase in per inmate spending of over 400 percent, while, at the same time, the population has only grown approximately 30 percent.

* * * *

[741] hope.

Mr. Mello: We are done with this witness. I believe you were done, correct?

Judge Reinhardt: I was just trying to find out if I could take anything from the evidence that would be helpful to your case.

Mr. Lewis: I have no further questions. Thank you, Mr. Jerue.

Judge Henderson: Let me—before we have cross, does this chart show us—we know there's been a 554 percent increase over the years of this chart with an attendant 30 percent population increase. Does this show us—does it break down as to, when we reach the high point, what this money was used for?

And what I have in mind is, as recently as three years ago, perhaps, I took a tour of a prison in which the medical people didn't even have a wash bowl to wash their hands. Is this—would it be fair to conclude that some of that increase was just to get things that just had not been furnished, or do you know?

The Witness: The department would have the exact ways that the money was spent. I would have general ways that the money was spent, or have some knowledge of, for example, what the receiver has done since his inception.

Judge Henderson: But there are figures someplace to [742] tell you exactly how the two billion—

The Witness: That's correct, especially the growth in the last couple of years. There would be specific proposals that the Administration has put forward, whether it be for mental health care or from the receivership, to grow these budgets.

Judge Karlton: I take it no—I don't know whether I—I take it that there's no case on these charts, or even in your documents, whether or not the initial amount of $344 million was an appropriate sum. All this chart may prove is that there was desperate underspending until now; is that right or wrong?

The Witness: I don't think I could speculate on either side, but I can't sit here and tell you I can say either way whether $344 million was the correct number in '94/'95

Mr. Lewis: Thank you, Your Honor.

Thank you, Mr. Jerue.

Judge Henderson: Thank you, Counsel.

Cross?

Ms. Morris: Maria Morris on behalf of *Coleman* Plaintiffs.

Cross-examination by Ms. Morris

By Ms. Morris

Q. Mr. Jerue, I would like to take a moment to look at your trial affidavit, which is Document 346

* * * *

[745] Q. Okay. So when you're comparing costs from 1994/1995 to 2007/2008, you're not actually comparing necessarily the same set of costs; is that correct?

A. It's possible.

Q. You just don't know?

A. Correct.

Q. Okay. Do you know how much of the current costs of medical care in 2007/2008, how much of those were for administration costs?

A. It was factored into the number. I don't have that with me today.

Q. Do you know how much of those—of the costs currently are custody-related costs?

A. Once again I could guess at a number. I don't have the exact number with me today.

Q. Okay. So again, you don't know—that is the portion that you don't know about for 1994 and '95, whether that was included?

A. That's correct.

Judge Karlton: Can you give me a rough estimate as to those—rough, as to those components?

The Witness: As of today?

Judge Karlton: Yes.

The Witness: I would say roughly for both components it would be approximately 250 to 300 million in [746] today's dollars.

By Ms. Morris

Q. So about a fifth to a sixth of the total costs?

A. That's correct.

Q. In this chart as far as—rather, in your—in your trial affidavit, as far as I can tell, you did not factor in inflation; is that accurate?

A. That's correct.

Q. And you didn't factor in medical care inflation specifically either, did you?

A. No. We just compared the actual costs of the department.

Q. Okay. Do you know how much inflation there has been in medical care since 1994?

A. No, I don't.

Q. Have you ever used the consumer price index?

A. For some applications, yes.

Q. So you use it in your work?

A. Rarely. Rarely in what we do in budgeting, but every now and then.

Q. I ran some numbers on the consumer price index to see how much growth there has been in today's dollars, and I'd like to just put up for the Court the CPI calculator.

Mr. Lewis: Objection, Your Honor. This lacks foundation, and also the witness or the—I'm sorry—counsel is testifying now, it would seem.

* * * *

[750] from June 30th, 1995 through June 30th, 2008, that's comparing healthcare costs, is that how you understand this as well?

A. I never looked at the chart.

Q. You've never looked at the Medical Care Inflater Chart?

A. No.

Q. Okay. So you have no knowledge, when you talk about how much the cost has increased, what percentage of that is due to inflation?

A. No, because we didn't do our analysis based on that.

The Clerk: Five minutes, Counsel.

Ms. Morris: Okay.

Judge Henderson: Counsel you said western urban. This says all urban.

Ms. Morris: Let's see—can you blow up the place in the top right above the chart where it says—down lower, the—inside the chart, that portion.

Judge Henderson: There's some blurred reading. I can't see.

Ms. Morris: I do have a copy of it I can provide for the Court—and I can provide—

Judge Henderson: Just give it to the Deputy. Okay.

Judge Reinhardt: We see it. We see it.

Judge Henderson: it's just not clear on that chart.

By Ms. Morris

Q. Also, you don't give any information in your affidavit

* * * *

[752] increasing the quality of healthcare?

Mr. Lewis: Objection, Your Honor. Vague, and this witness is not being proffered for any of this evidence.

Judge Henderson: I think it's a fair cross-examination question, and I'll allow it.

The Witness: No, I wouldn't have the expertise to know how it's affecting the quality of the care.

By Ms. Morris

Q. So you did not consider inflation, you did not consider quality of healthcare, quantity of healthcare, for any of the years between 1994 and 2005, and you don't actually know what the starting point included in your categories of healthcare spending, correct?

A. That's correct.

Ms. Morris: Your Honors, we would move to strike the testimony of this witness as lacking foundation, and as being irrelevant and not probative to any matter in this case, and we would like also to strike the chart which is based entirely on his testimony.

Mr. Lewis: Your Honor, if I may address that via redirect?

Judge Henderson: You may. We'll take it under—

Redirect Examination by Mr. Lewis

By Mr. Lewis

Q. Mr. Jerue, when the chart comes up, I would like you to

* * * *

[755] regarding foundation or anything like that, I could address that. I tried to establish these are records and they are based on numbers his unit is responsible for keeping.

Judge Henderson: No further questions for anyone? I'm going to deny the motion and rule it goes the weight of this testimony and not its admissibility, counsel.

Thank you, Mr. Jerue.

You may call your next witness.

Ms. Tillman: The witness is right in the hallway, Your Honor.

Judge Henderson: Step forward, ma'am, and be sworn in.

Ms. Tillman: Your Honor, this is Ms. Cynthia Radavsky from the Department of Medical Health. My name is Lisa Tillman on behalf of the *Coleman* defendants.

CYNTHIA ANNE RADAVSKY

Having been called as a witness by the defendants was first duly sworn and examined as follows.

The Clerk: State and spell your full name for the record.

The Witness: My name is Cynthia Anne Radavsky, R-A-D-A-V, as in Victor, -S-K-Y.

Ms. Tillman: Good morning, Your Honor. Lisa Tillman on behalf of the defendants. We've presented the Court with a trial affidavit of Cynthia Radavsky. I think it was [756] tagged as Exhibit No. 1106. We respectfully request this court admit that trial affidavit into evidence today.

Judge Henderson: 1106?

Ms. Tillman: I believe it is 1106.

Judge Henderson: It says 1006.

Ms. Tillman: I'm sorry. Is it 1006? My typo. Thank you.

Judge Henderson: It will be admitted.

(Defendants' Exhibit 1006 received in evidence.)

Direct Examination by Ms. Tillman

By Ms. Tillman

Q. Ms. Radavsky, who are you employed by?

A. The State Department of Mental Health.

Q. And can you inform the Court, please, of the nature of your position with the Department of Mental Health by job title and your responsibilities?

A. I'm the Deputy Director of Long-Term Care Services, which is responsible for the oversight and management of the five state mental hospitals, two psychiatric programs. I'm responsible for the conditional release, and Mentally Disordered Offender program, and the Sexually Violent Predator Program.

Q. Ms. Radavsky, when did you first begin working with the federal court in the *Coleman* case on compliance issues?

A. In 1998 when I became the Assistant Deputy Director, one of [757] my first responsibilities was attending and participating as *Gates* was being merged into *Coleman*.

Q. And *Gates*, *Gates* was a class action suit, of course, involving just the California Medical Facility, for the record.

At the time did the Department of Mental Health provide inpatient services to the California Department of Corrections and Rehabilitation inmates?

A. Yes, they did.

Q. And since that time of 1998 through today, has DMH provided inpatient mental healthcare services to Department of Correction inmates?

A. Yes, they do.

Q. To your knowledge, does any other entity provide inpatient mental healthcare services to these CDCR inmates?

A. No, they don't.

Q. So DMH is the sole provider of mental healthcare services required by CDCR inmates who need inpatient care?

A. That's correct.

Q. Does the Department of Mental Health receive patients from any other agencies other than the Department of Corrections and Rehabilitation?

A. Yes, we do. The mission of the Department of Mental Health is outlined in the state Constitution, and we're required to provide services for mentally ill that come in through either a voluntary or involuntary short commitment. We're responsible [758] under Penal Code 1370, Incompetent to Stand Trial, Penal Code 26, Not Guilty by Reason of Insanity; Welfare and Institutions Code 6600, sexually violent predators, and various Penal Codes, 2962, 2972, and 2974, mentally disordered offenders.

So we receive multiplicity of patients from the various superior courts within the counties of California, the Board of Prison Hearings. I service the population from the Department of Juvenile Justice within the California Department of Corrections and Rehabilitation, as well as providing services to the counties.

(Document Displayed.)

By Ms. Tillman

Q. Would you look at Exhibit 1243, please, that we put up on the screen? Was your staff responsible for creating this exhibit?

A. Yes, they were.

Q. And, to your knowledge, when was it prepared by your staff?

A. Within the last 30 to 60 days.

Q. What does this exhibit show?

A. This exhibit shows the locations throughout the State of California of our five state mental hospitals and the two psychiatric programs.

Q. Does it also show the number of inpatient mental healthcare beds provided by the Department of Mental Health to CDCR in states?

[759] A Yes, it not only shows the number, but it shows the breakdown between gender and between acute level of care, which is essentially for those patients that require immediate treatment to stabilize a psychotic crisis or those, for example, in intermediate care, which is for longer term and chronic mental illness.

Q. Will this map assist in your testimony today?

A. Yes.

Q. Looking at the map, would you describe to the Court where the Department of Mental Health provides inpatient mental healthcare to CDCR inmates within CDCR premises?

A. Okay. Let's start with the state hospitals. At the top of the box on the side where it says "Atascadero," Atascadero has 25 beds set aside for the Department of Corrections and Rehabilitation inmates. So we have 25 acute care beds and 231 intermediate care beds, which are beds for inmates that have a lower risk of violence or security. That hospital is within the city of Atascadero, close to San Luis Obispo.

Coalinga State Hospital is in Coalinga. It has a 50-bed intermediate care for the CDCR inmates. Patton State Hospital is in San Bernadino, and we have 30 female intermediate care beds.

Then the two psychiatric programs are within two prisons. So the Vacaville Psychiatric Program is within the California Medical Facility, there's 150 acute beds, which [760] right now has 20 beds dedicated for mental health crisis beds, and 150 intermediate care beds. That 150 includes a 44-bed day treatment program. Then the Salinas Valley Psychiatric program is within Salinas Valley State Prison, and currently we have 176 male intermediate care beds.

Q. Now, in regards to the programs at Vacaville Psychiatric and Salinas Valley Psychiatric Program, are those particular inpatient programs within—let me strike that.

Do those particular psychiatric programs at Salinas Valley and Vacaville Psychiatric program provide their own dining facilities for your patients?

A. Yes. Because its licensed care, they have services provided through a licensed dining and therapeutic kitchen, so they are not allowed to commingle in the other dining rooms or have food served to them by other inmates.

Judge Karlton: Ms. Tillman, may I interrupt? I have the same problem with this witness as I have with the first, although it's not as dramatic. How does this bear upon the question of whether or not overcrowding is the primary cause? Where are we going?

Ms. Tillman: I'm trying to lay a necessary foundation, Your Honor, for this witness to testify that, indeed, the mental healthcare patients that are provided inpatient services by the Department of Mental Health are not in overcrowded conditions.

[761] Judge Karlton: I see. All right. Now I understand where you are going.

By Ms. Tillman

Q. Ms. Radavsky, when you mention there is no commingling in the dining facilities, are you also indicating that there's no commingling in terms of the housing of inmates receiving inpatient mental healthcare services by the Department of Mental Health at CDCR sites with general population inmates at CDCR sites?

A. That's correct. Our patients, when they are with us, not only dine separately there, they are in separate therapeutic environments, separate individual and therapeutic groups, and they're not allowed to be out for recreation or yard time at the same time.

Q. Is any of your patients—are any of your patients triple bunked at any of your sites within state hospitals or within premises—

A. No, they are not.

Q. Under applicable state licensure requirements of Title 22, are your patients permitted to be triple bunk?

Mr. Galvan: Objection. Leading.

Judge Henderson: I will allow it.

By Ms. Tillman

Q. Are your state hospitals subject to Joint Commission Accreditation of Hospital Organization accreditation standards.

[762] Mr. Galvan: Objection. Leading.

Judge Henderson: Overruled.

The Witness: Four of my hospitals are Joint Commission accredited: Atascadero, Patton, Napa, and Metropolitan. And we do have standards for care in the living environment.

By Ms. Tillman

Q. In the course of working with the accreditation standards of the Joint Commission, are you aware of whether or not any of those standards permit triple bunking of your patients?

A. No, they do not.

Q. Are you familiar with the Court orders from the *Coleman* court concerning care provided to California Department of Correction patients by the Department of Mental Health?

A. Yes, I am.

Q. Have any of those court orders addressed the adequacy of the care rendered by the Department of Mental Health to these particular patients?

A. No, they have not.

Q. What have the orders addressed?

A. The orders have primarily requested additional beds from the Department of Mental Health.

Q. When you mention that the Court has requested additional beds be provided by the Department of Mental Health for the care of *Coleman* patients, are you familiar with the Court order [763] of March 3, 2006, which we've labeled as Exhibit 1043? And looking at page four of that court order, are you familiar with the paragraph four that requires defendants to build 64 single cells in the presently planned expansion of Salinas Valley Psychiatric Program operated by the Department of

Mental Health for Level Four violent inmates at Salinas Valley State Prison?

A. Yes, I am. And that program, the administration building has been turned over to me, and we're anticipating the housing portion to be completed and turned over by the end of December, early January '09 so that we can start occupancy either the end of January '09 or February '09.

Q. And are you also familiar with a court order of May 2, 2006, Defendant's Exhibit 1296?

The Clerk: You have five minutes, counsel.

By Ms. Tillman

Q. Again, that court order indicates not only, in paragraph seven, the addition of 36 beds for inmates at Salinas Valley State Prison, but also the addition of, in paragraph ten, 25 additional inpatient beds for inmates at Coalinga State Hospital, correct?

A. That's correct.

Q. And were those beds made available at Coalinga State Hospital?

A. Yes, they were.

Q. Looking at paragraph 11 of that exhibit, that paragraph [764] also addresses the need to provide additional beds to those inmates of the Department of Corrections who not only need inpatient services but have Level Four high custody classification, correct.

A. That's correct.

Q. In the course of your work with the Department of Mental Health, have you found that there is a wait list for beds provided by the Department of

Mental Health to these CDCR inmates in need of inpatient services?

A. The wait list is for the high security inmates that have a risk of violence.

Q. Where does that wait list usually occur, is it at your state hospitals or at the psychiatric programs within CDCR?

A. The wait list is predominantly for Salinas Valley Psychiatric Program and the high security units that we operate within the Vacaville Psychiatric Program, P2 and P3, which were opened within the last three to four years, specifically to address the wait list for these high security inmates.

Q. Why is there no wait list for the beds, the inpatient beds provided by the Department of Mental Health at places within the state hospitals like Atascadero State Hospital?

Mr. Galvan: Objection. Assumes facts not in evidence.

Judge Henderson: Why don't you rephrase, counsel?

Ms. Tillman: Thank you.

[765] By Ms. Tillman

Q. In regards to the inpatient beds available at Atascadero State Hospital, is there usually a wait list for those beds?

A. No, there is not.

Q. Do you have an understanding or have you formed an opinion as to why there is no wait list for the beds provided at Atascadero State Hospital for the care of CDCR inmates?

A. We have not received sufficient referrals to fill those beds. I have openings in the low security beds at Vacaville, Atascadero, and even for the women at Patton. So it's—you know, the lower security folks are being treated or not referred to us.

If we get a referral and we reject it, the clinical—the Coordinated Clinical Assessment Team reviews the rejection. If there's sufficient evidence after a joint discussion by CDCR clinicians and Department of Mental Health clinicians, we will accept that and make—the final appeal decision resides with myself and my counterpart over at Corrections. If the rejection stands in the monthly report that I submit to the Special Master in the Court for bed utilization, that rejection is attached.

Q. So at the end of the day, all the rejections that stand are essentially submitted to the Special Master's team for review; is that correct?

A. That is correct.

[766] Q Do you find that mentally ill patients within the *Coleman* caseload are subject to periodic episodes of decompensation?

Mr. Bien: Objection. Leading.

Judge Henderson: I'm going to allow it. Its not prejudicial in any way. You may answer that.

The Witness: Mental illness being a metabolic and a biological disease has its ebbs and flows. It's not black and white. There are gray areas. And it's based on the stabilization of patients. Sometimes there are triggers that add to the decompensation, and that's why you have varying levels of care to meet the individual needs of patients as they stabilize or they decompensate to help get them back on track.

By Ms. Tillman

Q. How would you term the model of care provided by the Department of Mental Health?

A. The philosophy of the Department of Mental Health is to use what is called a recovery model. It's an inclusion of biopsychosocial rehabilitation and relapse prevention. It's very person centered. It treats the whole person, not just the symptoms that bring them to us for admission. So it takes us approximately 60 days to do a full admission set of evaluations from an entire interdisciplinary team.

The Clerk: Time's up, counsel.

Judge Henderson: Let me ask, is the recovery model that you just—is that a prison model, or is that in the [767] broader world outside the prison world? Is that something you've devised within the prison system? Just for my information.

The Witness: That's a good question. It started as a community basis of services and a model where traditionally mental health was a—what was called a medical model. The doctor told the team how to treat the patient. This model was started by the consumers in the community and has grown through the state mental health hospitals across the country, because it's based on the wants, the needs, and the desires of the patient with the full team in collaboration bringing every clinician to bear. You have psychologists, rehabilitation therapists, social workers, psychiatrists, clinical dieticians, because they all play a role.

Judge Henderson: Thank you.

Ms. Tillman: May I have just one last question? Thank you.

By Ms. Tillman

Q. What would enable the Department of Mental Health to better serve the mental healthcare needs of the Department of Correction inmates?

A. Additional high security beds.

Ms. Tillman: Thank you. Nothing further.

Judge Henderson: Any intervenors have any questions?

* * * *

[769] (Document Displayed.)

By Mr. Galvan

Q. Good afternoon, Ms. Radavsky. Ernest Galvan for the Plaintiffs. This is Defendant's 1243, your map. I believe you testified you prepared this for the trial. If we could zoom in to just the table of the beds for a moment? The largest set of beds are the Vacaville Psychiatric Program; is that right? The beds at CMF California Medical Facility Vacaville.

A. At this time, correct.

Q. And those are the beds that were at issue in *Gates*, those beds were there during the period of the *Gates* litigation; is that right?

Ms. Tillman: Objection as to relevance.

Judge Henderson: Overruled.

Was there an answer?

The Witness: Not all of them were.

By Mr. Galvan

Q. Those beds include a unit known as the Q unit, is that correct? Q1, 2 and 3?

A. Yes.

Q. And at the beginning of 2007, you had two suicides there toward the end of January among *Coleman* class members in the Q units, is that correct?

A. Yes.

[770] Q. Okay. If we could put up, please, the April 16th, 2007, memo?

(Document Displayed.)

Mr. Galvan: Thank you.

Judge Karlton: What exhibit is this, counsel?

Mr. Galvan: This is not an exhibit yet. We are going to offer this as a rebuttal impeachment exhibit. It will be number P588. I have copies for counsel. May I present one to the witness?

Judge Henderson: You may.

By Mr. Galvan

Q. Ms. Radavsky, are you familiar with that report?

A. Yes, I am.

Q. The document P588, did you receive a copy of that report when it was issued?

A. I didn't hear the end of your question.

Q. Did you receive a copy of that report,

Judge Henderson: When it was issued.

The Witness: Yes, I did.

By Mr. Galvan

Q. For the record, this is—the report describes on the title "the suicide report of inmate," and I've redacted the name. I'll just refer to him as D.M. This is one of my clients who died in the Q unit at Vacaville, according to this report, January 27th, 2007. I would ask you to please turn to [771] page—the page after the cc if you would, page three, the one that starts: "Memorandum to Susan Hubbard" at the top it's page one of the actual memorandum, one page in from here.

And the body of text there in the memorandum describes the circumstance under which D.M. died, you'll see there, the first sentence:

"An order for one-to-one direct visual observation for the purposes of suicide watch was in effect."

And it says there.

"He has smeared feces on the window, and then when they checked on him—"

Down at the bottom, if I can read, it says:

"M was kneeling in front of his desk with a noose around his neck,"

And describes the lifesaving measures.

If you could turn now to the recommendations page, which is page four of this same memo. And the—one page back, please.

(Document Displayed.)

By Mr. Galvan

Q. If I could ask you, Ms. Radavsky, to look at the very first cell in the table which has some text? It's a little bit obscured by the watermark. I will read it for the record.

"The Department of Mental Health administration [772] requested to have 124 cells retrofitted to remove the desks and stools, replace the beds, doors and vent and window screens."

Are you familiar with that recommendation?

A. Yes, I am.

Q. And, to your knowledge, has that cell been retrofitted as described there?

A. There's a plan developed to complete all of the retrofitting. Some of the pieces have been removed, but not all of it because we have to remove inmates from the cells in order to do this, and we've submitted a plan for the retrofit, but that has not been approved yet at this time because I was asked for further clarification on it.

Q. And is it correct that you can't remove the inmates from those cells because, if you do, you'll put your department and the CDCR to the Hobson's choice of depriving inmates who are waiting for those cells of the level of care they need?

Ms. Tillman: Objection. Argumentative. Misstates Evidence.

Judge Henderson: I will allow it.

The Witness: From my point of view, I can't remove them because the Court has not allowed me, and I have been directed by the Court that all plans and changes in the Vacaville site program must occur upon approval of the Court.

[773] By Mr. Galvan

Q. Didn't the Court make that order in order to avoid the deprivation of lifesaving care to people waiting for those beds?

Ms. Tillman: Objection. Calls for speculation.

Judge Henderson: Sustained, unless you can lay a foundation.

Judge Karlton: I don't know what I said at the time I did it so—

Mr. Galvan: Thank you, Your Honor. I'd like at this time to switch the document to the April 20th memo, the one that was up before, the report of R.M. this is also an impeachment rebuttal exhibit that will be numbered for the record P589.

May I present this to the witness?

For the record, what I presented to witness will be numbered P589, and it's titled "Suicide Report Of Inmate," and again it's been redacted to protect the privacy of R.M. and surviving family in accordance with the protective orders in this case.

R.M. was another client of mine. It says here he committed suicide in the Department of Mental Health in Vacaville January 28th, 2007.

Judge Karlton: January 29th.

Mr. Galvan: I'm sorry, Your Honor. January 29th, [774] 2007.

Judge Henderson: This is two days of after the other one; is that correct?

Mr. Galvan: Yes, Your Honor. The report indicates it is two days after D.M. committed suicide in the same unit.

I would like to ask the witness to turn to page nine of the report.

By Mr. Galvan

Q. Ms. Radavsky, did you receive this report as well?

A. Yes, I did.

Q. When it was issued?

A. Yes, I did.

Q. And if you could move forward two pages, please, in the report to the page numbered nine there? If I could draw your attention to the table, the second row, first column numbered item ten. Again it's somewhat obscured by the watermark, so I will read it.

"Ten, the Department of Mental Health has been attempting to have the vents retrofitted in patient rooms since the last hanging in December 2005. The California Department of Corrections and Rehabilitation must facilitate the physical plant modifications requested."

Ms. Radavsky, you've testified you are the person responsible for these programs, is that right?

[775] A. I'm responsible for the operations and the treatment provided in these programs, yes.

Q. You are not able to, just after you leave the Courtroom today, call a contractor and have those vents redone, are you?

A. No, I am not.

Q. You are not able to do that because these so-called separate and apart DMH facilities actually are controlled by the California Department of Corrections and Rehabilitation, aren't they?

A. Ms. Tillman: Objection. Calls for a legal conclusion beyond the expertise of this witness.

Judge Henderson: Sustained.

Judge Karlton: Well, setting aside the legal question, as a practical matter, is that true?

The Witness: The Department of Corrections and Rehabilitation is responsible for the physical plant modifications.

By Mr. Galvan

Q. And the beds that we are discussing here, the beds in the Q unit, these are part of what's known as the Acute Psychiatric Program; is that right?

A. That's correct.

Q. They use the acronym APP?

A. That's correct.

Q. Is it fair to say these are the highest levels of care in [776] the system—in your system of care for CDCR inmate patients?

A. In my system of care, that is correct.

Q. And as the highest level of care, is it fair to say these are the scarcest and most available beds—I'm sorry—beds most in demand?

Ms. Tillman: Object. Vague and ambiguous.

Judge Henderson: Overruled. Are these the beds most in demand?

The Witness: Not according to my waiting list.

By Mr. Galvan

Q. According to your waiting list, what are the beds most in demand?

A. The high security beds at Salinas Valley Psychiatric Program.

Q. Would it be fair to say that these APP beds are in such high demand that you're forced to operate them in this state of—in the state that they are in now, not retrofitted?

Ms. Tillman: Objection. Misstates evidence already provided by this witness.

Judge Henderson: I will allow it as a question—as an appropriate cross-examination. You may answer that.

The Witness: Well, as I stated earlier, we submitted a plan to the Court, and I have been asked to add some clarification, which has since been added to the plan. So I'm pending a response.

[777] By Mr. Galvan

Q. I'm sorry. You are pending a response from whom?

A. I submitted a retrofit plan in order to start the retrofitting of these cells, with so many cells at a time coming off line, and Special Master Lopes asked me to add some clarification and answer some questions for him, which has recently been provided.

Q. Did you at any time call Special Master Lopes and ask for permission to accelerate the retrofitting?

A. It was included—not accelerating, but in the original request. That's why we submitted the plan.

Judge Henderson: A request for acceleration was in the original submission?

The Witness: No, sir. A request to take approximately four cells off line at a time in order to have four cells retrofitted at a time so there would be four less beds available for an acute psyche patient.

By Mr. Galvan

Q. Do you know what the current size of the waiting list is for those beds?

A. For the acute psych program?

Q. Yes, ma'am.

A. As of yesterday, it was three.

Q. At this point, I would like to turn to Defendant's exhibit 1175, which is the—titled, "July 16th, 2008, Mental Health [778] Bed Plan," and it has an attachment C at page 29.

Ms. Radavsky, are you familiar with this chart, this table?

A. I'm sorry, Counsel. Could you repeat this question?

Q. Ms. Radavsky, are you familiar with this chart or table?

A. I'm trying to see the bottom to see what document this was in.

Mr. Galvan: May I present this to the witness?

Judge Henderson: You may.

The Witness: Yes, I have.

By Mr. Galvan

Q. If I may direct your attention on this chart to the second row from the top, which I presume will be much easier to see, I think—

Mr. Galvan: I apologize, Your Honor. This chart is buried within that exhibit. It's approximately—it's about 29 pages in, Your Honor, after the text, the body of the text.

By Mr. Galvan

Q. Does the second row there, Ms. Radavsky, refer to this project of the Q1 through 3 and S2 renovations we have been discussing?

A. Yes, it does.

Q. And under "status" do you know the significance of, "April '8 to August 2009," does that mean that's the period during which the project will be built?

[779] A. That's my understanding of the status chart, because it was supposed to be coordinated as the additional crisis beds came on line at CMF.

Q. And the comment that reads, "project pending full activation of the MHCB," mental health crisis bed, "per request of the *Coleman* Special Master," does that reflect the status of the project at the time that you prepared this bed plan report?

A. That was the status at the time.

Q. And isn't it true that the project was pending activation of the MHCB because those beds, the beds you would have to take off in order to retrofit them, were needed for mental health crisis bed acute patients?

A. That's correct.

Q. If we could go back to 1243, the map, please—I'm sorry. Actually, one—if we could go to P159, exhibit P159? P159, please. Thank you.

(Document Displayed.)

Mr. Galvan: This is, for the record, Plaintiff's Exhibit P159. It has a Bates number E-Priv 183396. And if we could go back to the full document?

By Mr. Galvan

Q. Ms. Radavsky, this is a memo on your letterhead; is that correct? I realize this is another one that's hard to read.

A. That's correct.

Q. And it's addressed to J. Michael Keating, the Special [780] Master in this case?

Judge Karlton: *Coleman* Special Master.

Mr. Galvan: *Coleman* Special Master.

If we could go to the second page, please, of P159? It's actually the last page, page four, that I would like to look at, of P159. If we can go to the last page? If we could make the text big enough to read? May I present the witness a paper copy?

(Document Displayed.)

Judge Henderson: You may.

By Mr. Galvan

Q. Is it correct, Ms. Radavsky, that—well, first, I want to ask you, who is Victor Brewer, the person who signed this?

A. Victor Brewer is the Executive Director of both the Vacaville Psychiatric Program and the Salinas Valley Psychiatric Program.

Q. And he works for you; is that right?

A. He works for me.

Q. To send a memo like this to the Special Master in the *Coleman* case, he would need your permission; is that right?

A. That is correct.

Q. Isn't it true the purpose of this—of sending this memo was to seek assistance from the Special Master over a conflict in the use of the beds in the S1 unit, a conflict between two definitions that those beds could serve?

[781] A. The purpose of sending the memo was to request some guidance about—you're correct—conflict over the various mission of a mental health crisis bed versus the mission of an acute psych bed because a mental health crisis bed is ten days or less.

Q. And to be clear, when we talk about the S1 unit, the beds that are the subject of this letter, we are talking about your beds, not the CDCR's beds? The DMH beds?

Ms. Tillman: Objection. It's vague and ambiguous, argumentative, misstates evidence.

Judge Henderson: Overruled.

The Witness: Those are the beds operated by the Department of Mental Health.

By Mr. Galvan

Q. And I believe the letter—the letter will help us explain to the Court what the conflict is. If we could zoom into about the sixth line down that has the word "however" toward the middle. Mr. Brewer wrote:

> "However, if it is determined that the Appropriate LOC," level of care, "is to transfer the patient from mental health crisis bed to an app bed, the question arises, is MHCB patient to take priority over the current patients on the APP wait list. If this is the direction of the Special Master, if this is the direction the special master elects to take, [782] then the negative aspect is that any patient

> in the MHCB within VPP," Vacaville Psychiatric Program, "will take priority over the current wait list which will result in additional days before the non-Vacaville psychiatric patient mental health is many crisis bed patients will be admitted to the acute psychiatric program."

Q. Now, the conflict that Mr. Brewer is talking about there is that you've got more than one person calling on one bed; isn't that right?

A. Yes, with the mission that we were asked to take by setting aside 20 of the APP beds for the mental health crisis beds, I think part of the question also called to protocol because, being the acute beds that are the patients with the most severe mental illness, they're the folks we want to expedite in the quickest.

The question that we were asking was, did an MHCB patient, if you had a patient going into another bed, bump the acuity of the acute patient?

Judge Karlton: The point is, you wouldn't have any bumping problem if you had enough beds, right?

The Witness: Correct.

By Mr. Galvan

Q. If we could just look at the second paragraph, what Mr. Brewer wrote, his final sentence:

> [783]"the simple fact is the bed shortage places both CDCR," California Department of Corrections and Rehabilitation, "and VPP," Vacaville Psychiatric Program, "in the current operational dilemma."

I would like now to skip back to 12—switch back to 1244 which is the map 1243, I'm sorry 1243, the map in color. D-1243. Thank you.

Ms. Radavsky, we've discussed Vacaville, and just now, just talking now about the facilities operated, or as you say in the chart, co-located in the CDCR facilities, I would like to switch now to Salinas Valley Psychiatric Program, the last category. And is it correct to say that there are 176 male intermediate care facility beds in that program?

A. Yes, there are.

Q. And is it your testimony that every single one of those beds provides care that is not impacted by overcrowding in this—alleged overcrowding in the CDCR?

A. They're not impacted because they're separate from the general population, and I provide licensed care in there, so I cannot double or triple bunk those patients.

Q. So it's your testimony that you operate every single one of those 176 beds independently from the CDCR?

Ms. Tillman: Objection. Argumentative, vague.

Judge Henderson: Is that your testimony, or is it not your testimony?

* * * *

[796] Judge Henderson: It was ruled on anyway. Don't worry about it.

By Mr. Galvan

Q. You are not responsible for the administration of the care they receive while they are on the waiting list, are you?

A. No, sir, I'm not.

Q. Has anyone ever shown you the lists that some of the institutions keep of the status of those men on the waiting lists?

A. I've reviewed them, and my staff review them weekly—with my staff at Salinas Valley. My headquarters staff review them with my staff at the prison, and they make calls on those gentleman that are there.

Mr. Galvan: P583, please.

(Document Displayed.)

By Mr. Galvan

Q. Going to look at an exhibit that we have offered as P583. This is a redacted list. Okay.

Let me turn back to ASH, Atascadero State Hospital, that is, I think you've testified, a truly stand-alone state hospital, near but not on the grounds of a prison?

A. That's correct.

Q. Isn't it true that the Department of Justice monitors found in 2006 that you engage in a practice called overbedding at Atascadero?

[797] Ms. Tillman: I'm going to object. It's vague and ambiguous as to Department of Justice monitors. If you could identify which agency? I believe it's department—United States Department of Justice.

Mr. Galvan: I'm sorry. I meant to say United States. I'm sorry.

Judge Karlton: Is that true, ma'am?

The Witness: They essentially have indicated that there was some overbedding in the state hospitals.

By Mr. Galvan

Q. Isn't overbedding the practice of attempting to care for more patients than you have staff for?

A. It's not care for more patients than you have staff for. It's putting, you know, more people in than licensed capacity.

Q. Isn't it true in January 2007, you sent a letter to then Special Master Keating saying you had to restrict admissions to ASH, to Atascadero State Hospital?

A. That is correct.

Q. And isn't it true in the letter you reported to Special Master Keating that, as a result of the restriction of admissions, there were three men who had been cleared for care, in transit, already on the way there, and had to be turned back?

A. I don't have the letter in front of me, and that's possible.

[798] Mr. Galvan: If we could look at P257, please?

(Document Displayed.)

Mr. Galvan: Might I present the witness with this? P257.

The Witness: Thank you.

By Mr. Galvan

Q. P257, is it correct, is your Declaration of Cynthia A. Radavsky in Support of Defendant's Response to Plaintiffs Motion for Emergency Relief regarding Defendants' Denial of Access to Inpatient Psychiatric Beds in DMH State Hospitals?

A. That's correct.

Q. If you turn to—it only has one exhibit, Exhibit A. This is a copy of your letter to J. Michael Keating; isn't that right?

A. That is correct.

Q. You wrote here:

> "This letter is to officially notify you that the Department of Mental Health long-term care services has received information from Atascadero State Hospital that necessitates immediate restriction of admissions due to staffing limitations."

A. That is correct.

Q. If we skip down to the second paragraph, about one, two, three, four, five, six, seven, eight, nine lines, nine lines from the bottom: "an example of this occurred January 18th, [799] 2007," about five days before you wrote the letter, "when three inmates were denied admission to ASH," Atascadero State Hospital, "although the sending institution was informed of the admission restriction early in the a.m., these inmates were already in transit, recognizably an unfortunate situation for all parties." Is that correct?

A. That's correct.

Q. If we could go back to the map, which is defendant's D1243? This is the color map, State of California. So Atascadero State Hospital, you went through the numbers in your direct testimony, male acute beds, 25; mail ICF beds, 231; total of 256. Is it your testimony that you are caring for 256 CDCR inmate patients there?

A. No. Those are the beds that are dedicated. If we receive the referrals, those are the beds that I have committed we would provide services for.

Q. If I represented that the last monthly report I saw had 147 men in those beds, would that seem right?

A. That would probably be accurate.

Q. Okay. And so the balance, more than a hundred beds, 109 beds, those are empty, just waiting for patients?

A. No, they are not.

Q. I'm sorry. Those beds are not available for the *Coleman* class members?

A. Those are very valuable resources within the state of

* * * *

[808] met with on these issues?

A. Yes, it was.

Q. Were you satisfied with the outcome of those discussions?

A. Very.

Q. There's also been mention made of some of the wait lists. Has the Department of Mental Health engaged in any activity with or even without the Department of Corrections staff to address the wait list issue?

A. We've made numerous attempts at ensuring the forms are streamlined, that clinicians have been trained on both sides of the house, that we've made joint visits so that the mental health clinicians could see the environment that the patients were coming from, and that the corrections clinicians could see the environment and the milieu that the patients are in when they're with us so we could share treatment modalities and try to maintain stabilization once patients are moved back to Department of Corrections.

Q. Would it be correct to say that—let me strike that.

Do you also have a working relationship with the *Coleman* Special Master?

A. Yes, I do.

Q. And how would you describe how that working relationship is conducted?

A. Well, I think the *Coleman* Special Master and his experts raise issues to us that we take very seriously. We do [809] population management for the state hospitals, and in a recent discussion he mentioned to us that we might want to separate and do population management for the Department of Corrections inmates, which we started.

We met with him and then on Tuesday afternoon identified the group of forensic liaisons that deal with the population and started them with weekly meetings so we could track the waiting lists when there are waiting lists and make sure referrals are moving to the appropriate place.

Q. In addition to that outreach, in regards to the wait list, the Department of Corrections and rehabilitations, have you also worked with the *Coleman* special master in regards to the activation of appropriate mental healthcare beds for the California Department of Corrections inmates?

A. Yes, I think when the initial activation of the 64 Stand-alone at Salinas Valley, the activation of P2, the activation of P3.

Q. And where are P2 and P3?

A. I'm sorry. P2 and P3 are at the Vacaville Psychiatric Unit, and those were identified and opened for high risk inmates that were on the waiting list. It was a way to help whittle down the wait ing list for Salinas Valley.

Q. Have you examined the feasibility of converting space at existing state hospitals for use by *Coleman* inmates?

A. We did two studies regarding Coalinga State Hospital.

[810] Q. I believe this is in Exhibit 1158, correct? We can put that up here if you like.

Mr. Galvan: Objection to this area. I don't see how it's within the scope of cross.

Ms. Tillman: I believe there was a lengthy discussion on cross about the availability of beds.

Judge Henderson: Proceed.

By Ms. Tillman

Q. Is that the Coalinga feasibility study you were referring to, Ms. Radavsky, in exhibit 1158?

A. Yes, it is.

Q. And you have placed *Coleman* caseload patients into beds at Coalinga State Hospital, is that correct?

A. Lower custody inmates, yes.

Q. In terms of the bed plans that have been prepared in response to the needs of the mentally ill inmates of the Department of Corrections, were those bed plans submitted for approval by the Special Master in the *Coleman* case?

A. Yes, they were.

Q. On cross-examination Plaintiffs' counsel asked you questions about the closure of the Atascadero State Hospital facility in January 2007; do you recall that?

A. It was not closure. It was a reduction of admissions. Yes, I do.

Q. And when you say "reduction of admissions," what does that [811] mean?

A. It means I had to limit admissions due to health and safety concerns, and in order to maintain the licensure of the hospital until I could staff up through emergency contracts adequate staff to start admissions again.

Q. And did Atascadero State Hospital—let me strike that. Is that reduction in admissions policy still in effect at Atascadero State Hospital?

A. No, it is not.

Q. Do you recall approximately when that reduction in admissions policy was eliminated?

A. The memo went in January, and I believe March or April of that same year, '07, we were able to start admishing (sic) at our regular rate.

Q. Have you undertaken any efforts to ensure that the Department of Mental Health has adequate staffing to operate its institutions without having to do a reduced admissions policy?

A. Yes. The initial reason for the reduction in admissions was a pay increase under a *Coleman* court order for the Department of Corrections and Rehabilitation.

Q. Was that—I'm sorry. Go ahead.

A. I'm sorry. We pursued pay parity which helps draw our clinicians back and keeps us viable.

Q. Was that under your May 2007 pay parity plan? I think it [812] was admitted as Defendant's exhibit 1040. We can bring that up on the screen if you like. Just paging down there—you have it?

A. Yes, it is.

Q. And is it correct that the pay parity plan was submitted to the *Coleman* Special Master and the *Coleman* court for approval in May 2007?

A. That's correct.

Q. And was that approved by the *Coleman* court?

A. Yes, it was.

Q. Have you found that the increase in pay scales for the Department of Mental Health, mental health clinicians, has enabled any reduction in staff vacancies?

A. Yes, it helped. Although we still have some contracts in place, it has helped us with recruitment of clinicians.

Q. Has the Department of Mental Health engaged in any other efforts besides obtaining pay parity with Department of Mental Health clinicians to ensure adequate staffing for its facilities?

A. Yes, we continue to reach outside of the state of California, because it's very competitive within the state. There's a national shortage on clinicians, so we make sure we have licensed internships for all of our clinical classes, as well as fellowships for our psychiatrists. That's a very strong recruiting base from us across the country, and we don't [813] want to keep competing as much within the state, we want to draw from outside of the state and from foreign nationals as possible.

Q. Did the Department of Mental Health provide the Special Master in the *Coleman* case with a recruitment plan?

A. Yes, we did.

Q. And I believe that's exhibit 1145-2. We can page down, and—there is the recruitment plan.

(Document Displayed.)

By Ms. Tillman

Q. Is that the plan you drafted and submitted to the *Coleman* Special Master and the *Coleman* Court?

A. Yes, it is.

Q. Thank you. Since the increase in pay for the Department of Mental Health clinicians and with the implementation of these recruitment strategies, has Atascadero State Hospital—has Atascadero State Hospital implemented any reduction in its admissions?

A. No, it has not.

Q. Has Coalinga State Hospital implemented any reduction in its admissions?

A. No, it has not.

Q. Do you report to the *Coleman* Special Master in regards to the status of your recruitment strategies and the success of those strategies on any periodic basis?

* * * *

PROCEEDINGS

Judge Henderson: Okay. Good Morning. Are We Ready to proceed?

Mr. Bien: Yes, Your Honor.

Ms. Tillman: Yes, Your Honor.

Judge Henderson: You may proceed.

Ms. Tillman: Good morning, your honors. We call Robin Dezember.

(Thereupon, the witness was sworn.)

The Witness: Yes.

The Clerk: Please have a seat.

State your full name for the record.

Judge Henderson: Okay. Before we begin, I want to make something clear on the record–and proceed as you planned, counsel–but I've read Mr. Dezember's declaration, and it will not be received to the extent that it seemed to say that the state is in compliance. We've ruled on that, and it will not be received for that purpose.

Ms. Tillman: Thank you for informing me of that, your honors. I apologize to the court. I must have left my cell phone on.

May I just step away and turn that thing off? Judge Henderson: Certainly.

[837] Ms. Tillman: Thank you.

In regards to Mr. Dezember's affidavit, may I speak very quickly to the court's comments?

Judge Henderson: Yes.

Ms. Tillman: That Declaration was submitted to inform the court of exactly the impact of overcrowding on the mental health services delivery system and whether or not the primary cause of any deficiencies was, indeed, overcrowding.

And so we wanted to illuminate for the court where we were in the past as the population existed then and where we are today as the population exists today. So it's proffered with that concept in mind.

Judge Karlton: Ms. Tillman, we've said–and everybody knows it, I hope—that all of the objections will be reserved to the end. And we're receiving everything pending those decisions. But it is important because certainly I read, and perhaps unfairly, the Dezember direct testimony—and certainly the plaintiffs read it that way, as well—as going to the question of whether or not there's a continuing constitutional violation.

And it is only in that context that we have indicated that the direct testimony will not be received for that purpose. To the extent that it illuminates questions that are properly before the court, of course it will be.

Ms. Tillman: Thank you, your honor.

[838] If there's nothing further, may I proceed with the examination?

Judge Henderson: You may.

Ms. Tillman: Thank you.

I'd like to approach the witness and provide him with a copy of that trial affidavit. We've marked it as trial exhibit 1007.

Judge Henderson: You may do so.

Thereupon–

Robin Dezember

Was called as a witness on behalf of the defendants, and after having been first duly sworn, was examined and testified as follows:

Direct Examination

By Ms. Tillman:

Q. Good morning, Mr. Dezember.

A. Good morning.

Q. Would you please inform the court of your present employment in terms of its job title and job responsibilities?

A. Yes. And my name is Robin Dezember, R-o-b-i-n, Dezember.

My present title is Chief Deputy Secretary Correctional Healthcare Services Division of the Department of Corrections and Rehabilitation.

Q. Is it correct that you served previously as an [839] undersecretary of the youth and adult correctional agency from 1982 to 1986?

A. Yes, that's correct.

Q. And during that time how many prisons were built?

A. Yes, some were built. We began a program that built a lot of prisons even thereafter.

Q. And to the extent that prisons were built during your tenure as undersecretary of the youth and adult correctional agency, did staff pay attention to creating spaces to house separately, to separate house and treat the mentally ill inmates?

A. At that time, no.

Q. As we sit here today have there been changes in how the mentally ill inmates are housed and treated?

A. Well, over the years since this case began, which I think was 1995 when the order came out, there have been a lot of changes not only in process and procedures, but in retrofitting the interior spaces of the prisons to accommodate the necessary elements of mental health treatment for the population. That has gone on for years as the population grew.

Q. And has the Coleman special master had a role in those changes to the prisons to enable space to be provided to the mentally ill inmates for treatment and housing purposes?

A. Yes, he's always had a role.

Q. And how would you describe that role?

* * * *

[841] others may not?

A. Yes. The desert prisons they are there to identify need, treat for short-term, if necessary, but transfer an inmate to a place where they can get the services they require. And then, some of the prisons have a fairly extensive mental health program.

Q. Where the map indicates inpatient beds, like intermediate care and acute care enhanced outpatient program beds, are those mental healthcare beds in housing units separate and apart from general population beds, housing general population units?

A. Yes. The higher levels of care are anything we would call enhanced outpatient and above.

Q. Now, when you mentioned that many of the present housing spaces and clinical treatment areas provided for the treatment of mentally ill inmates were from retrofitted interior spaces, does that mean that cells that might have been used previously by the general population may have been somehow retrofitted?

A. Yes.

Q. Are clinicians' offices sometimes placed inside retrofitted cells?

Mr. Bien: Objection, leading.

Ms. Tillman: Pardon me?

Judge Henderson: Overruled.

The Witness: Treatment spaces and clinical office spaces, as we lump together treatment and office space, those [842] are always provided in–subject to the conditions available.

We have in some cases constructed new facilities. In many of the retrofitted facilities, the clinical spaces are acquired where they can be acquired, and people operate out of those.

By Ms. Tillman:

Q. Is it your understanding that adequate care can be rendered in these kind of make-do arrangements?

A. In my opinion, yes.

Judge Karlton: The objection that it's beyond the scope of his expertise is well-taken. I know that's just what you were going to say, Mr. Bien.

By Ms. Tillman:

Q. Have you ever received any report from the special master in the Coleman case indicating that this retrofitted space for either offices for the clinicians or for housing the mentally ill inmates was somehow not appropriate for the purposes?

A. Yes.

Q. And in terms of the Coleman special master, has the Coleman special master ever indicated that any licensure standards would be waived so that clinical space and housing space could be provided to the mentally ill?

A. That has occurred in one instance that I'm aware of.

Q. And where was that?

A. That was at California Men's Colony in what is called

* * * *

[852] the Last big piece.

And if we could continue the momentum that we have now and have the facilities to operate in, then I think we would have a sound system.

Q. Thank you.

Ms. Tillman: nothing further.

Judge Karlton: Is there anybody else?

Ms. Wang: No further questions, your honor. Cross-examination

By Mr. Bien:

Q. Good morning, Mr. Dezember.

A. Good morning.

Q. You just explained to the court what you explained to my associate in your deposition, that you don't believe that overcrowding is the primary cause of the ongoing constitutional violations in medical and mental healthcare; is that correct?

A. In mental healthcare.

Q. You're not expressing any opinion about medical care?

A. I'm not.

Q. In your witness statement in paragraph one, you referred to the alleged overcrowding of the CDCR population. Do you agree with the governor, who has declared a state of emergency based on overcrowding, that the CDCR prisons as they currently exist are extremely overcrowded?

A. Yes. I don't know about the alleged, if it's there, I'm [853] not sure. But I don't know anyone who denies that our prisons are overcrowded, and certainly not me.

Q. So if you put that in a statement it should be removed, paragraph one? You agree it's overcrowded, right?

A. I would have to look at paragraph one. Is it in here?

Q. It is.

A. Would you like me to go there? All I'm saying is my testimony is that I concur that the prison system is overcrowded.

Q. And you agree with the governor's proclamation that there's an extreme level of overcrowding that justifies a declaration of a state of emergency due to overcrowding.

A. Well, I don't assess states of emergency. But I can't state more clearly my belief that we are terribly overcrowded in our prison system.

Q. In paragraph 7 of your declaration of your witness statement, you say that you understand that this three-Judge court is convened to address the issue of CDCR's overcrowding and its impact, if any, on the delivery of mental health services to CDCR inmates.

Do you agree, Mr. Dezember, that overcrowding is having an impact on the delivery of mental health services to CDCR's mentally ill population today?

A. It has to have an impact. What I'm saying is I don't think it's a primary cause of the difficulty in delivering service.

[854] Q. So you agree that overcrowding does impact the delivery of mental health services on CDCR's inmates population today?

A. In some cases, yes.

Q. In what cases?

A. Well, in an overcrowded system you may have more difficulty with transportation from one location to another. We don't have a—you know, I can't think of very many others. But I would simply say as a reasonable human being if you filled this courtroom with 500 people, we would all be a lot more uncomfortable. And it may be even worse than that.

So I'm not offering an expert view here. I'm offering my view as a government official for all these years.

Q. And is it your view—I just want to make it clear what your view is.

Is it your view as a government official that overcrowding does not have an impact today on the mentally ill?

Ms. Tillman: Objection, asked and answered.

The Witness: I'm not saying—

Judge Henderson: I'll allow it.

Proceed.

Judge Karlton: You may answer, sir.

The Witness: I'm not saying it doesn't have an impact. I'm saying it's not the primary cause of the problems. And I also connect that to the logic of a potential solution, because in my view if you look at overcrowding and you say:

> [855] "Well, how do we solve overcrowding?" Well, one way is to cut the amount of people in the prison system. And if you do that, is that going to have an ameliorative effect on our ability to deliver healthcare, mental healthcare to the inmate population?"

And to the degree we look at the higher levels of care where we have focused most of the attention of this case over the years, I don't think it has an appreciable effect on that.

We're still going to need to provide care to a large number of those in the caseload population of EOP enhanced outpatient care and above.

If an order of this court, for example, were crafted to say those people are released, well, then, obviously it would have a significant impact on our demand for services.

But I don't think that's the kind of order that is responsible in a situation like this.

By Mr. Bien:

Q. Can you separate—are you unable to separate whether or not overcrowding is the primary cause from your concern about the type of order the court should issue?

In other words, focusing simply on the question: is overcrowding harming mentally ill prisoners of all types in [856] todays prison system, you agree that that's the case?

A. Overcrowding has negative effects on everybody in the prison system: inmates and staff, mentally ill not mentally ill, medical, all of them. Those I could certainly say yes, that's correct. That has a negative impact.

I think there's a great distinction between whether it has a negative impact and whether it is the primary element of the problem.

Q. You've testified that overcrowding is not the primary cause, and it's your contention, isn't it, that the cause is poor planning and forecasting by the state of California for the needs of the mentally ill population; is that correct? That's one of the causes that you believe?

A. I can elucidate those, if you like. I have indicated before that I think there has been a period of time when there has been poor management of the mental health system in California prisons, and that that has led to a situation that we're faced with today.

Q. So, in other words, California authorities, whoever they may be, did not do a good job of planning sufficient resources to address the current needs for mental healthcare and treatment space for the current population.

A. Good planning–good management would have involved good planning, which would have produced on a more gradual basis the bed plans that we have today. As the demand was recognized as [857] over a, what, responsible five-year planning period. As far as I can tell in recent times that was only initiated in about 2006.

So for some period of time there was a lack of attention to solving the problem of treating the higher levels of mentally ill.

Q. Well, when the prisons were built–and you personally were involved in the effort of this massive prison construction in California in the '80's; isn't that correct?

A. That's correct.

Q. You were first part of the administration that authorized the building, right?

A. Yes.

Q. Okay. And then, you moved over to Kitchell, the company for seven years that was in charge, was the general contractor that actually built those prisons.

A. Well, Kitchell wasn't a general contractor. It was a management–capital expenditure management company that I was associated with for seven years.

Q. And during that time isn't that what they were–one of the things you did with Kitchell was to help them work on the project of building this massive California prison construction.

A. By the time I was there, the prison construction program was pretty well underway. And Kitchell does a lot of different [858] kinds of work. So, I was in charge of the office, and we were responsible for school construction, other public building construction. And certainly Kitchell was a program manager of the Department of Corrections in the prison business.

Q. And you had some responsibility for that, too?

A. Yes, of course.

Q. And those are the prisons that were built without adequate medical treatment space and mental health treatment space; is that correct?

A. We had–they had treatment space. They had adequate treatment space. There was no forecast at that time of this demand we're dealing with today.

Q. So it's correct that they were built for treatment space

For medical care based on design capacity of a hundred percent and not based on the current use of those prisons at close to 200 percent?

A. Well, they were designed–let me put it this way: they were designed specifically for prison population. It was a legislative declaration that required them to be overcrowded individually, as individual prisons were authorized by the legislature.

What we attempted was to design prisons with a design capacity. We had not started out saying:

"We want to put 200 percent population in here."

[859] That evolved over time and largely came out of legislative enactments.

Q. Be that as it may, today we have close to 200 percent capacity in prisons that were designed for a population of a hundred percent.

A. That's correct.

Q. And as a result, you agree that there is a shortage of treatment and office space for medical and mental health clinicians who need to do their work to provide care to the prisoners in the prison today?

A. Well, there is a shortage of what you might call "appropriate space" for them. We certainly have them. We have–it has not prevented us from increasing the ranks of our treating clinicians. They are operating in conditions that I would prefer be improved. And definitely we would plan to do that as part of this building program that we have.

Q. As of today, Mr. Dezember, you agree that it's inappropriate to place clinicians in converted toilets as their offices.

A. I've agreed to that already in my deposition –

Q. Okay.

A. More than once.

Q. Okay. We showed you pictures, and the court has seen these pictures.

You agree that is inappropriate office space.

[860] A. Yes.

Q. And you agree it's also inappropriate to be providing mental healthcare to prisoners in non-confidential spaces.

A. Yes.

Q. Yet that is what is going on today in many of your prisons; is that correct?

A. That's exactly right. It's part and parcel of delivering a major mental health program, probably the largest mental health program in a single location in the world, and delivering that inside a prison system.

Q. And you have said that one reason–overcrowding is not the cause. The other cause is that there's been insufficient management recognition of the growing problem, the increasing prevalence rate of mentally ill.

Is that one of your alternative explanations for the problems we have today?

A. Well, it's certainly–in this situation there are cumulative causes, and that's one of them.

And when I talk about management, now, I don't talk about local management. You have to have that. You have to have local management in the prisons. You have to have a central office headquarters management structure. There were deficiencies there.

But we also–the resources need to come from where the resources are generated, and that's the legislature. So

* * * *

[862] we had mental health focused in three institutions only. And we did follow consultant advice in setting up the disbursed mental health system that was the result of our–what we called our mental health service delivery system –

By Mr. Bien:

Q. But despite—

A. –Put in it every prison.

Q. Despite listening to those consultants then, something happened between, right? Between 1995 and today, you lost track of forecasting for the growing population; is that correct?

A. I'm looking at a period of time maybe for eight or nine years prior to 2006, maybe seven or eight years where there seemed to be a lack of continuous attention to this program.

Q. And that was the time when you were not there.

A. And I was not there as a responsible official, but I was called back from time to time as a consultant myself.

Q. Whatever–my point is, you know, something happened in the past that's resulted in today's problems, right? Right now you agree that we need a massive construction program of new high-level intense beds to meet the needs of the population; is that correct?

A. Yes.

Q. And you agree we need a program to go prison by prison and build adequate treatment and office space to provide care for [863] the prisoners who are still in the prisons?

A. Yes, for those prisoners who are still there who are mentally ill patients.

Q. And the reason is that right now today the department has insufficient treatment and office space to provide for the needs of the current mentally ill population?

A. I'm not saying that. I'm saying that–

Judge Karlton: Let me just drop the word "appropriate" in there, and I think it ends this debate.

The department presently doesn't have sufficient appropriate office and treatment space.

The Witness: That I could say is correct.

By Mr. Bien:

Q. Isn't it correct, Mr. Dezember, that historical perspective that you have given your testimony here, someone who was there for a long time, you've gone in and out of government, is really an explanation for why we're in the current state of affairs we're in today, but not an alternative cause of the problems?

Ms. Tillman: I'll object. Vague and ambiguous.

Judge Karlton: I didn't understand the question, either. I agree with Ms. Tillman. I don't know whether you guys did.

Judge Henderson: I agree with you.

Mr. Bien: I'll take your guidance and try again,

* * * *

[880] The population, do you?

A. No, I don't.

Q. Okay. And so you don't know whether or not those orders may include mechanisms that would benefit all parts of the Coleman class?

A. Well, depends on what you mean by "benefit" at that point.

Q. Well, you agree that overcrowding is impacting the prison system, right?

A. I do.

Q. Okay. And one way overcrowding impacts the prison system is through increased stress, violence, which results in lockdowns in the prison system; isn't that correct?

A. It can, yes.

Q. And those lockdowns and stress impact all prisoners in the system.

Ms. Tillman: Objection, vague and ambiguous as to "stress"; calls for a possible clinical conclusion on people's care and condition?

Judge Henderson: Clarify what you mean by "stress."

By Mr. Bien:

Q. You agree that the–

Mr. Bien: I'll rephrase, your honor.

By Mr. Bien:

Q. You agree that the impact of overcrowding affects prisoners throughout the prison system?

[881] A. Um-hum.

Q. Is that right?

A. Yes.

Q. Okay. So, for example, if you're a triple C in a program and the program is locked down, that's going to affect your life. You may not be able to go to program.

A. Yes, if there's a lockdown, that's correct.

Q. And you may not be able to get access to a group, a mental health group that you might have been in?

A. Yes.

Q. So Triple C's are also affected by overcrowding. A. Yes, they are.

Q. And if there's a reduction in overcrowding Triple C's would benefit, just like everyone else.

Ms. Tillman: Objection, calls for speculation as to what reduction.

Judge Henderson: I'm going to allow it.

You may answer that.

The Witness: Well, to the degree that releasing from prison is a benefit–and I would assume in most cases it is–then, yes, they would.

Judge Karlton: Not just that. The problem is–the question is: even as to those who remain in prison, if you reduced the level of stress–and I know Ms. Tillman will object, but I'm going do use it anyhow–by virtue of

* * * *

[885] By Mr. Bien:

Q. They are going to happen. They are going to come to fruition.

A. Well, you know, we've already talked about the receiver's difficulty getting funding. This is an approved plan and it is progressing in steps and stages. And my assumption is that it will continue that way.

I can't guarantee what is going to be funded or what isn't going to be funded.

Q. You claim that you now have a good system of projecting future needs for mental healthcare. You have validated–you called it a validated system now; is that correct?

A. Yes.

Q. And that's the Navigant consultant?

A. Right.

Q. That's John Rizner?

A. That is correct, yes.

Q. John Rizner is the individual that does the work for the state?

A. He does what?

Q. He's the individual that you rely on who is employed as a consultant?

A. He's employed by navigant under their contract with the state, and he provides this function of forecasting population and bed demand.

[886] Q. And based on his–on these forecasts you have developed these bed plans which show current need and future need?

A. Yes.

Q. Okay. And you rely on those in your work and you've gone to the governor and to this court and said: "this is what we need"; is that correct?

A. Yes.

Q. And isn't it correct that the most optimistic projections of when the department will have constructed sufficient beds to meet the needs of the mental health population based on these projections is 2014.

A. I think in the bed plan that we're referring to it was 2013, but it also is addressing the population demand of that time. So this is a five-year forecast and a five-year plan that's updated annually so that you would still–you would always have a five-year look.

If you cut it off at the current bed plan, it's out at year 2013. Construction processes ordinarily somewhere in the three to five year range. But the focal point is to have beds at 2013 that meet the population expected for 2013. And all that is changeable on an annual basis.

Q. When you did that plan, the 2007 plan that you say was approved by this court, things have gotten delayed since then; isn't that correct?

A. Delayed?

[887] Q. In other words, since that plan was approved by the court, department made a decision to join in with the receiver in the 10,000 bed plan; is that correct?

A. Well, that's partially correct. There is an order of four Judges in a coordinated order that indicated that the receiver has the lead responsibility for building the 10,000 beds, which is medical and mental health.

So while we decided to do that, because it's a good thing to do, and it will fulfill the bed plan, there was also an order that said:

> "This is how you should do it."

And so we followed that.

Q. I won't go over what the order says, but I understood the order to ask the department to cooperate and work with the receiver; isn't that correct?

A. Well, there are those orders, as well.

Q. Right.

A. But this one is specific in giving the receiver the lead–I don't remember the exact–lead project authority for the 10,000 beds.

Q. Right. And you were the representative of the state of California in many meetings where the decision about whether to throw the mental health beds into the receiver's projects were discussed.

A. I have been, yes. I've been in meetings like that.

[888] Q. Okay. And you've discussed these issues with representatives of the governor's office, haven't you?

A. Yes.

Q. And are you aware of any–prior to June of 2008, are you aware of any objection the state of California has raised to any court order dealing with mental health projects, joining into the receiver's 10,000 bed project?

A. No, I'm not.

Q. And, in fact, you were–you personally testified in deposition, Mr. Dezember, that you thought that was a good thing to do to merge these projects and let the receiver take the lead.

A. Yes.

Q. And you said that was a good thing to do because by cooperating you could use the space more effectively. That was one of the reasons; isn't that correct?

A. That's one of the reasons.

Q. There's only a certain amount of space available at these sites to build. And it's better to build in an unified structure than in two separate projects.

A. Yes.

Q. Okay. And you also supported the project because you felt the receiver might have the ability to cut through some of the governmental red tape and get these things built more rapidly.

A. It appeared that way, yes.

* * * *

[894] There's some concern that the program may fold just because at some point people are not going to work for free.

The Witness: I understand that.

By Mr. Bien:

Q. Let's go over what Judge Karlton just brought to you, Mr. Dezember. Let's assume that a decision is made not to proceed with the receiver's construction program. We asked you that question in your deposition.

And you said—what would you do if the receiver's 10,000 bed program is taken off the table to comply with this, this court, Judge Karlton's orders to build mental health beds?

A. Well, the order we still have, notwithstanding the receiver's efforts, is to build the August, 2007 bed plan. That's where we would be.

Q. And how many of your staff are working on developing the August, 2007 projects?

A. Well, they are not at this point, except on individual projects, such as the preliminary planning for the 64-bed at CMF and the preliminary planning for the 50-bed at CMC and other various small projects.

What would require—what that would require if this is the result that the receiver is not going to build his facilities, the CHCF, is a shift to the August, '07 bed plan. And the projects would then have to proceed through the capital outlay process of the state.

[895] Q. Okay. And that process–we're talking about these consolidated care centers. I think that's what they are called, right, at that point?

A. Yes. Yes.

Q. And these were similar to the receiver projects in that they were efforts to concentrate in certain locations a large number of the high-level mental health beds?

A. Yes.

Q. Okay. And one of the reasons you wanted to do that was to improve your ability to recruit and retain clinicians by concentrating them in places where you might have a better chance of hiring them?

A. Yes.

Q. Is it correct that those projects, if we have to go back there, we've lost at least a year on those projects?

A. Perhaps more.

Q. When are you going to decide which project you're doing, Mr. Dezember? You have a court order to build these mental health beds. When are you going to decide whether you're going to build the August, 2007 plan or go along with the receiver's beds?

A. Well, on a gradual basis we have been on both tracks. And believe me, in government that's a difficult thing to sustain, because the attention over the past, say, 15 months has been on the receiver's building program.

[896] I don't know anyone who didn't think that was going to materialize.

So the projects that I've mentioned are part–part of the August, 2007 plan. And they are proceeding. They are not numerous projects from that plan that have been proceeding. And if that was the only thing left, then we would have to proceed with that.

Q. Have you discussed with the governor's office when the decision is going to be made about going back to the August plan or proceeding with the 10,000 bed plan?

A. I have not talked directly with the Governor's office on that. I have talked with the new Secretary of our department on a number of those issues.

Q. And what's the schedule for making that decision, Mr. Dezember?

A. I don't know.

Q. So as you sit here today, you can't represent a date certain in the future when these mental health beds that you agree are necessary to provide treatment will be available?

A. That's correct.

Q. Now, you've testified that an appropriate vacancy rate for clinicians in your area, the mental healthcare, is eight to ten percent; is that correct?

A. Yes.

Q. And today the vacancy rate is closer to 20 percent; isn't [897] that correct?

A. Well, it's today between 17 and 19 percent.

Q. And for psychiatrists it's far worse; isn't that correct?

A. It's higher, yes.

Q. Forty, 50 percent?

A. No, it's roughly 30 percent, 32 percent.

Q. Is that after you count your use of registry or before?

A. Before. When we count use of registry our vacancy is about 11 percent.

Q. Now, when you're talking about your vacancies–and you showed a chart earlier to the court–you're talking about positions that have been allocated to the department as of the date that you projected that information; is that correct?

A. Yes.

Q. Okay. And isn't it correct that the department has undertaken, as a direction of legislature and of this court, a workload study to evaluate the appropriateness of the positions it has allocated for mental healthcare?

A. Well, the workload study assesses the work required and determines the number and type of staff required to perform it. It's a true workload study.

Q. And you performed that workload study. The department performed that study?

A. It did, yes.

Q. And that was something that is part of California

* * * *

[904] we can only show established positions that the legislature has approved.

Q. Let me show you –

Mr. Bien: Can you put up, Mr. Jones, chart–plaintiffs' 245? Do you have that?

Let me–may I approach the witness and give him that?

Judge Henderson: You may.

By Mr. Bien:

Q It's a little hard to read, and I apologize for that, Mr. Dezember. This information is a little different from the information that you showed the court earlier, because it's based on the information that the department regularly provides the special master and plaintiffs' counsel in this case about your hiring and vacancies.

So this is the only information that we have access to, and the special master.

You'll see that this is taken from the monthly information that you provide, the Department of Corrections provides.

Isn't it correct that as of August of 2008 there's a 40 percent vacancy for psychiatrists?

A. According to this report, yes.

Q. And you had 955 vacant positions in August of 2008?

A. 155 what?

[905] Q. 955 total positions?

A. Oh, total. Total, yes.

Q. Yes.

A. Vacant.

Q. And so if you add in the additional positions that you've been authorized–

Judge Karlton: Not positions; proposed.

By Mr. Bien:

Q. Proposed positions–excuse me–your vacancy rate would currently be higher. In other words, you've added 400 more positions than what is shown here?

A. I believe it would be that much higher. I'm trying to think of when the budget was approved.

Q. Late September.

A. September.

Q. Right.

A. So it would jack this number up, yes.

Q. Okay. And in addition to the 400 positions, we also have these additional positions that you and the special master have decided are necessary under the workload study based on the changed assumptions we have discussed. And you haven't even asked the legislature for those positions yet, have you?

A. That's correct. They are not yet established.

Q. And before you can start actually hiring for a position, you have to go to the legislature and get them established; is

* * * *

[910] Q. And would you agree that 20 percent of the triple CMS class today is more than 5,000 prisoners?

A. Yes.

Q. So you agree that as of today, as you sit here today, November of 2008, 5,000 –

Judge Karlton: December, but who's counting?

Mr. Bien it's December now. Excuse me.

By Mr. Bien:

Q. In December of 2008, 5,000 Coleman class members are housed in what you would call "bad beds" or "nontraditional beds."

A. Yes.

Q. You've, in fact, called them "ugly beds" in a report that you wrote–helped write to governor Schwarzenegger; isn't that correct?

A. Which report?

Q. The Deukmejian report?

A. Oh, the independent review panel.

Q. Independent review panel.

A. Yes, there are euphemistic terms for them. They are bad beds. They are ugly beds. They are alternative beds. They are places where housing an inmate was not designed or intended when the place was built. And so they are gymnasiums. They are dayrooms, things like that.

Q. Are you aware of any program policy written statement that excludes triple CMS inmates from these bad beds?

[911] A. I don't think we have a written policy on that. It's a matter of cooperation between our mental health folks and the classification and housing people in the division of adult institutions.

Q. Now, I'm talking about the triple C right now. You say there's some policy?

A. No, I said I don't think there's a written policy directive on that, as far as I know. I could be wrong, but I do know as a matter of cooperative relationship, if you will, between the mental health organization and the division of adult institutions that if–that a caseload inmate is not necessarily treated by a noncaseload inmate in this regard.

Q. But 5,000 of them are there right now.

A. Well, yeah. We're 200 percent overcrowded.

Q. And I'll represent to you, and you can look at the–have you looked at the declarations of Dr. Haney or Dr. Stewart?

A. No.

Q. You understand that those are experts working for the plaintiffs in this case?

A. I understand that, yes.

Q. And they toured the prisons and studied the prisons and examined medical records and looked at these issues, and they first issued their reports in November of 2007?

Do you know that?

A. I don don't know that, no.

* * * *

[924] report–well, go ahead. I don't want to–go ahead, Ms. Tillman.

The Witness: this is–this chart demonstrates improvement coinciding, I think, with the opening of our California medical facility mental health crisis bed.

By Ms. Tillman

Q And that opened in June 2008; is that correct?

A Excuse me?

Q Did that open in June 2008?

A. Yes.

Q. Even with the opening of the mental health crisis bed unit at California Medical Facility, there appears to still be a wait list for mental health crisis beds, correct?

A. Yes.

Q And are there reasons that there still remain a wait list for mental health crisis beds?

A Well, the demand–all I can say is demand exceeds the supply of those beds.

Q And we move to page 5 of exhibit 1290. We see the Ash wait list, correct?

A Yes.

Q And ash provides intermediate care beds?

A Excuse me?

Q Does ash provide intermediate care beds?

A Yes.

[925] Q And, again, we see a marked decrease in that wait list, correct?

A Yes, correct.

Q Moving to page 7, the Salinas valley psychiatric program wait list, do we see any change in the wait list for the inpatient beds provided by Salinas valley psychiatric program over the past four months?

A Very little.

Q Why is that?

A Again, there's a large demand there that exceeds the available beds.

Q What is the demand for, exactly?

A It's for high custody intermediate care for severely mentally ill inmates.

Q And those inmates are amenable to placement only at Salinas valley psychiatric program because of their high custody status?

A For the most part.

Q In terms of the treatment and care of high custody inmates with mental illness issues, are you familiar with the use of therapeutic modules?

A. Yes.

Mr. Bien: Beyond the scope of the direct–cross. Excuse me.

Ms. Tillman: Your Honor, I wanted to get into the [926] Contrast between holding cells and therapeutic modules, if I might proceed on that basis? Holding cells were discussed on cross-exam.

Judge Henderson: Discussing and opening–go on. go on.

By Ms. Tillman

Q Mr. Dezember, Are you familiar with any differences or similarities–let me strike that.

Mr. Dezember, can you explain to the court what a holding cell is versus what a therapeutic module is?

A Well, holding cells may vary from prison to prison. It's a place where they're keeping an inmate while moving from one location to another, and it's a temporary location.

A Therapeutic treatment module is a designed–I don't know–phone booth sort of thing with a mesh–wire mesh around it. It's for the purpose of permitting one-on-one or group therapy with a clinical psychologist or social worker in a setting in which they would be at risk otherwise if the inmates were not so contained.

Q When you say "at risk," at risk for what?

A Attack. We do have staff that are attacked from time to time.

Q And when you previously testified that you rely upon the monitoring tours of the special master's team of experts to obtain information about the operations of the whole range of [927] CDCR institutions providing mental healthcare, have you received any information critical of the use of holding cells from the special master's team?

A Holding cells?

Q Correct.

A I think–you know, I can't remember specific, but my general sense is if they're used for anything more than a very short stay, they're inappropriate.

Judge Karlton: and you have been told that by the special master that's going on?

The Witness: Yes.

By Ms. Tillman

Q And have you received any reports from the special master's team critical of the use of therapeutic modules?

A Initially, yes. Although, there's been–there was a recognition that at least under the conditions we're using them they were necessary, and so the special master allowed his monitoring staff to assist us with putting together an appropriate design that would suit both the purposes of the communication with the inmate that's necessary for the therapy and also the safety of the clinician.

Q When you say "an appropriate design," what are you referring to?

A Well, we now have a standard design that we have given the prison industry authority when they build these. That is [928] a design that was concurred in by at least one or more of the special master's monitors.

Judge Karlton: Dr. Metzner approved the present design?

The Witness: Yes, Dr. Metzner was involved in that. By Ms. Tillman

Q Is the present design all that different from the previous design?

A It's somewhat different. I don't know. I can't tell you exactly what the differences are. I think it's a little roomier, more space in it.

Q To the extent that you review the special master's monitoring reports that are filed with the Coleman court, are you aware of the special master's latest 20th round report's findings as to the decreased vacancies at certain institutions?

A Well, I think as–yes, in that report, he summarizes every institution, and some discussions are faring quite well in all of the categories we're concerned about, and some institutions are not, and that includes the vacancy rates at the individual facility.

Q So, for instance, the California Institute for Women, the report indicated, quote, "achieved nearly full staffing with a vacancy rate of .018." That's at page 306 of the report. Was that a finding that you agreed with?

A I accept it. I did not go and make my own survey. I was [929] very happy to see that result.

Q And, likewise, the report indicated that at Folsom State Prison they were able to achieve full mental health clinical staffing with the exception of 75 recreational therapist. And, again that was something you were happy to see?

A Yes, yes, of course.

Q Likewise, High Desert State Prison was found to have consistent compliance with quarterly case manager contacts and annual interdisciplinary treatment team review of the clients, patients, with reception services appearing to be substantially in compliance with program guide requirements. Was that a finding that you also accepted?

A Yes.

Q And the California Institute for Men, the report indicated that all supervising clinical positions were filled. Again a finding that you accepted?

A Yes.

Q Sierra Conservation Center was reported had no mental health vacancies and remained richly staffed as to inmate/clinician ratios. Was that a report finding that you accepted?

A Yes.

Q In discussing the potential impact of a prisoner release order, you were posed various hypotheticals by plaintiff counsel. It was indicated in plaintiff counsel's hypotheticals

[933] the actual construction stage?

A It's going to be several years.

Q And during that time you'll make do with what you have?

A I can't hear.

Q During that time you'll make do with what you have?

A That's all that is available.

Ms. Tillman: thank you. Nothing further.

Mr. Bien: can you show plaintiff exhibit 585, please? First page?

May I approach the Witness?

Judge Henderson: You may.

Recross Examination by Mr. Bien

By Mr. Bien

Q Is plaintiff's Exhibit 585 a document that you receive in the course of your work as Chief Deputy Secretary?

A Yes.

Q Okay. And this is a report prepared by the healthcare placement oversight program run by Mr. Rick Johnson?

A Yes.

Q And you've testified this is some of the most accurate information you receive?

Ms. Tillman: I object to the extent this particular exhibit is after the August 30, 2008 deadline. It refers to information gathered in September 2008, I believe.

Mr. Bien: the chart they put up covered September [934] a Minute ago.

Judge Henderson: Proceed.

The Witness: What was the question again?

By Mr. Bien

Q You've testified that Mr. Johnson's department provides good, accurate information that you rely on; isn't that correct?

A Yes.

Q Okay. And this is a report on prisoners who are referred for mental health crisis beds and need assistance in getting there by the–by headquarters because they can't get to them in their own prison; is that correct?

A Well, this report does that, and other things.

Q Okay. So is it correct that in the month of September–I'm looking at the first paragraph–Mr. Johnson reports to you there were 359 referrals for mental health crisis beds, right?

A Yes.

Q And of the 359, 100 got to a mental health crisis bed; is that right?

A It says a hundred were placed.

Judge Karlton: that means they got to a mental health crisis bed, right?

The Witness: Well, I certainly assume so. It doesn't say that. I'm just trying to be accurate.

[935] By Mr. Bien

Q Okay. Then if you go down two paragraphs below, it says of the hundred transferred, 27 cases were transferred within the required 24 hours?

A Yes.

Q Okay. So of the 359 referrals in September 2008, 27 of the patients were placed in a mental health crisis bed within the required 24 hours, right?

A Yes.

Q For the hundred right before that, for the hundred that did get to mental health crisis beds, the average number of days waiting was 2.45, right?

A Yes.

Q And the program guide standard is 24 hours or less, right?

A Yes.

Q Okay.

Mr. Bien: can you show 263, please? I think I'm going to give you a copy, also.

Judge Karlton: I think we've got a copy. Maybe we don't.

(Document displayed.)

By Mr. Bien

Q Mr. Dezember, This is plaintiff's exhibit 263 that was created based on data that we receive and the special master receives from you. This very chart–this very document we [936] get from Mr. Johnson. It's also provided to us, as you know. And on the top line you'll see are the–is the referral number, the same number I showed you here, the 359. And the bottom line is the–and the bottom line is the transfer number, the same number we just discussed, the hundred transferred.

You'll note that between June and July and August there was some improvement, wasn't there, in terms of the number of prisoners that actually were able to be transfer to a mental health crisis bed?

A Yes.

Q Okay. And do you attribute that to the opening of a 50-bed mental health crisis bed facility at CMF?

A It at least had a positive impact on that.

Q And you have been subject to a court order to build an additional 50-bed mental health crisis bed unit at CMC prison; isn't that correct?

A That's correct.

Q And as of today, is that program under construction? Is there any –

A Not under construction. It is in that capital outlay process I described a few minutes ago.

Q Several years away still?

A Probably.

Q Are there any other crisis bed construction projects that

* * * *

[943] I still believe the solution to the problem is utilizing available beds that we have at Atascadero and California medical facility for intermediate care, notwithstanding custody determinations, which are now being reviewed very carefully by the division of adult institutions who make those determinations.

By Mr. Bien

Q Do you know that Dr. Packer looked at the issue of utilization management for these higher level of care beds?

Ms. Tillman: Lack of foundation. I think he testified previously he hasn't read Mr. Packer's report.

Judge Henderson: He has not read Dr. Packer's Report.

The Witness: I have not, and I haven't met him Either.

By Mr. Bien

Q Okay. You agree with the Navigant study that shows that there is a current deficit in inpatient care beds the department needs? In other words, you agree that there is a need to build more beds?

A Let me just say this: I agree–I understand and agree with the Navigant information, the study, the report. I'd have to look at it to identify any details in it. But I concur in that report. It's why we hire them.

Q And you agree that the beds that you have recommended to [944] this court and the Governor that need to be built should be built?

A Yes, I do.

Mr. Bien: Thanks.

Judge Henderson: Do you have something further, Counsel?

Ms. Tillman: One question.

Judge Henderson: Do you have something?

Judge Karlton: No, I didn't know what was going on. Further redirect examination

By Ms. Tillman

Q Would it be correct to say, Mr. Dezember, that even if there is a population reduction, you'll still have to create beds, whether out of existing space or hopefully out of new space?

A That's my conviction, yes, that we will still need to build most, if not All, of the beds we're planning in the plan now. Ms. Tillman: thank you, nothing further.

Judge Henderson: Okay. Any other defendants or intervenors? CCPOA?

Ms. Leonard: No further questions.

Judge Henderson: Okay. Thank you for testifying, Mr. Dezember. You may step down. You're excused.

Let's take our lunch recess for an hour. Court's Adjourned.

[945] (Luncheon recess taken.)

Judge Henderson: Okay. Let's get going. You may call your next witness.

Ms. Kahn: Good afternoon. Jane Kahn for plaintiffs, and we would like to call back Dr. Haney.

Judge Henderson: Welcome back, Dr. Haney. You are still under oath from your previous swearing in.

Judge Karlton: You're still under oath.

Craig William Haney,

Having been called as a witness by the plaintiffs was previously duly sworn and examined as follows:

Direct examination by Ms. Kahn

By Ms. Kahn

Q Dr. Haney, in your August 2008 report, you expressed the opinion that no relief other than a population reduction order will remedy the constitutional violations in mental health and medical care. Can you briefly explain the basis of your opinion?

A Yes, I can. There are really three or four reasons why I reached that conclusion. The first one is that the alternative approaches to addressing the problems are ones that are very time consuming in nature. The kinds of problems that I identified in my report, the things that I saw when I toured the prisons, the things that are reflected in the documents that I reviewed speak to really emergency-like conditions.

[946] There are people, prisoners, suffering throughout the entire prison system, mentally ill and medically ill prisoners who are not able to get the level of care they need. They are not able to participate in programs because of shortages of staff and space and so on and so forth. Those things are urgent problems, and only a solution which can be brought to fruition quickly can address the kind of

immediate suffering which is taking place throughout the system which I saw and other experts saw as well.

The proposal–the proposals that I've looked at that identify potential solutions to this problem which involve construction of additional mental health facilities and healthcare facilities and so on, as well as construction at the present sites of the prison project timetables out to 2013, 2014, before these plans are finalized. The prisoners who were in the situations that I saw can't wait that long.

In addition, however, unfortunately, it appears to me, again based on everything that I've read in this case, that even those projections are unrealistic. So 2013 and 2014 is not only a best case scenario. It appears to be an impossible scenario for the state to be able to meet.

There have already been a series of delays in the case, not contemplated in the plans that I reviewed that project to 2014 or so, delays which involve expenditure of funds in the early stages of planning so that things have been [947] placed on hold. The receiver's beds, for example, which are such an integral part of the state's proposed solution to these problems. That plan is at about step two or three or four in what may end up being a hundred-step process and it's on hold.

I've looked at other documents which speak to relatively, one would think, seemingly straightforward kinds of small-scale remedies to immediate problems, things like creating small management yards that prisoners in the administrative segregation units need because they are not getting adequate access to exercise. And even something like that has taken a long period of time to be completed.

So a several-year process, request for the court to stay or extend the deadline in order to finish a project pales in comparison to the large-scale issues and problems that have been identified by myself and other experts.

The other reason really has to do with a frank recognition on my part that even if these plans did come to fruition and even if they were somehow miraculously done on time, or even ahead of time, they would not adequately address all of the overcrowding related constitutional problems that I saw in the system. There are plans for increasing space for only a small percentage of the Coleman class members. They don't address the way in which overcrowding is affecting 29-, or, what may be by 2013 or '14, 30,000 3c class members.

In fact, the plans that I've seen, the receiver's [948] Beds contemplate only the creation of adequate space for about 5,300 EOP prisoners, 2,000 of whom will be left in the prison system unless steps are taken to address the overcrowding which plagues that system and all aspects of that system.

Those 3c prisoners, all of whom will remain in those facilities, and the 2,000 remaining EOP prisoners will still be subjected to many of the kinds of conditions that I have been describing and other experts have talked about as well.

Those plans also, in my opinion, don't realistically address the kinds of massive increases in staffing that would need to be introduced into the system in order to respond to the kind of overcrowding-related constitutional violations that I addressed in my report and that I testified about a few weeks ago.

I guess the final issue is that I–this is a problem that I have been looking at for a long time in the state of California, somebody who studies overcrowding and how prison systems operate and function, the Department of Corrections has been talking about addressing the issue of overcrowding and the way in which overcrowding impacts mental health and medical care and other aspects of the conditions that prisoners in the system confront in pretty much the same way for almost 28 years.

The very first overcrowding case I participated in was in 1980 and there, and in each subsequent case, including a [949] case that involves a fair number of mentally ill prisoners in the California men's colony in San Luis Obispo, a case called *Donner versus Mccarthy*. Each time the proposed solution is to address an unexpected influx of prisoners whose presence in the system has created overcrowding which is undermining the delivery of services and care through a little bit better planning and more construction, and over that 28-year period of time, the system has gotten worse not better. It has gotten more and more overcrowded.

The delivery of services, with some peaks as a result of the intervention of the court and some injection of energy and resources, things have improved from time to time, but the overwhelming press of the numbers in the system is now weighting it down in such a way that this proposed solution, i think, has finally run its course, and it is time, in my opinion, to address the issue at its cause, and the cause of it is overcrowding. And until and unless overcrowding is dealt with in a direct and significant way, all of these other approaches to the delivery of services in a constitutional manner, frankly, miss point.

Q In your report, when you were discussing a population reduction order, your opinion was the CDCR population should be reduced to a level of capacity 145 percent or lower?

A Yes.

Q Can you explain how you came to that number?

[950] A Yes. Well, I would be misleading the court if I suggested this was an exact science. So this was an approximation on my part, and I specified a range within which I thought a target range, within which I thought the population--or to which I thought the population should be reduced, and I began that range with a hundred percent of the population, a hundred percent of the rated capacity of the system.

Judge Karlton: Let me interrupt you before you go on. I think I read in your direct testimony that most experts thought that 93 to 95 percent of capacity was approaching overcrowding.

The Witness: Yes, Your Honor.

Judge Karlton: How do you get to 145?

The Witness: You get to 145, frankly, by making a concession to what's practical in the immediate circumstance, and that's why I did not want to take a hundred percent of capacity off the table. There was a time in corrections when 95 percent was regarded as a system that was beginning to get dangerously overcrowded. Design capacities are established for a reason. They're established not only based on the number of cells, but also based on the amount of resources, the programming space and so on that a facility has. So these are meaningful limits.

We have been operating roughly for ten or so years in this system at almost twice what those rated capacities are [951] at. So I certainly did not want to exclude the possibility that we would move back to a point in time at some point in the future where a hundred percent of capacity or even less, assuming the system begins to function as it should, could be attained.

Now, the 145, I said, is the outside limit, the outside limit of a target, and that was based on an analysis that was done actually by another group of experts who relied on the input of a group of experienced California wardens. The court may be aware that in 2004 a group called the corrections independent review board met. It was headed by former governor George Deukmejian. There were a group of experts, many of whom employees of the departments of corrections and other experts. Mr. Dezember, who I understand was here this morning, was the chief consultant to that group.

They fashioned an estimate of what they believed to be, based on their knowledge of the California prison system, what they called a maximum operable capacity. This was the capacity that, in their opinion, the prisons could operate at safely but also could deliver programming services in an effective way.

I hasten to add they were explicit in that calculation, and Mr. Dezember has acknowledged they were explicit in that calculation, as excluding from that number the kind of treatment space that would be required to deliver

* * * *

[954] Q Is it also your testimony and opinion that remaining in the reception centers for long periods of

time can actually cause decompensation and cause patients to move to higher levels of care?

A Yes.

Ms. Tillman: objection to relevance. We already discussed it. It's been asked and answered in the course of phase one testimony.

Judge Henderson: Overruled.

The Witness: It is absolutely my testimony–in phase one testimony, Judge Karlton asked me whether being in prison in and of itself adversely affected people's mental health. I answered under ideal conditions, of course it didn't. We are talking about in this system, far from ideal prison conditions. We are talking about prisoners, many of whom are mentally ill, who come into this system and who sit in some of the worst conditions of confinement that I have seen anywhere in the united states, and they sit there not for short periods of time, but more for months on end, waiting for transfer to appropriate beds elsewhere in the system.

Many of them are transferred out of these housing units into environments where–the 3c's can go anywhere in the system, including being housed in what, again, are bad beds, psychologically and medically unhealthy environments for them to live in.

[955] Reducing the overcrowding in the system by reducing, among other things, the existence of these bad beds takes class members out of these environments and prevents their exposure to those environments from adversely affecting their mental health and from leading some of them, some percentage of

them, to decompensate or deteriorate in the face of these conditions.

Reducing the overcrowding does many other things as well. Many of the problems that affect the Coleman class members are problems that have to do with space and access to treatment. That involves space for treatment, space which is inadequate in part because it's being used for other things, in part because it is not enough space to accommodate the numbers of people who need to use it. A reduction in overcrowding will directly–will directly begin to resolve that problem.

Many of the access to treatment and access to appropriate level of care issues have to do with the understaffing that plagues the system. Much of this understaffing can only be understood in terms of overcrowding. Understaffing is also in relationship to the number of people that the staff needs are intended to address.

So, obviously, if you reduce the amount of overcrowding in the system, you reduce the level or percentages of understaffing that currently plagues the system, and that directly affects Coleman class members.

It allows them to get access to better care. It [956] allows them to move through the system more quickly because they have better and more clinical contact. It gives clinicians opportunities to make recommendations about housing that are clinically mandated, the kinds of recommendations that they're not in a position to make now, simply because there are no beds available.

The fewer people there are in the system, the fewer people there will be on the waiting lists in the system. Once the system begins to operate and functions more effective as a mental healthcare delivery system, then the level of acuity you would expect to go down, rather than going up we're looking at.

And I showed charts in my testimony in the first phase of the trial about the increase in, not only the size of the Coleman class population in general, but also what appears to be an increasing level of acuity, a larger number of mentally ill prisoners in the system and a larger number of more seriously mentally ill prisoners. I believe that is, in part, the result of the overcrowding which plagues the entire system.

By Ms. Kahn

Q Thank you. One last question.

Are you aware of any other prison systems that were able to come into constitutional compliance after they reduced the level of overcrowding in their system?

A Yes. There are a number of instances of this. I know the

* * * *

[966] Q And I think what you're really saying, isn't it, as the report stated, quote:

"A group of experienced California prison wardens told the panel at a recent forum that the operable capacity of the state's prisons to support full Inmate programming in a safe and secure environment is 111,309 inmates, or 145 percent of design capacity."

Correct?

A Yes. One hundred forty-five percent of capacity is how they defined maximal operable capacity.

Q At least how that set of wardens defined it, correct?

A How that set of wardens defined it and that figure being endorsed by the corrections independent review panel.

Q In your mind, right?

And so wouldn't you say that the 145 percent number is at best a range of appropriate capacity?

A Well, I'm not sure it's a range. It's a number. It's not a range, so I didn't see anything in the–in that report or in the logic by which that number was arrived at that suggested it was a–it was a range of numbers around which it might be possible to operate at maximal operable capacity. I suggested it to you as a range. I articulated a range from 100 to 145 percent, and also articulated why I thought 145 percent was the most generous possible estimate that was defensible, given [967] The fact that those wardens and the corrections independent review board did not take into account many of the issues that we're grappling with here, which is what kind of space is needed for a constitutionally adequate mental and medical healthcare delivery system.

Judge Karlton: Hang on a second, Dr. Haney. Now I'm even more confused than I was when I came in, which is very confused.

If 145 percent is inadequate because it doesn't represent the operable level including mental health and physical health provision, how can we–how could anybody find 145 percent adequate, appropriate?

The Witness: well, that's a very good question. What I'm assuming is we would be doing other things as well, so in addition to that, arriving at that percent of the population, that there would be other things that would be being done as well so that we would begin to approximate a much more viable overall system of medical and mental healthcare delivery.

Admittedly, a better number would be a hundred percent, but given the fact this is a system that's operated at 190 percent for a decade or so, it seemed to me it was appropriate to articulate a range that was reachable, a range at which we could begin to— we could begin to perceive the benefits of some of the modifications that had been made in the [968] medical and mental healthcare delivery system.

It's conceivable that a system operating at 145 percent of capacity in California, given the size of the population and so on, would, in fact, have to be further reduced, but it seemed to me it was a good place to begin.

By Ms. Tillman

Q You didn't participate in the discussions with the wardens that were a part of this independent review panel report, did you?

A No, I simply read the chapter that was devoted to it. I read Mr. Dezember's deposition testimony in which he discussed that meeting.

Q And you don't know what methodology or formula the wardens may or may not have used in coming to this 145 percent figure, do you?

A As it's reflected in the chapter in the discussion of how they came to that conclusion.

Q It simply says, "a group of experienced wardens told the independent review panel." There's no discussion of formula, is there?

A I think there's more discussion about what was discussed, where it was discussed, how it was discussed. And I think Mr. Dezember discussed these in his deposition testimony as well.

Q You don't know what that formula was, do you?

A I don't know the specific formula, no.

* * * *

[972] it, and I haven't looked at it."

On that basis we ask his last response be struck, Your Honor.

Judge Karlton: That's not what happens. The record is what the record is.

By Ms. Tillman

Q Do you have any opinion as to whether or not any of the released inmates, particularly release involving some 40,000 inmates, would actually receive constitutionally adequate care in the communities they're released to?

A Well, yes, I do. I think it would depend entirely on how they were released, the time period over which they were released, what kinds of changes were determined to be necessary, if any, in the resources that were available to communities where the prisoners were being released to, whether there needed to be enhancement, if any, to the parole outpatient clinics. I think all of those things would need to be determined.

Judge Karlton: Hang on a second, Ms. Tillman.

We have an obligation, in the event we reach the point where we think–the point that something has to be done in considering what has to be done to consider public safety. Unlike you, I'm not an expert, but it seems to me that it at least raises a serious question if you were to take 40,000, for example, some 20 percent of which were seriously ill, and move [973] them into the community–let me ask instead of telling you. Does that represent a threat to public safety?

The Witness: if it was done thoughtlessly without planning, without a process, then it might, not only because some percentage of them were mentally ill, but because that kind of outpouring into communities that weren't prepared to receive a very large influx of prisoners might be problematic in a variety of different ways. So I did not in my report, and I don't know anybody to be suggesting, that an immediate release of 40,000 prisoners is what is called for.

What I recommended here, and Ms. Tillman and I discussed this in my deposition, is a process by which prisoners were released–a process by which at the very least prisoners who are already scheduled to be released simply be released at an accelerated pace, an accelerated pace consistent with the resources available in the community, including resources for the mentally ill, and that, in addition, other kinds of population control mechanisms be addressed.

For example, the issue of whether or not technical parole violaters needed to be returned to prison or could be handled in some other way through some other set of sanctions; whether or not in a longer-term, some kind of sentencing restructuring needed to be redone so the population of prisoners began to be reduced over time in a way that could be stabilized rather than a one time only release of prisoners.

[974] So I think there are a variety of ways this could be done. Public safety would be one consideration. But I would continue to underscore for the court we are talking about prisoners who come out of this system anyway. Some 130,000 or 10–plus or minus 10,000 each year come out of the system.

If the Department of Corrections had started a year ago simply accelerating the releases by ten percent, that would mean in an average year instead of 130,000 coming out, 143,000 came out. That single step would have in a year eliminated most, if not all, the bad beds in the system, which are about 13,000 worth.

So there are–there are small but directed steps that can be taken that minimize or eliminate any public safety concern but which have significant impact on a seriously overcrowded system. Not taking any of them, it seems to me, is also a public safety-related issue, because the prisoners who we're talking about coming out, 130,000 of them every year, being subjected to exactly the kind of noxious and unhealthy conditions that we have been talking about. I don't think–I don't think that benefits public safety either. Not to be able to address the mental health needs and issues of a significant percentage of people who are going to be released in the long run it seems to me places public safety at risk not at benefit.

Ms. Tillman: just for the record, your honor, this expert was not designated on the public safety implications of the release.

[975] Judge Karlton: I understand.

Ms. Tillman: that was not brought up in his deposition, and he was not permitted to testify about it.

Judge Karlton: thank you, ma'am. You may proceed.

By Ms. Tillman

Q You would agree that mentally ill inmates who are released, whether on parole or otherwise, can decompensate when they are not given sufficient medication management and psychiatric support?

A Persons who are mentally ill do sometimes decompensate for a variety reasons.

Q Under the best of circumstances and under the worst of circumstances, correct?

A Yes. And as I think I said the last time, I testified much more often under the worst of circumstances, which is why the circumstances under which they're living in the prison is of such concern.

Q Wouldn't the worst circumstance be an inmate who needs mental health assistance who's not able to get it while on the streets?

A No. No, not necessarily. First of all, you are assuming that they're getting mental health assistance in the system, and for a very, very large number of them they are not.

Q Can you state to any degree of certainty that, with 140 percent capacity or 145 percent capacity, the department of [976] Corrections will be able to operate a constitutionally adequate mental health-care system?

A No. I said at the outset of that estimate, that it was not an exact science. That's why I provided a range. I tried to defend both the bottom and upper limit to the range.

I also said repeatedly that other things need to be done, that this is–there's nothing magical about 145 percent or even a hundred percent, but that at 190 percent, in my opinion, it doesn't matter what you do, you cannot achieve a constitutionally adequate system.

And the closer to a hundred percent we get, the better we will be, and the greater the likelihood that the other things the courts have been ordering in these two cases will, in fact, significantly affect the delivery of the system and bring it into constitutional compliance.

Q Isn't it true you said in deposition that, quote:

> "I am not Judge of whether or not a system at the time we arrive at that point of 145 percent capacity (145 percent capacity) is operating at a Constitutionally adequate level"?

A Of course, it goes without saying I wouldn't be the Judge of whether or not a system is constitutionally adequate.

Ms. Tillman: thank you. Nothing further.

Ms. Kahn: nothing further.

Judge Henderson: nothing further? Thank you for

Official Official Court Reporters, U.S. District Court

[1072] The Witness: IRA K. Packer, P A C K E R.

Ms. Tillman: good morning, your honors. We are calling Dr. Packer this morning, who obviously is testifying from Boston, Massachusetts, via various video teleconferencing technology.

Dr. Packer's experts reports in this case are marked as defendants' trial exhibits number 1018, 1019, 1020 and 1021, and they are hereby offered into evidence.

Dr. Packer's qualifications today are set forth on his curriculum vitae, and that is attached to his report of November, 2008, which is marked as exhibit 1018. There's also a summation of his qualifications on pages two and three of that report.

Thereupon–

Dr. IRA K. PACKER

Was called on behalf of the defendants, and after having been first duly sworn, was examined and testified as follows: direct examination

By Ms. Tillman:

Q. Good morning, Dr. Packer.

A. Good morning.

Q. Since you are testifying remotely, please let us know if at any time you are having difficulty hearing us or seeing any document that is being presented.

A. Okay.

* * *

[1077] The number of inmates. And so each day that the court wanted to send somebody in, they would have a special process by which they would have a double review of the bail status, and in that way limit it to who could go into the jail. If they decided they were going to send that inmate in, somebody else had to be released on the other end.

Q. Dr. Packer, is it correct that your reports indicate that you toured prison facilities within the state of California in preparing your opinion in this case?

A. I'm sorry. I could not hear the last part of your sentence.

Q. Did you tour some 11 prisons within the state of California in preparing your opinion in this case?

A. Yes, I did.

Q. And those tours occurred in November '07 and August '08, correct?

A. July, the end of July, 2008, and November, 2007.

Q. And, in general, what did you do during these tours?

A. During these tours I met with the leadership of each Prison, including the correctional, as well as the health and mental health administrators. I toured the various settings where inmates were being housed, particularly focusing on those in the Coleman class.

I looked at ADSEG units, EOP units when they were available, mental health crisis beds. I also specifically looked at gym housing, gyms that had been converted to [1078] housing.

I interviewed correctional officers, mental health professionals, as well as inmates.

Q. Did plaintiffs' counsel attend any of these tours?

A. On every single tour there was at least one plaintiffs' counsel present during the entire tour.

Q. Were you asked in this case to form an opinion on whether overcrowding was the primary cause of the alleged deficiencies in the mental healthcare system?

A. Yes, I was.

Q. And when you formed your opinion in this case on that issue, what factors did you consider?

A. What factors did I consider?

Q. Yes.

A. I considered all the information that I obtained from my tours, as well as voluminous documents and records that I reviewed, including affidavits, special master's reports, other expert reports, reports from parole, et cetera. And looking at all of those materials I arrived at conclusions about what factors within the current system were contributing most Heavily towards deficiencies in delivery of mental health services.

Q. And what were those factors?

A. Obviously, one thing I was looking at was the impact of overcrowding or too many individuals in the system. But there [1079] were many other factors, as well, including issues such as lack of electronic medical records, lack of appropriate type of placements, both concerned with physical environments as well as programmatic elements for the most severely mentally ill people who are in the system.

I also took into account the factors such as ability to attract and retain appropriately trained mental health staff, and, again, the physical conditions in terms of space available both for housing, treatment and also space for the clinicians.

Q. Based on your review of the documents and your tours of the prison and you're interviews with various personnel within the prisons, what opinion did you form to as to whether overcrowding was the primary cause?

A. As I indicated in my report, although I–excuse me–although I concluded that overcrowding was contributing and exacerbating many of the other problems, in my opinion the most–the primary cause is that the prison system in California and many other states, now has many more acutely mentally ill individuals and at a level of more severity than had been anticipated when the prisons were built.

And as a result, the existing space and existing programs really were not designed to meet the needs of this type of population. And this has resulted in a mismatch in that individuals who are much more mentally ill are now placed [1080] in prisons that were not designed for that purpose. And as a result, it's difficult in that environment to provide adequate services absent development of new facilities, as well as new programs within the new facilities.

Q. Based–I'm sorry. Go ahead.

A. Yes, that was the main factors. There were other factors, as well. As I indicated in my report, the medical record system is a paper system, and the prison is simply not able to keep up with the amount of work and volume that's required in order to maintain an appropriate medical record system without going to an electronic process, which is not yet in place.

Q. Based upon your experience and educational background and employment background, do you have an opinion regarding whether constitutional level of care can be achieved in overcrowding conditions within a correctional setting?

A. Yes, I do.

Q. And what is that opinion?

A. My opinion is that although overcrowding exacerbates the problems in providing such appropriate care, if other changes are made in the system particularly based on my experience, very particularly in Hamden, but other positions, as well, that if appropriate facilities and programs are developed that the needs of the most severely mentally ill people can manage within a correctional facility.

Judge Henderson: Can you give us some examples of

* * * *

[1086] they can become incrementally better. And I guess I haven't gotten that far in the testimony, but I'm not also necessarily saying that just releasing prisoners would improve the situation, anyway.

By Ms. Tillman:

Q. Dr. Packer, is it your testimony that Hampden county jail and the overcrowding conditions there you were able to deliver constitutionally-adequate mental healthcare?

A. Again, I can't speak to the word "constitutionally-adequate," but I will say that we were able to provide what I considered and what others considered an appropriate level of mental healthcare.

Q. And were you able to do that with the use of certain staffing resources, programming resources?

A. Yes, but part of it was our process of how we employ our staff and programs we had. The other part I believe I already testified to is that there was some effort on the part of the courts to not send in some of the mentally ill inmates into the system.

And, frankly, in my opinion the most effective procedure we had was that we provided mental health services at the courts, and we diverted mentally ill people away from the jail. So that that had a very good impact on our ability to provide the services, even though the jail was overcrowded.

Judge Karlton: Sir, that would be under the very 1087] Broad definition of a prison release program, a prison release order. What I'm asking you–I think I what I heard you say–and it's very–you know, this is not the best way to have a conversation. But what I think I heard you say was that perhaps the most effective thing to do in the interim is to in some way divert mentally ill prisoners away from the prison.

Is that correct?

The Witness: That is what I'm saying now, and i also included in my reports.

Judge Karlton: Okay. So that to the extent that that would be under the law a prison release order, you would think nonetheless that would be the appropriate thing to do? Am I understanding what you're saying?

The Witness: Yes. Yes.

Judge Karlton: Okay.

The Witness: I apologize. When they said "prison release," I thought they were literally releasing people from the prison.

I did recommend in my report, and I'm saying that now, that efforts to divert mentally ill people from the prison in the first place I do think would be a very reasonable strategy.

Judge Karlton: Thank you, sir.

By Ms. Tillman:

Q. Dr. Packer, taking a narrower definition of a prison

* * *

[1092] somebody actually is providing the services, I think that's doable.

But in the absence of those two elements, releasing them without adequate time to plan and without appropriate resources in the community, it's not likely to be very effective. I think they will decompensate and go right back in again, and then very little has been accomplished.

Judge Henderson: thank you.

Ms. Tillman: Thank you. Nothing further.

Judge Henderson: Thank you, counsel.

Any others from defense table have anything of this Witness?

Ms. Wang: Nothing further, Your Honor.

Mr. Mitchell: No questions.

Judge Henderson: Okay. Cross-examination

Cross-examination

By Mr. Bien:

Q. Good morning, Dr. Packer.

A. Good morning.

Q. Dr. Packer, if you assume that crowding means that the supply for mental health services and space exceeds the existing–I'm sorry. I'm going to start that again.

If you assume that overcrowding means that the demand for mental health space and services exceeds the existing supply for mental health space and services, would you [1093] agree that crowding is the primary cause of the ongoing problems in California?

Ms. Tillman: Objection, misstates the law. Misstates the PLRA. I think that's a legal definition used in this proceeding.

Judge Henderson: I'm going to allow that. You may answer that, doctor. Did you hear the Question?

The Witness: Yes, I did. Let me make sure I understood the question.

You're asking me to redefine "crowding" to say–and say the existing resources, meaning the number of ICF'S and crisis beds and et cetera is not enough relative to the number of inmates who need those services. That if I call that "crowding," would I say that's the main cause?

Judge Karlton: Overcrowding.

Judge Henderson: Would you call that "overcrowding"?

By Mr. Bien:

Q. If you called that "overcrowding" would you agree that that's the primary cause of the problems you observed right now?

Ms. Tillman: Same objections.

Judge Henderson: Same ruling.

The Witness: Yes. But let me just be clear. I [1094] want to make sure I'm saying this right. I believe you are redefining it as being that the fact that there aren't enough ICF beds, crisis beds, acute care beds, EOP beds, given the current population, that is if that is equal to overcrowding, yes. Then, I would say that is what causes it, the primary cause.

By Mr. Bien:

Q. There also aren't enough treatment spaces in prisons. There aren't enough confidential spaces in the prisons you saw also, correct?

A. That's correct.

Judge Karlton: And there wasn't enough staff; is that correct?

The Witness: Yes, the staffing thing was much more variable. I have to be frank. At some places the staffing was better than others. And certainly there had been some improvement in the staffing over at least the time period that I saw the documentation, and even from one place to another. So that was a contributory factor.

By Mr. Bien:

Q. Dr. Packer, just to be clear, in the one system that you personally worked in that experienced overcrowding, the Hamden county, Massachusetts–it's called the house of corrections. It's typically what we call a jail; is that right?

A. It actually was both called a jail and a county

* * * *

[1100] lowered in 2007.

The Witness: No. I'm sorry. I didn't hear that, Your Honor.

Judge Karlton: This is very difficult.

Do you have any reason to believe that there was any significant change in the ratio of California to the rest of the prison population in 2007?

The Witness: No, I do not.

Judge Karlton: All right.

By Mr. Bien:

Q. You endorse the various orders of the court that require the California prison system to address the particular risk of suicide in administration segregation units; isn't that correct?

A. I'm not sure what you mean when you say I "endorse."

Q. Well, you refer to the various plans that the state is implementing in an attempt to reduce the high rate of suicide in the ADSEG units.

You're aware of those plans, aren't you?

A. Off the top of my head, I'm not particularly finding what you're saying. I don't know what page you're referring to in my report to know specifically what you're talking about.

Q. Are you aware of any plans by the state of California to address the high rate of suicide in ADSEG units?

A. I did review both the reports by Dr. Patterson and the [1101] response from the state that included those plans, but off the top of my head I couldn't agree to them at this point.

Q. Okay. You agree that overcrowding can contribute to risks that might lead to suicide.

A. In and of itself, that could be one of the factors that could contribute.

Q. So, for example, if someone was in–a mentally ill person was housed in an ADSEG unit that was impacted by overcrowding, that might increase the risk of suicide for that individual.

Ms. Tillman: Objection, vague and ambiguous.

The Witness: I'm not sure what you mean when you're saying "ADSEG units impacted by overcrowding."

By Mr. Bien:

Q. Well, for example, an ADSEG unit like the ones we visited where they were unable to provide outdoor exercise to the mentally ill inmates that were house in that unit.

Do you agree that if they couldn't provide outdoor exercise as a result of overcrowding, that that mentally ill inmate in that unit was at risk as a result of overcrowding?

Ms. Tillman: Same objections.

Judge Henderson: Overruled. You may answer that.

The Witness: Yes. If you're asking me if, indeed, someone is in an ADSEG unit, and as a result of overcrowding their ability to get out of that cell and have other types of [1102] interaction is limited, could that increase that person's risk of suicide? My answer is: yes.

By Mr. Bien:

Q. And if they are in an ADSEG unit that as a result of overcrowding there's limited access to mental healthcare, the clinicians can't see the patients in a confidential setting, would you agree that also might increase the risk of suicide?

A. Yes, in that hypothetical, again, that could lead to an increased risk of suicide.

Q. And you're aware, then, that as part of the program guide, the mental health delivery system, prisoners at the enhanced outpatient level of mental healthcare, people who are at the higher level of care are supposed to be removed from regular ADSEG units to specialized ADSEG units where they can receive 10 hours a week of EOP care.

You're aware of that requirement?

A. Yes, I am aware of that.

Q. And in the course of your tours, did you learn that the system as it currently exists is unable to meet that transfer requirement, and so you found many EOP's housed in normal ADSEG units that had not been able to be transferred to these specialized units?

A. Over the course of my tours, I did come across some EOP inmates who were awaiting transfer to an EOP ADSEG and were at this time being housed in regular ADSEG awaiting a bed space, [1103] Yes.

Q. And isn't it correct that we found–I'm saying "we" because you and I were together on several of these tours–we found some of these EOP prisoners who had been referred for transfer and had been waiting for months and months and months.

Ms. Tillman: Objection.

The Witness: I definitely remember coming across a number of inmates who had been waiting for a long period of time.

By Mr. Bien:

Q. And, in fact, wasn't it correct that, for example, at Tehachapi prison you discovered several inmates who had been waiting for transfer not only to an EOP program, but to an ICF or app program, the highest level of care, the acute psychiatric program, had been waiting for months and months and months for that transfer?

Ms. Tillman: Objection, vague and ambiguous, argumentative.

Judge Henderson: Overruled.

You may answer that, Dr. Packer.

The Witness: Yes, although let me put a qualifier. I believe you said the word "acute." The ICF was intermediate care. And that was much more problematic than the acute. There were individuals waiting to get into acute. Much more significant was the waiting for the people waiting to get into [1104] this intermediate care facility.

And as I indicated in my report, the number that they gave me when I was last there was 160 something people on the waiting list to get into the intermediate care. And that's what I saw was the biggest problem that they just weren't–didn't have enough intermediate care beds to be able to accommodate the individuals that needed to be transferred there.

By Mr. Bien:

Q. Do you recall your tour of Tehachapi prison which occurred–I think it was on July 31st or August 1st, 2008? A. I would like to look at my report in front of me. I'd be able to tell you what date that was. Tehachapi, July 29th, 2008.

Q. And isn't it correct that on that tour you were accompanied by Dr. Craig Haney, plaintiffs' expert, along with other people, including me?

A. That's correct.

Q. And isn't it correct that during the course of that tour we–at the end of the day, we visited a unit called "4a." Do you recall that? And we visited several men who were on the waiting list for transfer for DMH care?

A. To be frank, I don't remember specifically the unit. I certainly do remember coming across some men who were waiting to get in –

[1105] Mr. Bien: If the court reporter could provide Dr. Packer with exhibits we premarked as p800. These are Dr. Packer's handwritten notes of his tours.

By Mr. Bien:

Q. Maybe that will help refresh your recollection.

And, Dr. Packer, if you could turn to page–you see the page numbers on the bottom right? They are production numbers, start with "PAC"?

A. Yes.

Q. If you turn to page–take a look at 2274 and 2275, please.

A. Excuse me. 2274?

Q. And 2275. And I would like you to first confirm that those are your notes for this tour.

A. Yes, they are.

Q. Okay. And on 2275, do you recall that we visited unit 4a towards the end of the day?

A. Yes, I do. I'm looking at that right now.

Q. And if I could just–if I could indulge the court and Dr. Packer–on your notes there are some names of particular prisoners that we interviewed that were in the mental health caseload.

Mr. Bien: And if it is okay with the court, we would prefer not to refer to them by name.

Judge Henderson: That's fine.

[1106] By Mr. Bien:

Q. So if we can refer to the first inmate as inmate m, Dr. Packer.

A. Yes, I understand.

Q. And the second one is inmate l; is that okay?

A. Yes. Yes.

Q. Okay. So is it correct that–if you remember–that, first of all, that unit 4a was locked down when we visited it; is that correct?

A. I have to say I don't recall exactly which unit was locked down, but I certainly visited some units that were locked down. I don't recall this particular one.

Q. Well, turn one page before to 2274. Did you recall that we were informed that that unit had not been given any yard since April of 2008?

A. Yes, I'm looking at that now, and it does refresh my memory. That unit had been locked down for quite a long time.

Q. And do you recall what we were told by the custodial officer as to why the unit was locked down?

A. Yes. There had been a serious assault on a couple of officers, and that unit had been locked down.

Q. And we were also informed that–isn't it correct that you were informed by the officers that no yard whatsoever was being provided to the inmates on that unit since April of '08?

A. That's correct.

[1107] Q. So they had not been allowed outdoors for months.

Judge Henderson: That's what "no yard" means. The Witness: they had not been allowed into the yard, it says, since April. And it was in July.

By Mr. Bien:

Q. Now, do you recall that inmate m had been referred for inpatient psychiatric care and had been accepted by the app unit in February of '08?

A. Yes, that's correct.

Q. So he'd been accepted in February of '08, but in late July he was still here in Tehachapi?

A. Yes. The only thing my notes don't say is it was acute unit. Says he was referred to DMH, and then says he was on the waiting list for ICF, which is intermediate care units. But he was so far down on the wait list that he wasn't going to get in, and so they dropped him from the list.

Q. Okay. And is it correct that the ADSEG unit at 4a was not an EOP ADSEG unit. In other words, didn't provide 10 hours a week of services?

A. That's correct.

Q. And I think your note, if you look down a little bit, about a quarter of the way down the page, were you told by the clinicians that it was even–it took even longer to transfer a prisoner to an EOP ADSEG unit than it did to get them to a DMHICF unit?

[1108] A. I thought they were talking about this particular individual. But, yes, I think what they told me, based on my notes, is that there was a long waiting list to get into the ICF, but might be longer to get them into the EOP ADSEG .

Q. And one of the two men that you and Dr. Haney interviewed whose first name begins with m refused to come out of his cell; isn't that correct?

A. That's correct.

Q. And you attempted to interview him through the cell door. What was that like, Dr. Packer?

A. To be honest, I cannot off the top of my head recall whether it was this particular interview or not. But I did several interviews over the course of my visit, so I tried to interview people through the cell doors. I can't remember specifically this case.

Q. What was your experience in general in terms of your success as a clinician in obtaining information from an inmate talking through a cell door?

A. I can tell you both based on these tours and having been in other systems that it is simply not the way to conduct a clinical interview. One cannot ask as much detailed information, cannot interact as long. And the environment doesn't lend itself to anything other than a brief mental status assessment to give a sense of whether the person is in acute crisis or has some immediate needs.

[1109] Q. The other inmate that you interviewed agreed to come out. And where did you interview him?

A. I don't recall.

Q. If you go a little further down, do you recall that there were some–I'll use the euphemism–"holding modules" set up in an area so you could interview people?

A. Again, I certainly remember that. I don't remember this particular individual. Over the course of my visits on a number of occasions they brought somebody out, put him in one of these holding cells or modules, and I would sit right next to them and interview them.

Q. Have you made a recommendation–looking back on your report about–your December report about suicide, you made a recommendation to the Department of Corrections that they should reexamine their policy of housing in the same ADSEG unit people who are there for nondisciplinary reasons and disciplinary reasons; is that correct?

That's on page –

A. To be more precise–yes, I know. But to be more precise I recommended reexamining the policy of placing somebody in ADSEG simply because they had been the victim, rather than the perpetrator.

Q. It's your understanding that that is the policy in California right now, isn't it?

A. I actually used the word "policy." I don't know if it's a [1110] policy or a procedure, but they were doing it. I found inmates like this one who had been involved in a fight, and had been not the instigator, but the victim, and for their own safety had been placed in an ADSEG unit.

And just to be clear, my recommendation was–reading this report, was either not to put them in such a unit, or at least since they were–they needed to for safety reasons, for enhanced services provided for those individuals as opposed to the instigator, the one who started the fight.

Q. Are you aware that in response to an order of Judge Karlton, that the state brought together experts from all over the country about suicide prevention, and these experts made a series of recommendations to California as to what it can do to address the problem of suicide in ADSEG units?

A. Yes, I came across that in the course of my work on this case.

Q. And are you aware that one of the recommendations that those experts made to California in 2006 was the same recommendation that you just made to California in December of 2007?

A. I don't have an independent recall of that, but that doesn't surprise me.

Q. And you also are aware that in response to that recommendation the state said that due to overcrowding it was unable to implement this idea of separating people in ADSEG who

[1192] David L. Thomas,

Having been called as a witness by the government was first duly sworn and examined as follows:

The Clerk: Please state and spell your full name for the record.

The Witness: David l. Thomas, D-A-V-I-D L, T H O M A S.

(Dr. Thomas appeared remotely through video conferencing.)

Ms. Johnson: Dr. Thomas's expert reports in this case are marked as defendant's trial exhibits numbers 1015, 1016, and 1017, and are hereby offered into evidence.

Also, to the court reporter in Florida, we did mail copies of Dr. Thomas's expert reports to you, as well as a copy of his deposition transcript. If you could make those available to him at this time?

Dr. Thomas's qualifications are set forth on pages 1 through 3 of his first report, defendant's exhibit 1015, and his curriculum vitae, which is attached as exhibit a to that report. We're going to summarize, highlight some of his salient qualifications.

Judge Henderson: Okay.

Direct examination by Ms. Johnson

By Ms. Johnson

Q Good afternoon, Dr. Thomas.

[1193] A Good afternoon.

Q Since you're testifying remotely, please let me know if at any time you have difficulty hearing me or seeing a document that's being presented. Okay?

A Okay. Yes.

Q Dr. Thomas are you a practicing physician?

A Yes, ma'am, I am.

Q For how many years total have you practiced medicine?

A Just under 40.

Q Are you board certified in any specialty?

A Yes, Ma'am. I am board certified by the American board of ophthalmology.

Q Do you have any formal training or experience in any other medical specialties?

A Yes, Ma'am. I was partially trained in general and chest surgery and served as a general and chest surgeon in Vietnam. And I also at one time was certified by the American board of American forensic examiners as a diplomat in forensic medicine.

Q When did you receive your medical degree and from where?

A From university of Miami in 1970.

Q Do you have any other advanced degrees?

A Yes, ma'am. I have a J.D. from Stetson university law school, and I am currently working on a doctorate in health education.

[1194] Q Are you currently employed?

A Yes, ma'am, I am.

Q What are your current positions?

A I am professor and chairman of the department of surgery, professor and chairman of the division of correctional medicine and professor of public health, all at Nova Southeastern University.

Q You mentioned you served as a physician in the military?

A Yes, ma'am.

Q And what positions do you have–or what were your responsibilities at that time?

A I was drafted and went to Vietnam, and in Vietnam I served as commanding officer of a 30-bed hospital with three or four, depending on the time, other physicians working for me. It was a general medical and surgical hospital.

Q Did you also serve in the Florida house of representatives?

A Yes, ma'am, from 1984 to 1994.

Q What committees did you serve on while you were a representative in Florida?

A Could you restate that question, please?

Q What were the committees that you served on when you were a representative in Florida?

A Okay. I served on a variety of committees, probably too many to remember accurately as we sit here. But I served on appropriation. I always served on healthcare. I served on [1195] Corrections. I served on reapportionment and a variety of other commit–natural resources. Those were ones that come to–judiciary. Those were the ones that come to the top of my head as we speak.

Q After serving in the Florida house of representatives, did you work as a correctional healthcare administrator for the Florida department of corrections?

A Yes, Ma'am. In 1994 I worked as the executive director of–the executive medical director of Zephyr hills correctional institution. In that capacity, I served as a physician and an administrator, and I had about nine doctors working for me.

Q For how many years total did you work for the Florida department of corrections?

A Nine years total.

Q And you said the first position was as executive director of the Zepher hills facility?

A Yes, ma'am.

Q Can you just summarize briefly from that position until your last position what positions you held in the Florida department of corrections?

A Yes, ma'am. After being at Zepher hills for a little less than a year, I became the regional medical director for region five and had about 12 or so institutions that I was responsible for the medical care.

* * * *

[1203] Q Based on your review of Pennsylvania's healthcare system with Dr. Maue, did you reach any conclusions regarding the adequacy of that health-care system?

A Yes, ma'am. I was relatively–I was convinced they were providing adequate care, that is the inmates had access to care without real barriers. They had access to a professional medical opinion. That opinion seemed to be carried out. There didn't seem to be any barriers to that, and there seemed to be reasonable documentation that this occurred.

Q In brief, what documents did you review in preparing for your opinions in this case regarding California's correctional medical care system?

A Well, in brief is difficult. I certainly had a complete set of the Plata policies and procedures, the reports of the receiver, all the reports of the receiver, the plaintiff counsel's letters of site visit reports, court orders, and a variety of other things.

Q Dr. Thomas, in preparing your opinions for this case, did you tour any prisons in California?

A Yes, ma'am, I did.

Q How many?

A A total of eight.

Q Which prisons did you tour in preparing your opinions for this case and when?

A In December of 2007 I toured San Quentin, the California [1204] medical facility, and the California Institute for Men. In September of '08, I toured north kern, the substance abuse treatment facility, pleasant valley, saline (sic) and high desert.

Q When you "saline" did you mean Solano?

A Yes, ma'am. Solano. I'm sorry.

Q In general what did you do during your tours of these eight prisons in California?

A In general? That's all I got, in general.

Q What did you do during your tours of these eight prisons in California?

A The same things that I did whenever I was asked to evaluate a prison system. I took a look at daily, and in some cases weekend, functioning of the prison, the medical facilities and their functioning. I talked to staff. I inspected medical records. I interacted with physicians, physician providers, nursing staff, correctional officers, inmates; witnessed pharmaceutical functioning; looked at the chronic illness clinics; looked at acute care responses; looked at individual provider interactions and system functioning.

Q Does plaintiffs' counsel attend these tours with you?

A Yes, ma'am.

Q Are you familiar with the concept of preventable death in the concept of medical care?

A Yes, Ma'am.

* * * *

[1224] Q The second sentence–actually, starting at the beginning: "note must be made of the space for medical facilities in the California Department of Corrections and Rehabilitation. Because of the aforementioned culture of custody dominance, even the newest of California prisons have inadequate space for care."

A Yes, ma'am.

Q That was your testimony?

A Yes, ma'am. That's not a term of art. That's a term of common language. That implies that the newest ones I have seen. I am not certain if there are other facilities that I have not seen that are newer. But, clearly, you know, from years of having custody dominance, the facilities that I have seen did not have adequate space for patient care.

Q You agree the lack of adequate space reflects a mindset where there's simply not much thought given the needs of medical care for inmates when these spaces were constructed, correct?

A That's correct.

Q You are aware that the receiver has written that the facilities available for providing healthcare within the cdcr are woefully inadequate, correct?

A Yes, ma'am.

Q And you are aware that the receiver's turnaround plan of

PROCEEDINGS

The Clerk: Please be seated.

Judge Henderson: Okay. You may proceed when you're ready, counsel.

Mr. Specter: Good morning. Plaintiffs call Jeanne Woodford back to the stand to testify, your honor.

Judge Henderson: Good morning, Ms. Woodford. You're still under oath from your previous swearing in.

The Witness: Thank you. Good morning.

Thereupon–

Jeanne Woodford

Resumed the stand and having been previously duly sworn, testified further for plaintiffs as follows:

Direct examination

By Mr. Specter:

Q. Good morning Ms. Woodford.

A. Good morning.

Q. Last time you testified here you explained that you held various positions within the department of corrections, including warden at San Quentin and the acting secretary of the agency; is that correct?

A. That is correct.

Q. And while you were the warden at San Quentin, didn't san

* * * *

[1327] On parole, so that there are incentives to follow the directions and rules that they are supposed to follow.

So it really depends on the model. You really can reduce your prison population, as New York has done, and reduce crime at the same time if you're building the right model and have the attitude that you can be successful.

Judge Karlton: I'm sorry, Mr. Specter, but–Mr. Specter: go ahead.

Judge Karlton: I think at least part of what you're saying suggests that an expenditure of significant funds, both in prison and outside, as a way of directing people away from their criminal behavior towards a more law-abiding behavior, that takes apparently a lot of money.

And is there any–in your view, any reason to think that we're going to see that kind of money?

The Witness: Well, I guess I would answer it this way: it costs almost $46,000 per year per inmate now. And building incentives such as work time credits or more participation credits doesn't have to cost more money. I mean, there are certainly programs available to inmates inside the prison system.

And if you're sending them out and keeping them in the communities, that's much cheaper. I believe that the chief probation officers' association of California has said that it would cost about $10,000 per year per individual to provide

* * * *

[1335] Q. Do you know whether California is currently piloting and using a risk assessment tool in the CDCR system?

A. I know that they are attempting to use a couple of risk and needs assessment tools.

Q. And Mr. Specter was asking you about the expert panel report, correct?

A. Yes.

Q. And that report was relating to rehabilitative programming, correct?

A. I think it was beyond that. It was really looking at how to reduce recidivism, which really goes into all areas of public safety, quite frankly.

Q. That report did not analyze medical or mental healthcare programming in CDCR institutions, did it?

A. Not that I recall.

Q. And that program did not provide a population number that was necessary to provide constitutionally-adequate medical and mental healthcare, did it?

A. I don't think it used that language, no. It did recommend reducing the prison population to make it operational.

Q. Okay. Are you aware of any study that sets forth the appropriate population or necessary population to provide constitutionally-adequate medical and mental healthcare in California's prisons?

A. I don't know that those words were used. I know that the [1336] State itself has looked at what it considers to be appropriate level of population to be operational.

Q. Okay. But are you aware of any study that specifically analyzed the population level necessary in order to obtain appropriate medical and mental healthcare?

A. Well, I'm not aware of a study that just dealt with that. But if you're using the term "operational," it includes providing the services to inmates that include medical and mental healthcare.

Q. I took your deposition twice in this case, correct? A. Yes, that's correct.

Q. Ms. Woodford, you do not believe that the only way to provide constitutionally-adequate medical and mental healthcare in cdcr prisons is to release prisoners, do you?

A. Could you repeat that one more time?

Q. Sure.

Mr. Specter: Paul, can you speak a little louder?

Mr. Mello: Okay.

By Mr. Mello:

Q. Ms. Woodford, you do not believe that the only way to provide constitutionally-adequate medical and mental healthcare in cdcr prisons is to release prisoners, do you?

A. I believe that we can only do that by reducing overcrowding.

Q. Okay. But you do not advocate the immediate release of prisoners, correct?

[1378] Judge Henderson: You may call your next witness.

Ms. Evenson: Thank you, Your Honor. Rebekah Evenson for plaintiffs.

Plaintiffs call Dr. James Austin –

James Austin, Ph.D.

Having been called as a witness by the government was first duly sworn and examined as follows:

The clerk: State and spell your full name.

The Witness: My name is James Austin. Last name is spelled A-U-S-T-I-N.

Ms. Evenson: Dr. Austin, as we just indicated, filed four separate expert reports, and we provided courtesy copies of those reports to the court. I won't provide another set of copies now, but for the court's convenience I have reproduced copies of key graphs that appear in his reports.

I also have a correction to one report. Table 8 in the August 15, 2008 report had an arithmetical error which we have corrected. I have revised versions of table 8, which we marked as plaintiff's exhibit number 829.

Dr. Austin's qualifications are set forth in paragraphs one through twelve of his first report which was submitted in November of 2007. So I'm not going to spend too much time on that here.

I'd like to turn now to Dr. Austin.

[1379] Direct examination by Ms. Evenson

By Ms. Evenson

Q Good morning.

A Good morning.

Q Can you briefly describe your educational and employment history?

A briefly, I have a bachelor's, master's degree and Ph.D. in sociology. Got my Ph.D. from the University of California at Davis.

I first started working in corrections in 1970 where I took a job working for the Illinois Department of Corrections and then moved to California and took a job with the National Council on Crime and Delinquency. I worked there for approximately 20 years and then assumed the position at George Washington University for approximately three or four years, and then started my own not for profit institute which is called the JFA Institute, which I presently am the president of.

Q Now, in the course of your work with the JFA Institute, have you had the opportunity to work with state and local governments seeking to reduce their prison or jail populations?

A Yes, I have.

Q Can you describe that work?

A Briefly, I'm presently working in approximately ten states. That would include, very briefly, Michigan, Ohio, Maryland, Louisiana, Mississippi, Kentucky, some more I can name. [1380] Basically, I'm working with those states' state legislators to craft policies that they can develop and implement to either reduce their prison population or stop it from growing. A lot of that work is done through the council state governments, which gets financial grants. Then they subcontract with me to come in and do the analysis for the states.

Q Who are you working within those various states, what actors?

A The principal people I interact with would be governors, staff, legislators, and Department of Corrections officials.

Q And in addition to the ten states you just named, or referenced, have you worked with other states in the past to do the same type of work?

A Yes. In my career I've probably worked with probably 30 some states in this area.

Q In the area of pop–of addressing population?

A It's population reduction, and it is also just analyzing the prison population. A lot of our work is doing population projections, we do that for 20 states now, where we forecast for them where their prison population is going so they can budget appropriately. That also tells them which options they have which can change that population trend.

Q Now, has the U.S. Department of Justice recently asked you to conduct a similar analysis?

A Recently, yes, the U.S. Department of Justice through its [1381] National Institute of Corrections has asked me to draft a white paper for them on how the nation and states could reduce its prison population by as much as 50 percent over the next eight years.

Q In addition to the work you just described, California chose you to be a member of its expert panel, along with other experts and heads of other correctional institutions; is that right?

A That's correct.

Q And the number one recommendation that came out of this expert panel was to reduce overcrowding. Do you agree with that recommendation?

A I do agree with that recommendation.

Q I want to turn your attention to what's been marked as exhibit 830, which is on the easel here. I have additional courtesy copies. Can you briefly explain what this chart shows?

A Yes. I'm going to step over to it and kind of point to some things.

Judge Karlton: You are going to need a microphone. Do we have a–Rowena?

Ms. Evenson: Can we move this and see if this works?

The Witness: Can you hear me?

Judge Henderson: Yes.

The Witness: this is an important chart because when I'm asked to come into a state and look at their prison

* * * *

[1404] in relatively low episodic criminal activity. There's a small group, they think, that's very active in their criminal activity. That's the group you want to incapacitate as long as you can. If you can identify them and keep them locked up, yes, you have a positive impact.

But the other group, which is the majority, are just kind of randomly involved in these low level kinds of activities, they are not being affected—they are not affecting us in terms of probabilities of committing crimes against us. They have the same probabilities whether you keep them in six months, twelve months, eighteen months, but you have a huge impact on the prison population and the cost of that prison system. You move that prison population down

30 days any direction, you are talking tens of millions of dollars. That's what you are talking about.

Q Now, Dr. Austin, your models in your report look at arrest rates, but chief dyer, who submitted a report for the Intervenors in this case, assumes that for every arrest, a parolee would have already committed 12 crimes for which they are not arrested. You just alluded to the portion of population that's a career criminal. Can you explain whether you agree with Dr. Dyer's conclusions?

Judge Karlton: Chief Dyer.

Ms. Evenson: Chief Dyer, thank you.

The Witness: I read Chief Dyer's—I have to [1405] Congratulate chief because his city and county has one of the largest drops in crime rates in California, just an extremely large drop in crime. Even though they are getting more parolees each year, he has been able to do that. So I congratulate him on that.

But, basically, what's going on there is—let me put it this way: he mentions the 12 crimes for every arrest. Now, he doesn't cite any studies, so I have to speculate what study he's talking about, but I think he's talking about a study done by Al Bloomstein in the District of Columbia 30 years ago, where Mr. Bloomstein identified people that he calls persisters. These are people that are career criminals. He found of the people being arrested, this is a very, very small percent of the population that's being arrested.

So my number one response to Chief Dyer is that you cannot apply the 12-tt-1 to every person coming out. That would only pertain to these career criminals who are very active and represent a very small portion of the population as being released from prison to his county. So that produces a statistic that just exaggerates the potential danger.

By Ms. Evenson

Q Now, you mention that approximately ten percent—or I don't know if you put a percent to it, but a small percentage of them are actually—of the arrests are actually career criminals?

[1406] A That's correct, a small percentage.

Q And in conjunction with the diversion programs or reduction in length of stay that you have set forth, is it possible to use a risk assessment instrument that would identify those individuals and cull them out?

A Yes, and they should be—they should be using risk assessment instruments. California is a little bit hamstrung because it has determinate sentencing, and that reduces your ability to discretionarily release people.

But even if you have to release people, you can apply a risk assessment that would then tell the police officials, we are releasing John Doe, and he is a high risk person, we need to watch him.

I'll give you an example of a state that's doing that very successfully that I'm working with, which is Maryland. Maryland does that risk assessment, because we discovered in Baltimore City a large proportion of the homicides and attempted homicides, either as a victim or perpetrator, were people on probation, not parolees, but probationers.

So we equipped the probation department with a risk assessment tool, and they are aggressively supervising those people. Aggressive means five contacts a week and zero tolerance. So if they get off —any kind of indication they, are not in compliance, they are brought back into custody. Since we have been doing that, the homicide rate has dropped [1407] about 30 percent in Baltimore City.

So this is an example of not restricting releases to everyone, because also the parole board is paroling more people in Maryland, because they have to reduce their prison population. So they are releasing more people, but those they're releasing or supervising, they're targeting them using risk assessment.

So if you do this properly, you can accomplish all our objectives which is lower your cost, lower the population, make it a safer place for people to live.

Q Dr. Austin, some of the parties in this litigation have given the opinion that local resources for providing rehabilitative programs, like drug treatment or mental health treatment, are overtaxed. Don't those programs need to be in place before you can implement any of these population reducing methods?

A No, they don't. What this will do, this would, basically—again, going back to the original flow diagram, which is producing—this is what we're doing now in California, which has this high recidivism rate, we can talk about that if you want — this will lower the prison population at a level that it will generate, the expert panel estimated and I'm estimating, approximately a billion dollars in savings a year.

My proposal would be to take a chunk of that money and give that to the counties so that they can make this release

* * * *

[1429] and Coleman requirements in that report, did you?

A. I'm sorry. Can you repeat that? I apologize.

Q. In your August 15, 2008 report, and your two later reports

A. Oh, 2008.

Q. —In 2008, you did not offer an opinion on whether a reduction of the prison population is the only remedy that will fulfill the Plata and Coleman requirements, did you?

A. That's correct.

Q. You do not know the status of medical or mental healthcare delivery in California's prisons any time in 2008, do you?

A. I believe that's correct, yes.

Q. Its not your opinion that no matter what resources he has or what actions he takes the receiver cannot provide constitutional levels of medical care at current population levels, is it?

A. Well, my opinion in reading the various reports is that they are trying very hard, and they are being unable to reach those levels of care, simply by throwing as much staff and resources they can into the existing system.

It is my opinion that the only way to really solve the problem is to reduce that population at some level. It has to be reduced for the reasons I've stated already.

Q. Okay. I'm going to look at your first deposition of September 19, 2008, page 26, line 22 -- page 126.

[1430] Reading:

> "Is it your opinion that no matter what Resources he has or what actions he takes, the receiver cannot provide for constitutional levels of medical care at current population levels?
>
> "Answer: No."

A. Right.

Q. You wrote in your August 15, 2008 report on page eight, paragraph 19—

Ms. Johnson: August 15, 2008.

This is not the right page. Page eight, paragraph 19.

Up.

That's the wrong one.

Hold on a second. Was that it?

Oh, yes. There we go. The last sentence in the first —take the last sentence of the paragraph, actually.

> "And as will be shown below, comma, moderately lowering the prison population and incarceration rate while using evidence-based models for rehabilitation does not result in higher crime."

By Ms. Johnson:

Q. Do you see that?

A. Yes.

Q. One of the states that you use as an example of the impact of a reduction in the prison population on the crime rate is New

* * * *

[1546] early, I hope.

Judge Reinhardt: Thank you.

Judge Henderson: You may proceed.

Judge Karlton: You are still under oath.

The Witness: Yes.

Jeffrey Beard

Having been called as a witness by the plaintiffs was previously duly sworn and examined as follows:

Direct examination by Mr. Specter.

By Mr. Specter

Q. Dr. Beard, you're still the Secretary of the Pennsylvania Department of Corrections?

A Yes, I am.

Q. And I think you alluded last time you were here briefly to the fact that the Pennsylvania prison system was somewhat overcrowded; is that right?

A Yes, we are currently somewhat overcrowded.

Q. At what percentage of operable capacity are you?

A We are at 113 or -14 percent of operable capacity, maybe 115 percent right now, which is about 6,500 inmates more than we would like to have in our system.

Q. And—

Judge Reinhardt: What does that translate into in design capacity?

The Witness: That's very difficult to do, Your

* * * *

[1583] Q. And California—

A Right about at the top of that rate.

Q. Secretary Beard, you never evaluated whether California can provide adequate medical and mental health care without a reduction in the prison population, did you?

A No, I never went and visited all—I only visited one institution as I testified to.

Q. You never evaluated whether California can provide adequate medical and mental healthcare absent a reduction in its population, correct?

Judge Karlton: That's what you just asked.

Mr. Mello: Oh, really? It's been a long week. I apologize.

Judge Reinhardt: I'm not sure he answered.

The Witness: My answer would be I haven't personally evaluated it, but I reviewed a lot of information, and I think we talked about this in my testimony before the last time, that I reviewed a lot of reports by a lot of experts, and that's what I do in my job now to run my system. So from reviewing those reports, I would conclude that overcrowding is the prime cause for the mental health and medical problems, and the only way to really address that is to lower the population.

Mr. Mello: I didn't mean to go back to phase one, so I apologize.

Judge Reinhardt: it's not phase one. Phase two is

* * * *

[1607] Mr. Galvan: Thank you. Plaintiffs call James Gilligan, M.D.

James Gilligan

Having been called as a witness by the plaintiffs was first duly sworn and examined as follows:

The Clerk: Please have a seat and state and spell your full name for the record.

The Witness: My name is James Gilligan, spelled G-I-L-L-I-G-A-N.

Mr. Galvan: Your Honor, Dr. Gilligan's qualifications are set forth in his report, which is Coleman Document Number 3170, which we offer into evidence at this time. We also offer his rebuttal report, which is Coleman Document 3172.

If I may quickly lay the foundation for his expertise?

Dr. Gilligan is a board certified psychiatrist and professor at New York University. He has 40 years of experience in mental health treatment in prison, jails, mental hospitals, civil mental hospitals, court clinics, and community mental health, and his experience in establishing and running the Massachusetts Prison Mental Health Services under federal court supervision and serving as medical director of the mental health in Massachusetts. His scientific research focuses on the causes and prevention of violence, including in California and [1608] internationally. He has been qualified as an expert in numerous proceedings regarding correctional mental health and forensic psychiatry.

At this time, the plaintiffs ask the court find that Dr. Gilligan is an expert in prison psychiatry and the provision of mental healthcare in prisons, the causes and prevention of violence and the relationship between mental illness and violence.

Judge Henderson: We find he is so qualified.

Direct examination by Mr. Galvan

By Mr. Galvan

Q Dr. Gilligan, you were asked to form an opinion about the impact on public safety of a prison population reduction that could include prisoners with mental illness. What did you conclude?

A Concluded that including mentally ill prisoners in that group would pose no increased risk to public safety. This is based on research done throughout the United States and other countries, as well as specifically in California. There are many studies about recidivism among mentally ill and non-mentally ill parolees, and the consensus from these studies consistently is that the mentally ill are either no more likely to commit violent crimes after discharge, or are significantly less likely to commit violent acts when they return to the community, as compared with non-mentally ill parolees.

[1609] Q When you use the word "recidivism," how do you use that word? What do you mean by that?

A "Recidivism" is a term that could refer to a huge variety of different outcomes. I think a distinction needs to be made between a revocation of parole for, quote, technical violations of parole conditions, such as a mentally ill parolee missing an appointment with a psychiatrist, as compared with revocation of parole because the parolee has committed a new crime, either a violent crime or property crime or whatever. So it's a term that's ambiguous and is often, I think, misused as if it always referred to the same thing.

One distinction between the mentally ill parolees and the non-mentally ill in California specifically, is that the mentally ill parolees are significantly—that's statistically significantly less likely to return to prison because of a new offense, that is of committing an act that could be regarded as a crime or prosecuted as a crime, as compared the non-mentally ill parolees. When they do commit a crime, they are no more likely than the non-mentally ill to commit a violent crime.

Q In the material you looked at regarding California mentally ill parolees, were there particular types of reasons they tended to return to prison?

A Yes. The mentally ill parolees were significantly more likely than those non-mentally ill to be returned for purely technical violations, rather than behavior that, under other [1610] conditions, would be in any way considered criminal.

Q Are there any examples of technical violations which are particularly susceptible?

A I'm sorry. Could you repeat?

Q Are there any examples of technical violations to which parolees with mental illness are particularly susceptible or more likely to commit?

A Yes. When I mentioned just simply missing an appointment or in some other way not complying with treatment, which is—by the way, that's a condition which has been repeatedly described by officials within the parole department in California as very frequently a product of the mental illness itself, that is, the mentally ill parolee is too disorganized or too paranoid, whatever it might be, to participate in the treatment, you know, exactly as required.

Q Were you also asked to look at the links between mental illness and valid predicters of future violence?

A Yes. As I said, within the parole population, the mentally ill are no more likely than the non-mentally ill to commit future violence. There's actually some evidence that the more severely mentally ill parolees are actually less likely than the non-mentally ill, they're just too disorganized or socially withdrawn.

The more important point, though, I think in response to your question, is that the predicters of future violence, [1611] that is, the risk factors that predict violence in the future, are the same both for the mentally ill and non-mentally ill parolees.

For example, future risk factors that predict violence are age, sex, substance abuse, access to weapons, prior criminal history, certain kinds of personality disorders, which are not Axis I mental disorders, and I would say the general category of socioeconomic hardship, poverty, homelessness, things of that sort.

Q You were also asked for an opinion about how California could improve upon the status quo regarding public safety and the current flow of mentally ill parolees from the prison system. What did you conclude with regard to that?

A That one of the most important things the State of California could do would be to reduce the churning of parolees and disproportionately, that means mentally ill ones, from the community and into the prison and back again, sort of short periods in each place, which disrupts every kind of reintegration into the therapeutic or rehabilitative activity and so on.

The main things I'd emphasize, though, in terms of practices that would improve public safety would be to make sure that every parolee leaving the prison, there was a significant prerelease planning, starting, hopefully, months before they leave; secondly, assuring they have access to care when they [1612] return to the community; thirdly, making sure they had access to treatment for dual diagnosis problems, that is, people who are both mentally ill and have substance abuse problems, to make sure they can actually get that treatment, and, fourthly, to increase, I'd say, coordination with community mental health providers to get them involved in the treatment process with a returned parolee.

Q. You referred earlier to statements of California officials regarding the churning phenomenon. Were there any particular statements from high level officials?

A Absolutely. I could mention the—well, Mr. Kernan's comments that we have on video.

Q. What were—

A And Mr. Tilton.

Q. When you mention Mr. Tilton's comments, we can play that for the court. If you look—or you can tell me, also. What is the significance, before we do that, of what you saw from Mr. Tilton?

A Well, the significance is that the mentally ill who are in prison are, in many cases, there simply because access to mental health has not been made—mental healthcare has not been made available in the community. In other words, the prisons in California, as in many other states, have a significant number of prisoners who are in prison primarily because they are mentally ill and they can't get treatment elsewhere. So the [1613] prisons are being treated as the de facto mental hospital system.

Q. I'd like to show you that statement and ask you if it's the one you were referring to. Could we look at, roll, plaintiff's exhibit 361, 361? Plaintiff's exhibit 361? It will need sound.

(Video played.)

By Mr. Galvan

Q. Is that the video you were referring to?

A Yes.

Q. You mentioned a statement by Scott Kernan, Mr. Kernan. I'd like to show you that and ask you if that's the one you are referring to. That is P 360.

We can come back to that. I'm going to move forward to one of the other things that you were asked to opine about.

You were also asked to write a—I'm sorry—you were also asked to write a second report, a rebuttal report, regarding the impacts of a population reduction on community mental health services in California. How did you go about forming your opinions in that area?

A Well, first of all, I reviewed the actual classification of prisoners as to their mental health status and the numbers involved, and it appeared to me that it would be very easy to exaggerate the impact of discharging mentally ill prisoners on the county and mental health system if the one doesn't actually look at the relatively small numbers involved.

[1614] Could we look at Figure One, which shows the number of parolees discharged in recent year, 2006, I believe?

(Document displayed.)

The Witness: what that shows is that in 2006 there were roughly 135,000 releases to parole, of which about 20 percent, or roughly 27,000, were of people who had been classified in need of mental health services within the CDCR. Of those, the vast majority, almost 24,000, were at the lowest level of mental illness of a 3CMS group, which is classified as really not needing any inpatient treatment, or even particularly intensive outpatient treatment. These are people that could easily be handled in a community mental health system with appointments, you know, from every one to three months, maybe one appointment. Many of them won't even need continuing treatment.

The next more severely disturbed are the EOP, or enhanced outpatient population, which is about 2,400 of this group. But these are also classified as people who do not need inpatient treatment. They don't need mental hospitalization. They specifically are people who are manageable on an outpatient basis. So these are people that might be patients in a community mental health clinic.

There's a much smaller number of that, a little over 600, who need either a crisis bed or a DMH hospitalization. That's of the entire 135,000 who were discharged under the [1615] status quo in 2006.

If we looked at a specific—if we could look at figure two, we could see what this would amount to if we were talking about, say a release of 30,000 people into parole to just to decrease the prison population by that much.

What you can see is that the number of people who would need inpatient treatment in this group, the crisis bed and DMH, at the top would be about 143 people, and only a little over 500 would need even regular outpatient treatment of the EOP group.

Now, I would mention that the county mental health system in California as it is now operating has approximately 658,000 patients. That's 658,000. Of those over 43,000 need 24-hour-a-day care. So what were talking about is adding to that population of 24,000 maybe 140 who would need outpatient care, and of the 658,000, were talking about, maybe 6,000 that would be, you know, an increased population, again, the vast majority of whom would need only minimal mental health care.

So I emphasize that because I think it's important not to exaggerate the impact or the stress the difficulty that the county and state mental health systems would have if these mentally ill parolees were actually being taken care of by the mental health system rather than being placed in prison, which are, of course, the worst possible location for someone who's mentally ill.

[1616] Q. In doing in the analysis, did you conduct a county-by-county review?

A No, I looked just at the state—state figures as a whole.

Q. Are you saying that, in your opinion, the California community mental health system has all the funding that it needs?

A No. I mean, I don't pretend to be an expert on that subject, but from what I have been told, what I've read, I continually hear that the county mental health system is underfunded and understaffed, according at least to the judgment of the people who work in that system.

Q. And in looking at the statements in the defense expert reports on community mental health, did you form any opinions about their discussion of the resource problems?

A The representatives from the county mental health system.

Q. I'm thinking particularly of the defense experts.

A Yes.

Q. Ms. Bataille and the county experts?

A They were making the point repeatedly that they felt the counties' mental health system, since it is underfunded, could not afford to treat more patients. What I would—what I think is worth noticing, though, is that actually what the state of California is doing now with this population of mentally ill parolees is vastly more expensive than taking care of them within the mental health system would be.

* * * *

[1642] with the release of 15,000 or 50,000 inmates?

A Well, I mean, any time an inmate is released, there's a risk of recidivism, sure.

Q. Would you also agree there's a risk that a released offender may commit an act of bodily harm on another person while on parole?

A There is also that risk.

Mr. Lewis: Thank you, Dr. Gilligan.

I have no further questions, Your Honors.

Judge Henderson: thank you, counsel.

Anything from Intervenors?

Ms. Fuentes: Good morning, I'm Theresa Fuentes from Santa Clara County on behalf of defendant Intervenors.

Cross-examination by Ms. Fuentes

By Ms. Fuentes

Q. Dr. Gilligan, do you agree that mentally ill prisoners who will be released or diverted from prison under a population reduction will need access to some sort of mental health treatment in the community?

A I would think so, and I would certainly recommend it.

Q. That would be whether they're 3CMS or EOP; it would just depend on the level of treatment that they need?

A Yes. The important thing I want to emphasize is simply how highly variable that is, as I was trying to say, from the most intensive to the least intensive.

[1643] Q I think you said, in your opinion, the 3CMS would need maybe some appointments with mental health professionals and access to medications?

A I would assume that most or all of them would need that at some point, but I would also not be surprised if many of them did not need it on–on an ongoing basis.

Q But you don't have any idea what the actual numbers would be of who would need medications in the community?

A I don't think anybody could predict that in advance. I just think the appropriate thing the mental health system could do is to respond to whatever the need would turn out to be.

Q It would depend on what their needs are out in the community?

A These could vary from one time to another even within the same person, of course.

Q And do you agree that the mentally ill released prisoners would need some sort of housing, access to housing?

A I would–well, I would certainly recommend it. I don't recommend homelessness for anybody.

Q And some sort of support structure as part of their treatment regimen?

A Again, the need for this would vary enormously. I think all inmates leaving prisons, whether they're mentally ill or not, really, they benefit, and public safety benefits from their having a lot of help in getting reintegrated into the community [1644] with adequate housing, employment, or at least income a base, and so forth.

Q Okay. And do you agree that California counties do not currently have funds or resources to provide any of those type of services to prisoners who would be diverted or released under a population reduction?

A I don't know how this relates to their resources. My understanding, though, is that they, the parolees, are simply excluded from access to the county mental health systems. That's why the parole officers often have to send them back to prison.

Q So they are not receiving treatment in the community, is that what you're saying?

A That's my understanding.

Q So what about mentally ill individuals who are diverted or are not able to be sent to prison because of a population cap, what about those?

A Well, if the county mental health system would then agree to provide them treatment, I would think that would be the appropriate response.

Q What if the counties don't have any funds or resources to provide the treatment?

A Well, I would say that would create a situation that the citizens of California would have to deal with. I mean, that's why California has a government and a legislature and an [1645] executive branch and so on. That's what they exist for.

Q Well, do you agree it would impact public safety if there were mentally ill individuals, offenders who were unable to access any sort of mental health treatment in the community?

A Well, I think it–there would be an adverse effect on

public safety if any released prison inmate did not have access to the services they needed in the community. That would include the mentally ill and the non-mentally ill, all of whom need one kind of service or another.

But what I'm trying to get at is right now the resources of the state–and, obviously, they're always finite, they're limited resources–are disproportionately put at the service of the prison system, in part because the prison system is taking care of people that the mental health system 50 years ago would have taken care of directly.

If we are going to–if the prison population is going to decrease and a certain number of mentally ill people will be in the community, this might be an historical time for the state and other states in this country to think of redistributing resources from the prison system back into the mental health system.

Judge Reinhardt: Doctor, are you saying it's more dangerous for the safety of the community to continue the prison system the way it is than to release these people with adequate treatment?

[1646] The Witness: Absolutely. I really think–I think the status quo is more dangerous than releasing people, assuming that, you know, the citizens of this state and the mental health professionals and so on are willing to respond to this, you know, in ways that are appropriate and necessary. Again, I've indicated from the figures that I projected onto the screen what a relatively small number of people we're talking about in a mental health system that is already taking care of at least 658,000 patients.

Judge Karlton: Let me follow up from Judge Reinhardt's question. What we're doing now, in your view, is dangerous for public safety, in your view?

The Witness: Yes, that's what I'm talking about.

Judge Karlton: And your view, as I understand it, is even a release of as many as 50,000 people, given the relatively small number of mental health people who would be released just if you just follow the average, will not have a substantial increase in the danger to the public which exists today?

The Witness: Yes, Your Honor.

Judge Karlton: but that if the state were to divert funds from the prisons to the community, among other reasons because they would not need as much funds for mental health in the community in the prisons, that would, in your view, have a substantial beneficial–I don't know substantial–a beneficial effect on public safety?

[1647] The Witness: Yes.

Judge Karlton: Is there any way for you to

quantify–and the answer may be no, I understand that. Is there any way for you to quantify the benefit in terms of cost?

The Witness: Yes, I mean, I could at least refer to some figures that I think would be relevant in making such an assessment. I also mentioned a crude estimate of the cost to the state for each prisoner in the prison system is costing roughly $43,000 per year. That may actually be an underestimate.

The figures that I've heard with respect to really full scale inpatient mental hospital treatment are more on the order of $30,000. And for outpatient treatment I've heard figures–again, I'm talking about in California–are figures of averages of maybe $4,500 a year, which is roughly one-tenth as much as it cost to keep somebody in prison.

So what I'm saying is I'm very aware and very sensitive to the fact that any state's resources financially are limited. They're finite. What I'm trying to say is I think the kind of change that we're talking about here, not only would be better for the mentally ill, would not only be, I think, an improvement in public safety, it would actually save the taxpayers money.

By Ms. Fuentes

Q Well, do you agree there's no guarantee that the counties [1648] will receive the funding to provide those services?

A I understand that. That's always the risk in a democracy.

Q So the result may very well be that there are just more untreated offenders in the community?

A If the state decided that's what the state wanted, that's what the state would get.

Ms. Fuentes: Thank you.

Judge Henderson: Redirect.

Redirect Examination by Mr. Galvan

By Mr. Galvan

Q On cross there was a lot of discussion of risk in various ways. Are mentally ill offenders more risky than other offenders when they're released?

A No.

Q Why not?

A The likeliest explanation is that people suffering from the severe mental disorders, the Axis I disorders, which is what we're primarily talking about here, are more likely to be socially withdrawn than they are to be socially aggressive. They're more likely to be disorganized than they are to be capable of carrying out a–you know, a complex crime, you know, like robbing a bank or whatever, and I mean, even people who are very paranoid are more likely to respond with fear and withdrawal than they are with attack.

So I think it's–I realize it's somewhat

[1669] Direct examination by Mr. Mello

By Mr. Mello

Q Good morning, Secretary Cate.

A Good morning.

Q When were you appointed as the Secretary of the California Department of Corrections and Rehabilitation?

A May 16th of this year.

Q Okay. Immediately prior to that point, what position did you hold?

A I was the Inspector General for the State of California.

Q And can you generally describe what your responsibilities were in that position?

A I was–as Inspector General, I was responsible for the oversight of the Department of Corrections and Rehabilitation, including auditing its systems, investigating misconduct by senior personnel, and overseeing the officer discipline process.

Q And you served on the California Rehabilitation oversight board, also referred to as CROB, from 2007 until your appointment, correct?

A I'm actually still a member of the Rehabilitation Oversight Board. I served as its chair in my capacity as the Inspector General, and I'm currently a member of the board in my capacity as secretary.

Q What were your responsibilities as chairman of CROB?

A I lead the board, and its responsibilities were to oversee

* * * *

[1680] reentry beds. That process is going on through–I think It's six different–excuse me–12 different communities at this time. So I think those are the primary efforts.

Q And are your–are CDCR's efforts to reduce its inmate population driven by the effort to reach a particular population number?

A No. We're trying to use the best correctional practice and science to reduce our population safely, but there's no particular number that we're trying to reach. I mean, I think that the Administration's goal and my goal is to get rid of what we call non-traditional beds or bad beds, meaning beds in gyms or beds in dayrooms. They make our business more difficult.

Q Have you been successful in eliminating some of those non-traditional beds?

A Largely through our out-of-state program, we have been able to reduce our number from approximately 20,000 to just under 14,000 now.

Q And are you familiar with the January budget proposal which again happened before you were even Secretary with respect to CDCR?

A Yes.

Q And what was that budget proposal, to your understanding?

A As it related to CDCR, there was–well, the Governor proposed a ten percent across-the-board cut to deal with the budget problems in California, and the solution from CDCR at [1681] that time was the release of 22,000 non-serious, nonviolent inmates before their terms expired.

Q Was that budget proposal adopted?

A No, it was taken out in what's known as the May revision to the budget.

Q Mr. Secretary, to your knowledge, has the projected budget deficit for the State of California increased since January 2008?

A It has.

Q And did the Governor recently convene a special session of the Legislature to address this increased budget deficit or projected deficit?

A He convened a special session of the last Legislature which ended November 30th, and there's been talk of another special session. I'm not sure if it's been officially convened, though.

Q Okay. Are you familiar that there was a budget proposal–strike that.

What was the focus of that last session, to your knowledge, economically?

A Well, the focus was to cut the budget or raise revenue, do something to balance California's fiscal situation, and, I mean, so all departments took part.

Q Okay. Is it your understanding that the projected deficit for '07/'08, '08/'09 and '09/'10 is bigger than even anticipated?

* * * *

[1683] releases, correct?

A Correct.

Q And in April of 2006, you put out a press release about an audit that you had done; is that correct?

A I'm sure it is. I don't know which one you are referring to.

Q It's the audit you did of all the other audits to determine what percentage of recommendations the cdcr had complied with; do you recall that?

A Yes, we called it the accountability audit.

Q Right. In that press release you said:

> "Severely hampering the Department's ability to address its problem, the Inspector General noted, is an inmate population that has prisons straining at almost double the design capacity." Do you recall that?

A Yes.

Q And that statement is true now as well, isn't it?

A It is. Overpopulation makes everything we do more difficult.

Q And you also said in that same press release:

> "As the inmate population increases, Controlling violence, offering education, delivering health-care, managing overcrowding, and controlling costs become more difficult."

[1684] Do you recall saying that?

A Yes.

Q That's true now as well, correct?

A It is.

Q And it's your position that overcrowding needs to be reduced because it makes everything easier to do in a prison, correct?

A Yes.

Q And because it makes everything easier, it will have an impact on the Receiver's ability to provide healthcare to prisoners, correct?

A I think it will be. Obviously, that's fewer doctors that need to be recruited, for example, and less clinical space that would have to be built, less money that would need to be spent On those examinations, et cetera.

Q So the answer to my question is yes?

A Yes.

Q Okay. Now, you believe your charge as Secretary is to ensure that any strategy the CDCR employs to reduce the prison population does not cause more victimization in society; is that accurate?

A That's one of them, yes.

Q And you believe that the measure that you use in evaluating whether CDCR's strategies are safe is their effect on the overall crime rate, true?

A I think that's probably part of the calculus.

* * * *

[1694] here, it says "this pilot program"?

A Correct.

Q Could you read that first sentence, please?

A "This pilot program will remain in effect for a 24-month period from November 3, 2008 through November 3, 2010, at which time it will lapse by operation of law or will be promulgated through the Administrative Procedure Act."

Q Thank you.

A But I think that's just a matter of semantics. The point is that we're going to be rolling out the entire thing at 90 days and then studying it and making changes along the way during the course of the two-year period.

Q Okay. As of the end of August, which is when the court has held that we stop talking about the conditions, there was about 4,788 out-of-state transfer beds–people in out-of-state beds, correct?

A That's right.

Q Now, in the Governor's special session for the November 2008 Legislative special session, he recommended various prison population reducing measures, correct?

A Correct.

Q And those–did you recommend that he make those proposals?

A I definitely was consulted and took part in that decision-making process. I brought some of those ideas forward.

[1695] Some were ideas that other stakeholders had brought forward that we adopted. Some were ideas that had been bandied around before.

Q Did you believe that–did you tell the governor that any of those proposals shouldn't be put forward because you didn't believe they were safe for the community?

A I'm sorry. Can you remind me which proposals we're talking about again?

Q The November 2008 budget proposals.

A Okay.

Judge Karlton: Did you recommend he not adopt any of them because they adversely affected public safety?

The Witness: No. I recommended, in light of the budget crisis we were in, this was the best we could do.

By Mr. Specter

Q Those recommendations included no parole supervision for offenders without a conviction for a non-serious, nonviolent, or sexual crime, correct?

A And those who had–it was those who were not convicted for non-serious, nonviolent, non-sex, but you also have to have never been convicted of a serious, violent or sex crime in your past.

Q Correct. And it also included up to four months for each program successfully completed by a prisoner, correct?

A Correct.

[1696] Q And so if a prisoner completed four programs, he could get a year off of his sentence under that scheme if it was enacted, correct?

A Well, the details of whether there would be a cap on the amount of credits you could earn were to be determined at a later date, but you could earn up to three months credit for as you described.

Q Four months, I think.

A Or four months, right.

Q It would also provide that prisoners would get day-for-day credit, those who were eligible for it, for obeying the prison rules, correct?

A Correct.

Q This would result in earlier release of some prisoners, right?

A No. It would result in them serving less time, but they would serve the time prescribed by law.

Q They would get out of prison less–they would get out of prison earlier, wouldn't they?

A Earlier than they would have been, yes.

Q Okay. And you also–the Governor also proposed day-for-day credit for prisoners who are in jail awaiting their transfer to state prison, correct?

A Correct.

Q And this would result in prisoners getting out of prison [1697] earlier than they otherwise would have, right?

A That's right.

Q And it also would have provided additional credit for prisoners who are waiting for an assignment to a conservation camp, correct?

A Correct.

Q And this would result in earlier release of some prisoners, correct?

A Earlier release, yes.

Q And how many credits–what's the ratio of credits that prisoners in conservation camps get now?

A Two for one.

Q So this would give them possibly–those who are waiting to get into conservation camps, was your intent to give those prisoners two-for-one credits?

A Yes.

Q So they would get two-for-one credits even though they weren't working in the camp; is that right?

A Because they are in the process of being trained and going to the camps, yes.

Q And you also–or, I'm sorry, the Governor also proposed increasing the statutory monetary threshold for determining whether property crimes could be prosecuted as grand theft, correct?

A Correct.

[1698] Q That's because the statutory limit hasn't been raised somewhere in the 20 years, correct?

A I'm not sure of the number of years, but for many years, yes.

Q It hasn't caught up with inflation, in other words, right?

A That's right.

Q And this would result in less offenders coming to state prison; isn't that right?

A It would.

Q And the November special session ended without any Legislative action on these proposals; isn't that correct?

A That's right.

Q Now, before the special session, you mentioned, when you were on direct examination when you were asked, that there was a May revision to the Governor's budget in 2008, correct?

A Correct.

Q And you were consulting the governor about that may revision when it was announced, correct, or before it was announced, correct?

A Yes.

Q And that included –

A Yeah. I was going to say not as the Secretary, but I did in my role as the Inspector General, I did consult, I think, once.

Q And that budget proposal contained a proposal to provide for summary parole, correct?

* * * *

[1734] (Recess taken.)

Judge Henderson: Okay. You may call your next witness, counsel.

Mr. Lewis: Good morning, your Honor. Kyle Lewis for the state defendants.

Defendants now call Thomas Hoffman.

Thomas Hoffman, Called as a witness for the defendant herein, having been first duly sworn, was examined and testified as follows:

The Witness: Yes, I do.

The Clerk: State your full name for the record.

The Witness: Thomas George Hoffman. H O F F M A N.

Direct examination

By Mr. Lewis:

Q. Good morning, Mr. Hoffman.

Mr. Lewis: Your honor, defendants have submitted a trial affidavit for Mr. Hoffman previously identified as exhibit 1005, and I ask the court to take it under submission at this time.

Judge Henderson: it will be done.

By Mr. Lewis:

Q. Mr. Hoffman, are you currently employed by the State of California?

A. Yes, sir.

[1735] Q. What department do you work for?

A. California Department of Corrections and Rehabilitation.

Q. What is your current position with CDCR?

A. I'm the Director of the Division of Adult Parole Operations.

Q. Please inform the court of your prior work before assuming the role as Director of Parole Operations?

A. From 1975 to 1994 I worked for the city of Inglewood police department. I went from officer to captain there.

I left Inglewood p.a. In April of 1994 to join the west Sacramento P.D. As the then captain. Ultimately became the Deputy Chief of Police. I retired in April of 2004 as an interim chief of police.

Q. And how long have you held the position as director of the Department–or the Division of Parole Operations?

A. Twenty-eight months.

Q. How many parolees are currently under the supervision of the Division of Parole Operations?

A. About 125,000.

Q. And are these parolees broken down into different classifications or service classifications?

A. They are broken–yes, they are broken down into groups based on their needs. Mental illnesses is a group. There's sexual offenders that we supervise specifically, gangsters, second strikers. You know, I'll say the generic population. All of them are organized in a way that revolves around first

* * * *

[[1741] and needs of that individual; be it education, drug, anger management, social skills, education.

And this rather extensive document is included in the pre-parole plan package that goes to the parole agent and his supervisor prior to the inmate being released and on parole. It provides us with an opportunity to develop a parole plan that is individual specific and sensitive to the needs and risks of each individual.

Q. Is there a risk that a parolee will reoffend even if they use this tool, even if you use this tool?

A. Oh, absolutely. Yes.

Q. The court has heard testimony from other–that other states use a parole violations tool. Has cdcr implemented a parole violations tool?

A. Yeah. We are really excited about it. We have been working on our parole violation instrument with the center for effective public policy since July of 2007.

We went through a very detailed, involved process to build a tool that's sensitive to the unique environment of California parole.

We now have that tool in a pilot–in a pilot capacity in four units, one in each of our four regions, and we are actively using it now.

And a real good advantage to the tool is we have also embedded the California static risk assessment into the PVDMI [1712] process. So when we are faced with a decision about a response to a violation or commission of a new crime, we are considering the risks that the specific parolee represents to our communities and, also, we are–we have determined the risk of the incident violations.

So it's a two-fold decision-making process that lends itself to guiding the agents towards consistent and proportionate responses to violations.

It's a part of an overarching agenda that says we want to move ourselves towards policy-driven responses to violations of parole and commissions of new crimes so that we can have a consistent and predictable and proportionate response to violations from one end of our state to the next.

Q. Will the PVDMI, or parole violations tool that you are describing, will it help possibly push parolees towards alternative sanctions programs or remedial programs rather than send them back to prison?

A. Yes, because what it does is it guides our agents. As we sit here today, there's about 2400 agents making these decisions this morning. It guides our agents and their supervisors through a very thoughtful structured process so that the full range of alternatives and appropriate responses to violations and commissions of new crimes are considered in each instance.

Q. What kinds of remedial programs are available to parolees?

A. It runs the gamut. There's about 100 million in programs [1743] funded via CDCR in parole. They include such things as the Day Reporting Centers and literacy labs and drug treatment programs and residential Multi-service Centers and care for the mentally ill.

Then we also work very closely–sometimes an uphill battle, but very closely with local communities and private service providers to expand the menu of service that we can offer this large population of parolees.

Q. Have other states demonstrated positive impacts from the use of a parole violations tool?

A. The Center for Effective Public Policy, who are the folks that have helped us build ours, have helped 33 states and/or county parole and probation operations undertake a process, as I said, more commonly referred to as policy-driven responses to violations. One of the outcomes is frequently the development of a decision-making instrument of one kind or another.

States like Texas, New Jersey, Kansas, Ohio, Florida have all engaged in this process and all of them have seen a reduction in the use of the revocation process and in the parole environment, a reduction in prison populations and better outcomes from the parolees.

Q. Do you believe that the use of the California parole tool will eventually result in less recidivism and fewer parole revocations in California?

A. Absolutely, absolutely.

[1744] Q. In your opinion, will the use of a risk and needs assessment and the parole tool result in a different kind of CDCR population after some time?

A. Yes. It will provide us with an opportunity to bring–and this is a huge step forward for our state. We will bring science and evidence-based practices to what has historically been a clinical decision about risk. The research validates that the clinical decision or conclusion about risk, you get it right about 50/50, 50 percent of the time.

When you introduce a validated evidence based tool, you bring that threshold up to about 70 percent. If you also have talented professionals, you can continue to bump that ratio up where the decision can be right in excess of 70 percent of the time, recognizing you are never going to get 100 percent.

The clerk: Time is up, counsel.

Mr. Lewis: If I might ask a few more questions, your Honors?

Judge Reinhardt: Let me ask one before you continue,

Counsel.

In answering the last two questions you used the word "eventually" and then in another instance "after some time."

Is there anything within your own experience or looking at programs from other states that can tell you concretely or semi-concretely when these changes–when you'll start seeing these changes?

[1745] The Witness: Other states, you know, like Kansas and Texas, Illinois see the changes quickly. The caveat for California is, we are the gorilla in the crowd.

Ohio, as an example. Ohio has about 37,000 parolees that they supervise. They have just recently come out with, just in the last week, the most extensive review of the decision-making instrument process ever and it validated that they've experienced significant reductions in revocations and the use of incarceration in this process very quickly.

Judge Karlton: what does "very quickly" mean? A year? Six months? What does it mean? I understand that you don't have a precise number, but rough.

The Witness: You are going to see the change virtually immediately, recognizing that it will take–and this is why–I'm not trying to avoid the question but, you know, when you–when we run through 70,000 or 80,000 violations, the impact of having a structured decision-making instrument and alternative sanctions will be recognized quickly.

I guess one way to answer your question, your Honor, is we are using this tool right now in four of our units. In the first couple of weeks when we–our agents used the tool, they agreed with the tool–and this was about 113 cases. They agreed with the tool all but six times, and then the outcome that that tool recommended.

And I think what you will see–I know what you will [1746] see quickly is consistency and continuity in these responses and a new focus. This is–some of this is cultural, but a new focus on recognizing that what parole is about is helping folks to safely and effectively transition back into society whenever we can make that happen.

Judge Reinhardt: How long will it take before it's in effect state wide?

The Witness: We will have this–the plan is to have the PVDMI state wide before the end of next year.

Our strategy at the moment–and, obviously, all of this is, we could–we could accelerate this, but the plan right now is that beginning in February we will begin to roll this tool out in four districts every 30 to 45 days. There's 25 district in our state system. So we would roll four out every 30 or 45 days. Right now projecting that by October, maybe November–October seems to be a pretty comfortable date for us–that we would have the tool up and our agents trained and everybody using it by then.

Judge Karlton: And the budget crisis and the apparent determination that one way or another every agency is going to have to take a hit will delay that to some degree, and you don't know how much that will be because it depends on how badly you are hit?

The Witness: Your Honor, I don't believe that it will–it will delay the implementation of the use of the

* * * *

[1753] handle, sounds like about 2500 more parolees a month coming into our system.

Q. Additional resources in what regard? What would you need; more parole agents, more housing, more what?

A. Yeah, we would need–yes. Our–parole is financed at 70 to 1. Every 70 parolees that come into parole, we get an agent for the–you know, non-specialized case loads.

But, yes, we would need additional agents so that we can maintain case loads where we are. We need more supervisors. I mean, you just run through the whole gamut of personnel and logistics and, of course, adding that number of parolees into the communities each month would further stress an already stressed infrastructure for programming.

Q. Thank you, Mr. Hoffman. No further questions.

The court: Redirect?

Judge Karlton: Cross.

Judge Henderson: I'm sorry, it would be cross. Thank you, Judge.

Mr. Galvan: Ernest Galvan for the plaintiffs.

Cross Examination

By Mr. Galvan: Q. Good morning,

A. Good morning. Mr. Hoffman.

Q. Mr. Hoffman, you were just testifying about the resources you would need if you had more parolees to care of.

[1754] In your trial affidavit you cited that this document, the final report of the U.C.L.A. evaluation of the mental health services continuing program– and if I could zoom on the chart at the top there–and just ask some foundational questions.

(Document Displayed)

The mental health services continuum program is the program that does pre-release appointments and benefits planning for the mentally ill people about to be released from prison; is that right?

A. Yes.

Q. And your Department Commissioned U.C.L.A. to study the effectiveness of that program, is that right?

A. Yes, sir.

Q. And then what we have up is part of one of their reports that they provided to you, is that right? Just a page from one of them.

A. Yes, sir.

Q. Okay. And this is an exhibit number, defendants' 1205. It's one of the exhibits to your affidavit, sir.

And part of their job was to tell you whether or not it was cost effective to invest in all this pre-release planning for the people about to parole, is that right?

And so as part of the basis, they made this chart for you. Estimated daily parole cost on the side there, about $10. Estimated daily incarceration cost for a person at the Enhanced [1755] outpatient level of care at the B.O.P., about $94?

A. Yes, sir.

Q. About ten times more to keep somebody in prison than to take care of them on parole, is that right?

A. In this instance, yes, sir.

Q. You were testifying earlier about the proportion of the violations that you have to refer to the Board of Parole Hearings for formal proceedings under a regulation that you referred to as 2616, Title 15?

A. Yes, sir.

Q. And that's also known as the Robin Regan regulation, is that right?

A. Yes, sir, it is.

Q. And that's one of those laws–or regulations that we got in California because there was a high profile murder and someone did a campaign to make that regulation, is that right?

Mr. Lewis: Objection. Lacks foundation.

Judge Karlton: Can you tell us if that was the motivation?

The Witness: That is how it's been characterized to me. I was in law enforcement at the time. I wasn't tracking the discussion, but that's how it's been told to me.

By Mr. Galvan:

Q. So your answer is yes?

A. Yes.

[1756] Q. And that's just a regulation, correct, administrative regulation?

A. Yes, sir.

Q. And your administrative agency can change regulations through a formal process, is that right?

A. We can change a regulation, that's true. This is a regulation by the board–or of the board, not of DAPO.

Q. And are you aware that Senator George Runner authored an initiative that was on the ballot this last November, Proposition 6, the so-called Save Neighborhoods Act, that would have made 2616, the Robin Regan regulation a statute?

A. Yes, sir.

Q. And are you aware that the voters turned down that Proposition? They voted it down?

A. Yes, sir.

Q. To your knowledge, California is one of two states, right, that tries to put everybody released from prison on parole?

A. Currently we are the only state. We were in company with the state of Illinois and Illinois has now ratcheted back.

I think as we sit here today, there are about 84 percent of the people that come out of an Illinois institution would go on to what you and I see as formal parole.

Q. And shortly after you were appointed, you went to Illinois to study what they were doing there in parole reform, is that right?

[1757] A. I went there with Dr. Petersilia, yes, sir.

Q. And Dr. Petersilia is Joan Petersilia, the head of the Center for Evidence Based Corrections at U.C. Irvine, is that right?

A. Yes, sir.

Q. And she has been frequently retained by the Department of Corrections as a consultant to study and advise them on their programs?

A. Yes, sir. And I talk to her frequently.

Q. And she assisted you with the development of the parole violations decision-making instrument, is that right?

A. Yes, sir. She is a very close confidante.

Q. And so for the–the status quo in California right now is that every month–every month you get about 10,000 new parolees, is that right?

A. Yes, sir.

Q. And you have to supervise them all for up–for roughly three years for each one, is that right?

A. Well, minimally 13 months. Many of them are on parole for up to, you know, 48 months, yes.

Judge Karlton: excuse me, Mr. Galvan.

We hear a lot about probation having banked cases. Does parole have banked cases?

The Witness: No, your Honor, not at the moment, although there are ongoing discussions about engaging in that [1758] classification.

By Mr. Galvan:

Q. And it's your view that maintaining supervision on the low risk end of that 10,000 group does not do anything to promote public safety, is that right?

A. No, sir. What I would say is that the science and evidence, and there's lots of it all across this nation, does support a conclusion that there is a percentage of the parole population that shouldn't be supervised or supervised very little; that at the low end of the spectrum supervision is counter productive.

Q. Why is supervision counter productive at the low end of the spectrum?

A. I guess the way to describe it, you introduce low end offenders to high risk career criminals and gangster types, the tendency is that the low end folks are more–I will say more motivated–not motivated, but more influenced by them than the reverse. Basically, you poison the pool.

Q. What does front loading parole mean?

A. It's a concept that says–and there's a lots of research behind this as well, and we are very much interested in this; that says if you can get to the parolee quickly, and if you–really, in the first weeks after they are released and get them stabilized, housing, hopefully a job, educational, income, simple things like drivers license, social security cards, and then you do that well in the first 90 days, recidivism rates are

* * * *

[1768] A. The average term is about 4.2 months for a revocation and our recidivism rates do run about 70 percent.

Q. And then a person who churns through that for 36 months, or three years–or four years because they get the extra year added on for their violation time, then they discharge from all supervision by operation of law, is that correct?

A. That's the reality at the moment.

Q. And you discharge about 56,000 people a year, is that right?

A. On average about that number, yes, sir.

Q. And it's your view, isn't it, that if you take a person through that history, where they churn through their whole time on parole, they do the whole time in prison, out of prison, that all you are doing is postponing future victimization and crime?

A. That's true. And I would say that, you know, it's important to understand that our culture is in the midst of a huge change. We are part of a system that was about–all through the criminal justice system in California for the almost 34 years I have been part of it is largely punitive. Certainly the CDCR and DAPO side of the equation was largely punitive. And now we are.

It's a fascinating experience to watch rebuilding a rehabilitative side of our obligation, both inside and out of the institutions.

With that comes the struggle that we have at the [1769] community level for councils and boards and so forth to provide use permits so we can provide rehabilitative programs for this population, but it–the mechanisms and the will and the tools to do it are in place.

Q. And so your answer to the question about whether it's your view that this churning pattern just postpones victimization and crime is yes, is that right?

A. My personal opinion is yes. We know it's not working. I mean, at 70 percent I think everybody understands we–and this is one of the reasons I'm flattered to be any part of the discussion. We all know we need to change the way we are thinking about this process and we are all engaged in that, including parole.

Q. Thank you. No further questions.

Judge Reinhardt: Does the CCPOA have any questions of this witness?

Ms. Leonard: No, your Honor.

The court: Thank you, counsel.

Redirect?

Mr. Lewis: Yes, your Honor. Thank you. Very briefly. Thank you.

Redirect Examination

By Mr. Lewis:

Q. Mr. Hoffman, there was testimony regarding that there would be a possible prisoner release order in this case.

[1770] If this prisoner release order included mentally ill parolees, what services do mentally ill parolees need that you currently attempt to provide through DAPO resources?

A. It runs the gamut from clinical psychologists inside our units, to counselors, to providing medications, to getting them to services outside of our units, to local services.

As we speak, we are working hard with local service providers in cities and counties across the state to provide these services. We have got about $9.6 million that we are working hard to get vendors and providers lined up for.

Q. And if additional mentally ill parolees were released in the community as a result of a prisoner release order, could CDCR provide the needed services for this increased population with its current resources?

A. No. The same logic would hold true; that this population, which is, obviously and understandably, work extensive and service intensive would need–we would need additional agents and, again, additional programming resources to do—to take care of them, or at least try to.

Q. And if these additional mentally ill parolees do not receive the services, are you concerned and, in your opinion, is there a risk of increased recidivism among them?

A. Again, the science would support that conclusion, yes.

Mr. Lewis: No further questions, your Honor. Thank You.

PROCEEDINGS

[1891] December 10, 2008 9:21 a.m.

Judge Henderson: Okay. You may call your next witness when you are ready, counsel.

Mr. Mello: thank you, your honors. Paul Mello for Defendants.

Defendants call Scott Kernan, Undersecretary of Operations for the California Department of Corrections and Rehabilitation.

SCOTT KERNAN,

Called as a witness for the defendant herein, having been first duly sworn, was examined and testified as follows:

The clerk: State and spell your full name for the record.

The Witness: My name is Scott Kernan, K E R N A N.

Mr. Mello: Undersecretary Kernan has submitted a trial affidavit in this matter, which is defendant's exhibit 1002, on November 17th. We filed minor revisions to correct in exhibit numbers in that trial affidavit.

Undersecretary Kernan's education and professional background is summarized in paragraphs two and three of his trial affidavit.

* * * *

[1894] have come down between now and July.

Q. Of 2009?

A. Yes, sir.

Q. And Judge Reinhardt asked this question. As of August 29, 2008, CDCR had transferred approximately 4800 inmates to out-of-state institutions, correct?

A. Yes, sir.

Q. Does CDCR plan to transfer additional inmates to out-of-state institutions?

A. Yes, sir.

Q. How many more are currently planned to be transferred under current plans?

A. A total of 8,000, approximately 8,000 we currently have contracted. We are going to have 6,000 out by tomorrow.

Judge Karlton: I'm sorry. I just missed the question. My fault, Mr. Mello.

8,000 more or 8,000 total?

The Witness: 8,000 total.

By Mr. Mello:

Q. Mr. Kernan, has CDCR made efforts in the last few years to increase custody staffing to meet its needs?

A. Yes, sir.

Q. And specifically what have you done and what have you accomplished in that regard?

A. Well, the Receiver's office added 600 positions last year [1895] and are going to add 1800 this year. So about 2400 additional correctional officers dedicated solely for the access to care units, to use the Receiver's words.

And that's to provide services to the inmates, taking them out of the prison, getting them to medical appointments and mental health appointments within the prison.

Q. In addition to the Receiver's efforts to get the correctional officers, as far as healthcare access teams, has CDCR also increased its–its correctional officer staff separate and apart from the Receiver's efforts?

A. Yes, sir. I think it was a little more than a year ago we–or I anticipated or I projected we have about a 2,000 correctional officer shortage, and we had widespread overtime and we were difficulty at almost all of our prisons.

Today we have literally filled up all of our prisons with correctional staffing and we have–normally, this is the season for it, and we are going to cancel the January academy because we are actually overfilled at this point.

Q. I'm going to pull up defendant's exhibit 1235, page eight, please.

(Document Displayed)

Q. And this is a chart that was prepared and it demonstrates correctional officer numbers, both established positions and filled positions over time; correct, Mr. Kernan?

A. Yes, sir.

* * * *

[1941] duly sworn and examined as follows:

Judge Henderson: Before we begin, we are aware of the objections to certain parts of the declaration here, and consistent with previous rulings, we'll take that under advisement. So proceed.

The clerk: please state and spell your name for the record.

The Witness: James W. M-A-R-Q-U-A-R-T.

Ms. Johnson: Defendants have submitted three expert reports by Dr. Marquart which are marked as defendant's exhibit 1022, 1023 and 1024. Defendants now offer these exhibits into evidence.

Dr. Marquart's qualifications are described on pages one through three of his first report, defendant's exhibit 1022, and his curriculum vitae which is attached as exhibit a to that report.

Direct examination by Ms. Johnson

By Ms. Johnson

Q Good morning, Dr. Marquart.

A Good morning.

Q You have a PhD., correct?

A Yes, ma'am.

Q What field is your PhD. in?

A It's in sociology.

Q You are a professor at the University of Texas at Dallas?

* * * *

[1993] Violation process, right?

A That is correct.

Q And you agree that parolees should receive substance abuse education and job training, right?

A Yes, sir.

Q And you agree that the state should divert technical parole violaters and less serious property and drug crimes, right?

A It would be a good thing, yes.

Q And you support reducing the prison population through parole reform, correct?

A Can you repeat the question, please?

Q You support reducing the prison population through parole reform, correct?

A That's one way to manage it, yes.

Q So if you did use parole reform–you know that back end thing you were talking about with the hydraulics and different doors?

A Yes, sir.

Q So if they committed a crime and you had parole reform, it would not have the–if you had parole reform, even though they were committing crimes at the same rate, it would result in less people coming back into the prison system; isn't that true?

A It's a possibility.

Q Isn't that true?

A It's a possibility.

[1994] Q Everything in life is a possibility, correct?

A That is correct.

Q So your answer doesn't have very much meaning. So I'm asking you to be a little more definitive if you can.

A Can you repeat the question one more time?

Q Surely.

That would result–if the prisoners kept committing crimes at a certain rate but you had parole reform, it would result in less prisoners coming back into the system; isn't that true?

A One would hope that that's the case.

Q And in your estimation, in your opinion, the state should use multiple methods at the same time, such as reforming parole, early releases, and even changing the sentencing structure in order to reduce the population, right?

A That's right.

Q And as a general matter, it's your opinion that the California prison population can be reduced without adversely affecting public safety; is that right?

A We have to put in the proper tools and assessment techniques, as well as what I've talked about before in my reports and here, that programming inside, evidence-based programming on the inside, as well as having the proper resources on the outside in terms of housing, jobs, access to substance abuse, you know, all that.

[1995] Judge Henderson: Access to substance –

The Witness:–Abuse programs. Yeah, we don't want to have them have access to substance abuse, right.

But access to programming and the things that are going to help them transition back to the community, all of that together, one would hope that would help, yes.

By Mr. Specter

Q You have certain questions–you believe certain questions have to be answered about any population reducing plan, correct?

A Yes, sir.

Q Such as who would be released under what conditions and the like, right?

A Yes, sir.

Q You are confident, though, that if all the key stakeholders got together, rational effective decisions can be made so a safe plan can be developed; isn't that true?

A It would help, yes, sir.

Q It would more than help. You said in your deposition you were confident it could be done.

A Yes, sir.

Q You agree that the length–we've talked a little bit about this. You agree the length of incarceration is not related to recidivism; isn't that true?

A I guess so, yes.

Q So that means that reducing the length of stay in prison is

* * * *

[2004] strike team to implement the recommendation of the expert panel, is that right?

A. That's right.

Q. In Washington and Pennsylvania, did those states while you were there implement population reducing measures or controlling measures?

A. Yes, they did.

Q. In Washington that meant change in the law regarding technical parole violators, isn't that right?

A. Yes, it did. The law was changed to precluding technical violators from coming back to prisons.

Judge Reinhardt: Can we have the definition of technical violators, technical violations as far as those states were considered? I'm not sure that that means the same thing to everybody.

Mr. Specter: That's a good question.

By Mr. Specter:

Q. Who was considered a technical–who was considered a technical violator in Washington or what types of–

A. That would be any individual under supervision who, in fact, violated one of the conditions of their supervision.

Q. So it would be somebody who didn't commit a new crime, is that right?

A. That's correct. Non-Criminal Behavior.

Q. And those individuals would not be sent back to prisons, is [2005] That –

A. That is correct.

Q. Instead, what would happen to them?

A. They were–they were–there was a matrix in terms of the violations, the nature of the violations.

Depending on the nature of the violation, there was graduated sanctions that might be imposed. If it was a serious violation related to their past criminal behavior they, in fact, might do some jail time.

Q. And would some of the other sanctions be that they would participate in some sort of programs?

A. They might be ordered to be involved in a treatment program. They may be ordered to report to a day reporting center. There are a number of non-confinement sanctions.

Q. Okay. And in Washington was a risk assessment used for parolees?

A. Yes.

Q. And what was it used for?

A. We used an actuarial based instrument that would define the likelihood, risk of somebody reoffending.

Q. And once that you had information what–what did you do with it?

A. Well, we were faced, I think, in Washington, like any other system, with the recognition that not all offenders are the same, just like not all people are the same.

[2006] And the critical issue in terms of a lot of resources to address those offenders was to–to address–use those resources diligently on those offenders who represent the highest risk. So we wanted to assess who those offenders were.

Q. Okay. So that when they got out on parole, you could allocate your resources accordingly, is that right?

A. Yes. In fact, in–in Washington the issue became apparent when–we were, like any state, had limited resources.

So the question became, how can we best use the limited resources we have? We got together with prosecutors, with victim community, with law enforcement and basically came up in terms of the offender accountability act with a risk based system.

Q. And did this risk based system–when did the risk assessment, when was it done? In what stage of the offender's progress of the criminal justice system?

A. Well, at the very beginning. When the individual came–for example, the statutes in Washington mandated that the courts take into consideration risk in sentencing.

It certainly was done in relation to people coming either on parole or probation. It was even done in the prison system.

Q. And in that respect Washington changed its method by which it awarded prisoners credits, is that right?

A. That is correct.

[2007] Q. And how did the awarding of credits interact with the risk system?

A. A statute was placed where we would be authorized to allocate a greater amount of good time and earned time to those offenders who were low risk offenders, and a less amount of good time–for example, 50 percent, on those who were low risk. High risk offenders would only receive a third off.

Q. I see. And did the Washington credit method change for prisoners who were participating–who were conforming their conduct to the rules and participating in programs?

A. Yes. Actually, we had two forms of credits. One was good time, that was where they would be actually abiding by the rule of the prison and behaving themself. The other was an earned time credit, and that earned time was those individuals who were complying with the program requirements within prison.

Q. And were these credit–changes in the credit structure made retroactive?

A. Yes, they were. When they were implemented.

Q. Okay. Now, Pennsylvania, did they make any changes to the criminal sentencing structure?

A. Yes. In fact, Pennsylvania, like Washington and like California, was a determinative system. The sentencing guideline structure, that guideline structure in Pennsylvania initially provided for only total confinement.

So it was altered. The Sentencing Guidelines [2008] commission and subsequent legislature altered it to include intermediate sanctions and graduated sanctions in the community.

Q. So that meant that more offenders were diverted to the community, is that right?

A. That's right.

Q. And does the state do anything to encourage counties to provide alternative sanctions in the community?

A. Yes. Actually, we funded–we gave resources to those counties that would create programs to, in fact, divert offenders to the county system.

Q. How well did that work, if it worked at all?

A. No, it did work. It did work. In fact, the counties wanted to participate in the process because they wanted to ensure that those offenders in the community would have viable programs that with make a difference.

Q. The counties were satisfied with the program?

A. Yes, they were.

Q. Did any of these population reducing measures that you have described in both states endanger the communities in your opinion?

A. No, they did not.

Q. Do you believe there was any measurable impact on public safety, adverse impact?

A. No adverse impact.

Q. Do you believe it had a–what's the opposite of adverse?

[2009] Judge Karlton: Positive.

A. A positive effect.

By Mr. Specter:

Q. Thank you. A positive effect?

A. Yes. In Washington, the Washington state institute for public policy reviewed the impact on an ongoing basis. They actually were mandated when the offender accountability act was passed to do a full study in 2010. They did interim studies and all the interim studies have indicated positive progress.

Q. Now –

Judge Karlton: Please tell me what "positive progress" is?

The Witness: in other words, it was not having a deleterious effect on crime.

Judge Karlton: One argument that can be made is that given California's present system with its inability to provide meaningful programs in the prison system, if we reduce the significant weighed population, we might–so that we could provide programs, we might actually be improving public safety.

The Witness: And I agree emphatically with that. And, in fact, the research indicates that if you can provide programming and–there's evidence based program you can provide within the institutional environment that will, in fact, reduce the likelihood that they will reoffend. And it becomes even more powerful if there is after care programs once they are

* * * *

[2012] Q. And do you believe that's an appropriate policy?

A. The panel was recognizing that similar to credits, when you do prison and you are trying to influence their behavior, relative conduct or programming, that same system should exist in the community. When you supervise them, is to provide some ability to, in fact, incentivize their involvement in programs in the community and reward them for it.

Q. And you had experience with similar policies in Washington, correct?

A. That's correct.

Q. And what effect did those have?

A. Beneficial effects. I mean, the–the role of the Corrections Department in any system is to reduce the likelihood that they would reoffend. And I think you need–you need the capacity to, in fact, confine them when appropriate.

You need the capacity to intervene in their lifestyle and their thinking in terms of reducing the risks that they will reoffend, and you need to have a system of rewards and sanctions relative to that process.

Q. And did the panel believe that through the use of these measures, California's prison population could be reduced without adversely affecting public safety?

A. Absolutely.

Q. And you agree with that?

A. I emphatically agree with that.

PROCEEDINGS

Judge Henderson: Okay. You may call your next witness, counsel.

Mr. Sangster: good morning, your honor. Ed Sangster for the plaintiffs. The plaintiffs call Dr. Barry Krisberg. Barry Krisberg,

Having been called as a witness by the plaintiffs was first duly sworn and examined as follows:

The clerk: state and spell your full name for the Record.

The Witness: my name is Barry Krisberg, B-A-R-R-Y, KRISBERG.

Direct examination by Mr. Sangster

By Mr. Sangster

Q Good morning, Dr. Krisberg. Would you give the court a very brief summary of your educational background?

A I received a bachelor's from the university of Pennsylvania, got a master's from the same school in criminology, and, ultimately, a PhD. in sociology from Penn.

Q Would you give the court a very brief summary of your career in criminology?

A After getting my degree, I came out and taught at the [2100] University of California Berkeley in what was then the school of criminology, went on to work for the National Council on Crime and Delinquency where I'm still employed. That began in 1976.

I've also had a number of adjunct educational appointments during that period, most recent one at the law school at U.C. Berkeley.

Q What is the National Center on Crime and Delinquency?

A National Council on Crime and Delinquency.

Q National Council on Crime and Delinquency.

A It is the nation's oldest criminal justice research organization.

Q Have you published any books on the subject of criminology? A yes, I have.

Q How many?

A Four books.

Q Have you authored any peer-reviewed articles in the field of criminology?

A Yes, quite a number of over the years.

Q Have you received any awards for your work in the field of criminology?

A Yes, in 1993 I was selected by the American Society of Criminology for the August Vollmer award which is–

Q how significant is that award?

A It's their highest award for contributions to criminal justice. I've also been selected by the Jessie ball DuPont fund [2101] as their grantee of the year, and some other awards as well.

Q Have you been asked to provide any training to California counties in the field of criminology?

A Yes, I have.

Q Would you briefly describe that?

A Principally, my research, my training has involved training probation staff, and, in some cases, jail staff on issues related to classification and effective supervision strategies.

Q What studies of California prisons have you been involved with?

A I probably been involved in every major legislatively mandated study of the California prisons since 1980. The first one, I actually directed a study for the legislature on alternatives to the prison system. Subsequent to that, I was appointed to the blue ribbon commission on inmate population management, which was during Governor Deukmejian's administrations. More recently I was appointed to be part of an expert panel on prisoner rehabilitation in CDCR. So, again most of the major efforts I have been involved in.

Q Have you formed any opinions about the impact that prison population reduction in California would have on public safety?

A Yes, I have.

Q What is your opinion?

A My opinion is that, done properly, there is no reason to think that that release of prisoners from the California prisons [2102] ought to have any adverse effect on public safety.

Q What did you do in order to form your opinion?

A My opinion is based on a couple of–I guess three major components. One is I did an exhaustive review of research having to do with early accelerated release from other state prison systems over the last 20 years.

Q Let me just stop you there. Those were studies of what actually happened, not what people were predicting would happen; is that correct?

A That's correct.

Q Go on. What else did you do?

A Secondly, I looked at data from approximately 22 California counties that over the last ten years had released approximately 1.7 million inmates based on court ordered releases, and I looked at that as it was related to crime trends in the state.

Finally, I have been reviewing a number of studies and reports, including the report of the expert panel, indicating the most effective strategies to both select people for release and also manage them in the community.

Q Now, I want to turn your attention to your review of the studies of what actually happened when there was efforts to reduce prison population. So let's talk about the studies of the other jurisdictions. How many jurisdictions did you study?

A I looked at nine American states, city of Philadelphia, and also Canada.

[2103] Q How did you select those jurisdictions?

A I looked at–well, using the resources of the national criminal justice reference service, the national institute of corrections information center, the Bancroft library at U.C. and, also, the Rutgers NCCD James Cotton Library, which are pretty much the exhaustive literary sources, I attempted to assemble every article that was done on accelerated early release from roughly the 1980"s on up.

Q Did you find any articles on that topic that you did not consider?

A No, none that were–I mean, my criteria is it had to be real research, not opinions, and it had to have some data that you could analyze.

Q Did you have any personal involvement in studying population reduction in any of those jurisdictions?

A Yes, I was involved as well as the supervisor and also as a co-worker in a study that I think you've heard about, that Jim Austin talked about, in Illinois, the study of forced release in the Illinois Department of Corrections.

Q What was studied in connection with the other jurisdictions that you reviewed?

A Essentially, I was looking at two things. One was summarizing the information on whether or not the recidivism rates of people released early, how that compared to people released at the end of their regular terms. I also collected [2104] some data from the FBI to see whether or not during the period in which the release practices were taking place, there were any crime trend patterns.

Q What conclusions did you reach as a result of your studies of these other jurisdictions?

A With respect to recidivism–

Judge Karlton: Well, before you go there, we've had–we've now learned that recidivism means different things to different people. What do you mean by it when you talk about recidivism?

The Witness: Well, in these studies, Judge, they used a variety. Typically, the measure was parole failure, return to prison. That was the most typical measure used. In a couple of them they looked at arrests, but it was mostly failure on parole.

Judge Karlton: Does that mean, when you say "failure on parole," what has been referred to here as technical violations of parole?

The Witness: In most of these studies, it included both measures, new offenses and technical violations.

Judge Karlton: Thank you, sir.

By Mr. Sangster

Q Let me follow up on Judge Karlton's question.

Why is it significant to look at the recidivism rates when you are trying to evaluate the impact on public safety?

[2105] A I think the key issue is whether or not, by releasing inmates early, one sees an increase in the criminal behavior they engage in, as compared to persons who are released normally.

Q Did you find any jurisdictions during the course of your review that actually reduced recidivism rates as a result of population reduction?

A Yes. Most of the studies found no difference, but what we found in a study of the Philadelphia jail system in which they made provisions for drug treatment resources, that, in that case, those early paroled Philadelphia jail inmates who participated in drug treatment did better than those that did not participate in drug treatment.

The other significant study was in Florida where the state created a program called community control, in which, in lieu of going to prison, you would have intensive supervision and intensive services. And on that study, which was actually done by NCCD staff, again under my general supervision, the study showed that the inmates under this community control program have much lower recidivism rates than those that had been released from Florida prisons normally.

Q Now, I think the court has heard, and is going to hear, the opinions of some witnesses that releasing prisoners early will somehow reduce the deterrent effect of prison. What does your data from the studies show about the impact of early release on [2106] recidivism?

A Well, first of all, the research on deterrence suggests that marginal reductions in sanctions are not going to likely have an effect. That it is the certainty of punishment and the quickness with which penalties are brought to bear has a much bigger effect. There's a pretty large consensus that minor reductions are not going to make a big difference.

Q Based on your studies of the results of prison population in these 14 other jurisdictions, as well as your own experience, would there be an adverse impact on public safety if this court ordered the State of California to reduce its prison population?

A I don't believe so, provided that the plan that emerged was, you know, followed, sensible screening and good supervision strategies, and, where possible, resources were available, like drug treatment services.

Q You said –

Judge Reinhardt: what if there were no resources available?

The Witness: well, there's research indicating that you can slightly reduce recidivism rates simply by better screening and teaching parole officers how to better supervise offenders. There's studies from Florida, Wisconsin, and south Carolina indicating that simply training parole officers on how to do a better job will get you a net reduction in those recidivism rates. You will get additional reduction if, in [2107] addition to that, you were able to provide resources.

Mr. Sangster: I want to make sure, if I could follow up on your question, Judge Reinhardt.

By Mr. Sangster

Q The question, I think, is in order to avoid an adverse impact on public safety, do these programs have to be in place before the court can reduce the prison population?

A No.

Q Why not?

A Again, in a number of the jurisdictions that I looked at, Washington, Wisconsin, and others, these programs did not exist at the time of the accelerated release of inmates, and, again, there was–the recidivism rates were essentially identical and, again, no discernible changes in crime patterns.

Judge Karlton: May I interrupt for a moment? Yesterday we heard some testimony which, the witness, having reviewed apparently much the same material, I gather, said you couldn't make any conclusive judgment about anything, that the material was too–I'm not clear exactly why you couldn't, but, in any event, he was very firm about not being able to make a conclusive determination about anything.

Is your review of the material of the same judgment? I mean, obviously it's not. You seem to believe that the material clearly points one way or another.

The Witness: Well, my conclusion is based on the[2108] fact that, looking at these 14 separate and distinct articles, dissertation, and state agency reports, they're all in the same direction, and in some cases so–in social science, we would call this a meta analysis, when you find 14 studies and they are all reaching the same conclusion.

There's at least one study which, although a bit dated, I think is interesting.

California in the 1970's engaged in an experiment, which, again, is sort of the gold standard of research, in which random–based on a random sampling basis some inmates from the California Department of Corrections were released six months early. And the research done by the California Department of Corrections unit showed no difference based on that.

Now, it's pretty rare to get randomized experiments like that, but what we have in these 14 studies is a pretty broad range, different methods, different approaches, but all reaching the same conclusion.

By Mr. Sangster

Q Now I want to turn your attention to your study of what's actually happened in California. You said you studied the impacts of population control in county jails in California. How many counties did you study?

A The number varied from 20 to 24 depending on time periods. I tried to look at a ten-year time period, a five-year time period, and the last three years. So sometimes I didn't have [2109] the data for all those years.

Q What was the source of the information that you studied in connection with California jail releases?

A The data on court-ordered jail releases came from what's now called the corrections standards authority. It was submitted by the counties to CSA, and I pulled it right off the website of CSA.

Q Did you also review any interrogatory responses that were provided by parties to this litigation?

A Yes, I did.

Q Did you review any information about the crime rate in the counties–let me just end it there. Did you review any information about the crime rates in the counties you studied?

A Yes, I did. I contacted the California Department of Justice and was able to assemble data on serious crimes that, as part one offenses, in each of these counties for all those years.

And because these were jail inmates, I also wanted to look at misdemeanor crime trends. Misdemeanors, as you know, aren't reported as consistently. So in the case of misdemeanors, I looked at trends in misdemeanor arrests for the same period of time.

Q Now, did you consider your study of California study–California counties to be as rigorous as the other studies that you referred to in other jurisdictions?

[2110] A No, it was not as rigorous. The other studies involved individual cases randomly sampled from releases. In this instance, I was simply looking at aggregate information, total numbers, releases each year, and looking at that in relationship to total numbers of crimes.

Q Is the information that you gain from studying California counties nonetheless helpful in analyzing the impact of court-ordered population reductions in jails?

A I believe it is, because, for example, looking at the ten-year period, 21 counties, what we see is over 1.7 million inmates were released from California jails during this period of time. Again, those counties, specifically due to overcrowding orders during that same period of time, the number of crimes in California went down by 18–in those counties went down by 18 percent, serious crimes. And also misdemeanor arrests went down by 18 percent in those same places.

Judge Karlton: But at least one argument we will hear, apparently, is that misdemeanor arrests went down because the sheriff and police had no place to put them; the jails were so overcrowded. Can you really relate the downward trend on crime and the reduction in misdemeanor arrests to the cap that had been placed on the counties?

The Witness: I wouldn't go there. I would be far more confident that–that jail caps would not affect crimes reported to the police, the most serious crimes, rape, robbery, [2111] aggravated assault, car theft, et cetera. There's no reason that people stop reporting crimes to the police.

Judge Karlton: That's why I said misdemeanants.

The Witness: Yeah. The only reason I looked at misdemeanants is, I guess the argument is since most jail releases are most likely to be misdemeanants, I wanted to see whether or not there was a sudden increase in misdemeanant crime in the state, and there was not.

By Mr. Sangster

Q You said you studied 1.7 million people released over a ten-year period. Did you also study the number of people who were released from California counties during the five-year period between 2001 and 2006?

A Yes, I did, and during that period, a little over three-quarters of a million inmates were released from–I have data on 22 counties. And during that period of time reported in those counties was essentially unchanged.

For the last three years, 2004 to 2006, there were over 400,000 inmates released based on court orders from these counties, and during that period of time the number of reported crimes declined by seven percent.

Q Did all of the counties show consistent results?

A No. One of the things I did was look at each one of these counties individually to look at these trends and put them together.

[2112] Q What did you find as a result of looking at them individually?

A What I found is there were some variations, but there was no consistent pattern. Release didn't lead to a crime reduction, but it certainly did not lead to a crime increase.

What I found, for example, was, you know, let's take the last three years. I found 13 counties where releases were up and crime was down. There were another eight counties in which crime was down and releases were down. And then there were three where releases were actually up and crime went up.

We also–I also looked separately at Los Angeles, Orange, and San Diego to see whether or not this trend had anything to do with the larger counties, and, again, no consistent pattern. When you put this on a scatter diagram and you look at these things from a statistical point of view, there's just no discernible pattern.

Q What opinions did you reach as a result of your study of court-ordered population reductions in California counties?

A That it did not appear to have any adverse effect on crime in California.

Q My prior questions have been retrospective, in other words, dealing with what's actually happened in the past and been observed. Now I want to turn your attention for a moment to your opinions about what would happen in the future in this case.

* * * *

[2181] Work with, that the severe overcrowding in California prisons is leading to tremendous levels of violence, is inhibiting the capacity to deliver rehabilitation services.

So I think reducing the crowding and cutting down on the violence and actually introducing rehabilitation should bring that California recidivism rate down to much more what we're seeing in other states, which is a much, much smaller recidivism level.

Judge Henderson: Nothing further from–Mr. Sangster: no, your honor.

Judge Henderson: Okay. Thank you for testifying, Dr. Krisberg. We'll take a 15-minute recess at this time. (recess taken.)

Judge Henderson: call the next witness, counsel.

Ms. Keck: Good morning, your honors. Ann Keck, deputy county counsel on behalf of the Sonoma county intervenors, and I would like to call David Bennett to the stand.

Judge Henderson: Step forward and be sworn in, Mr. Bennett.

David Bennett,

Called as a witness for the defendants herein, having been first duly sworn, was examined and testified as follows: the witness: I do.

The clerk: Please have a seat. State and spell your

* * * *

[2189] community, then what is at stake here is the overall integrity of the process.

We can't build enough beds and lock enough people up for a long enough period of time to impact the crime rates. We have to rely upon the integrity of the process. And so simply releasing individuals from prison early is going to have a significant impact upon that integrity issue and on everything that we are doing in the criminal justice system.

Q. But do you believe that it's possible to reduce the prison population safely and effectively?

A. Absolutely.

Q. And how–how would you say that could be done?

A. A well-thought-out plan needs to be implemented, a plan that has three primary areas, that covers three primary areas.

First of all, the introduction into the system, the expansion, the use of programs that are based on evidence-based practices.

Second of all, the use of a risk and needs assessment in order to set parole supervision conditions.

And, finally, the implementation. I know there has been some work in this area, but it has not been implemented. The implementation of a structured sanctions process for both probation and parole violators.

Q. I would like to have you explain more of each of these to the court in turn, so let me address your attention to the first [2190] part of the plan that you just stated, the programs need to be instituted.

Could you explain for the court what you mean by that and what would be the impact of that recommendation?

Judge Reinhardt: Can I ask you one question here?

When you say could you reduce the population with your programs, are you–are you saying you could reduce it by 50,000? And if so, over how long a period?

The Witness: Your honor, I don't have a number or a time period. I'm proposing a process and a structure in which to reduce that prison population.

A lot of work is going to have to be done in order to put in place the specificity and as I continue talking, to put in place the needed partnership between the State of California and its counties to carry this out.

Judge Karlton: Following Judge Reinhardt's question, is there any way that you understand that we can reduce the population so as to affect the ability of the system to provide adequate medical and mental health healthcare without releasing people?

The Witness: My understanding of the overcrowding situation in the prison system is that it absolutely will require the release of inmates in the facilities in order to be able to provide that level of care that's required.

Judge Karlton: So that some form of a prison release [2191] rder will be required somehow?

The Witness: Yes. What I'm talking about here this morning, and as I walk into the three parts of this plan, is not just a release order, but the development and the introduction of a plan that a byproduct will be a managed prison population.

Judge Karlton: go ahead.

By Ms. Keck:

Q. Let me direct your attention to the first part of the plan that you mentioned, which is the programs necessary to support the release.

Could you please explain to the court what it is you mean by that?

A. It's a combination of programs. Right now there are some programs that CDCR offers. There's very little incentive for prisoners to participate in the programs.

There's no linkage whatsoever with the programs that they participate in while in the institution, and they are released back out into the community.

There is no structured process for making sure that the basic issues that we are dealing with in a correctional system are being addressed; the alcohol, drug, mental health issues; the lack of education and the problems with employment issue; the housing issues.

There is no putting together of a plan. There is holding individuals in the prison system and releasing them.

* * * *

[2194] happen again, then we need to individually tailor how we handle and address that specific individual's needs and problems.

Q. Are there examples currently in the State of California where this type of individual assessment and addressing the specific needs of the population is being conducted currently?

A. Well, Sonoma County is in the process of implementing the use of a risk and need assessment throughout its entire system. It comes online this next week on the juvenile system, and in march on the adult system, with that risk and needs assessment as being applied to the individuals in the local criminal justice system to help determine, either at the juvenile level or the adult level, the level of supervision and the programs that the individuals are going to be involved with.

CDCR has done some different things with risk and needs assessments. It's in the process. It's growing. It's happening. It just hasn't been fully implemented and there hasn't been that formal linkage with the level and amount of supervision of individuals released on parole.

Q. And when you talk about there being structured sanctions, is the only sanctions you are referring to just a return to prison if there is a violation of parole or is it something more?

A. We need to do a lot more. What we have learned–and we knew this all along, but drug court has taught it to us again.

It's not the severity of the sanction that's Important. What's important is the certainty and the immediacy [2195] of it That an offender who is out, either on probation or parole, that there is an understanding, there are certain rules, there are certain conditions that have to be followed. There has to be the ability to monitor those conditions and then there has to be the consequence for their actions.

We don't just simply wait till the level of failure rises to the level, whether a zero tolerance program is in place or probation and parole officers have some discretion as to when to violate the offender, violate them and simply return them to prison, have them held on what the data tells us an average of 120 days, circulate them through the process back out again.

We need to have meaningful, immediate, certain sanctions. And it doesn't have to be a return to prison. We can develop sanctions at the local level.

We can keep individuals locally in this partnership between the state of California and it's counties. We can have a more effective sanction without interrupting individuals lives and returning them to prison.

Q. Why would a prison population reduction plan that contains the three elements you describe significantly lower prison population? Why do you believe they would be effective?

A. Because we are interrupting the cycle of crime. We are becoming involved with the individual, with their issues and with their problems.

No longer one size fits all. No longer simply taking

* * * *

[2201] counties.

The Witness: It does, but it's my opinion that the state is already spending substantial amounts of dollars in its ineffective broken criminal justice and corrections system; that by reprioritizing its dollars, by retargeting and working on upstream issues so that we get out ahead of the problem, that's the only way that we are going to be able to solve this problem without catastrophe.

Judge Reinhardt: And how long if your steps were in effect-are you saying if these steps were in effect, then 50,000 prisoners could be released?

The Witness: I'm saying that if this plan were adopted by the State of California, that the population could be brought down in a systematic way without having to enter a release order.

Judge Karlton: I thought you just said–never Mind.

By Ms. Keck:

Q. Perhaps you should clarify to the court. Are you recommending as part of your program that there be a population cap or other general release order entered with respect to the state prison population?

A. I understand it's a $64,000 question here this morning.

Judge Reinhardt: well, to answer the court, the cap–if your program would bring it down, what harm would [2202] there be to a cap, if that would be the effect anyway?

The Witness: The issue–and the issue I think that Judge Karlton was reacting to was my comment earlier about within the institutions, the providing of the necessary constitutional medical and mental health services can't be provided with today's overcrowding.

It's going to take some time to implement my plan. It's going to take some time to put this in place, the overall planning process as well as the implementation, once the planning has been done.

And so we are kind of between a rock and a hard spot right now because we have the overcrowding at the level that we have. We have the difficulties within the institution, and we don't have the mechanisms in the community to have–to implement a release order in such a way that it's not going to impact the local systems.

By Ms. Keck:

Q. Would a population cap by itself be sufficient to both resolve the problems at the overcrowding at the state prison level as well as address the concerns in the community?

A. Well, clearly, a population cap will address the overcrowding in the state prison.

Whether–depending upon how the cap is implemented, either the front door is going to be closed or the back door is going to open up. In any event, it's going to have a negative

* * * *

[2207] The Court: you may call your next witness.

Ms. Whelan: your honors, we recall Dr. Pablo

Stewart.

Judge Henderson: You are still under oath.

Ms. Whelan: for the record, we previously offered both of Dr. Stewart's expert reports into evidence in this case, including Coleman docket numbers 3217, which was his November 9 –

Judge Karlton: other than taking our time, why are you repeating it?

Ms. Whelan: Sorry, just for the record. I can move On.

Judge Karlton: I'm sorry, I didn't mean to speak sharply. Excuse me.

Direct examination by Ms. Whelan

By Ms. Whelan

Q. Dr. Stewart, one of the issues that you evaluated in this case was whether other relief, meaning relief other than population reduction measures, could succeed in remedying the constitutional violations in the delivery of medical and mental health care. What did you conclude?

A. I concluded that, due to the extreme nature of the overcrowding, which negatively impacts all aspects of the mental health and medical care system that is currently causing Coleman class members needless suffering, as well as death, that the [2208] only remedy that would help the system to move into constitutional compliance would be a population reduction.

Q. And could you explain the specific findings you made that led you to that conclusion?

A. There was a couple findings that led me to that conclusion. There were two of those that–excuse me, this sounds a little funny from here. Is this all right?

Judge Karlton: It's all right for me.

Judge Henderson: It's okay.

The Witness: Excuse me.

Two of the findings that I base that opinion on were also two of the findings that I based my opinions that overcrowding is a primary cause of the constitutional violations, and that is the persistence of the violations after years of very close court monitoring.

And, also, the special master has stated in several places that the progress that was made early on in the Coleman matter has been undermined by current population pressures that exist.

By Ms. Whelan

Q. And defendants argue in this case that they have plans to fix all of these problems. Have you had an opportunity to review those plans?

A. Yes, I have.

Q. Can you explain briefly why you do not think those plans [2209] will adequately solve the crisis?

A. Well, the main reason is that these plans will take years to implement, if they are even able to be implemented at all, given the current degree of the population pressures.

So the Coleman class members are suffering now. They're–and any plans that would come online years down in the future wouldn't do anything to address that issue.

So it's my opinion that the only remedy, since overcrowding, in my opinion, is the primary cause of the constitutional violations, that any remedy would necessarily need to include a population reduction.

Q. You discuss in your report your belief that the state must make substantial reductions in the prisoner population. Do you have an opinion about what target population should be achieved from a medical and a mental health perspective?

A. From a medical and a mental health perspective, and–I have run jail medical situation programs, and mental health programs necessarily need to be run at under 100 percent so you're able to respond to the given needs of a system on any given day. You need to move people quickly into a mental health crisis bed. You need to move someone to an acute care bed.

So any population reduction that would occur would have to be of sufficient quantity to allow the mental health units to exist at less than 100 percent of design capacity.

Q. You also state in your August 15 report that Coleman class

* * * *

[2211] over the course of two years, could you explain what effect that would have on the Coleman class?

A. Well, if we take just the 50,000 number, and given that approximately 21 percent are Coleman class members, the CDCR population, then that means out of this 50,000 reduction, 10,000 would be Coleman class members. And out of the Coleman class members, the overwhelming majority, 85 percent, are in the 3CMS level. So that would correspond to 8,500 people from the 3CMS.

And the 3CMS level currently in the Department of Corrections receive, quite frankly, minimal care. They are seen occasionally for medications. They may have a case manager visit. And that would translate to the community as needing similar levels of treatment, medication management possibly, maybe some sort of case management services. That would be the extent that they would need.

Q. What about in terms of class members at the enhanced outpatient or DMH levels of care?

A. Again, looking at the numbers that currently exist, the EOP level of care is 13 percent of the Coleman class, and in a 50,000 prisoner reduction, that would mean 1,300 people. And that would be 1,300 people possibly released–would be released over a period of two years.

Currently, in the state of California, looking at the DMH website for its most current data, there's over 658,000 people receiving mental health services at the county level, and [2212] out of those 658,000 people, over 69,000 receive any sort of day services, day treatment-type level that is roughly equivalent to the EOP.

We are talking 650 people added to that cohort of over 69,000 in a given year. I think that they can be incorporated into the current system as it exists, even without any augmentation.

And then if you look at the DMH level of care, again, that's around two percent of the Coleman class. That corresponds in this 50,000 prisoner reduction number to 200 people.

Now, assuming that once they are released from prison over the course of two years these 200 people would continue to require initiate care, and I don't think you can necessarily assume that, once they are removed from the very difficult conditions that they are in now, it's very reasonable to suspect that their mental health conditions would improve.

But even assuming 200, we are talking about 100 additional people over the state of California in a given year that currently treats over 43,000 people in inpatient care in a given year, that's 100 in a system that currently treats 43,000.

Q. You also state in your August 15, 2008 report that if the state increases resources to improve mental health services on parole and in the communities, it would actually improve public safety. Can you explain what you mean?

* * * *

[2216] abuse drugs, they are going to be too violent, we don't have enough services for them, and if we are forced to treat them, boy, all hell is going to break loose. Well, it didn't. And that was the first example.

You know, there has been other examples throughout my career where the community mental health makes a whole big fuss about treating people that have concurrent substance abuse problems. You know, the same examples are given. It's going to overwhelm our system. We don't have enough resources; they are too violent; we can't care for them adequately; public safety is going to go down the tubes. And, in fact, it didn't.

Right now the standard of care is that people with mental health and substance abuse problems are treated concurrently in the community mental health system.

So I can understand on one level. I can understand their degree of concern, as I would be. But I think it's, quite frankly, overstated.

Q. And defendants have argued in this case that the reduction that plaintiffs seek, again approximately 50,000 over the course of two years, will not benefit the Coleman class. Do you agree with that?

A. I wholeheartedly disagree with that.

Q. And can you explain why?

A. A significant reduction, if we look at 50,000 as an example, 50,000 people reduced from the current CDCR population would [2217] have a significant impact on the Coleman class.

Just for example, there are general population yards at Salinas valley state prison that have basically been in lockdown for several years because there's too many inmates and there's not enough guards to safely guard them. So they lock everybody up in their cells, and among that group of people that are locked down are Coleman class members, that, when I interviewed, talked about the extreme stress and the worsening of their mental illness because of their being locked down.

Another immediate relief that would be accrued for Coleman class members, if there were the 50,000 inmate population reduction would be, hopefully, the elimination of these horrible dormitories that exist in dayrooms, in gyms, in corridors and hallways where Coleman class members are currently housed.

And I certainly observed, and it was confirmed by the special master, that there's so many people that it exacerbates the people that started off with mental illness, and it creates new mental illness. So any population reduction would have–immediately have a beneficial effect on the Coleman class.

Q. And what about in terms of defendant's plans to fix some of these problems, how would the reduction affect those plans?

A. Well–

Ms. Tillman: objection. Asked and answered.

Judge Henderson: Overruled.

[2218] The Witness: Look at the different aspects of the plans, the bed plans, for example, the construction plans. The population at large feeds in to the system that then requires inpatient care.

So if you look at the numbers for mental health crisis bed referrals from July and August of this year, a significant number were from 3CMS and, also, over 40 percent and around 10 percent give or take were from the general population.

If you lower the general population, if you lower the numbers, there are less people that would be requiring mental health crisis beds, and then mental health crisis beds are then feeding into the intermediate care facilities which then feed into the acute care. It would have this cascading positive effect by lowering population.

And it may, quite frankly, be the only remedy that's going to help the state meet their requirements for adequate number of beds at different levels of care.

By Ms. Whelan

Q. You also talked about reception centers being a problem but could you talk about how a reduction may assist those, as well as the main line institutions?

A. The reception centers–the reception center that I toured was DVI. And it was–I don't have the right adjective how crowded it was. I believe it was operating at over 200 percent design capacity.

Official court reporters, U.S. District court

[2315] A Yes, it is.

Q Is that consistent with your experience in the field?

A Yes, it is.

Q Now, you also say in your report that the average inmate has committed 12 crimes before their current arrest. What was the source for that information?

A there was a rand study that was conducted, and I believe it occurred in two states, one of them being, I believe, Wisconsin, the other new jersey. And in one of those, one of the studies, it showed that before an individual was ever arrested, and this was the year before being incarcerated, they had committed 15 felony crimes, and there was another study that stated that they had committed 12, and that was self reported for individuals that had been convicted.

Q We've heard from other witnesses that those numbers are highly inflated. Do you agree with that?

A No, I do not.

Q And why not?

A I think generally there's–quite often, I should say, that those numbers are probably underreported. And there has been other studies that show that those numbers are underreported, that in some cases individuals are committing hundreds of crimes before they're ever apprehended, and what I prepared for my report was a very conservative estimate.

Q All right. Thank you.

[2316] Ms. Barlow: now, we do have, your honors, exhibit 653 and 637, if we could put up the first page 653?

(Document displayed.)

By Ms. Barlow

Q Is this one of the articles that contains the data you relied on for this information?

A There was an NIJ study that was conducted that showed a large number of crimes in addition to the research that we provided from the rand study.

Q If we could just put up the next page, second paragraph under "annual offender rates"?

A I think it would be the next paragraph.

Q Well, this one–I'm sorry.

That included inmates from California, correct?

A That's correct.

Q Okay. And then, yes, the paragraph under "the table represents". Okay.

> "When summed across appropriate categories, the study found that inmates average between 187 and 287 crimes per year, exclusive of drug deals."

Was your calculation about the number of crimes committed also exclusive of drug deals?

A The research that I relied on, yes, it was exclusive of drug arrests, drug crimes.

[2317] Q And also number 637?

(Document displayed.)

By Ms. Barlow

Q Is this also one of the studies–or summaries of a study that you relied upon?

A Yes.

Q If we could go to bates page 200, paragraph beginning “third”? This is a recitation of the rand study showing 15 crimes excluding drug crimes, correct?

And then in the next two paragraphs down–I’m sorry. Is that correct, chief?

A Yes.

Q And also were you looking at the studies referenced here from New Jersey and Wisconsin?

A That’s correct.

The Clerk: Five minutes, counsel.

By Ms. Barlow

Q Now, if you could tell us why you believe, chief, that the reduction in prison population of 52,000 that’s proposed is going to create a public safety hazard; could you tell us why that is?

Judge Henderson: For Fresno?

Ms. Barlow: I’m sorry?

Judge Henderson: For Fresno?

Ms. Barlow: Actually, your honor, his report talks [2318] About Fresno and the central valley.

Judge Henderson: okay.

The Witness: The–when individuals are released from prison, there is a high likelihood that they are going to continue in their criminal lifestyle. In fact, in California I believe that number is 70 percent or greater that recidivate. And when we look at if 52,000 inmates are released back into our community, depending on that timeframe, we have information that about 3.9 percent of those individuals would more than likely be placed in Fresno County. Of those, about 80 percent would come into the city of Fresno, minimum maybe 80 percent. That would be just over 1,600 inmates released back into the city of Fresno prematurely. If we furthered what we've already said, that there is a 70 percent likelihood that they would reoffend—

Judge Karlton: No. That they would recidivate.

The Witness:–recidivate. And if we look at the fact that those individuals would likely commit at minimum 12 crimes before they were apprehended, that would mean there would be a substantial number of crimes committed in the city of Fresno, upwards of 13,000 crimes over that three-year period.

Judge Reinhardt: That would be committed prematurely as opposed to committing them several months later.

The Witness: yes, sir. They would be committed at some point during that three-year period. I don't know–you know, I know that there's—

* * * *

[2348] but to state the obvious, and then restate it, and then restate it, and then–it's just a profound waste of time. This is cumulative. You got anything new that you want to ask?

Mr. Lewis: thank you, your honor. I'll be seated Now.

Cross-examination? Do you want to take break? Okay. We'll take a 15-minute recess.

(Recess taken.)

Judge Henderson: You may proceed with cross when you are ready, counsel.

Mr. Specter: Thank you, Your Honor.

Cross examination

By Mr. Specter:

Q. Good morning, Mr. Dyer.

A. Good morning, Mr. Specter.

Q. As I understand your position, it's that a prisoner release order would result in more parolees in your city and county for some period of time, correct?

A. That's correct.

Q. And this would dramatically increase the crime in your community, is that right?

A. That's correct.

Q. And so you would expect that as the number of parolees increase, the crime rate would increase, right?

A. Generally, yes.

[2349] Q. But that hasn't happened, has it? In fact–well, let me ask you this. Between 2003 and 2007–remember we went through this during your deposition?

A. Yes.

Q. (continuing)–there was a 28 percent increase in the number of parolees and crime went down during that period, right?

A. All but 2005.

Q. Right. And so what I did–you estimate that there are going to be about 1900 parolees from a prisoner release order, right?

A. That was based on the initial number of 40,000, yes.

Q. So we'll take around 2000 would be a fair estimate? Yes?

A. Yes.

Q. Okay.

Mr. Specter: Could we please have the first table?

(Document displayed)

By Mr. Specter:

Q. So, Mr. Dyer, this is a chart based on the number of parolees, new additional parolees which are released to the county of Fresno, and it also has the violent crime rates.

Ms. Barlow: I'm sorry, your honor. I'm going to object. I don't know where this document came from. I've never seen it before. I don't know who prepared it. I don't know where it came from.

* * * *

[2352] But I hope when they get to question her, they can–there won't be any more objections, just like we have done in other exhibits that they have requested that we . . .

Judge Henderson: proceed.

By Mr. Specter:

Q. So my question was, Mr. Dyer, even though there was an influx of parolees about that–during that time, there were–crime went down in all the years except 2005, isn't that right?

A. Yes.

Q. Okay. So, in fact, you have a page on the Fresno website, do you not, the police department website?

A. Yes.

Q. And you claim that Fresno has enjoyed the lowest crime in 43 years, isn't that right?

A. That's correct.

Q. All right. So now i would like to show you a powerpoint demonstration, which is all we do on these powerpoints is the spreadsheet makes some of these charts into graphs.

(Document displayed)

Judge Karlton: again, you are going to somehow or other either satisfy the defendants or put the person on the stand?

Mr. Specter: Yes, Your Honor.

Mr. Mello: Your honors, Paul Mello one last time. Can we just have a standing objection for lack of

[2509] Judge Reinhardt: we might be willing to discuss it with you.

Mr. Sangster: Currently, we think we have three witnesses on–the defense has three witnesses–or two witnesses, the plaintiffs have a rebuttal witness, for tomorrow. So even if somebody from today slops over, I don't see any chance we are not going to finish tomorrow.

Judge Henderson: Thank you. You may begin. Call your witness when you are ready.

Mr. Lewis: Good morning, Your Honors. Kyle Lewis on behalf of the state defendants. Defendants now call Gale Bataille.

Gale Bataille

Having been called as a witness by the defendants was first duly sworn and examined as follows:

The clerk: state and spell your full name for the Record.

The Witness: my name is Gale Bataille, G-A-L-E, last name B-A-T–A-I-I-L-L-E

Mr. Lewis: Good morning, Ms. Bataille.

For the court's knowledge Ms. Bataille's expert reports were filed and marked as trial exhibit 1025 and 1026, and her qualifications are set forth in her curriculum vitae which is exhibit A to 1025.

[2510] Direct examination by Mr. Lewis

By Mr. Lewis

Q Ms. Bataille, What is your current position?

A currently, I'm a consultant with several statewide organizations, the California mental health directors association and the California institute for mental health.

Q Are you also a member of a judicial council committee?

A Yes. I serve on the California judicial council's criminal justice and mental health task force, which is charged with coming up with some better solutions to the criminalization of mentally ill folks in this state.

Q And in the course of that committee and those other consultancies you work on, what are your duties generally?

A in terms of the judicial council committee, I actually serve on two task forces within the committee, one of them on co-occurring disorders, and the other on reentry or early post-adjudication services.

With the California mental health directors association, my primary role with them is as consultant on criminal justice policy issues.

Q And prior to your work with those organizations, did you work for any mental health department in the state of California?

A I worked for three mental health departments and one private nonprofit agency. I served as deputy director for alcohol, drug [2511] abuse and mental health services for nine years in contra Costa County. I served as mental health director for Solano County, and I served as mental health director in San Mateo County. Early in my experience I ran a small residential treatment facility in Alameda County.

Q What is your educational background?

A I have a BA with honors in psychology from Oberland School, and I have a master's degree in social work from San Francisco State university.

Q You were retained as an expert for defendants in this case regarding the potential effects of a California prisoner release order on county-based community mental health systems and mentally ill persons that it serves, correct?

A Yes, I have–was.

Q And what is your opinion regarding the potential impact of a prisoner release order on California's county-based mental health systems and the persons it services?

A My opinion is that a–particularly any kind of accelerated release order would have a detrimental impact, not only on the individuals released, but on the county, and, I would assume, state parole outpatient systems unless there is substantial availability of increased funding and increased services, as well as, really, the capacity to plan and fully execute those services.

I can say more, but California's mental health system

* * * *

[2516] Actually, many of them, we will only find out later, actually are on parole, so we don't necessarily know when they come in the door because they sometimes would prefer to use the public mental health system than parole outpatient. It depends on the individual.

Q Do you have an opinion regarding, I guess, the amount of supervision or treatment services that should be made available to the most highly needing criminal mentally ill offenders coming out, such as the EOP or high levels of care you described?

A Yes, I do. The EOP population–and then there is some more severely disturbed populations that really require intensive inpatient care. But the EOP population in general needs structured care and needs care that doesn't depend on them voluntarily remembering and keeping appointments and voluntarily going out and finding their own housing. They really need what we tend to call in mental health intensive wraparound services. Actually, that's been recognized in the work that was done in California, really following up on—excuse me—the AB 900 prison reform legislation.

There have been several bills that have been introduced, and vetoed, I think because of financial issues, but were introduced by senator Steinberg that really funded those kinds of intensive wraparound services, and they are–they probably cost on an average per individual $15 to $30,000 a year [2517] and really need 24-hour availability of care.

Q Are you familiar with CDCR's mental health parolee outpatient clinics?

A Yes, I would not say I have, you know–I haven't gone in and out of those clinics a lot, but I am familiar with the system.

Q Based on your experience, are the parolee outpatient clinics able to meet the needs of an additional 10,000 persons that may be released as a result of this prisoner release order requiring mental healthcare?

A No. What I can comment on at this point is that very much within my experience, and particularly when I was director in Solano County and in San Mateo County in the last 18 years, it was not at all uncommon for parole outpatient clinics to attempt to refer individuals who needed more intensive care to our system.

It was also not uncommon for them to say to a parolee, as by self-report that we heard from the parolee, go on over to county mental health and see if you can get in the door. It was commonly known and happens.

Q Does this lack of access by parolees to parolee outpatient care cause you concern in terms of the effects it might have on county health systems?

A Yes, it does. And let me give a little bit more specifics. The adult outpatient parole system has done various [2518] reports. The one that I've most recently seen was, I believe, march of 2008, and that report discusses both rates of recidivism for the Coleman class of mentally ill prisoners and parolees, and it also lays out staffing ratios that are currently in those clinics. And having worked in county mental health systems for, as I said, 28 years, I'm very familiar with what are generally accepted caseload of staffing, and I, quite frankly, was a bit surprised at the kinds of ratios that currently exist.

For example, I believe that there is–for every 570 parolees who are already classified as mentally ill, there's one psychiatrist. So it's a one to about a 570 ratio caseload. Similar kind of size for psychologists. And a one to, I think, 170, -75 for social workers who would help to manage the cases. That is dramatically higher than any caseload that can effectively work with folks, in my experience, in the public mental health system.

One of the things that report documents is that there is an increase in recidivism rate if there is not immediate contact with treatment and intensive follow-up. So—there's been a UCLA research study on the parole outpatient continuum that basically documents that as the frequency of contact and the immediacy of contact goes up, the recidivism rate drops, and the reverse is true.

Q And do county mental health-based systems have the capacity [2519] to meet an additional influx of mentally ill offenders that might not be able to get care at the POC's?

A I would say that that is absolutely not within the capacity of county mental health systems currently. I've already stated that county mental health systems are struggling with being able to meet the capacity of the most seriously mentally ill population currently, and that is not—let me just add that's not just a matter of having enough money to do it, but literally whether there are enough trained professionals out there to bring in—even if we had the money, there are not enough psychiatrists in the state, and that's one of the most critical shortages for nurses in the mental health system. There are significant vacancy rates.

I'm fairly familiar with that because I've also done work on what we call the workforce capacity crisis in California.

Q In addition to not having staffing, are there also funding problems for local county mental health systems?

A Yes. I'm not going to—unless you want me to, I won't go into all the funding streams that fund the public mental health system, but just to say that one of the key streams of funding is based on California's sales tax and vehicle license fees, and we all know what's going on in the economy right now. That's taken a nosedive and, frankly, has not grown over the last decade and a half since that's been in place to keep up with [2520] what the actual cost of doing business over that time is.

Q In one of your expert reports you highlight the importance of adequate planning to have mental health services in place prior to a release of Coleman class members. What would such planning entail?

A I did cite that, and, in my opinion, doing adequate planning means assessing–and I think there's some data to help with this, but assessing where the anticipated releases will be grouped, I guess, if you want to say that, so that, for example, we know that L.A., riverside, San Bernadino and San Diego county, if you take those four counties together, they would have over 50 percent of the released parolees in the state. Currently due, and one can anticipate that any additional, release would have a similar kind of percentage impact.

And so we really need to look at those larger counties and what it would take for them to have capacity to work with a parole outpatient system and provide services that may not be feasible within the current parole outpatient system. So that's one part of the planning. It also simply takes time to, based on your assessment of the needs, to–it takes time to determine what programs need to come up and to put them in place. And I think that if I've had a fault as a mental health director in my career it's because I have always been overly optimistic about how quickly we can bring programs up and operational.

* * * *

[2534] Q And you don't hold yourself out as an expert on anything about the internal operation of the prisons, do you?

A No. And that isn't what I was retained for.

Q You are not providing the court with any opinions at all about mental healthcare in the prisons; is that right?

A That's not my intention, no.

Q I'd like to read you a short statement and ask you if you agree with it.

> "Some people may argue that the basic building blocks of an effective mental health system are lacking in many communities, and, therefore, efforts to reduce the overrepresentation of people with mental illness in the criminal justice system are futile. This argument is not persuasive. Even then, most underfunded mental health systems can work to improve services to individuals with the greatest need, including the group of people with serious and persistent mental disorders who have frequent interaction with the criminal justice system. Such efforts require close collaboration between the mental health and criminal justice systems." Do you agree with that statement?

A if the summation of the statement is that local systems, [2535] even though they are underresourced and underfunded, could improve services to folks involved in the criminal justice system through collaboration, absolutely. That's what many, many California systems are trying to do, and that's actually what we are trying to help provide input on through the state judicial council. Mental health courts, collaborations with probation departments, all of which we were able to do in San Mateo County, and with local police departments, absolutely improve services. They don't absolutely, though, address a lack of capacity to provide services to everyone who needs them, including the most seriously mentally ill.

Q You testified about how county mental health prioritizes services and how, if there's a prisoner release order, there's the danger they would prioritize services to the released mentally ill prisoners at the expense of the general public?

A Yes, I did.

Q And you know that 10,000 people per month are released right now from California prisons to the communities?

A Yes, I do.

Q And you know that using the 20 percent estimate, about 2,000 of them are persons with mental illness members of the Coleman class?

A That are newly released each month.

Q That are newly released each month.

A Because the total parole outpatient system monthly average [2536] Is more like 22,5-, 23,000 of mentally ill, so you add—so it's 2,000 a month new within that system.

Q Yes. You are aware that 2,000 a month new come into your communities?

A Yes.

Q From the prison system?

A Yes.

Q Do the mental health directors prioritize them for service now?

A currently, in California there's some variability, but, traditionally, in California, it's basically operated as a parallel system. So that, in general, parolees receive their care, and have received their care, from the parole outpatient system.

The problem, I think, that CDCR, and is becoming more recognized, is the parole outpatient system does not provide the full range of intensive services that are needed for the highest risk parolees. That's why CDCR is attempting to develop services via counties and contract agencies to provide that full service partnership, that intensive level of care.

Judge Karlton: I'm not sure you've answered the question. The question was about 10,000 people are being released of which about 20-plus percent are Coleman class members. Does the community today prioritize in favor of those people as against population in general?

[2537] The Witness: thank you, your honor. The answer is generally, no, not the public mental health system.

By Mr. Galvan

Q And you are aware that other states, including Texas and Pennsylvania, have used population caps to reduce their prison populations, aren't you?

A I just missed–say that again, a little more slowly.

Q You are aware that other states, including Texas and Pennsylvania, have used population caps to reduce their prison population, aren't you?

A I–not specifically aware of what Pennsylvania did. I do know that other states have used population caps, yes.

Q In your study for preparing for your testimony today, you didn't find any evidence, did you, that Pennsylvania, Texas, or any other state stopped serving children in its community mental health system because of the population reductions?

A I'm having trouble with that question. I did not delve into, nor have I seen–I have not seen the Pennsylvania research. Perhaps I should have. But I haven't—I'm really grounding my testimony on what I know is currently available in California's public mental health system, and the capacity around that, and the undercapacity to serve adequately, as evidenced by recidivism rates in the parole outpatient system.

Q As you sit here today, you have no evidence that any other state that has reduced its prison population through a cap has

* * * *

[2546] By Mr. Galvan

Q The mental health directors association is a registered lobbying association; is that right?

A Yes, it is.

Q When you were asking for help, you specifically asked for help from three people, correct? Don Kingdon is one of them?

A Yes.

Q He's the assistant director of the association?

A Yes.

Q And Nancy Pena, P-E-N-A, is another?

A Pena? She is a mental health director in California.

Q You asked for her help?

A I asked to discuss an issue on *valdivia* with them.

Q And Patricia Ryan, the executive director, you asked her for help?

A I asked to have a conversation.

Mr. Galvan: could we look at bat 551, Mr. Jones, which is going to be marked as pa 43?

(Document displayed.)

By Mr. Galvan

Q You asked her for help in an e-mail on or about August 21st; is that right?

A I don't remember the date, but that could easily be correct.

Q If we could zoom in on the middle portion, original message, under "thanks, pat"? Down to the very bottom there.

[2547] Do you recall sending a message with that subject line, "really would like brief time to talk re: Coleman issues"?

A Yes, I do.

Q Your question to them, and I'll just read it into the record was:

> "Hi, Pat and Don. As I get deeper into assertions related to the Coleman suit, I anticipate increased pressures and questions about the role and responsibility of county public mental health

> systems to serve parolees. I have to do responses to several plaintiffs' expert witness reports by the end of Wednesday August 27 and would like a chance to discuss some of these issues with you, especially our position that county mental health is not responsible for treatment of individuals who are on active parole status, aside from the prohibition under MHSA. I think I will be challenged on this and will need to identify code citations, history, et cetera, and this is in light of continued, although perhaps weakening, assertions from CDCR about our responsibility to treat all of our residents." When you were asking for help with "our position,"

Were you asking for that help–was "our position" the mental [2548] health director's association or your position as CDCR's expert in this case?

A I was attempting to get clarification as to the

Historical–when I said there have been historically two parallel systems, the adult outpatient parole system and the public mental health system, what I was attempting to get was clarification about the consistency across California, frankly, that public mental health systems generally have not accepted active parolees into the public mental health system, other than for crisis psychiatric emergency care, and so that's the, quote, position I was referring to.

Q And—

A That's really historical practice.

Q You were asking them for some code citations. Did you find any code citations?

A there are—no, it's really practice and not code citations.

Q So as you sit here today, you still don't know of any authority in the law for county mental health directors to deny service to parolees, do you?

A To my knowledge, there is not legal authority. There is historical precedent and practice.

Judge Karlton: there's also historical—never mind. Go ahead.

[2549] By Mr. Galvan

Q And you are aware, aren't you, that there has been testimony in this trial that parolees, thousands of them, are returned to prison each year because they can't get access to mental health services in the community?

A I have not heard the testimony for the trial, but I would not be surprised at that being testimony.

Q so you wouldn't be surprised if it were true that thousands of parolees are returned to prison each year because they cannot access care in the community?

A My understanding is that there is certainly a factor in returning that has to do with lack of access to treatment, both substance abuse and mental health treatment. Mental health–and I would remind you there are many people in California that are seriously mentally ill that do not have access to adequate treatment, including people involved in the criminal justice system.

Q And you've said in your reports that under the realignment statute, your county mental health obligation is to provide services to the extent resources are available, correct?

A Yes, I did. I did.

Q And resources are limited, correct?

A resources are probably about 50 percent of what the need is.

Q Okay. When resources are limited you employ triage to decide where to use your resources, right?

[2550] A Yes, that is what systems do.

Q And one element of your triage system is to ask whether the patient has other resources to get care, correct?

A Yes.

Q For example, if a patient has private insurance, you might not serve them directly, but help link them up with their insurance; is that right?

A Yes, absolutely.

Q And when a parolee comes in for service and participates in your–in county mental health triage, one of the decisions made is that that person has another resource for service, correct?

A Yes, yes.

Q And that resource for service is the parole outpatient clinic, correct?

A Right. As I said, practice has been that generally people who are on parole are–go to the parole outpatient system. They don't generally come, with some exceptions, to the public mental health system while they were on parole.

Q If a parolee comes to the mental health system or community mental health system, and they need something beyond POC care, they need some kind crisis care, you still have to triage them, right?

A If an individual requires psychiatric emergency services, yes, you have to triage anyone who comes in.

[2551] Q And if after the psychiatric emergency services, they need continued high level services, does county mental health continue to serve them?

A I would answer that the practice has typically been that, no, and let me clarify one piece. The—currently, in California, the most intensive level of care, which is the full-service partnerships, are funded through the mental health services act, and that specifically precludes parolees, so that there really isn't capacity in terms of the funding that is available for those most intensive services to serve parolees.

Q So, therefore, a mental health director who felt he had to prioritize released prisoners would not have the option of prioritizing them for services funded by the mental health services act, correct?

A Not, no.

Q He would have to continue serving the general public, correct?

A Yes, yes, of whom there are more than—more people than services are available.

Q And isn't it correct, to your knowledge, that the mental health services act funding constitutes about 1.5 billion out of over $5 billion in the community mental health budget?

A That sounds correct, yes.

Q Isn't it your understanding that about 3.8 billion comes from the realignment funds; isn't that correct?

* * * *

[2594] you are asking?

Q. uh-huh.

A. I would say the correct answer, no one knows. Again, if you base it on the research of the rand corporation, the vast majority of people that come to prison commit very few crimes before coming to prison, and a small number have committed a lot of crimes.

But that study has been reviewed with some skepticism by a number of scholars, but that's basically what that research shows; that most prisoners commit very few crimes per year.

Q Let's talk about some specific crimes. The rand study, you agree, indicated that in California the—those who commit robbery have an annual offense rate of 50, right? Fifty robberies. Burglary has an annual offense rate of 102.

A. Again, let me restate—you are taking the average, okay. And the national academy of sciences did a reanalysis of that data.

And rand corporation agrees with this analysis; that most of the prisoners are doing—the prisoners said they had committed no crimes, one or two or three crimes.

Then they had these people out there saying they were committing hundreds of crimes a year based on self-report surveys to interviews at the reception centers.

That's how this was done. It's self-report by prisoners to researchers. And they get this incredibly skewed [2595] reaction or result, which is that five or ten percent say they are committing runs hundreds of crimes a year, but the vast majority is saying they are doing none, one, two or three.

So when you give that 50, you know, that's a statistical thing you are doing, which is suggesting they are all doing 50 to 100 crimes. No, it's just the opposite. The vast majority are involved only in episodic crimes.

The rand corporation concluded that you could lower prison populations across the country by just focusing on those high end career criminals. And that was their original proposal.

They then in a subsequent study found they couldn't do that because the people they thought that were committing 50 to 100, 200 crimes per year, in fact, when released did not. And they recanted their findings and said the career criminal cannot be predicted based on their research methods.

Judge Karlton: sir, we have heard from two law enforcement folks numbers like 12 crimes are committed before anybody is arrested. Is there, as far as you know, any research that supports that assertion?

The Witness: No.

Judge Karlton: Okay.

The Witness: Okay.

Ms. Barlow: Could we put up—

Judge Reinhardt: Are all those figures, the high [2596] ones and the low ones, based on what the people on their way to prison say they did?

The Witness: They are based exclusively on an interview that literally was done with rand and Dejulio did. They interviewed prisoners coming to the reception centers and they asked them in the last 18 months how many of these following crimes did you commit.

Judge Reinhardt: And then you say when they were released, they didn't commit crimes, at least that we know about. What about the two, two to three? The ones who said, I only committed one or two crimes. Is there any data as to what they did when they got out?

I mean, is there any reason to believe their statements are any more reliable than the ones who said I committed 50 crimes?

The Witness: They did not find that there was a correlation between what they thought were high and low based on the self-report data.

Judge Reinhardt: In other words, all of this is pretty worthless.

The Witness: Some have reached that conclusion, Your Honor.

Judge Karlton: Do you have an opinion as to whether it is of any use at all?

The Witness: My opinion is it's not. And it's also [2597] The opinion of other scholars who have done reanalysis of the data.

Ms. Barlow: If we could put up the exhibit? This Is—

Ms. Evenson: Is this an exhibit, counsel?

Ms. Barlow: It is an exhibit, yes.

Ms. Evenson: What exhibit is it?

Ms. Barlow: It is–let's see. It's di-6–shoot. I don't seem to have the reference right here.

Ms. Evenson: What is the name of the document?

Ms. Barlow: This is from "making confinement Decisions."

A. Is that from Mr. Zedlewski?

By Ms. Barlow:

Q. Ed Zedlewski, national institute of justice. You are familiar with that, right?

A. Very familiar with it.

Ms. Barlow: if you could put table 1 up on the Screen?

Judge Karlton: Well, there seems to be some doubt as to whether it's—

Ms. Barlow: it is an exhibit, your honor. It hasn't been admitted yet, but it is—

Judge Karlton: well, nothing has been admitted. We still have to go through that yet. Counsel wants to know what

[2857] Judge Karlton: Of course, of course. Goes without Saying.

Mr. Bien: We will get everything in.

Judge Karlton: whatever you need. Between now and the findings—proposed findings of fact whatever you guys need, just send us a note and saying, we have all agreed that it's Wednesday, that it's Friday, that it's two weeks from Tuesday. That's fine.

Ms. Barlow: Perfect. Thank you, your honor.

Judge Reinhardt: One other thing to keep in mind in preparing whatever you are preparing. This case has been tried on the assumptions by the defense that the burden or whatever happened with any kind of potential release order would be the amount of prisoners requested by the plaintiffs. So all the testimony has been what would the effect be of granting plaintiffs' full relief.

It's possible that some of the defense might want to give us their ideas at least about if there were an order, what should the number be and what would the effect of that be, rather than just limiting yourself to the idea that that prisoner release order would grant plaintiffs full relief.

Judge Karlton: And I'm concerned, just one of the thousands of things that I'm concerned about, the 130 number, 130 percent is contrary to everybody's testimony as to what you need, which is 95 percent.

[2953] Increased substantial risk to the health and safety of CDCR staff, inmates and the public.

Mr. Mello: that's what the emergency proclamation says.

Judge Karlton: No.

Judge Reinhardt: So you acknowledge that the overcrowding is a cause?

Mr. Mello: Correct.

Judge Reinhardt: And your only disagreement is it's not the primary cause?

Mr. Mello: Correct. I mean, that statement is in evidence. They moved for it into evidence before. We are not disputing the emergency proclamation and what it says.

What we are disputing is whether plaintiffs met their burden under the PLRA.

Judge Reinhardt: Showing that it's the primary cause?

Mr. Mello: Correct. And that a prisoner release order is the only fix.

Judge Karlton: That's a separate question.

Judge Reinhardt: That's a separate issue. We only get to the prisoner release order if it's the primary cause.

Mr. Mello: Of course.

Judge Reinhardt: So the issue, as far as you're concerned, is that it is a cause of the health problems in the [2954] prisons.

Mr. Mello: we've never disputed that overcrowding—

Judge Reinhardt: And your only issue is whether it's a primary cause as opposed to a cause?

Mr. Mello: Yes.

Judge Reinhardt: And the governor's position is that it's a cause, not a primary cause.

Mr. Mello: Well, the governor's position is spelled out in the emergency proclamation.

Judge Reinhardt: No, our current governor, at this point.

Mr. Mello: At this point—well, let me back up. The emergency proclamation was signed in 2006. It was based upon current conditions.

Judge Karlton: Right. It's worse now. There are more prisoners.

Mr. Mello: I don't believe that's true. I believe that defies the record in this case, that it's worse now.

Judge Karlton: No, sir. At the time that the Governor announced the proclamation, there were 166,148 prisoners. There are more now. Is that right?

Mr. Mello: There may be more prisoners under the care of CDCR. However, the question is how many prisoners? Because we are focused on the 33 adult institutions in state, how many prisoners are now in adult institutions?

* * * *

[2960] Mr. Mello: Okay. Even if that's what I think, I think I'm now speaking to the second prong of the first clear and convincing standard.

Judge Karlton: Let's take the first prong. Do you agree or disagree—it's very difficult because I don't know who you represent.

But if you agree—do you agree or disagree that the question of primary care does not mean—primary cause does not mean that finding overcrowding and reducing overcrowding would end the issue; that is, that there would continue to be other causes which have to be addressed as well?

Mr. Mello: I think with respect to primary cause, whether it's the primary cause or not, my belief, and I believe it was in our motion in limine, that primary cause means just the biggest cause. I'm not saying it has to be the only case.

Judge Karlton: Okay. So that if it turns out that, yes, we find it's a primary cause, yes, we find that it will not in itself cure the constitutional defect, we nonetheless have not only the power, but the obligation to set a cap. Is that right?

Mr. Mello: I disagree.

Judge Karlton: That's what I'm asking.

Mr. Mello: I believe that if this court finds, which I think it must and as Mr. Bien admitted up here a few moments ago, that it won't remedy the constitutional violation, then it

* * * *

[2984] '09-'10. I don't know what you're referring to.

If you are referring to the most recent one that we submitted briefing on, I believe our position is clear. And it says, here is the budget proposal. It doesn't propose the release of prisoners, the savings that we are being forced to try to have with respect to parole.

Judge Karlton: so you are prepared to say that the governor is proposing to the State that we endanger public safety.

Mr. Mello: no, I'm not.

Judge Reinhardt: so you will agree that whatever the Governor proposed would not endanger public safety?

Mr. Mello: However motivated.

Judge Reinhardt: Are you willing to say that whatever the governor proposed would not endanger the public safety?

Mr. Mello: I am sure that the governor did not make the proposal that he thought would endanger public safety. That being said—

Judge Reinhardt: Okay. So we can proceed from there, is whatever his proposal was.

Mr. Mello: We can presume that it was a proposal that would be different in the main revise, that isn't acted upon unless approved by the legislature.

Judge Reinhardt: I know. Sometimes the governor, as [2985] you said before, would like the court to do what they aren't able to do themselves. That's all clear. It doesn't matter.

We are trying to find out–I don't know who the state is, but the governor is the defendant in this case and you are the governor's lawyer, I assume.

Judge Karlton: Apparently.

Judge Reinhardt: And I assume you were going to take the same position that the governor is taking. And the governor, as I understand it, has told the legislature and the public that certain actions will not endanger the public safety.

Mr. Mello: I don't believe the–well, I believe I have answered your question. I don't believe the governor would propose something that he thought would endanger public safety. So I believe I have answered that question.

Judge Reinhardt: What is the governor's proposal? How many people would—you know what a prisoner release order is. I'm not saying he said open the gate to the prisons. I'm saying, how many people?

Mr. Mello: Your Honors, we submitted briefing regarding the budget proposal. It says what it says. It says that the savings are going to be achieved primarily by reducing the number of individuals who are on parole supervision. That's what it says. It doesn't say release prisoners.

Judge Reinhardt: I know that. I just said it

[3137] Safety matter?

Mr. Specter: as a public safety matter and as a practical matter.

In fact, some of the testimony you heard said some of these plans could be developed in a few months, period. And then implementing them would be done over two years.

We weren't giving you a number. You know, if we wanted a—we weren't planning—we weren't negotiating. I mean, we weren't giving you a lone—we try to be reasonable and give you a fair number right now, not an unrealistic number.

And, finally, there is no evidence to the contrary that it can't be done safely in two years.

In terms of the 130 percent issue, we agree with your comments yesterday that it's not an exact science. But what it is, is a consensus among experts that we've used and, as Mr. Bien said, Jeanne Woodford, who ran the prison system and who worked there 28 years, thinks it's a reasonable number and will get us to where we want to go. It seems to me that's a pretty reliable piece of evidence upon which to base a decision.

Secondly, you know, there is no other number out there. The state had the opportunity, as you asked them to do several times, to come up with a number and they didn't. And Mr. Cate testified that they wanted to reduce the population, but he didn't even have a number in mind in which he wanted to [3138] reduce it to.

So the short answer is the state doesn't know how much they want to reduce it to and they don't want, apparently, to present any evidence about what another number should be.

So I think that we have satisfied our burden on that issue, and that there is no contrary evidence.

Secondly, this is an injunction. It's not a monetary judgment. And as Judge Henderson and Judge Karlton knows, injunctions are kind of living documents. They are subject to modification—

Judge Reinhardt: Like the Constitution.

Mr. Specter: Except it's not quite so hard to amend. Judge Karlton: all you need is five members of the Court.

Mr. Specter: So if it turns out that this number—it's our best estimate based on the evidence. If it turns out this number is not the best number, based on changed circumstances or how things develop, it can be modified over time. And we—

Judge Karlton: That's a very important issue for us. In the underlying cases there is a single Judge doing what Judges do. What we are doing here is extraordinary.

And let me assure you, you know, Judge Reinhardt doesn't want to come back every three months, or at all.

And that is, I find, troubling. If it were my order,

Counsel for Appellants

August 27, 2010

*Counsel of Record

WILSON-EPES PRINTING CO., INC. – (202) 789-0096 – WASHINGTON, D.C. 20002

QUESTIONS PRESENTED

1 Whether the three-judge district court had jurisdiction to issue a "prisoner release order" pursuant to the Prison Litigation Reform Act ("PLRA"), 18 U.S.C. § 3626.

2. Whether the court below properly interpreted and applied Section 3626(a)(3)(E), which requires a three-judge court to find, by clear and convincing evidence, that "crowding is the primary cause of the violation of a Federal right, and ... no other relief will remedy the violation of the Federal right" before issuing a "prisoner release order."

3. Whether the three-judge court's "prisoner release order," which was entered to address the allegedly unconstitutional delivery of medical and mental-health care to two classes of California inmates, but mandates a system-wide population cap within two years that will require a population reduction of approximately 46,000 inmates, satisfies the PLRA's nexus and heightened narrow tailoring requirements while giving sufficient weight to potential adverse effects on public safety and the State's operation of its criminal justice system.

PARTIES TO THE PROCEEDING

Appellees are the following:

Gilbert Aviles
Steven Bautista
Ralph Coleman
Paul Decasas
Raymond Johns
Joseph Long

Clifford Myelle
Marciano Plata
Leslie Rhoades
Otis Shaw
Ray Stoderd

Intervenor-plaintiff:

California Correctional Peace Officers' Association,

Appellants are the following five defendants

Governor Arnold Schwarzenegger
Matthew Cate, Secretary of the California Department of Corrections and Rehabilitation
John Chiang, California State Controller
Ana J. Matosantos, Director of the California Department of Finance
Stephen W. Mayberg, Director of the Department of Mental Health

The following 144 individuals are intervenor-defendants

Samuel Aanestad, Legislator
Anthony Adams, Legislator
Amador County Sheriff Martin Ryan

Joel Anderson, Legislator
Roy Ashburn, Legislator
Chief Probation Officer Kim Barrett

James F Battin, Jr.*, Legislator
Tom Berryhill, Legislator
Sam Blakeslee, Legislator
Police Chief Michael Billdt
Butte County Chief Probation Officer John Wardell
Butte County Sheriff-Coroner Perry L. Reniff
Calaveras County Sheriff Dennis Downum
District Attorney Ronald L. Calhoun

OPINIONS BELOW

Although the courts below have issued many opinions, appellants ("the State") note here only those containing the judgment and rulings essential to resolving the questions presented. On January 12, 2010, the three-judge district court entered the "Order to Reduce Prison Population" (JS2-App. 1a-10a[1]) now on appeal. See 2010 WL 99000. On August 4, 2009, the three-judge court made the predicate findings for that order. See 2009 WL 2430820 (JS1-App. 1a-256a) Orders granting plaintiffs' motions to convene three-judge proceedings (JS1-App. 273a-304a) are available at 2007 WL 2122657 and 2007 WL 2122636.

JURISDICTION

On July 23, 2007, over the State's objections, the District Courts for the Northern and Eastern Districts of California entered orders convening a three-judge district court pursuant to the PLRA, 18 U.S C § 3626(a)(3)(B), in accordance with 28 U.S.C. § 2284. JS1-App. 273a-304a. As shown *infra* § I, the three-judge court was improperly convened and therefore lacked jurisdiction to issue the judgment.

---

[1] The Clerk previously authorized the parties to use the appendices filed in Number 09-416 Appellants cite their Appendix from that case as "JS1-App" and the Appendix to the Jurisdictional Statement in this case as "JS2-App" The records in *Plata*, No C01-1351-TEH (N D Cal), and *Coleman*, No CIV-S-90-0520-LKK (E D Cal), are cited by docket entry number (*i e* , "*Plata* D E __," "*Coleman* D E __") in the Rule 33 2 version of this brief, as well as in the booklet version when the cited materials are not included in the deferred joint appendix In the Rule 33.2 version of this brief, trial transcripts are cited as "Tr " and trial exhibits are cited by party and number, *i.e* "Defs ' Trial Ex __ "

The three-judge court's "Order to Reduce Prison Population" granted injunctive relief under the PLRA. JS2-App. 1a-10a. The State timely appealed and filed its jurisdictional statement This Court granted review but postponed consideration of jurisdiction. Pursuant to 28 U.S.C. § 1253, this Court has jurisdiction (i) to determine whether the three-judge court lacked jurisdiction, and, (ii) to review the judgment should this Court find that the three-judge court had jurisdiction.

STATUTORY PROVISIONS INVOLVED

The PLRA's relevant provisions, 18 U.S.C. § 3626, are reproduced at JS2-App. 71a-73a and in this brief's statutory addendum.

STATEMENT OF THE CASE

Congress enacted the PLRA to cabin the federal courts' role in prisoners' rights cases. See *Jones* v. *Bock*, 549 U.S. 199, 202-04 (2007). The Act restricts the availability and scope of prospective relief. 18 U S.C. § 3626(a)(1)(A); *Nelson* v. *Campbell*, 541 U S. 637, 650 (2004). Congress specially sought to curtail the use of prisoner release orders, making them the remedy of "'last resort'" for violations of prisoners' federal rights. JS1-App. 73a. Only three-judge district courts can order prisoner release, and they may not be convened to consider such relief unless the remedial orders entered by a single-judge district court have been given a "reasonable amount of time" to remedy the alleged violations. 18 U.S.C. § 3626(a)(3)(A). A three-judge court cannot order prisoner release unless "crowding" is the "primary cause" of the federal violation and "no other relief will remedy the violation." *Id.* § 3626(a)(3)(E).

During remedial proceedings involving the Eighth Amendment rights of two plaintiff-classes, the three-judge court was convened and issued a prisoner release order in contravention of the PLRA's text and purpose. The single-judge district courts erred by convening three-judge proceedings because the State had not been given a reasonable amount of time to comply with significant remedial orders that had then-recently been issued, including orders compelling the State to effectuate the plans of the Receiver who had taken control of the California Department of Corrections and Rehabilitation's ("CDCR") healthcare system, as well as recent revisions to the Special Master's plans for improving mental-health care.

The three-judge court then issued its Order to Reduce Prison Population. That "prisoner release order" requires the State to cap its prison population at 137.5% of the institutions' combined design capacity as a remedy for alleged Eighth Amendment violations sustained by two discrete plaintiff-classes. The State must reduce its overall prison population by between 38,000-46,000 inmates within two years. The court ordered this massive release despite, *inter alia*, the Receiver's confirmation that care satisfying the Eighth Amendment can be provided notwithstanding prison overcrowding and appellees' experts' concurrence in that view and recognition that a prisoner release order would not extinguish the alleged federal violations. The court refused to consider current conditions in the prisons at the time of trial, let alone more than one year later when it issued judgment. Moreover, the court based its release order solely on professional goals for limiting prison overcrowding, not any determination of the "least intrusive means necessary" to remedy the plaintiff-classes' *Eighth Amendment* rights. 18 U.S.C. § 3626(a)(1)(A) The court also failed to accord substantial weight to the adverse impact of its order on public safety. *Id.* This Court should reverse the judgment.

A. Statutory Background

The PLRA, Pub. L. No. 104-134, tit. VIII, 110 Stat. 1321, 1321-66 (1996), carefully circumscribes the federal courts' remedial powers over conditions of confinement. 18 U.S.C § 3626. Any prospective relief must be "narrowly drawn, extend[] no further than necessary to correct the violation of the Federal right, and [be] the least intrusive means necessary." *Id* § 3626(a)(1)(A). In considering injunctive relief, a court "shall give substantial weight to any adverse impact on public safety or the operation of a criminal justice system caused by the relief" *Id.*

Congress imposed additional and more intrusive limits on a federal court's ability to enter a "prisoner release order" as a prospective remedy. *Id.* § 3626(a)(3); see also *id.* § 3626(g)(4) ("prisoner release order" is "any order . that has the purpose or effect of reducing or limiting the prison population, or that directs the release from or non-admission of prisoners to a prison"). Only a three-judge district court may issue such orders *Id.* § 3626(a)(3)(C). A three-judge court cannot be convened:

> unless—(i) a court has previously entered an order for less intrusive relief that has failed to remedy the deprivation of the Federal right sought to be remedied through the prisoner release order; and (ii) the defendant has had a

> reasonable amount of time to comply with the previous court orders.

Id. § 3626(a)(3)(A). If properly convened, a three-judge court "shall enter a prisoner release order only if the court finds by clear and convincing evidence that—(i) crowding is the primary cause of the violation of a Federal right; and (ii) no other relief will remedy the violation of the Federal right." *Id.* § 3626(a)(3)(E).

B. Factual Background

1. The appeal involves two class actions, *Plata* v. *Schwarzenegger* and *Coleman* v. *Schwarzenegger*, concerning healthcare conditions previously determined to violate the Eighth Amendment. *Plata* implicates the healthcare provided to adult inmates with "serious medical conditions," and *Coleman* involves mental-health care provided to inmates with serious mental disorders. Each case has been in its remedial stage for years.

In *Plata*, Judge Henderson approved a stipulation for injunctive relief in 2002 requiring the State "'to provide only the minimum level of medical care required under the Eighth Amendment.'" JS1-App. 16a. In October 2005, the court concluded that the State was not satisfying its obligations under that decree. *Id.* at 14a It therefore placed CDCR's medical care system into Receivership. *Id.* The court concluded that "'despite the best efforts of [the State],'" *id.* at 22a, Eighth Amendment violations persisted for numerous interrelated reasons, but overcrowding was not listed as one of them. *Id.* at 27a-28a (*e.g.*, CDCR had "serious personnel problems," "was incapable of recruiting qualified personnel," "lacked medical leadership," had not implemented necessary systems for tracking inmates, and had "'a culture of non-accountability and non-professionalism'").

The court recognized that imposing the Receivership was "'a drastic measure,'" but found that "'establish[ing] [it], along with those actions necessary to effectuate it[]'" were the "'least intrusive means'" to remedy the Eighth Amendment violations. JS1-App. 28a; *id* at 30a (granting the Receiver "'all powers vested by law in the Secretary of CDCR'") The Receiver's appointment was effective on April 17, 2006. *Id.* at 29a-30a. Thereafter, the Receiver began gathering information necessary to formulate a plan to provide care that would satisfy the Eighth Amendment. On November 13, 2006, on the same day that the Receiver filed a motion for an extension to submit a plan of action to the court, the *Plata* appellees moved to convene a three-judge court to consider a "prisoner release order." *Id.* at 275a. The Receiver subsequently was granted the extension; he filed a proposed plan on May 10, 2007 and a final plan on November 15, 2007 JA 1071-99; *Plata* D.E. 658, 928, 930; see JS1-App. 280a.

In *Coleman*, following a 1994 trial, the court concluded that the mental-health care provided to the class violated the Eighth Amendment JS1-App 31a, 33a-35a. In December 1995, the court appointed a special master to oversee injunctive relief. *Id.* at 36a. In 1997, the court approved plans developed by the Special Master; and in the following years, "defendants continued to work with the Special Master to implement and revise" those plans *Id* at 37a. In March 2006, the court approved a revised "Program Guide" of remedial plans, policies and procedures aimed at achieving constitutional care. *Id.* at 37a-38a. Eight months later, plaintiffs moved to convene a three-judge court. *Id* at 304a

2. On July 23, 2007 (almost four months before the Receiver's final plan was issued in *Plata*), both single-judge courts granted plaintiffs' motions to convene a three-judge court over the State's objections. See JS1-App. 273a-304a.[2] Judges Henderson and Karlton recommended that both cases be heard by the same three-judge court. *Id.* at 286a, 304a Then-Chief Judge Schroeder assented, seating Judge Reinhardt to complete the panel. JA 491, see 28 U.S.C. § 2284. After three-judge proceedings commenced, the State remained obligated to effectuate the Receiver's and the Special Master's plans. See, *e.g.*, JS1-App. 287a; see also *id* at 30a (*Plata* court appointed a new Receiver in January 2008; he issued a Turnaround Plan of Action in June 2008, JA 1117-78, which the State continues to implement).

A trial on prisoner release was held between November 2008 and February 2009. The court prohibited defendants from introducing evidence concerning whether the Eighth Amendment violations were "'current and ongoing,'" JS1-App. 78a n.42, and concerning prison conditions after August 30, 2008, JA 1190 ¶ 2.e The court also barred the State from obtaining discovery from or calling the Receiver or the Special Master to testify. See *Coleman* v *Schwarzenegger*, No. CIV-S-90-520, 2007 WL 4276554, at *1 (E.D. Cal./N.D. Cal. Nov. 29, 2007); JA 1114-15, JA 1196-97.

On August 4, 2009, the court concluded that crowding was the "primary cause" of the alleged

---

[2] The Ninth Circuit dismissed for lack of jurisdiction the State's appeals from the orders convening the three-judge court *Coleman* v *Schwarzenegger*, No 07-16361, 2007 WL 2669591, at *1 (9th Cir Sept 11, 2007) (per curiam)

Eighth Amendment violations and that no other relief would remedy them. See JS1-App. 78a-168a, *id.* at 126a n.55. The order mandated that the State cap its system-wide prison population at 137.5% of the institutions' total "design capacity" within two years. *Id.* at 169a; see *id.* at 60a (156,352 inmates, *i e.*, 195.9% of design capacity, in August 2008) The required reduction would be approximately 46,000 inmates. *Id.* at 235a. The court concluded that its sweeping "prisoner release order" was appropriate notwithstanding that other causes for the alleged constitutional violations exist and that the population cap alone would *not* remedy the violations. *Id* at 134a, 143a. The court held that the cap satisfied § 3626(a)(1)(A)'s enhanced narrow tailoring requirements, see *id.* at 169a-185a, and, by not dictating how the cap should be implemented by the State, thereby gave substantial weight to any adverse impact on public safety and the operation of the criminal justice system. See *id.* at 185a-255a.

The court, however, recognized that the relief "extends further than the identified constitutional violations" and "is likely to affect inmates without medical conditions or serious mental illnesses." JS1-App 172a. It selected the 137 5% cap solely because it was "halfway between the cap requested by plaintiffs and [a group of] wardens' estimate [in 2004] of the California prison system's maximum operable capacity absent consideration of the need for medical and mental health care." *Id* at 184a The court recognized, however, that, absent effective rehabilitation programs, a prisoner release of this magnitude is likely to cause a statistically significant increase in crime *Id.* at 241a-248a.

3. The order required the State to submit, by September 18, 2009, a plan for meeting the 137 5%

cap within two years. JS1-App. 255a. The State timely appealed to this Court and unsuccessfully sought a stay. *Schwarzenegger* v. *Coleman*, 130 S Ct. 46 (2009). While preserving its challenges to the order, the State timely submitted a population reduction plan. JS1-App. 312a-353a. The State disclosed that even if proposals pending before the legislature were enacted, it could safely reduce the population to only 151% design capacity within two years. *Id.* at 317a-318a (plan would meet 137.5% within five years). The court rejected the plan and required the State to submit a plan that would rigidly comply with the 137.5% cap within two years JA 1525-33. Preserving its objections, the State submitted a revised plan to satisfy the 137 5% cap within two years, but could not ensure public safety JS2-App. 34a

On January 12, 2010, the "Order to Reduce Prison Population" approved the revised plan. JS2-App. 3a-6a. Without analyzing current conditions affecting the plaintiff-classes, the court reaffirmed that § 3626(a)(3)(E)'s requirements for a "prisoner release order" were satisfied, as were § 3626(a)(1)(A)'s rigorous narrow tailoring requirements. *Id* at 2a The court acknowledged that it had "not evaluated the public safety aspect of the State's proposed plan," but stated that "the evidence presented at trial demonstrated that means exist to reduce the prison population without a significant adverse impact on public safety or the criminal justice system" *Id.* at 3a-4a.

The order requires that within 24 months of taking effect, the State's systemwide prison population will be reduced to 137.5% design capacity JS2-App. 6a. *Sua sponte*, the court stayed the order pending disposition of this appeal *Id.* at 8a

On January 15, 2010, this Court dismissed the State's appeal of the August 4, 2009 order for lack of jurisdiction. *Schwarzenegger* v. *Plata*, 130 S. Ct. 1140, 1140 (2010). On January 19, 2010, the State timely appealed the "Order to Reduce Prison Population," and on June 14, 2010, this Court granted review but postponed consideration of jurisdiction.

SUMMARY OF ARGUMENT

Using the guise of providing healthcare that complies with the Eighth Amendment, the court below has accepted appellees' invitation to undertake comprehensive institutional reform directed at prison crowding. If it stands, the judgment will require the State to reduce its prison population by roughly 38,000 to 46,000 inmates within two years. As the district court recognized, the release of these inmates will jeopardize the safety of California residents unless substantial investments in rehabilitation programs for released inmates are made. There is, however, no guarantee that California, which remains mired in fiscal crisis, has the financial ability to offer those services, or that the political branches would agree to direct available funds to released prisoners rather than other pressing needs. In any event, it is clear that the PLRA does not require (or even permit) what the three-judge court has ordered here and therefore its judgment should be reversed

First, the judgment must be reversed because the three-judge court was improperly convened and thus lacked jurisdiction to issue any prisoner release order. Congress provided three-judge courts with exclusive jurisdiction to order release and forbid single-judge courts from convening three-judge proceedings until they had afforded defendants "a reasonable amount of time to comply" with all the "previous court orders" directed at remedying plaintiffs' federal rights. 18 U.S.C. § 3626(a)(3). Here, however, the *Plata* and *Coleman* courts denied the State a reasonable opportunity to comply with remedies recently set in motion, including the implementation of the plans of a Receiver who was just taking control of CDCR's health care system. Doing so was utterly inconsistent with the prisoner release order's status as the remedy of last resort.

Second, if the three-judge court were properly convened, it committed reversible errors in holding that "crowding" is the "primary cause" of the alleged Eighth Amendment violations to the plaintiff-classes, and that "no other relief will remedy" those violations. *Id.* § 3626(a)(3)(E). The court below conducted no inquiry—either at trial or when it issued judgment approximately one year later—into current prison conditions, including the state of appellees' alleged Eighth Amendment violations. Contrary to the statute's prospective requirements, the court's conclusions were based solely on selective analyses of former conditions.

Independent of the flawed, limited inquiry, the court's § 3626(a)(3)(E) holdings are unsustainable. The court erroneously applied "primary cause" as if only "contributory cause" were required. Having concluded that crowding was slowing other remedies for the alleged Eighth Amendment violations, the court found that crowding was both their primary cause and that no other relief would remedy the violations absent a release order. It did so despite the Receiver's statements that the State could "provide constitutional levels of care *no matter what the population is*," and plaintiffs' expert's testimony that fully effectuating the Receiver's plan alone would satisfy the Eighth Amendment.

Because the Receivership and other orders would remedy whatever Eighth Amendment violations to the plaintiff-classes persisted, and the record is plain that a release order alone will *not*, § 3626(a)(3)(E)'s requirements were not satisfied. The release order, as Judge Henderson acknowledged, "will not address the *core issue* in *Plata*, nor ... alleviate the reasons for the Receivership." JA 1861 (emphasis added). Instead, it was driven by the desire for institutional reform, which is precisely what the PLRA does not allow.

Finally, the system-wide 137 5% of design capacity cap must be reversed because it fails § 3626(a)(1)(A)'s strict narrow tailoring requirements. The cap has *no nexus* to alleged Eighth Amendment violations, current or otherwise Rather, plaintiffs sought a population reduction loosely based on the Federal Bureau of Prisons' goals for overcrowding, which are far more demanding than the Eighth Amendment Treating these aspirations as Eighth Amendment *minima* violates the PLRA Plaintiffs presented no evidence about what reduction was "necessary" to satisfy the Eighth Amendment, and admitted they lacked the information essential to making such a determination Instead, as their counsel acknowledged, they sought a cap that was "a reasonable number and will get us to where we want to go," JA 2563, and "could *improve* public safety and the administration of criminal justice systems throughout the state, *Plata* D E. 1766, at 7.

The court indulged plaintiffs' wishes, providing relief that not only is untethered to the Eighth Amendment, but is system-wide and expressly "extends further than the identified constitutional violations." JS1-App. 172a. The remedy thus violates the PLRA and this Court's holdings regarding the proper scope of federal systemic decrees, and invades the political branches' prerogative to manage their own affairs. Moreover, the court tacitly acknowledged that the ordered reduction would have an adverse effect on safety unless "the state were to divert [funds] to community corrections, rehabilitation, and re-entry resources" JS1-App. 232a. This, of course, the court below has no authority to require. Thus, the order does serious violence to the PLRA's requirement that the court "give substantial weight to any impact on public safety ... caused by [injunctive] relief."

ARGUMENT

I. THE THREE-JUDGE COURT LACKED JURISDICTION TO ENTER THE "PRISONER RELEASE ORDER."

The PLRA exclusively vests three-judge district courts with jurisdiction to order the release of prisoners—federal or state 18 U S.C. § 3626(a)(3)(B). A district court shall not convene three-judge proceedings unless (i) "a court has previously entered an order for less intrusive relief" that failed to remedy the violation of federal rights, and (ii) "the defendant has had a reasonable amount of time to comply with the previous court orders" *Id.* § 3626(a)(3)(A); see *id.* § 3626(a)(3)(C), (D)

The *Plata* and *Coleman* courts mistakenly interpreted the PLRA to allow three-judge proceedings so long as the State had been given a reasonable amount of time to comply with *any* prior remedial order. Here, however, the State did not have a "reasonable amount of time to comply" with the legally relevant orders, thus the three-judge court was not properly convened. The three-judge court's judgment should be reversed for want of jurisdiction.

A. The *Plata* Court Erred In Granting Plaintiffs' Motion To Convene.

In convening three-judge proceedings, the *Plata* court erroneously held that it was not required to give the State a reasonable amount of time to comply with the recently appointed Receiver's plans to deliver constitutional care. See JS1-App. 280a. Shortly before convening three-judge proceedings, Judge Henderson had taken the "'drastic measure'" of placing CDCR's health care system in a receivership. JS1-App. 28a. The *Plata* court found that the "'Receivership, along with those actions necessary to effectuate its establishment'" were "'necessary'" and the "'least intrusive means to correct the[] violations'" of plaintiffs' Eighth Amendment rights *Id*

Although the Receiver's appointment was not effective until April 2006 and the Receiver had not issued his plan for remedying the alleged constitutional violations, plaintiffs moved to convene a three-judge court on November 13, 2006. JS1-App. 275a On July 23, 2007, the district court granted the motion, concluding that § 3626(a)(3)(A)(ii) was satisfied. *Id.* at 280a. It did so despite acknowledging that the Receiver had not commenced his duties until April 2006, had "only recently filed" his preliminary plan on May 10, 2007, and was not due to file a final plan of action for several months (a deadline extended to November 15, 2007) *Id.*[3] The court reasoned that it had given the State a reasonable amount of time to comply with orders from June 2002 and September 2004—orders wholly *unrelated* to the Receivership See *id.* at 279a. While acknowledging that the Receiver "has made much progress" in the brief time since his appointment, *id.* at 280a, the court held that it was not "require[d] .. to wait more time ... to see whether the Receiver's plans will succeed or fail," *id.* at 281a.

---

[3] The May 2007 interim plan contemplated several years of efforts to remedy the claimed violations, and suggested that it "'w[ould] work'" without population control measures JS1-App 282a The Receiver found it "'simply wrong'" to think that

The court's analysis is wrong. Having established a Receivership which was implementing a plan to address alleged constitutional violations, the court was required to give the remedy of Receivership a "reasonable amount of time" to work before issuing a prisoner release order. The court's contrary holding violates § 3626(a)(3)(A)(ii), and the PLRA's requirement that "prisoner release" serves as the "'remedy of last resort '" JS1-App. 73a; see *Roberts* v. *Mahoning County*, 495 F. Supp. 2d 713, 715 (N.D. Ohio 2006) (per curiam) (three-judge court) ("a prisoner release order [must be] the only way to stop the unconstitutional behavior"); see also, *e.g.*, JA 1057-70, *Plata* D.E. 700, 647, 590, 554, 474 (orders effectuating Receivership).

1. The court's interpretation contravenes § 3626(a)(3)(A) by ignoring the variation between subparagraphs (i) and (ii) of that section. Subparagraph (i) requires only that the court previously have "entered *an* order" seeking to remedy the violation for which prisoner release is sought. 18 U.S.C. § 3626(a)(3)(A)(i) (emphasis added). In subparagraph (ii), however, Congress stated that three-judge proceedings cannot be convened unless

---

"'population controls will solve California's prison health care problems '" *Id* the defendant is afforded time to comply with all of "the previous court orders" directed at remedying the alleged violation. *Id.* § 3626(a)(3)(A)(ii). By referring to the court's "orders" (plural) and using the definite article ("the"), Congress made clear its intent that a prisoner release order must be the final option, not one among many that might implement any previous order. *Id.*, see also ***Kaufman*** v ***Allstate N.J. Ins. Co.***, 561 F.3d 144, 155 (3d Cir. 2009) ("the definite article preceding the term 'claims' ... means *all* the claims").

The requirements of subparagraph (ii) are not satisfied where, as here, the defendant has been given a reasonable amount of time to comply with an order at some earlier stage in the litigation, but not with the most relevant, recent remedial orders. If a court concludes that a less intrusive remedy may cure a constitutional violation, the PLRA commands that the court must give that remedy time to work.

2 The *Plata* court also wrongly believed that the State's prior inability to cure the alleged Eighth Amendment violations vitiated its obligation to afford the State time to effectuate the Receivership. See JS1-App. 279a-284a. No matter how the phrase "reasonable amount of time" is defined, it is clear that convening proceedings to consider whether to release prisoners two months after the Receiver issued a tentative plan—and prior to his final plan—is not "reasonable."

Indeed, the "reasonable amount of time" requirement must be assessed in light of Congress's express intent to avoid prisoner release and thus must take into account the work necessary to remedy the complained-of federal violations. Here, Judge Henderson vested the first Receiver, Robert Sillen, with authority to control CDCR's health care system with the understanding that the Receiver's work to remedy the alleged Eighth Amendment violations could potentially take years to accomplish. *Supra* at 14-15 & n.3; see JS1-App. 24a-29a (discussing problems that precipitated Receivership).[4]

Had reasonable time been afforded, the State's substantial (and ongoing) progress toward remedying the alleged constitutional violations under the Receiver's plans would have shown that there was no basis for convening three-judge proceedings. The Receiver's task was daunting. See, *e.g.*, JA 1133 ("it [wa]s a misnomer to call the existing chaos a 'medical delivery system'—it is more an act of desperation than a system"). Yet, since Mr. Kelso's appointment as Receiver, *supra* note 4, he has clearly stated that the alleged Eighth Amendment violations can be cured by effectuating his plans without population reduction: "we believe we can provide constitutional levels of care *no matter what the population is.*" Statement of J. Clark Kelso (Aug 13, 2008), *quoted in* JA 1236 [*Plata* D.E 1656, Ex. D (DVD) at 31:20 minutes] (emphasis added).

By June 2008, Mr. Kelso reported that "[t]here has already been significant progress" and "[s]ubstantial work has been completed at several prisons to improve conditions." JA 1127; see *e.g.*, *id.* at 1123-24, 1134-35 (plans). This progress has continued, and the State remains on track to effectuate Mr Kelso's plans within the timeframe he originally proposed. See, *e.g.*, JA 1547 (announcing in January 2010 that "there is much that prison healthcare stakeholders and advocates can showcase as accomplishments"); *accord Lifeline Newsletter* May 25, 2010, at 1, *available at* http.//www.cphcs.ca.gov/ newsletter.aspx (Receiver. the State recently has "move[d] us closer to ... bringing this matter to a *final close*") (emphasis added). In implementing the Receivership, the State has greatly increased funding for and improved access to medical care, dramatically improved staffing, finalized construction plans for new healthcare facilities, and enhanced its infrastructure and ability to provide adequate care. See JA 1547-49.

---

[4] In June 2008, shortly after it replaced Mr Sillen with J Clark Kelso, the current Receiver, the court approved a revised Turnaround Plan of Action "establish[ing] a three- to-five-year framework for addressing all of the[] problems" affecting the provision of constitutional care JA 1125, *see* JA 2080 [Sept 4, 2008] (plan would be accomplished in "about four years") Mr Kelso contrasted his "fairly aggressive time frame" for action—a time frame that is plainly "reasonable"—with one lasting "10, 15 years before [a receivership] would finish its work, [which] simply is too long a time frame" *Id*

Healthcare funding per inmate has nearly doubled under the Receivership. JA 1219-20 ¶¶ 7-9; JA 2293-95. The Receiver spent $1.8 billion in fiscal year 2008-09 to provide medical care to the inmate population. Office of the Inspector General, *California Prison Health Care Receivership Corporation Use of State Funds for Fiscal Year 2008-09*, at 1 (June 2010), *available at* http.//documents reportingtransparency ca gov/Common/Document.ash x?ID=6384&TB_iframe=true

Moreover, although the court criticized the State's efforts prior to the Receivership, JS1-App. 280a, initiatives to improve access to care at each institution have been "ahead of schedule" since September 2008, JA 1202. The State showed "marked[] improve[ment]" throughout 2009, JA 1547; *id* at 1553-56 ("[a]ll institutions" improved access to care). Indeed, contemporaneous with the judgment, the Receiver announced that because "[p]atient-inmate access to health care has markedly improved," "we are projecting that control of the Health Care

Access Units *can be transferred back to CDCR* as early as next fiscal year, with a target for July 2011." *Id.* at 1547 (emphasis added); see *id.* at 1553-63 (completed actions and upcoming tasks).

Similarly, although the order convening three-judge proceedings suggested that the State's medical staffing shortages were intractable, JS1-App 284a, under the Receivership, the number of healthcare staff had increased significantly by the trial date. JA 1205-06. When trial began, the State was within five and two percent of the Receiver's goals for filling physician and registered nurse positions, respectively. JA 2249-50, 2250-51, see also JA 2066-69, 2071 (detailing exponential increases in staff) "Significant gains" have continued since trial. JA 1547-49, 1575-78. By February 2010, the Receiver had met his goal of filling over 90% of nursing positions and had filled 88% of physician positions JA 1643-49; see also Cal Prison Receivership, *Analysis of Year 2008 Death Reviews* 1, 23 (Dec. 14, 2009) ("*2008 Death Reviews*"), *available at* http://www.cprinc.org/docs/resources/OTRES_DeathReviewAnalysisYear2008_20091214.pdf ("significant systemic improvement[s]" in staff quality due to "wholesale transformation [of physician and nurse staff], especially between July of 2007 and August of 2008").

In effectuating the Receiver's plans, the State has improved the healthcare to the *Plata* class and will continue to do so. See, *e g.*, JA 2249-50, 2250-52 (plaintiffs' expert Dr. Ronald Shansky testified that increased staffing has improved the quality of care); JA 2159, 2161 (plaintiffs' expert Dr. Jeffrey Beard acknowledged improvements in care). By trial, the number of deaths had been trending downward for 10 quarters, JA 2256-57, and the number of likely preventable deaths fell from 18 in 2006 to 3 in 2007, JA 2253, 2276-77 Additionally, the Receiver reported in December 2009 that the mortality rate has decreased 13.3% over the last three years, *2008 Death Reviews* 1, and the decreases are an even "more impressive" 24 3% when normal seasonal variations are taken into account. *Id.*, see also *id.* at 19 tbl.8 (five likely preventable deaths in 2008) These rapid successes demonstrate that had the *Plata* court applied the correct standard, it could not have convened three-judge proceedings

If this Court holds that the three-judge court should not have been convened in the *Plata* case, then the proper course is to reverse in both cases because the three-judge court's analysis depends inextricably on *Plata* to justify the prisoner release order. If Judge Karlton in *Coleman* believes that a three-judge court is still appropriate solely for that class-action, then the court can proceed accordingly after this Court reverses

B. The *Coleman* Court, Too, Erred When It Convened Three-Judge Proceedings.

On the same day that the *Plata* court convened three-judge proceedings, the *Coleman* court did too. JS1-App. 288a. It also erroneously held that the "reasonable amount of time" requirement was satisfied by non-compliance with some earlier orders that left unremedied the federal violations. *Id.* at 292a-297a.

The *Coleman* case has been in a remedial phase overseen by a court-appointed Special Master since before *Plata* was filed See JS1-App. 288a; see *id.* at 36a-37a (Special Master's supervision of Program Guide). The State has made "commendable progress" under the Special Master's direction over the years. *Id.* at 294a; see *id* at 37a

In January 2006, after negotiations, the Special Master recommended that the State's Revised Program Guide be approved. JS1-App. 37a, 294a. The *Coleman* court did so in March 2006. *Id.* at 38a; see *Coleman* D.E. 1772, 1773 (requiring, *inter alia*, that the State increase mental-health staffing and submit plans for reducing vacancies among psychiatrists and providing for sufficient mental-health inpatient beds). In June 2006, the remedial program changed again as Judge Karlton ordered the State to coordinate compliance efforts with the newly-appointed *Plata* Receiver. *Coleman* D.E. 2063, at 4:8-11; see also, *e g*, JA 1058 (agreements between Receiver and Special Master); *id.* at 1061-64 (Receiver's oversight of mental-health provider contracting and credentialing); *id.* at 1065-70 (Receiver's responsibility for mental-health records and pharmacy services); *Coleman* D.E. 1998, at 3 (requiring coordinated construction with efforts in *Plata*); cf. JA 1107-08 (coordination on construction)

Rather than allowing the State a reasonable amount of time to comply with this new remedial program, in November 2006, the *Coleman* plaintiffs moved to convene three-judge proceedings. At the time, the State was actively implementing the Revised Program Guide and plans regarding mental-health staff, beds, and suicides. See, *e.g*, *Coleman* D.E. 1950, 1951, 1990, 1990-1.[5] The *Coleman* court nonetheless granted plaintiffs' motion.

---

[5] *See also Coleman* D E 2061 & Attachs 1-4 (suicide plan filed shortly after motion to convene), *Coleman* D E 2091 (long-range bed plan submitted in December 2006, and approved in

In finding § 3626(a)(3)(A)(ii) satisfied, the court did not examine whether the State had been given a reasonable amount of time to effectuate the Special Master and Receiver's most recent plans. JS1-App. 296a. Instead, Judge Karlton stated: "The orders of this court issued from 1995 through the present have failed to remedy the constitutionally inadequate delivery of mental health care," and "Defendants have had more than sufficient time to comply with the mandate required by the court's 1995 order and the numerous orders issued since then." *Id.* at 296a-297a As in *Plata*, the court improperly substituted previously unsuccessful remedial efforts for the requirement that the State be afforded a reasonable amount of time to comply with the court's orders.

Additionally, as in *Plata*, the State's progress in *Coleman* suggests that the time allotted to implement the Revised Program Guide and its plans regarding mental-health staff, beds, and suicides was not reasonable For instance, the *Coleman* court's decision to convene three-judge proceedings was driven by its view that the State's failures to provide sufficient mental-health staffing and to allocate other resources to the classmembers would be irremediable without population reduction. See JS1-App. 295a-296a & n.5; *id.* at 301a[6] Indeed, because of these

---

April 2007, *see Coleman* D E 2200, subject to submission of supplemental plans to address two issues)

[6] During the hearing on the motion to convene, plaintiffs argued that the State's failure to devote sufficient resources, not crowding, was the root cause of the problem *See* JA 1659 [June 27, 2007] ("these cases, which are about—we're using the word 'overcrowding,' but it is not exactly—it doesn't exactly fit the cases that you're presiding over"), *id* at 1665 ("[T]his is *not* a case about where prisoners sleep It's a case about the demand and supply for services So they're increasing the demand for

purported resource allocation problems, the *Coleman* court rejected the State's plans to construct more space for housing and treating the classmembers, finding that the alleged Eighth Amendment violations would be "aggravate[d]" by such measures. *Id.* at 301a ("[T]his utterly fails to address the critical question of staffing.") Yet, the view that the State could not provide the necessary staffing and resources absent release proved erroneous once the plans of the Special Master and Receiver were given a reasonable amount of time to take effect.

Although mental-health care staff vacancies were high when the three-judge court was convened, JA 482-83; *Coleman* D.E. 2895, at 114-16 (reporting, *inter alia,* vacancy rates of higher than 40% and functional rates as high as 43% in May 2007), a recruiting and hiring program launched in November 2007 has been extraordinarily successful JA 1473, ¶ 48; *id.* at 1476-77, ¶¶ 57-60 (discussing, *inter alia,* 18% decrease in vacancy rate for psychologists over a six-month period). By trial, the Special Master recognized that certain facilities were fully staffed. See JA 2371, 2372. More recently, the Special Master reported that "the vacancy rate in mental health staffing at CDCR institutions continued the decline that had been found during the preceding monitoring period." JA 769 (footnote omitted). The overall vacancy rates for multiple staff categories fell to between 11% and 19% for the most recent reporting cycle. *Id* at 769-73; see *id.* (use of contractors reduced the functional vacancy rates to as low as 6%).

Furthermore, under the Special Master's recent oversight, the State added dedicated mental-health

---

services, but where's the action on the supply side?") (emphasis added) beds at various institutions, which diminished waiting lists. JA 1483-84, ¶ 74; Defs.' Trial Ex. 1186 CDCR's institutions implemented functional and effective quality management programs. JA 773-74, 775-76; see also *id.* at 786-87 (noting "significant improvement" in providing medication). Numerous institutions have satisfied the Special Master's requirements for suicide prevention *Id* at 780. Additionally, the number of suicides has experienced declines, which the Receiver recently suggested may be directly attributable to "improved mental health care and improved security." *2008 Death Reviews* 23.

These improvements—*i.e.*, the State's dedication to supplying the services demanded—during the new phase of the remedial program demonstrate that the *Coleman* court's misinterpretation of § 3626(a)(3)(A)(ii) was material.

C. The Release Order Should Be Reversed For Lack Of Jurisdiction, And The Cases Should Be Remanded To Their Respective District Courts.

Because the three-judge court was not properly convened to consider prisoner release, this Court should reverse the judgment for lack of jurisdiction and dissolve the order creating the three-judge court. See *Gully* v. *Interstate Natural Gas Co.*, 292 U.S. 16, 18-19 (1934) (per curiam) (reversing judgment entered by improperly convened three-judge court and remanding to the single-judge district court); *accord Gonzalez* v. *Automatic Employees Credit Union*, 419 U.S. 90, 95 n.12 (1974); see also *Gully*, 292 U.S at 18 (where "there was no occasion for constituting a court of three judges," "the merits [of its decision] cannot be reviewed").

Finally, if the Court concludes that a three-judge court was inappropriate in either proceeding, then it still must reverse (see *supra* at 20). This Court cannot meaningfully review the merits of the three-judge court's order arising out of the combined cases and attempt to apply it only to one of the proceedings. At plaintiffs' urging, the three-judge court did not differentiate between the two cases in determining that a "prisoner release order" satisfied § 3626(a)(3)(E), or in shaping the remedy See, *e.g.*, JS2-App 2a-6a, JS1-App. 171a-172a [7] The three-judge court imposed the 137.5% cap to remedy alleged violations of *two* plaintiff-classes' Eighth Amendment rights without differentiating between them Determining the necessary remedy for just one class would require additional fact-finding. Therefore, if this Court concludes that three-judge proceedings were improper in either case, it should reverse the judgment in both cases and require the plaintiffs or the single judge in the other case to renew the request to seat a three-judge panel See 28 U.S.C. § 2284.[8]

---

[7] Plaintiffs requested a release order that did not distinguish between the classes *See Plata* D E 1766, at 3, *see also Plata* D E 695, at 1-2 (arguing that the two cases should be heard by the same three-judge court), *Coleman* D E 2254 (same), *but see Plata* D E 701, at 2 (opposing consolidation)

[8] In ruling that *Plata* and *Coleman* should be consolidated for three-judge proceedings, then-Chief Judge Schroeder believed that the statutory requirement that she "shall designate two other judges," 28 U S C § 2284(b)(1), did not apply *See also id* (requiring that "the judge to whom the request [to convene] was presented" also be seated) Chief Judge Schroeder thus appointed only *one* judge, seating both Judges Henderson and Karlton JA 490-91 But if a three-judge court is proper in just one case, § 2284 would require the appointment of *only* the

II. REVERSAL IS WARRANTED BECAUSE THE COURT'S INTERPRETATION AND APPLICATION OF § 3626(a)(3)(E) IS CONTRARY TO THE PLRA.

If three-judge proceedings were proper in both cases, the judgment nevertheless should be reversed because the three-judge court erroneously interpreted § 3626(a)(3)(E). That provision requires a court to find, by clear and convincing evidence, that "crowding is the primary cause of the violation of a Federal right, and ... no other relief will remedy the violation" before issuing a "prisoner release order."

A. The Court's § 3626(a)(3)(E) Holding Should Be Reversed Because It Has No Relation To, And The Court Expressly Refused To Consider, Current Conditions.

The Order to Reduce Prison Population should be reversed first because the district court failed to assess whether crowding *currently* "*is* the primary cause" of whatever Eighth Amendment violation remains and that no other relief "*will remedy*" such violations, both prerequisites to obtaining a prisoner release order. 18 U.S.C. § 3626(a)(3)(E) (emphases added). "Congress' use of a verb tense is significant ...." *United States* v. *Wilson*, 503 U.S. 329, 333 (1992); *accord Carr* v. *United States*, 130 S. Ct. 2229, 2237 (2010). Congress's intentional use of the present and future tenses in § 3626(a)(3)(E) must be given meaning. Compare 18 U.S.C. § 3626(a)(3)(E), (1)(A), with *id.* § 3626(a)(3)(A) (present perfect and past tenses). The court below failed to do so.

---

district judge who presided over that case, and the Chief Judge would "designate two other judges" as § 2284 commands

The three-judge court refused to hear evidence concerning the current status of alleged Eighth Amendment violations or whether the requirements of § 3626(a)(3)(E) presently are satisfied with respect to the current violations. See JS1-App. 78a n.42, JA 1691 [Nov. 10, 2008]. It mistakenly believed that such an inquiry was irrelevant because "defendants ha[d] never filed a motion to terminate under § 3626(b), the proper means for any challenge to the existence of 'current and ongoing' constitutional violations." JS1-App. 77a. But, the State's failure to move to terminate proceedings—which would have required a showing that *all* constitutional violations had been remedied—does not indicate either which Eighth Amendment violations had been cured or what measures are necessary to address any remaining violations

More significantly, crowding cannot be deemed the current "primary cause" of alleged violations to plaintiffs' federal rights without considering the specific effects that crowding allegedly *is causing* Likewise, it is not possible to determine what remedy is "necessary" without analyzing what violations currently *are in need of correction*. See, *e.g* , JA 2258 (plaintiffs' expert's admission that care at certain facilities may have satisfied the Eighth Amendment by the time of trial). The excluded evidence was crucial to the § 3626(a)(3)(E) determinations. Instead of conducting the required inquiry, the court below allowed plaintiffs selectively to employ any evidence of constitutional violations over a time period spanning years in *Plata* and *Coleman*. The court made the situation worse by refusing to consider evidence of prison conditions after August 30, 2008—even though the trial extended into February 2009 and the judgment did not issue until January 2010—

and by prohibiting testimony or discovery from the Receiver and the Special Master. See *supra* at 7.[9]

The limited inquiry allowed by the court was insufficient to determine whether crowding is the primary cause of "a substantial risk of serious harm" to the plaintiff-classes, *Farmer* v. *Brennan*, 511 U.S. 825, 834 (1994), and whether it is the primary cause of present "deliberate indifference" by State officials, *i.e.*, "reckless disregard," *id.* at 838, of conditions "sure or very likely to cause serious illness and needless suffering," *Helling* v. *McKinney*, 509 U.S. 25, 33 (1993); see *Wilson* v. *Seiter*, 501 U.S. 294, 302 (1991). Likewise, it was inadequate to allow the court to determine whether any other relief "will remedy" any such substantial risk or end the State's purported deliberate indifference. 18 U.S.C. § 3626(a)(3)(E).

Instead, the three-judge court's § 3626(a)(3)(E) analysis was a selective examination of what the alleged Eighth Amendment violations once were and a *post hoc* application of causation to those conditions See, *e.g.*, *infra* § II.B.2; JS1-App. 9a (relying on death statistics from mid-2005, while ignoring "significant and continuous decline since 2006," *2008 Death Reviews* 31), JS1-App. 19a-20a, 24a, 90a, 94a, 107a, 111a (fixating on conditions at the former San Quentin facility, but ignoring that it has been replaced by a state-of-the-art facility, see *id.* at 333a; *Plata* D.E 1652, at 6 ¶ 14; JS2-App. 52a; JA 1550). This violates the statute.

---

[9] Although neither the Receiver nor plaintiffs objected to a noticed deposition, see *Coleman*, 2007 WL 4276554, at *1, acting *sua sponte*, the three-judge court assumed (wrongly) that the Receiver and the Special Master were protected by categorical quasi-judicial immunity. *Id.* at *1-2. The court failed to conduct the requisite functional analysis about whether all of the information sought involved mental processes within the Receiver's judicial capacity. *See Antoine* v. *Byers & Anderson, Inc.*, 508 U.S. 429, 435-36 (1993); *United States* v. *Morgan*, 313 U.S. 409, 422 (1941). This failure was significant because much of the information at issue pertained to administrative not judicial matters, and plaintiffs' expert admitted that the Receiver had "data" that was necessary to determine what would "achieve constitutional levels of care." JA 2273. It therefore was unreasonable for the court to conclude that categorical immunity applied. *Cf. Med. Dev. Int'l* v. *CDCR*, 585 F.3d 1211, 1221 (9th Cir. 2009) (reversing decision that the *Plata* Receiver was immune from suit).

The error is significant because of the disparity between the findings of Eighth Amendment violations upon which the court relied, and the current conditions on which a finding of necessity must be based. This point is further illustrated by assessing whether the State is acting with deliberate indifference. The three-judge court mentioned "deliberate indifferen[ce]" just once, and that was in the context of findings from *1995*. See JS1-App. 170a (discussing *Coleman* v. *Wilson*, 912 F. Supp. 1291, 1316, 1319 (E.D Cal. 1995)). The then-existing care and the *mens rea* of the former defendants are not comparable to those existing today Compare, *e g.*, JA 1133 (the State lacked a "medical delivery system" and was in "chaos" when the Receiver was appointed), and *Coleman*, 912 F. Supp. at 1322-23 (discussing weapons used against classmembers without penological justification), with, *e.g.*, *supra* at 18-19 (noting, *inter alia*, that the State now spends more than $1 8 billion per year on inmate health care), and JA 1635 (noting the "collaborative trust" forged among the Receiver, CDCR and the Governor's Office in remedying violations). The court should not have determined whether an injunction should issue today based solely on proof of violations in the past

See *Gwaltney of Smithfield, Ltd.* v. *Chesapeake Bay Found., Inc.*, 484 U.S. 49, 59 (1987) (the "harm [the district court] sought to ... address[] ... [does not] lie[] in the present or the future, [but] in the past").

B. The Court Erred In Interpreting The PLRA's "Primary Cause" And "No Other Relief Will Remedy" Requirements.

The three-judge court misinterpreted § 3626(a)(3)(E)'s requirements that plaintiffs must present "clear and convincing evidence" that "crowding is the primary cause of the violation of a Federal right; and ... no other relief will remedy the violation." The best reading of § 3626(a)(3)(E) is that as the "primary cause" crowding must be at least the "but for" cause of the federal violation, and therefore that eliminating crowding alone should "remedy the violation of the federal right." This standard was not applied and could not be satisfied here.

1. In enacting the PLRA, Congress did not define "primary cause," and the legislative history is silent See JS1-App. 78a-79a & n.43. Congress has rarely used the phrase "primary cause" in other contexts, and those are not helpful here [10]

Nonetheless, it is clear that "primary cause" is distinct from and more substantial than a "contributing cause." See *Black's Law Dictionary* 250 (9th ed. 2009) ("contributing cause" is "[a] factor that—though not the primary cause—plays a part in producing a result"). To give meaning to the PLRA's intent to make prisoner release the remedy of last resort, JS1-App. 73a, "primary cause" should be read to require an elevated level of "but for" causation.

---

[10] *See* 42 U S C § 9607(c)(2) (liability for costs of CERCLA response), Pub L. No 111-22, § 1002(a)(1), 123 Stat 1663, 1664 (2009) (findings on "primary causes of homelessness"), Pub L No 110-180, § 2(B), 121 Stat 2559, 2560 (2008) (findings regarding "[t]he primary cause of delay in NCIS background checks")

This Court and other courts consistently have distinguished between "primary causes" and "contributing factors," which do not require "but for" causation. This Court has explained that "concurrent" causes are distinct from the "primary" or "proximate efficient" cause of a particular result. *Rocco* v. *Lehigh Valley R.R.*, 288 U.S. 275, 278-80 (1933). It has held that an employee's failures could not be considered the "primary cause" of a resulting death because the acts of another could have been a cause "in whole or in part." *Id.* In *The G.R. Booth*, 171 U.S. 450 (1898), the Court concluded that the "primary and efficient cause" is that which is the "superior or controlling agency." *Id.* at 460-61. The "primary cause" is the one from which damages "proceed[] inevitably, and of absolute necessity." *Id.*

Similarly, the Third Circuit has recognized that a "primary cause" must encompass "but for" and "proximate" causation, explaining that such standards are "significantly more stringent than [a] 'material contributing factor' test." *Metro. Pittsburgh Crusade for Voters* v. *City of Pittsburgh*, 964 F.2d 244, 251 (3d Cir. 1992) (citations omitted); see also, *e.g.*, *Hawkins* v. *Dir., Office of Workers Comp. Programs*, 907 F.2d 697, 705 n.12 (7th Cir. 1990) (distinguishing contributing cause from "'principal, sole, primary, or proximate cause'" under the Black Lung Benefits Act); *Borras* v. *Sea-Land Serv., Inc.*, 586 F.2d 881, 885-86 (1st Cir. 1978) (distinguishing contributing factor from "primary cause" under the Jones Act).

Moreover, prior to the PLRA, plaintiffs already were required to show that crowding was the proximate cause of the violation of their rights to obtain a remedy. See, *e.g.*, *Carver* v. *Knox County*, 887 F.2d 1287, 1294 (6th Cir. 1989); *Marsh* v. *Barry*, 824 F.2d 1139, 1143 (D.C. Cir. 1987) (per curiam); *Abrams* v. *Hunter*, 910 F Supp. 620, 627 (M.D Fla. 1995), *aff'd*, 100 F.3d 971 (11th Cir. 1996). Congress is presumed to have knowledge of existing law when it enacted the PLRA. *Goodyear Atomic Corp.* v. *Miller*, 486 U S. 174, 185 (1988) In enacting the PLRA, Congress's clear purpose was to limit the remedies available in prison overcrowding cases, not to make the remedy more readily available. 18 U.S.C. § 3626(a)(1), (3)(E); H.R. Rep. 104-21, at 11, 25 (1995), JS1-App. 248a. Thus, by adding "primary" to the pre-existing causation requirement, the PLRA's causation standard is best understood to require special and heightened judicial scrutiny.

The three-judge court violated these rules. Although it purported to accept the State's argument that primary cause is that which is "'first or highest in rank or importance, chief; principal,'" JS1-App 78a, the court did not actually apply such a standard. Rather, it treated "primary cause" as if it were synonymous with a "contributory cause."

The district court acknowledged that the alleged Eighth Amendment violations resulted from numerous causes, many of which pre-dated the crowding at issue. See, *e.g.*, JS1-App. 16a-17a, 31a-52a, 85a-95a, 104a-126a. The complete lack of a *system* for providing care and a troubled institutional culture at the outset of these litigations were the driving forces resulting in constitutional violations. See, *e.g.*, JA 1124 ("pervasive, fundamental organizational weaknesses and failures"); *id.* at 1133 ("it is a misnomer to call the existing chaos a 'medical delivery system'"); *Coleman*, 912 F. Supp. at 1298-99; *Plata* v. *Schwarzenegger*, No. C01-1351-TEH, 2005

WL 2932253, at *29 (N.D. Cal. Oct. 3, 2005) (identifying the "historical lack of leadership, planning, and vision by the State's highest officials") [*reproduced at* JA 974].

Addressing these systemic issues has been a substantial task, see *supra* at 17, and crowding can strain reform efforts. See, *e.g.*, *Plata* D.E. 2031, at 2:13-16. The fact that crowding may slow the progress of other remedies does not make it the "primary cause," or indicate that prisoner release is "necessary." On the contrary, the existence of multiple and interrelated conditions necessary to remedy the alleged constitutional violations should have foreclosed prisoner release. The district court acknowledged that curing the crowding would not remedy the alleged violations because independent (*i.e.*, primary) causes would continue to produce constitutional injury. JS1-App. 134a, 143a. Yet, by treating crowding's contribution to other causes as sufficient to make it the "primary cause," the district court eviscerated § 3626(a)(3)(E)(ii)'s requirement that "*no other relief* will remedy the Federal right." (emphasis added). If overcrowding is the primary cause, then eliminating overcrowding should undo all or virtually all of the constitutional harm.[11]

---

[11] Plaintiffs claimed that because crowding slows multiple remedial efforts, it must be the primary cause of the Eighth Amendment violations. "[A]ll of the evidence shows that overcrowding is inhibiting the remedial efforts of both the courts and the Special Master and the Receiver in this case. And therefore, it is delaying the constitutional remedy." JA 1659 [June 27, 2007]; JA 1377, ¶ 4 (Shansky: "[T]he inadequate system will continue to exist for longer than it would otherwise unless there is a significant reduction in the population."). In virtually any systemic prison conditions case, crowding would make remedying existing violations more difficult. But under the three-judge court's reading, crowding automatically would

The record makes clear that this would not happen here. The Special Master, for instance, explained that "'even the release of 100,000 inmates would likely leave the defendants with a largely unmitigated need to provide intensive mental health services to program populations.'" JS1-App. 157a (alteration omitted); see *Plata* D.E. 2031, at 23-26 (most *Coleman* classmembers are housed in crowded conditions, and suicides are most prevalent in single-cell conditions). Plaintiffs' expert Dr. Shansky agreed that CDCR will not have constitutionally adequate medical care "[i]f the only improvement that was made ... is ... there are 40,000 less inmates." *Plata* D.E. 1481-1, at 61:14-24; see also JS1-App. 282a (Receiver explained that it was "'simply wrong'" to believe "'that population controls will solve California's prison health care problems'").

In contrast, the Receiver concluded that the State could "provide constitutional levels of care *no matter what the population is*" once his plan was fully implemented. *Supra* at 17. Likewise, Dr. Shansky repeatedly has conceded that "the full implementation of the [T]urnaround [P]lan will ensure a constitutional level of healthcare and mental health care in California." JA 2280-81; JA 1376-77, ¶ 4.[12]

---

be the "primary cause" in those circumstances and, contrary to the PLRA, a prisoner release order could issue whenever a three-judge court is frustrated by the speed of less intrusive relief.

[12] Dr. Shansky stated that the Receiver's plan alone would be sufficient unless the prison population "wildly increases again." JA 2280-81. Irrespective of the relief ordered here, California is committed to reducing crowding and recently has been the most successful jurisdiction in the country in doing so. *See* U.S. Dep't of Justice, *Prison Inmates at Midyear 2009—Statistical Tables* 1-2 & fig. 2 (June 2010); Pew Ctr. on the States, *Prison Count 2010*, at 5 (Apr. 2010).

Indeed, Judge Henderson's comments show that the three-judge court's determinations did not satisfy § 3626(a)(3)(E)'s requirements.

> [R]educ[ing] the prison population will not address the *core issue in Plata*, nor will it alleviate the reasons for the Receivership and my oversight over the prison's medical health care delivery system. Instead, a reduction in the prison population would simply resolve the plaintiffs' argument that overcrowding is the primary cause of the constitutional violations.

JA 1861 (emphasis added). This use of "primary cause" illustrates that the court below treated the phrase as if the PLRA merely required a "contributing cause" showing.

In sum, plaintiffs' experts, the district court, the Receiver, and the Special Master agree that the Eighth Amendment violations will *not* be cured by relief directed at crowding alone. They recognize that the other remedies are *necessary* and, indeed, may be sufficient to bring about constitutional care, while relief directed at crowding, at most, may expedite those other remedies In these circumstances, a prisoner release order may not issue. Instead, the trial court must focus on the other remedies that will remedy Eighth Amendment violations, if any remain, in due course, and it is the problems to which those remedies are directed that are the primary cause of the alleged Eighth Amendment violations.

2. Finally, the court's conclusion that "all other potential remedies will be futile in the absence of a prisoner release order" is not supported by clear and convincing evidence. JS1-App 144a-145a. The three-judge court considered and rejected four potential types of remedies as inadequate.

(1) construction, *id.* at 145a-154a; (2) additional hiring, *id.* at 154a-155a, (3) ongoing efforts of the Receiver and Special Master, *id.* at 155a-159a, and (4) transferring inmates, *id.* at 159a-162a. The court erred by analyzing and rejecting the potential measures in isolation rather than examining their cumulative effect and by unreasonably dismissing their individual effectiveness. See *id.* at 144a-162a.

Construction. The court rejected the State's argument that its implementation of legislation enacted shortly before trial (AB 900) and willingness to construct facilities would constitute less intrusive remedies than prisoner release. See JS2-App. 2a; JS1-App. 145a-154a.

The court first erred by declining to credit plaintiffs' experts' testimony that prison construction helped remedy federal law violations in systems they administered, JA 2182-83, 2185, and that the construction of additional treatment facilities in California could remedy the alleged violations, *id.* at 2165-66, 2259-60; see also Fed. Bureau of Prisons ("BOP"), *State of the Bureau 2008*, at 6 (2008) (agency "reduc[es] crowding by adding additional bed space"). It compounded that error by reasoning that the State's construction proposals were infeasible because "it will be years before any re-entry facility construction ... will be completed." JS1-App. 147a-148a. The court's reasoning is internally inconsistent. The court *sua sponte* stayed its prisoner release order pending appeal, once effective, that order will take *two years* to implement. JS2-App. 8a-9a.

During that time, construction that could be a partial remedy will occur. Prior to judgment, the State filed construction plans to satisfy the Receiver's proposals and the *Coleman* court's orders requiring that the State implement a long-range bed plan to provide sufficient housing and treatment facilities for the classes, including waiting lists affecting portions of the *Coleman* class. *Coleman* D E 3724 & Attach. A The Receiver called those construction plans "'an extraordinary milestone.'" *Lifeline Newsletter* Nov 24, 2009, at 1, *available at* http:// www.cphcs ca.gov/newsletter aspx; *Plata* D.E. 2325, at 1 (noting legislature's approval of construction), JS2-App. 11a-16a (approving plans, but ordering changes to the activation schedules for several facilities) Under these plans, thousands of new beds are to be added to the CDCR system. See *Coleman* D.E. 3724, Attach. A, at 10-11. The facilities will begin accommodating inmates this year, see, *e.g.*, *id.* Ex. 16; *Coleman* D.E. 3866, and all facilities are to be completed by 2014.[13]

Additional Hiring. The court rejected additional hiring as a less intrusive form of relief. See JS1-App. 154a-155a; JS2-App. 2a As shown *supra* § I, the relevant hiring trends were extremely positive between 2007 and 2008. The court declined to recognize these improvements despite the evidence of such progress at trial. See, *e.g.*, *supra* at 19, 23. Moreover, by the time of the Order to Reduce Prison Population, the Receiver had met his goals for staffing the health care system. *Id* at 19. Nonetheless, the three-judge court relied on the staffing levels in 2007 and before to dismiss this potential remedy. JS1-App. 154a; see, *e.g* , *id* at 28a, 47a-48a & nn.31-34.

---

[13] *Coleman* D E 3724, Attach A, *Coleman* D E 3830 (revising activation schedule for one facility as ordered), *Coleman* D E 3794 & Ex A (expediting activation schedule for another facility), JA 835-36, 848-51 (revising activation schedules), *Coleman* D E 3866 (approving revised activation schedules and waiving state regulations to expedite activation)

Emblematic is the court's crediting of outdated evidence that: "[CDCR] lacks sufficient custodial staff 'to keep prisoners safe from harm' or 'to provide ... timely access to care.'" JS1-App. 110a; see *id.* at 101a. This ignores that CDCR hired 600 and 1800 custodial staffers in 2007 and 2008, respectively, and that officers serve in dedicated "access to care" units to escort inmates to medical and mental-health appointments. JA 2483-84. Indeed, by trial, CDCR "literally filled up all of [its] prisons with correctional staffing" and planned to cancel academies for additional staff because "we are actually overfilled." *Id.* at 2484.

Thus, by the time of trial and when the judgment issued, the court had no basis to conclude that continued staffing increases—whether alone or in concert with other measures—would not remedy the alleged violations.

The Receiver and the Special Master's Ability to Remedy Alleged Violations Absent Release. Clear and convincing evidence does not support the court's claim that the tools available to the Receiver and the Special Master are insufficient to remedy the alleged violations absent a prisoner release order. See JS1-App 155a-159a; JS2-App. 2a.

As discussed, the Receiver and Dr. Shansky have acknowledged that full implementation of the Receiver's plans *alone* will be sufficient to ensure Eighth Amendment care *Supra* at 17, 34-35; see also JA 2434 (plaintiffs' expert Dr. Austin: "'[Q] Is it your opinion that no matter what resources he has or what actions he takes, the Receiver cannot provide for constitutional levels of medical care at current population levels? [A.] No.'") The three-judge court's failure to give any weight to the positive developments under the Receivership and Special

Mastership that occurred between the August 2008 close of evidence and the judgment makes matters worse. See *supra* §§ I, II.A.

Out-of-State Transfers. Finally, the three-judge court erred in rejecting the possibility of transferring inmates to out-of-state facilities as part of a remedy. JS1-App 159a-162a; see JS2-App. 2a It asserted that the number of transfers to-date and proposed in the future were "too small to significantly affect the provision of medical and mental health care to California's inmates." JS1-App. 160a.

This overlooks that Judge Karlton erroneously blocked the State's efforts to transfer mental-health prisoners to out-of-state facilities to address crowding. See JA 435, , ¶¶ 1, 5 (allowing CDCR to transfer only 80 non-*Coleman* classmembers, and ordering that "[n]o other CDCR inmates are to be transferred" unless pre-transfer screening requirements proposed by the Special Master were satisfied) Judge Karlton prohibited transfers based on the Special Master's concern, *id* ¶ 3, that "the actual state of mental health services" at the *out-of-state transferee institutions* would not provide sufficiently high quality care, see JA 439-40. It was mistaken to *presume* that the mental-health care at out-of-state facilities does not satisfy the Eighth Amendment. In these circumstances, the three-judge court should have refused to order prisoner release unless the district courts allowed the State to exhaust its avenues for prisoner transfer

The three-judge court failed to account for these various remedial measures individually and cumulatively. Even if it were appropriate to discount the Receiver's belief that, as discussed above, the tools available to him alone would be sufficient to remedy any alleged Eighth Amendment violations, it certainly is the case that the combination of the remedial measures discussed here could be a sufficient remedy and the three-judge court was obliged to deal with their cumulative effect before ordering prisoners released from confinement.

III. THE RELEASE ORDER VIOLATES THE PLRA'S HEIGHTENED REQUIREMENTS OF NARROW TAILORING AND FAILS TO GIVE SUBSTANTIAL WEIGHT TO PUBLIC SAFETY.

Even if § 3626(a)(3)(E) were satisfied, the order capping the system-wide population of CDCR's facilities at 137.5% of their design capacity must be reversed. The remedy violates the PLRA's heightened requirement of narrow tailoring, *i.e.*, that injunctive relief shall be "narrowly drawn," extend "no further than necessary to correct the violation of the [Eighth Amendment] right[s] of ... plaintiffs," and be "the least intrusive means necessary to correct the violation." 18 U.S.C. § 3626(a)(1)(A), JS1-App. 75a (calling these requirements the "need-narrowness-intrusiveness" standard); see JS2-App. 2a; JS1-App. 168a-185a. The order also fails to give sufficient weight to adverse impacts on public safety and the State's operation of its criminal justice system. 18 U.S.C § 3626(a)(1)(A), see JS2-App 4a; JS1-App. 185a-254a.

A. The 137.5% Cap Lacks Any Nexus To The Alleged Violations Of Plaintiffs' Eighth Amendment Rights, Is Not Narrowly Drawn, And Is Highly Intrusive

The order requires that the population of California's prisons be capped at 137.5% of their combined design capacity within two years JS2-App. 5a-6a. The State must reduce its prison population by between 38,000 and 46,000 inmates, depending on CDCR's ordinary population fluctuations. JS1-App. 235a, *Plata* Appellees' Mot. Dismiss, No. 09-1233, at 3-4 n.1 (U.S. May 14, 2010). The court claimed that "California's prisoner population *must* be reduced to some level between 130% and 145% design capacity if the CDCR's medical and mental health services are ever to attain constitutional compliance." JS1-App. 183a. It selected a system-wide cap of 137.5% design capacity because it was "halfway between the cap requested by plaintiffs and [a group of] wardens' estimate of the California prison system's maximum operable capacity" *in 2004*. *Id.* at 184a.

None of these three figures has any nexus to the alleged Eighth Amendment violations in this case. Each of the reasons below is individually sufficient to require reversal. Collectively, they demonstrate that the three-judge court used its prisoner release order to effectuate broad policy goals that are incompatible with the PLRA and ignored federalism concerns and the necessary separation of powers in doing so.

1 The 137.5% cap should be reversed because it has no connection to current prison conditions, including any alleged Eighth Amendment violations that continue to exist. See *supra* § II.A; 18 U.S.C. § 3626(a)(1)(A) (present tense). Moreover, "'the nature and scope of [an injunctive] remedy are to be determined by the violation.'" *Missouri* v. *Jenkins*, 515 U.S 70, 88 (1995). Thus, any current violations should have provided the starting point for the nexus analysis. See *id.* They did not. As discussed above, the three-judge court refused to consider evidence of prison conditions subsequent to August 30, 2008. The court could not lawfully craft a prisoner release order that met the PLRA's heightened tailoring requirements without considering the conditions that

existed at the time it imposed that remedy. For example, whatever population reduction may have been necessary in light of evidence about conditions prior to August 2008, that number surely declined after the State's intensive remedial regime took effect. The 137.5% cap should be vacated on this basis alone.

2 In any event, plaintiffs failed to demonstrate the required connection between the 137.5% of design capacity population cap and any effort to remedy the State's alleged *Eighth Amendment* violations Plaintiffs were required to show that a 137.5% cap is necessary to prevent a "substantial risk of serious harm," *Farmer*, 511 U S. at 834, and to extinguish the State's purported "deliberate indifference," *id.* at 838. Plaintiffs did not carry their burden

To understand the error of the 137.5% of design capacity cap, it is first critical to comprehend what "design capacity" means in California's prisons "Design capacity" is a term of art that refers to the number of inmates CDCR's prisons may house based on one inmate per cell, single bunks in dormitories, and no beds in space not designed for housing. JS1-App. 57a. California, however, "has never limited its prison population to 100% design capacity," because, *inter alia*, its prisons frequently were planned and built to double-cell inmates. *Id.* A facility intended to house two inmates per cell that houses two inmates in each cell (and thus is not overcrowded) is nonetheless at 200% of "design capacity." Equally important, housing two inmates in a cell designed for one does not violate the Eighth Amendment. *Rhodes* v. *Chapman*, 452 U.S. 337, 348 (1981). Neither plaintiffs' proofs at trial, nor the court's findings, take these realities into account.

At trial, plaintiffs requested a system-wide cap of 130% of design capacity. They did so because 130% of design capacity purportedly is "the federal standard for prison overcrowding," JS1-App 180a—it is not Regardless, plaintiffs did not link that population level to the State's ability to satisfy its obligations under the Eighth Amendment. *Id.* at 183a. Nor is there any nexus between the Eighth Amendment and the 145% cap that the district court treated as the outer bounds for any population reduction. See *id.* at 143a, 184a.

First, the so-called "federal standard for prison overcrowding" is actually a goal that the BOP set shortly before this trial In 2005, BOP announced a "population management" goal, stating that it would "work toward *ultimately achieving* an overall crowding level in the range of 30 percent [*i.e.*, 130% overcrowding] " BOP, *State of the Bureau 2005*, at 7 (2005) (emphasis added); see also JS1-App 179a-180a (CDCR's "long-term" goal that population not exceed 130% design capacity).[14] There is no evidence that BOP's aspirations have any connection to Eighth Amendment *minima* for medical and mental-health care. On the contrary, BOP clearly aims to exceed the Eighth Amendment: "The BOP delivers mental health services comparable to mental health care in the community." *State of the Bureau 2008*, at 32; see *id.* at 7-8 (quality of health care).

BOP's population levels, however, routinely exceed its goals. For instance, in 2003, the crowding rate for

---

[14] BOP does not measure crowding using "design capacity " It uses a different term of art, "rated capacity," as "the baseline for the statistical measurement of prison crowding " BOP, *Program Statement Rated Capacities for Bureau Facilities* 1, No 1060 11 (June 30, 1997) Critically, "[r]ated capacity is not necessarily the same as any institution's design .. capacity " *Id* at 2

BOP's prisons increased from 33 to 39 percent, and crowding at high and medium security prisons was "significantly higher at 59 percent apiece." BOP, *State of the Bureau 2003*, at 7 (2003); see also, *e.g.*, BOP, *State of the Bureau 2004*, at 7 (2004) (41% percent crowding). In 2008, three years after setting the "population management" goal, BOP still had a crowding rate of 36 percent, with high- and medium-security facilities at 50 and 44 percent, respectively. *State of the Bureau 2008*, at 2. None of these reports links BOP's conditions or goals to constitutional *minima*

Second, the 145% of design capacity cap that the district court considered likewise has no connection to the Eighth Amendment. See JS1-App. 59a, 181a. The 145% figure was drawn from a study conducted by California's Corrections Independent Review Panel, a group of wardens. See *id.* That Panel determined *in 2004*—before numerous subsequent improvements, *supra* §§ I, II—that CDCR's "operable capacity" was 145% of its design capacity. See JS1-App 59a. "'[O]perable capacity,' refers to 'the maximum capacity of the prisons to house inmates safely and securely while providing *effective education, training, and treatment.*'" *Id.* (emphasis added) (operable capacity "'takes into account space needed for effective programming'"). Therefore, "operable capacity" plainly is not aimed at any Eighth Amendment standard See, *e.g.*, *San Antonio Indep. Sch Dist.* v. *Rodriguez*, 411 U.S 1, 35 (1973) (public education is not a right guaranteed by the Constitution); *Hoptowit* v. *Way*, 682 F.2d 1237, 1255 (9th Cir. 1982) ("There is no constitutional right to rehabilitation."); cf. *Lewis* v *Casey*, 518 U S. 343, 350 (1996). See also JS1-App. 181a ("Operable capacity [as used in the study] d[id] not take into account the ability to provide [medical and mental-health] care [that would satisfy the Eighth Amendment].").

Accordingly, the three-judge court erred in treating the 130% and 145% figures as the poles for assessing constitutionality. Indeed, this Court has held that a lower court "err[s] in assuming that opinions of experts as to desirable prison conditions suffice to establish contemporary standards of decency . '*[T]hey simply do not establish the constitutional minima*; rather, they establish goals recommended by the organization in question.'" *Chapman*, 452 U S. at 348 n.14 (emphasis added) (quoting *Bell* v. *Wolfish*, 441 U.S. 520, 544 n.27 (1979)). Because the court treated these goals as Eighth Amendment *minima*, the judgment should be reversed.

Finally, plaintiffs' experts' testimony cannot support the judgment. They relied on the same professional goals noted by the court and uniformly denied that they could assess the population reduction required to provide care consistent with the Eighth Amendment.

For example, Dr. Ronald M Shansky, the former Medical Director of the Illinois State Prison System, testified·

> [Q] Isn't it true ... that you hesitate today to come up with a figure to which the prison population needs to be reduced to achieve constitutional levels of care, because .. that would require doing a study that requires data from the *Plata* Receiver?
>
> A. Yes, that's correct.

JA 2273 Dr. Shansky added that he had "no clue" what population reduction would be necessary to bring about care that satisfied the Eighth

Amendment *Id.* at 2279-80. Jeanne Woodford, a former CDCR warden, similarly testified that she was unaware of any study that determined what population reduction would be necessary "to provide constitutionally-adequate medical and mental healthcare in California's prisons." JA 2424-25 Additionally, Dr. Craig Haney, a professor who serves as an expert in prison conditions cases, admitted that he did not "'know how to calculate'" what CDCR would need to do to show compliance with the Eighth Amendment. Tr 342:15-23; see also JA 2393. Instead, like the court, he treated the wardens' estimate that operable capacity was 145% of design capacity as a constitutional benchmark, although he had no idea how the wardens calculated that number. JA 2388-89; compare JS1-App. 183a (nonetheless relying on Dr. Haney's report as evidence of what was necessary to eliminate Eighth Amendment violations).[15]

Indeed, plaintiffs effectively confessed that their remedies case was not linked to satisfying the Eighth Amendment. Their experts were unaware of the level of care provided to the class members, and had not evaluated CDCR's ability to provide constitutional care. See, *e g.*, JA 2179 (Lehman: "Q. In preparing your report, you did not know what the space needs were for medical or mental healthcare in California's prisons, did you? A Specifically, no."), *id.* at 2180 ("Q ... [Y]ou did not have knowledge of the status of medical health care delivery in California's prisons as of August 2008, did you? A. No ...."), JA 2122 (same from plaintiffs' expert Wayne Scott); JA 2218, 2219 (similar from Ms Woodford) Thus, their testimony was not relevant to the critical issue under the PLRA—the reduction *necessary* to provide care that complies with the Eighth Amendment floor See, *e.g.*, *Farmer*, 511 U.S. at 834; *Chapman*, 452 U.S. at 347.

---

[15] Even if plaintiffs' experts had addressed the relevant nexus to the Eighth Amendment, their admissions that they were able to provide constitutional health care in more overcrowded prison systems would have undercut their testimony *See* JA 2138, 2141, 2142, 2163-65 (Dr Beard provided constitutional care when Pennsylvania's system was 150-160% of design capacity, including at a facility "over . two hundred percent of capacity"), JA 2177, 2181 (Lehman constitutional care in Washington and Pennsylvania at 150% crowding and above), JA 2271-72 (Shansky constitutional care in Illinois at 140% crowding)

Instead, the experts testified only that the requested reductions would prove beneficial to the wardens, their staff and the inmates As the three-judge court acknowledged, plaintiffs' request was based on testimony regarding the level required for a "prison system ... to function *properly*" or "'*appropriately*.'" JS1-App. 177a-178a (emphases added). Dr. Beard, for instance, testified that it "is impossible to really do a good job" as warden when prison population exceeds 150% of design capacity. JA 2142; see *id.* at 2141. When pressed by the court about what this meant, Dr. Beard did not point to any Eighth Amendment benchmark. *Id.* at 2143; see *id.* at 2137-38, 2157

Plaintiffs' closing argument at trial is telling:

> In terms of the 130 percent issue, we agree with your comments yesterday that it's not an exact science. But what it is, is a consensus among experts that we've used and, ... Jeanne Woodford, who ran the prison system and who worked there 28 years, thinks *it's a reasonable number and will get us to where we want to go. It seems to me that's a pretty reliable piece of evidence upon which to base a decision.*

JA 2563 (emphasis added). The PLRA does not allow a prisoner release order to issue based on what experts deem *reasonable*, it requires that release be the "least intrusive means *necessary*" to remedy alleged Eighth Amendment violations. The evidence here does not satisfy § 3626(a)(1)(A).

In sum, the three-judge court imposed the 137.5% of design capacity cap even though the record contains no evidence supporting a nexus between plaintiffs' request and the alleged Eighth Amendment violations Instead, the court usurped the role of the political branches, erroneously substituting its own policy preferences about prison conditions for what the PLRA and the Eighth Amendment require. See *Chapman*, 452 U.S. at 349 (professional standards may "reflect an aspiration toward an ideal environment for long-term confinement," but "properly are weighed by the legislature and prison administration rather than a court") Plaintiffs did not satisfy the PLRA, they sought systemic prison reform. *Accord Plata* D.E. 1766, at 1-7 (plaintiffs' trial brief) (failing to explain why reductions are *necessary* to remedy Eighth Amendment rights, but focusing on how a "population reduction order could *improve* public safety and the administration of criminal justice systems throughout the state"). The district court's order should be reversed on this basis alone.

3. The court below failed to limit the prisoner release order to what is necessary to remedy the violation of *plaintiffs'* rights, thereby violating not only the PLRA, but also the requisite constraints on injunctive relief and fundamental principles of federalism. In fact, the court acknowledged that the relief "extends further than the identified constitutional violations" insofar as it "is likely to

affect inmates without medical conditions or serious mental illnesses." JS1-App. 172a.

First, as a result, the injunction contravenes the PLRA which provides that injunctive relief shall "extend[] *no further* than necessary to correct the violation of the Federal right of ... particular ... plaintiffs," *i.e.*, the class members 18 U.S.C. § 3626(a)(1)(A) (emphasis added); see also H.R. Rep. No 104-21, at 24 n.2 ("[T]he provision stops judges from imposing remedies intended to ... provide an overall improvement in prison conditions."); cf *Casey*, 518 U.S. at 364 (Thomas, J., concurring).

Second, the relief violates the permissible scope of a federal decree. The order breaches the rule that "only if there has been a systemwide impact may there be a systemwide remedy." *Dayton Bd. of Educ.* v. *Brinkman*, 433 U.S. 406, 420 (1977) In *Jenkins*, this Court held that "'federal-court decrees exceed appropriate limits if they are aimed at eliminating a condition that does not violate the Constitution or does not flow from such a violation.'" 515 U.S. at 98. There, the Court reversed an interdistrict desegregation remedy, explaining that "[t]he proper response to an intradistrict violation is an intradistrict remedy" *Id.* at 90; see *id.* at 90-92. Similarly, in *Casey*, the Court struck down a systemwide injunction that sought to remedy multiple inadequacies in prison administration, not merely those found to "have harmed ... plaintiff in th[e] lawsuit." 518 U.S. at 357-58 (rejecting argument that class action authorized broader relief); see also *id.* at 359.

These principles apply here. The alleged constitutional violations affect two discrete plaintiff-classes. Yet, rather than specifically addressing the alleged Eighth Amendment violations sustained by members of the two classes, the court ordered prison-wide relief There is no basis for a systemwide remedy for the alleged Eighth Amendment violations in this case because the quality of care varies by facility and plaintiffs conceded that the conditions in some facilities already may satisfy the Eighth Amendment despite their overcrowding. See, *e.g.*, JA 2258 (Dr. Shansky). Moreover, a remedy spanning both classes is not narrowly tailored because crowding does not affect individuals with severe medical problems and the mentally ill (let alone different types of mentally ill prisoners) in the same manner. Indeed, it is unclear whether a prisoner release order that does not differentiate between class members and the prison population as a whole can be deemed narrowly tailored in light of the violations at issue.

Third, the "Order to Reduce Prison Population" contravenes principles of federalism and the prerogatives of the political branches generally. See *Jenkins*, 515 U.S. at 98-99, *id.* at 114, 124-34 (Thomas, J , concurring); 18 U.S.C. § 3626(a)(1)(A). In *Jenkins*, the Court reaffirmed that courts must be especially cautious in imposing injunctive relief that threatens "'the interests of state and local authorities in managing their own affairs.'" 515 U.S at 98, see *id.* at 99, *Horne* v *Flores*, 129 S. Ct. 2579, 2593-94 (2009).

Here, the state and local interests are at their zenith: "It is difficult to imagine an activity in which the State has a stronger interest ... than the administration of its prisons." *Preiser* v *Rodriguez*, 411 U.S. 475, 491-92 (1973); see also, *e.g* , *Casey*, 518 U.S. at 362-63; *Chapman*, 452 U.S. at 352; *Turner* v *Safley*, 482 U.S. 78, 84 (1987), *Wolfish*, 441 U.S at 548. The PLRA further emphasizes those interests, requiring the court to "give substantial weight to any adverse impact on ... the operation of the criminal justice system" in considering injunctive relief. 18 U.S C § 3626(a)(1)(A) See 141 Cong. Rec S2648, S2649 (daily ed Feb 14, 1995) (Sen. Hutchison) ("[t]his bill will curb the ability of Federal courts to take over the policy decisions of State prisons").

In ordering a systemwide remedy, the three-judge court did not consider the burden placed on the State as it simultaneously must comply with the court's order and the less intrusive, but nonetheless robust remedies previously imposed by the Receiver and Special Master—remedies which directly affect the classmembers Additionally, because it is not feasible, as Judge Karlton recognized, to accomplish population reduction by releasing class members alone, see JA 2389-90, 2450-51, the court's order requires the State to reform how it incarcerates criminals outside the plaintiff-classes. See JS2-App. 39a-42a, 45a, 63a-64a (parole reforms and alternative custody).

Finally, the court attempted to justify the imposition of the prisoner release order on the basis that it was more protective of the State's interests. This assertion is misguided. The court claimed that "a systemwide population reduction ... is preferable to an order ... requiring particular methods of population reduction," as it purportedly exhibits "deference to state expertise." JS1-App. 174a-175a (internal quotation marks omitted), JS2-App. 3a. The court *rejected* institution-specific relief, claiming that the State "ha[d] never contended that the problems at issue in *Plata* and *Coleman* are institution-specific." JS1-App. 171a. The court was mistaken. In fact, the State elicited testimony from plaintiffs' experts that certain institutions may be in constitutional compliance notwithstanding their populations.

Supra at 50. The State also adduced evidence that the problems about which plaintiffs complained were unique to and variable among specific CDCR institutions. See, *e.g.*, JA 2104-05 (discussing Special Master's findings, *Coleman* D.E 3029-1, at 6, that several institutions were in substantial compliance with the court-approved policies and procedures for providing mental-health care); JA 2122-25, 2127 (plaintiffs' expert's testimony that he was unfamiliar with the staffing levels or quality of care provided at a number of specific institutions); Defs.' Trial Ex. 1074, at 1 (in-person monitoring of California Women's Facility was no longer necessary) The PLRA requires consideration of the fact that certain facilities were in compliance.

The claim that the order provides the State with flexibility is likewise misplaced. Although the court did not dictate specific measures for achieving population reduction, its order is not deferential. It compels the State to reform its correctional practices on the whole rather than targeting relief at *either* of the plaintiff classes. Moreover, in implementing the three-judge court's ruling prior to its *sua sponte* stay of relief, Judge Karlton held that he would not approve a housing plan in *Coleman* "as long as [it] calls for a projected population in excess of 137 5% of the facility's design capacity." JS2-App. 13a; see JA 860-61 (delaying imposition of the facility-specific mandate pending this appeal). Under Judge Karlton's understanding, the 137.5% cap does not give the State flexibility to implement the population reductions systemwide, but instead acts as a facility-by-facility ceiling that deprives the State of meaningful discretion to manage particular facilities. In sum, the operation of California's prisons is now under the clear control of a federal court and the court's purported "deference" to how the State does the federal court's bidding does not alter that fundamental fact.

B. The Court's Order Does Not Give "Substantial Weight" To The Adverse Impacts On Public Safety That The Prisoner Release Order Will Cause.

The court failed to "give substantial weight to any adverse impact on public safety" caused by the Order to Reduce Prison Population. 18 U.S.C. § 3626(a)(1)(A), see also H.R. Rep. No. 104-21, at 9 (discussing murder committed by individual released due to population cap); 141 Cong. Rec S14407, S14418 (daily ed. Sept. 27, 1995) (Sen Hatch).

First, the Order clearly does not satisfy § 3626(a)(1)(A) because it states that the court "ha[s] not evaluated the public safety impact of each individual element of the State's proposed [population reduction] plan." JS2-App 3a; see *id.* at 4a ("Certain of the measures suggested by the state ... were ... not evaluated from the standpoint of public safety."). Moreover, unlike the first population reduction plan submitted by the State, which the three-judge court flatly rejected, the State was unable to attest in its second plan that public safety would be assured Compare *id.* at 32a-33a, with JS1-App 317a & n 1 ("The State ... believe[s] that reducing the prison population to 137.5% within a two-year period cannot be accomplished without unacceptably compromising public safety.") The court nonetheless accepted that plan in the face of clear public safety risks.

Second, the court's assertion that the population reduction measures offered sufficient protections because "they had previously been endorsed by state officials, and thus, presumably, 'would not have an adverse effect on public safety'" cannot withstand scrutiny. JS2-App. 4a (quoting JS1-App 219a), *id* at 3a-4a ("[T]he evidence presented at trial demonstrated that means exist to reduce the prison population without a significant adverse impact on public safety or the criminal justice system.") There is a marked difference between implementing measures under compulsion of a court order and doing so under a time frame chosen (and that can be revisited) by the political branches.

Moreover, the endorsements referenced by the court occurred in 2008 and in budgeting for 2009-2010, see JS1-App 219a, when California's economy was less troubled than it later became. Cf. *id.* at 187a (noting California's "serious fiscal crisis") This is critical because the court conceded that the measures it deemed necessary to ensure public safety will require substantial expenditures by the State or local governments. See, *e.g* , JS2-App. 5a ("additional financial resources from the State [may be required] to ensure that no significant public safety impact results"); JS1-App. 200a (expanded rehabilitation programming would be necessary). It acknowledged that there would be an adverse impact on crime rates without expanded rehabilitation programming for individuals no longer incarcerated by the State JS1-App. 242a. See also *Samson* v *California*, 547 U.S. 843, 850 n.2 (2006) (recognizing that California's parolees present special dangers to the public, recognizing that they "are more akin to prisoners than probationers"), *id* at 853-54 (crediting statistics that 68 percent of adult parolees are returned to prison, 13 percent for the commission of new felonies, and thus "grave safety concerns ... attend recidivism"). Nonetheless, the court presumed that the services necessary to protect the public could be provided, suggesting that "[r]educing the number of persons it imprisons should result in significant savings to the State." JS2-App. 5a; see JS1-App. 187a. Although the court asserted that it was not dictating "whether and to what extent the State should allocate part of its savings" to these programs, JS2-App. 5a, it previously acknowledged that assuring public safety *requires* that the State appropriate funds in this manner. "[T]he proposed population reduction measures would have no adverse effect … *if the state were to divert some portion of the savings* generated by the population reduction to community corrections, rehabilitation, and re-entry resources" JS1-App. 232a (emphasis added). Compelling the State to divert any such savings in this manner is a severe, unlawful intrusion on the State authority See 18 U.S.C. § 3626(a)(1)(A)

California cannot protect public safety under the order without seriously compromising the ability of its political branches to set the State's priorities. "Federalism concerns are heightened when … a federal court decree has the effect of dictating state or local budget priorities." *Horne*, 129 S. Ct at 2593-94. "When a federal court orders that money be appropriated for one program, the effect is often to take funds away from other important programs" *Id.* at 2594. Here, the three-judge court acknowledged that the State already has been forced to "reduce[] spending on education, health care, the social safety net, and services for the needy, the blind, and children to the breaking point." JS1-App. 11a n.4. The release order effectively requires California to spend its money on rehabilitation instead of on improving conditions for the State's citizens. The

PLRA does not allow the court to put California to this choice where, as here, the prisoner release order has not satisfied the requirements that the Act imposes.

The 137.5% cap on the State's general prison population should be set aside.

CONCLUSION

The Court should reverse the judgment for lack of jurisdiction and dismiss the three-judge court In the alternative, the Court should reverse the judgment of the district court.

STATUTORY ADDENDUM

STATUTORY ADDENDUM

FEDERAL STATUTE

18 U.S.C § 3626: Appropriate remedies with respect to prison conditions

(a) Requirements for Relief.—

(1) Prospective relief.—(A) Prospective relief in any civil action with respect to prison conditions shall extend no further than necessary to correct the violation of the Federal right of a particular plaintiff or plaintiffs. The court shall not grant or approve any prospective relief unless the court finds that such relief is narrowly drawn, extends no further than necessary to correct the violation of the Federal right, and is the least intrusive means necessary to correct the violation of the Federal right The court shall give substantial weight to any adverse impact on public safety or the operation of a criminal justice system caused by the relief

(B) The court shall not order any prospective relief that requires or permits a government official to exceed his or her authority under State or local law or otherwise violates State or local law, unless—

(i) Federal law requires such relief to be ordered in violation of State or local law;

(ii) the relief is necessary to correct the violation of a Federal right; and

(iii) no other relief will correct the violation of the Federal right.

(C) Nothing in this section shall be construed to authorize the courts, in exercising their remedial powers, to order the construction of prisons or the raising of taxes, or to repeal or detract from otherwise applicable limitations on the remedial powers of the courts.

* * * *

(3) Prisoner release order.—(A) In any civil action with respect to prison conditions, no court shall enter a prisoner release order unless—

(i) a court has previously entered an order for less intrusive relief that has failed to remedy the deprivation of the Federal right sought to be remedied through the prisoner release order; and

(ii) the defendant has had a reasonable amount of time to comply with the previous court orders.

(B) In any civil action in Federal court with respect to prison conditions, a prisoner release order shall be entered only by a three-judge court in accordance with section 2284 of title 28, if the requirements of subparagraph (E) have been met

(C) A party seeking a prisoner release order in Federal court shall file with any request for such relief, a request for a three-judge court and materials sufficient to demonstrate that the requirements of subparagraph (A) have been met.

(D) If the requirements under subparagraph (A) have been met, a Federal judge before whom a civil action with respect to prison conditions is pending who believes that a prison release order should be considered may sua sponte request the convening of a three-judge court to determine whether a prisoner release order should be entered.

(E) The three-judge court shall enter a prisoner release order only if the court finds by clear and convincing evidence that—

(i) crowding is the primary cause of the violation of a Federal right; and

(ii) no other relief will remedy the violation of the Federal right

* * * *

(g) Definitions —As used in this section—

* * * *

(3) the term "prisoner" means any person subject to incarceration, detention, or admission to any facility who is accused of, convicted of, sentenced for, or adjudicated delinquent for, violations of criminal law or the terms and conditions of parole, probation, pretrial release, or diversionary program,

(4) the term "prisoner release order" includes any order, including a temporary restraining order or preliminary injunctive relief, that has the purpose or effect of reducing or limiting the prison population, or that directs the release from or nonadmission of prisoners to a prison;

QUESTIONS PRESENTED

1 Whether the Court's jurisdiction under 28 U.S.C § 1253, which extends only to orders "granting or denying ... an interlocutory or permanent injunction" rendered "by a district court of three judges," authorizes direct review of a single-judge court's decision to convene a three-judge panel, which does not grant or deny injunctive relief

2 Whether the three-judge court clearly erred in concluding that the conditions for a prison overcrowding limit under 18 U S C. § 3626(a)(3)(E) were satisfied based on its fact-intensive determinations (i) that prison overcrowding is the primary cause of California's failure to provide inmates with constitutionally adequate mental and medical healthcare, and (ii) that, in light of numerous unsuccessful previous court orders spanning years of failed remedial efforts, "no other relief" would remedy the ongoing constitutional violations.

3 Whether the three-judge court's order requiring California to reduce overcrowding to within 137.5% of its prisons' total design capacity, while affording state officials broad discretion to choose which remedial measures will safely and effectively address the prison overcrowding crisis, is narrowly drawn, extends no further than necessary, and is the least intrusive means necessary to correct the ongoing violations of inmates' federal constitutional rights.

JURISDICTION

The Court has jurisdiction under 28 U.S.C. § 1253 to review the three-judge court order granting prospective injunctive relief. Contrary to the State's assertion, the Court lacks jurisdiction to review the single-judge court order granting the request to convene a three-judge court.

STATEMENT OF THE CASE

Every day, psychotic, suicidal, and other severely mentally ill prisoners languish in horrific conditions in California's prisons. Amid what the lead appellant, Governor Schwarzenegger, has proclaimed to be an emergency overcrowding crisis, with acute shortages of staff, hospital beds, and crisis cells, mentally ill prisoners have been found hanged to death in holding tanks where observation windows are obscured with smeared feces, and discovered catatonic in pools of their own urine after spending nights locked in small cages

These grisly examples come not from the original record in this suit, filed twenty years ago, but from the expansive record of current prison conditions during a 2008–2009 trial before a three-judge district court convened under the Prison Litigation Reform Act ("PLRA"), 18 U.S.C. § 3626. After a three-week trial, at which dozens of witnesses testified about current prison conditions, the court determined that, until California addresses its unprecedented overcrowding crisis, the State will not be able to resolve the long-standing constitutional violations found by the single-judge district courts in *Coleman v. Schwarzenegger* and *Plata v. Schwarzenegger*. Those courts previously determined that California is not providing its inmates with constitutionally adequate mental health care (*Coleman*) or constitutionally adequate medical care (*Plata*). In fact, California's failure to provide adequate care to seriously mentally ill inmates has persisted through *14 years* of *post-judgment* proceedings. Despite more than 70 previous court orders (*see* Appendix A), remedial plan after plan has been fatally undermined by severe overcrowding. Whatever modest temporary improvements the State may have made, it has failed to remedy the entrenched constitutional violations. And overall conditions are getting worse.

The three-judge court thus required California to take whatever steps it deems necessary to ensure that, within two years, its prison population is within 137.5% of its prison facilities' total design capacity as determined by the State. The court determined that this overcrowding limit is necessary to allow the State to bring its correctional facilities into constitutional compliance. The remedy is expressly authorized under the PLRA, and the court's findings of fact are supported by overwhelming record evidence.

A. The Statutory Scheme

Congress enacted the PLRA to establish standards for entering and terminating prospective relief in civil actions challenging prison conditions. *See Miller v. French*, 530 U.S. 327, 333 (2000). The principal target of the PLRA was long-term structural injunctions that left day-to-day prison management decisions in the hands of federal judges with no end in sight. *See* 141 Cong. Rec. S14,419 (1995) (Sen. Abraham) (the PLRA addresses the problem of "continuous litigation and intervention by the court into the minutiae of prison operations") The statute also addresses "prison release orders" and expressly contemplates that such orders may be required in certain circumstances. 18 U S C. § 3626(a)(3)(A). A "prisoner release order" is a term of art defined expansively to include any order that "has the purpose or effect of reducing or limiting the prison population." *Id* § 3626(g)(4).

A "prisoner release order" may be entered only by a three-judge district court *Id.* § 3626(a)(3). A single judge overseeing a prison case may convene a three-judge court if the single judge finds that (1) a previous order "for less intrusive relief .. has failed to remedy" the constitutional violation, and (2) the defendant has had a "reasonable amount of time" to comply with the "previous court orders." *Id* § 3626(a)(3)(A). In turn, a three-judge court may enter a "prisoner release order" if it finds, by clear and convincing evidence, that (1) crowding is the "primary cause" of the violation, and (2) "no other relief will remedy" that violation *Id* § 3626(a)(3)(E) The order must be "narrowly drawn," "extend[ ] no further than necessary," and be "the least intrusive means necessary to correct" the constitutional violation. 18 U S C. § 3626(a)(1)

B. Failed Efforts To Remedy The Constitutional Violations

1 Twenty years ago, prisoners suffering from serious mental illness (such as schizophrenia, major depression, and bipolar disorders) filed suit because California was failing to provide them with constitutionally adequate mental health care After a contested trial, the district court determined that

the State prison system violated the Eighth Amendment *Coleman v. Wilson*, 912 F Supp 1282, 1298 (E.D. Cal 1995). It found that California's prisons were "seriously and chronically understaffed", that there were "significant delays in, and sometimes complete denial of, access to necessary medical attention", and that the State lacked a minimally adequate program to identify and treat prisoners with severe mental illness. *Id.* at 1296–97, 1306–15

2. From 1995 until 2007, the district court tried every conceivable means to prompt the State into ending the constitutional violations The court issued "well over seventy orders concerning the matters at the core of the remedial process " JS1-App 38a–39a, *see* Appendix A.[1] It also appointed a Special Master, who over the course of a decade and a half filed 21 monitoring reports and 58 other reports. JS1-App. 36a–38a, J A. 758–814, *Coleman*-D.E 3677

None of these efforts was successful. Although the court's orders initially produced some hard-won progress, inspiring "hopes of eventually ending *Coleman*," the "steadily rising overall population" had caused "earlier gains" to "dissipate[ ]." J A. 482.

---

[1] Cites to "J A " refer to the Joint Appendix filed by the parties in this case "JS1-App " refers to appellants' appendix in Case No 09-416 "JS2-App " refers to appellants' appendix to their Jurisdictional Statement in this case The district court records in *Coleman*, No CIV-S-90-0520-LKK (E D Cal) and *Plata*, No C01-1351-THE (N D Cal) are cited by docket entry (*i e* "*Coleman*-D E __", "*Plata*-D E __") Trial exhibits are cited by the first letter of the party and by number (*i e* , "D-__", "P-__")

By October 2006, California's prisons had reached over 200% of design capacity, and sustained overcrowding had reduced efforts to resolve the constitutional violations into a Sisyphean task. JS1-App. 49a, 60a; *see also* www rbg-law com/selected-coleman-plata-trial-materials (website of record materials, including photographs of overcrowded prison conditions)

3. In 2006 and 2007, the Special Master issued reports supporting the conclusion that resources that were "absolutely essential for the provision of adequate mental health services" were "impacted seriously by overcrowding" J A 476, *see also* J A 2011–2012 (15th Report), 2016–2018 (16th Report). The Special Master found that the lack of space for mental health treatment—clinicians' offices, rooms for interviews, and group treatment facilities—poses a "huge problem." J A. 479 As the Special Master determined, the State's prison facilities are "hopelessly inadequate" because they are "designed to meet just half of anticipated medical needs"—without any space to accommodate mental health treatment J.A. 477. Overcrowding made existing problems even more intractable, forcing inmates to spend "larger chunks of their days" in tighter quarters and on lockdown status, "escalat[ing] the incidence of mental illness and exacerbat[ing]" preexisting illnesses. J.A. 479, *see also* J A. 478 ("growing problems reflect the impact of overcrowding").

The Special Master also found that, after "stalled and ineffectual efforts," whatever progress had been achieved in securing specialized beds for the "most seriously mentally ill" had evaporated due to "severe overcrowding." J.A. 479–480. The shortfall had left large numbers of acutely ill patients with no place for treatment, causing "unmet needs [to] spiral higher and higher." J.A. 481; *see also* J.A. 429 (prison official testifying that lack of mental health beds has reached crisis levels). Because the system does not work, "harassed clinicians often choose not to undertake the frustrating struggle" for bed referrals that often see no action "for weeks or months," further increasing the numbers of psychotic patients "trapped in" outpatient programs "that cannot meet their needs." J.A. 481. Indeed, "nearly 12 years after the determination that mental health services" in California's prisons "were egregiously unconstitutional, hundreds certainly, and possibly thousands" of California's "inmates/patients ... are still looking for beds at the level of treatment their mental illness requires." *Id.*

The Special Master likewise concluded that staffing is an "absolutely essential ingredient" to ending the constitutional violations. J.A. 482. The State increased staffing in the early 2000s, but "the growth of the resource" did not match "the rise in demand" and "earlier gains" dissipated. *Id.* Although the functional vacancy rate for clinicians fell to between 2% and 7% in 2003, by 2007 it had spiked to 20%. J.A. 482–483. And the vacancy rate among top managers reached a "devastating 70%." J.A. 484.

Given the lack of space, beds, and staff, the Special Master found it "easy to conclude" that the key step to fixing ongoing constitutional violations is "a reduction in the overall census." J.A. 486

"[M]any of the achievements" of the prior decade "succumbed to the inexorably rising tide of population, leaving behind growing frustration and despair" J A 489. The "expanding demand for services resulting from the bulging population" caused such a "deterioration of mental health staffing" that California lacks the "clinical resources" necessary "to meet the needs of some 25 to 30 percent of" mentally ill inmates J.A 2016–2017; J.A 486. The Special Master estimated that an overall reduction of 50,000 prisoners would alleviate persistent staffing shortages, while noting that more clinical staff in specialized mental health units would be required to treat prisoners requiring more intensive levels of care J.A 486–487

4 The State did not object to the Special Master's conclusions *See Coleman*-D.E. 1772, 2067 Nor could it have reasonably done so. California's Governor had already declared a "Prison Overcrowding State of Emergency" *See* Appendix B; J.A 1693–1709. The Governor recognized that "immediate action is necessary to prevent death and harm caused by California's severe prison overcrowding." JS1-App 61a. All 33 of California's prisons "are now at or above maximum operational capacity, and 29 of the prisons are so overcrowded" that more than 15,000 prisoners are being held "in conditions that pose substantial safety risks." *Id.* Overcrowding has overloaded the prison infrastructure. J.A. 1694–1695. Indeed, by the time of the Governor's proclamation, the suicide rate within the prisons had approached "an average of one per week." JS1-App. 61a. The crisis, the Governor declared, "gets worse with each passing

day." *Id.* The Governor's emergency declaration remains in effect.

C. The Decision To Convene A Three-Judge Court

1. In November 2006, following the Governor's emergency declaration, the *Coleman* plaintiffs filed a motion to convene a three-judge court under 18 U.S.C. § 3626(a)(3). The district court held a hearing in December 2006 and granted a six-month continuance, offering the State an opportunity to demonstrate progress and outline measures it would take to improve prison conditions. JS1-App. 63a. That opportunity was wasted.

In June 2007, the district court reconvened proceedings and found that its myriad orders for "less intrusive relief" over the last 12 years had "failed to remedy" the constitutional violations. JS1-App. 65a, 74a, 288a–304a. The court found that California's "mental health care delivery system has not come into compliance with the Eighth Amendment at any point since this action began." JS1-App. 294a. Backsliding had coincided with crisis-level population growth, leading to a 33% rate of "unmet needs" among nearly 33,000 mentally ill inmates. JS1-App. 67a–69a, 296a. The results, the court found, were "unconscionable." *Id.*

2. The State did not contend that it had remedied the constitutional violations. J.A. 446–447. It admitted ongoing deficiencies in mental health care but blamed them on "management issues" and asked for more time. J.A. 1666. The State pointed to plans for prison and jail construction, rehabilitative programs, and parole reforms. JS1-App. 283a, J.A.

458–459, 465–467. But the court found that the State's plans, even assuming they could be timely implemented, would be ineffectual in the face of severe overcrowding. For example, the construction plan, AB 900, authorized the addition of 12,000 new beds by 2009—but the State's own projections showed that it would be short thousands of beds. JS1-App. 300a–301a. Moreover, AB 900 "utterly fail[ed] to address the critical question of staffing," and the State did not explain how it would obtain the additional staff needed to handle the increased prison population. JS1-App 301a, J A 1971. The court found that the State's plan would "aggravate" rather than "alleviate" the problem. JS1-App. 301a

3 With "extreme reluctance but firm conviction," the court determined that a "reasonable time" for compliance had passed, and ordered the convening of a three-judge court JS1-App. 74a, 304a On July 26, 2007, the Chief Judge of the Ninth Circuit convened a three-judge court. JS1-App. 69a. Contrary to the suggestions in its brief, the State raised no objections to the composition of the panel. *See* State Br. 25 nn 7–8.

D. Current Prison Conditions

1. In 2007, the parties began initial discovery into current prison conditions This included undertaking prison tours in which both sides' experts observed housing and treatment areas, reviewed files, and interviewed prisoners, staff, and clinicians *See* J.A. 1863, 1866–1897, J.A. 492–626, 627–691; *Coleman*-D.E 3231-10. In late 2007, the three-judge court stayed discovery and referred the matter to a settlement referee, affording the State another opportunity to avoid judicial intervention JS1-App

69a–70a; *Coleman*-D.E 2620; J.A 1111–1113 These efforts proved unsuccessful.

2 In 2008, plaintiffs sought to resume discovery into current prison conditions. In response, the State sought a protective order *prohibiting* plaintiffs' experts from conducting any further prison tours. According to the State, updated inspections were "irrelevant" and "would constitute a waste of the parties' time and resources" J.A. 1182 In addition, the State filed motions *in limine* to exclude current evidence of staffing shortages, housing conditions, inadequate suicide prevention measures, and inpatient psychiatric hospital bed shortages *Plata*-D E 1559, 1564, 1566, 1576

Over the State's objection, the three-judge court allowed additional expert tours to evaluate current conditions *See* J A. 1864–1865, 1898–1910, J A. 492–626, 692–751, *Coleman*-D.E. 3231-9, 3231-13, 3231-15 The parties acquired extensive information about the current state of California's prisons, analyzing electronically stored information from over 80 state officials and deposing 16 officials with responsibility for overseeing California's prisons.

The State then moved for dismissal and/or summary judgment. *Plata*-D.E 1479 Significantly, the State did not argue that the single-judge courts had not given it sufficient time to comply with previous court orders. *See id.* at 10–16 Plaintiffs opposed both motions and presented overwhelming evidence of continuing constitutional violations. *Coleman*-D E 3054–3061, 3063, 3064

3. On November 3, 2008, the three-judge court denied the State's motion for dismissal and/or for

summary judgment, *see Coleman*-D.E. 3260, and, on November 10, 2008, denied the motions *in limine*. J.A. 1688–1690; JS1-App. 70a. The court clarified that the PLRA did not authorize it to re-adjudicate the existence of the underlying constitutional violations found by the single-judge courts. If the State wanted to argue that violations no longer existed, it should direct that argument to the single-judge courts and seek relief under Federal Rule of Civil Procedure 60(b)(5). J.A. 1691. The three-judge court nonetheless made clear that the parties could introduce evidence of current prison conditions relevant to whether section 3626(a)'s requirements were satisfied, including (1) whether crowding is the "primary cause" of constitutional violations; (2) whether "other relief" will remedy those violations; and (3) the impact of a release order on public safety. *See* J.A. 2338–2339.

E. The Three-Judge Court's Findings

The three-judge court held a three-week trial, reviewing hundreds of exhibits and testimony from nearly 50 expert and percipient witnesses. JS1-App. 70a. On February 9, 2009, the court issued a tentative ruling, finding that plaintiffs had "presented overwhelming evidence that crowding is the primary cause of the underlying constitutional violations." J.A. 1508. The court then waited six months, giving the State another opportunity to avoid judicial intervention. JS1-App. 70a. But the State made no progress and declined to negotiate a settlement.

On August 4, 2009, the three-judge court issued a 183-page opinion and order. The opinion addressed each of the PLRA's statutory requirements, carefully cataloging the evidence and finding that (1) overcrowding is the "primary cause" of the Eighth Amendment violations; (2) "no other relief" will remedy those violations; (3) a 137 5% overcrowding limit is a necessary and narrowly tailored remedy, and (4) the overcrowding limit will not adversely impact public safety JS1-App. 1a–256a

1. Overcrowding Is The Primary Cause Of Ongoing Violations

1 The court accepted the State's argument that "primary cause" in section 3626(a)(3)(E) means "the cause that is 'first or highest in rank or importance, chief, principal " JS1-App 78a. The State did not dispute the notion that overcrowding was *one* cause "imped[ing]" a remedy of these ongoing constitutional violations, the State argued only that overcrowding was not the "primary" cause *Id.* Applying the State's own-proposed definition, the court found that "[t]he only conclusion that can be drawn from the wealth of clear and convincing evidence ... is that the unconstitutional denial of adequate . . mental health care .. is caused, first and foremost, by the unprecedented crowding in California's prisons." JS1-App. 140a–141a, 143a.

2. This determination was well supported Four of the "nation's foremost prison administrators" testified that overcrowding was the primary cause of the continuing constitutional violations. JS1-App. 81a, 141a. The current head of corrections in Pennsylvania, Jeffrey Beard, testified that "the biggest inhibiting factor right now in California being able to deliver appropriate mental health and medical care is the severe overcrowding " JS1-App 82a, 127a–128a. The former head of Texas' prisons,

Doyle Wayne Scott, testified that "[e]verything revolves around overcrowding," which he called the "primary cause of the mental health care violations in California prisons." JS1-App. 127a The former head of corrections in Pennsylvania, Washington, and Maine, Joseph Lehman, testified that crowding is the "primary cause of the inability to provide [mental health] services." *Id.* And the prior head of California's prisons, Jeanne Woodford, testified that overcrowding is "extreme, its effects are pervasive and it is preventing the Department from providing adequate mental and medical health care to prisoners." JS1-App 84a She "absolutely believe[d] the primary cause is overcrowding." JS1-App 126a.

In addition, plaintiffs presented the testimony of Dr. Pablo Stewart and Dr Craig Haney, prominent experts with decades of experience in correctional mental health, who conducted interviews with patients and clinicians, and reviewed patient files at California's prisons in 2007 and 2008. J A. 492–626, 627–691, 692–751. They found that patients are exposed to ongoing risks of injury, death, and inadequate mental health care because the system is "plagued by severe overcrowding" JS1-App 131a–133a The State's own expert, Dr. Ira Packer, who also toured California's prisons in 2007 and 2008, concluded that overcrowding is the primary cause of deficient mental health care in California's prison "reception centers," JS1-App. 138a, and that the State's failure to plan for the number of acutely mentally ill inmates caused inadequacies in the overall system. JS1-App. 138a–139a.

The experts who toured the prisons witnessed symptoms of severe overcrowding, including the conversion of every available space into emergency housing crammed with bunks two and three levels high. The experts observed acutely ill patients held in makeshift spaces such as cages, supply closets, and laundry rooms, awaiting transfer to proper crisis cells. J A. 2090–2092, 2108, 2193; J A. 667–669, J A. 521–525, 541–543, J A. 554–555, 559–560; J A 1880–1881, 1903–1905.

Hard statistics further supported the experts' conclusions that, because of overcrowding, California is unable to provide inmates with adequate mental health care. For example, evidence showed that overcrowding has caused an increasing number of *preventable* suicides. Indeed, not only were the raw numbers of preventable suicides increasing but the suicide *rate* increased to 25.1 per 100,000 inmates—almost double the national average prison suicide rate of 14 per 100,000. JS1-App. 123a; J.A. 1779–1781 Similarly, the percentage of suicides involving "inadequate treatment or intervention" rose sharply from 45% in 2002 to 72.1% in 2006, as overcrowding spiked JS1-App. 124a.

Beyond the statistics, the real-life details of California's prisons are horrific. For example, prison officials referred a 34-year-old suicidal male to a crisis bed but, because no bed was available, he was left in an administrative segregation cell where he hanged himself. J.A. 734–736, 1838–1847 Similarly, two prisoners were placed on suicide watch in "acute psychiatric program unit cells" that had been identified, years before, as needing a simple fix to remove attachment points that could be used to affix a noose *See* J A 1848–1853, 1854–1857, 2317–2319 The retrofits were never performed because they required "remov[ing] inmates from the cells" and there was no place to which to remove them J.A. 2315–2316. Both prisoners hanged themselves J.A 2313–2314.

3 Record evidence also demonstrated that, because of space and staff shortages, overcrowding has caused mentally ill inmates to endure degrading, inhumane, and unconstitutional conditions. The court found that, while waiting for crisis beds, inmates were transferred back and forth between "'dry cells,' which are 'tiny, freestanding upright cages with mesh wiring surrounding them (and no toilet),' during the day" and "'wet cells,' which are holding cells that have toilets, at night." JS1-App. 98a–99a. One prisoner was found "completely unresponsive, virtually catatonic" in a "dry cell," standing in a pool of urine, with a fixed gaze and unable to make eye contact J A. 592–593.

The lack of adequate space to house and treat suicidal inmates has also caused a cascading shortage of space for inmates who are acutely ill but not suicidal. *See* J.A. 2406–2409, 2410–2411; J.A. 1880–1882, 1902–1903. Acutely ill inmates, waiting for transfer to hospital beds, are housed for months in harsh administrative segregation units, isolated and with only limited access to mental health services, a practice that the State's own expert conceded is dangerous and increases the risk of suicide. *Coleman*-D E 3201 at 66–69; J.A 528–539, 550–553, 576–580, 2405–2413. Patients who should be in psychiatric hospital beds remain in crisis beds, causing patients in crisis to remain in housing units where they fail to receive adequate treatment JS1-App 122a. The system continues to spiral downward, "intensify[ing] the acuity of mental illness among inmates" JS1-App. 121a As testimony from State witnesses confirmed, overcrowding is straining the mental health system to a breaking point *See* J A. 2324–2325 (shortages of inpatient placements), 2313–2319 (recent suicides in acute mental health unit), 2327–2329 (turning patients away from psychiatric hospital), 2330–2331 (waiting lists), 2333–2336 (efforts to recruit and hire mental health staff), 2341–2342 (unavailability of treatment space), 2344–2347 ("terribly overcrowded" conditions affecting mental health care), 2364–2365 (staffing shortages).

4. Against this clear and convincing evidence, the only evidence the State offered was Dr Packer's opinion that the primary cause of the ongoing constitutional violations was not overcrowding but rather the State's inadequate planning for the number of acutely mentally ill inmates JS1-App. 138a–139a. But the three-judge court found that purported distinction illusory. JS1-App 139a And even Dr. Packer testified that overcrowding was the primary cause of deficient mental health care at the State's twelve prison "reception centers," JS1-App 86a, J A 1892, which at any given time hold approximately 20% of the total prison population. P-135

2. No Other Relief Will Remedy The Violations

Having found that overcrowding was the "primary cause" of the ongoing constitutional violations, the court reviewed the State's proposed alternative remedies to determine whether the violations could be "resolved in the absence of" an order limiting overcrowding. JS1-App 145a It found clear and convincing evidence that they could not

1. Several remedies available in theory were unavailable in practice. Constructing new prisons could eliminate overcrowding, but the State "ha[d] not suggested" that it had any plans "to construct additional prisons in the near future" JS1-App. 146a Like the single-judge court, the three-judge court rejected the State's prior construction program, AB 900, as a viable alternative. The State failed to provide funding or necessary legislative fixes for the AB 900 construction program to begin. JS1-App 147a. And, even if funded, designing and constructing new facilities would take many years. JS1-App 147a–151a.
